There is a difference between an open trial fairly conducted in a less impassioned moment and drumhead justice dispensed by hotheaded rebel troops. Capital punishment in such a situation too readily becomes lynching. Terror has a way of passing beyond control as the appetite for vengeance increases with use. * * *

According to recent press reports, Castro stated that he has no desire to run for the office of President of Cuba. By his own admission, the job of governing Cuba is too big for him and he ought to resign from active leadership or perhaps taken on some kind of professorship at the University of Habana and bide his time.

Castro cannot, by self-appointment, be the commander of the land, air, and sea forces of Cuba which by removing conscription, as he has promised, will eventually be composed of volunteers who are actually his followers. In this way he will succeed in entrenching himself in power and as such become just as dangerous and threatening as any dictator. Under such circumstances it is difficult to see how free elections can be held, except at the point of the bayonets of these self-appointed liberators. No President and no member of congress could possibly be elected or serve in office without Castro's approval.

Furthermore, Castro admits that his brother Raul has Communist leanings, having been trained in Moscow. Simultaneously, it is reported that a large number of Castro's followers are Communists, but Castro himself protests that he is not a Communist and is willing to aline himself with the United States. Here again, however, he throws in a proviso that we first show our respect for him. I should like to ask: Respect for him as what? As a kidnaper of American citizens? As a brutal murderer of his own people?

No matter how flushed he may be with victory, Castro should quickly come to his senses and realize that the United States will not take any bluff from him, just as it had not taken and still refuses to take any bluff from other dictators. He would do well to study the map of the Western Hemisphere and learn the facts of life, particularly as they affect the economy of his own country, before he makes demands on the United States. We will not stand for a Nasser or a Hitler so close to our shores.

Whatever justification may have existed for the Castro revolution has now been completely annulled by his most recent threat to kill 200,000 gringos, or Americans, should we decide to send marines to Cuba, although there has been no such suggestion on our part.

I have never forgotten Castro's unwarranted seizure of American soldiers, sailors, marines, and civilian workers, holding them as hostages for a considerable period of time, and thus humiliating the United States in the eyes of the world. I am sure that many other Americans have neither forgotten nor forgiven him for this deed. Nor do we in this country particularly like his treat-

ment of U.S. citizens who presently have to travel to Cuba for business or pleasure. Authentic reports show that Americans are forced to wait long hours at airports under the restraint of armed men and that before being admitted their bags are searched and their bodies frisked like criminals.

I think we ought to make it clear to Revolutionist Castro, for his own good and before he gets any more wild ideas, that it is we who demand respect from him. I think we should tell him in no uncertain terms that we will not tolerate any further mistreatment, friskings, kidnapings, and other indignities to U.S. citizens residing in, or traveling to, Cuba.

At the same time, let us state unequivocally that we are opposed to dictators in any form. Castro and his revolutionists in Cuba must realize that government of the people, by the people, and for the people—as the immortal Abraham Lincoln has so correctly defined the democratic form of government—must be sustained by ballots and not by bullets.

Mr. Speaker, I wish to serve notice that unless a democratic form of government is soon established in Cuba and free institutions are allowed to flourish there, I shall be the first to move before the House Committee on Agriculture, of which I am a member, and before the Congress of the United States to drastically reduce the sugar quota for Cuba. Perhaps Castro will be able to understand that kind of language better, since appeals based on justice and morality do not seem to have the desired effect on him.

Bill To Repeal Certain Federal Excise Taxes

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. LESINSKI. Mr. Speaker on January 7 I introduced H.R. 388, a bill which will directly benefit the great majority of our people and will make greatly needed revision in our tax structure. Everyone wants a simpler and fairer tax structure. My bill goes a long way toward effectuating this desire. It accomplishes this goal by providing for repeal of the Federal retailers' excise taxes, the manufacturers' excise taxes with the exception of those levied under our highway financing program, and the excise taxes levied on facilities and services.

At the present time, the federally imposed excise taxes create a heavy burden on the American people. True, we must impose burdensome taxes to pay for our heavy expenditures needed for defense, public welfare, interest on the debt, and other necessary Government functions. But a tax structure which imposes such a hodgepodge of taxes as the excise taxes requires substantial revision. These excises have been imposed indiscriminately, largely in emergency times, without much consideration of whom they are hurting or discriminating against. Subsequently they have been repealed, restored, revised, and amended many times, but in no systematic fashion. As a result, a host of inconsistencies, incongruities, and anomalies have become imbedded in the tax structure.

Although I would like to see all the Federal excise taxes discarded immediately, I have restricted my bill to the retailers' taxes, the manufacturers' taxes which are not used to finance the highway program, and the taxes on facilities and services. My bill, therefore, will repeal the retailers' taxes imposed on toilet preparations; luggage, handbags, and other leather articles; jewelry and related items; and furs. It will eliminate the manufacturers' taxes imposed on automobiles, parts and accessories; lubricating oil; automotive and related items; household type equipment; entertainment and recreational equipment; business machines; pens, mechanical pencils, and lighters; and matches. And, it will repeal the excise taxes imposed on telephone and other communication facilities and services, which include also those levied on admissions, club dues, transportation of persons, and safe deposit boxes. Repeal will be effective after the date of the enactment of the act.

The manufacturers' taxes which are used to finance the highway program and which will not be repealed by my bill are those automotive taxes imposed on gasoline, trucks and buses, diesel fuel, tires and inner tubes, and tread rubber. These taxes provide funds which benefit the highway users, and consequently can be justified from that standpoint. Furthermore, it is a fair and expeditious way to finance an accelerated highway construction program. The bill does not affect the taxes on alcoholic beverages and tobacco, although I do believe some adjustment should be made with respect to the taxes on alcoholic beverages for it is my understanding that the additional appropriations needed to police this law offset the revenue received. Some of the miscellaneous excise taxes which impose relatively small general burdens are excluded.

Many of the excise taxes were imposed as temporary measures during emergency periods but are still with us today, many of them at even higher rates. Many industries have been hurt by the imposition of these taxes. Occasionally, after a long and bitter fight by the affected industries and individual businesses, some of these taxes were repealed or modified, but in many cases considerable damage was already done. What we need is the removal of the excise taxes that are imposed indiscriminately with no regard of the effect they have.

An important reason for my desire to repeal at least some of the excise taxes is that these taxes are contrary to our generally accepted principle of taxation in accordance with ability to pay. The greatest impact of the excise taxes falls on the consumers with the low incomes. They are regressive taxes. Through its various features, such as the progressive income tax rate schedule, our tax structure attempts to lessen inequalities in income; but the excise taxes work contrary to this objective. Regressivity results not only from taxes paid directly by the consumer on commodities and services they purchase, but also from the taxes paid by business on commodities and services it purchases. The impact of these latter taxes is felt indirectly, because they are a cost item which are reflected in higher prices charged to the consumer. We should, therefore, reduce our reliance on these regressive taxes and place more reliance on the other forms of taxes, principally the income tax which imposes tax burdens in accordance with our ability to pay.

Elimination of Federal excise taxes will be an important stride toward simplifying the problems of our Federal-State-local relations. In spite of all the studies, both official and nonofficial, on the problems of overlapping taxes in the United States the basic problems still remain with us. Essential to the solution of these problems is the removal of at least some of the Federal excise taxes. The Federal Government imposes numerous selected excise taxes on top of those imposed by the States and local governments. As a result of these multiple levels of taxation, State and local governments must limit their taxation of these sources, although they, too, are faced with increasing costs of financing their government activities. Withdrawal of the Federal Government from some of these sources would enable the States to tap some of these sources of revenue to help them be more self-sustaining and less dependent on aid from the Federal Government. This will help restore some of the sovereignty and independence which the States formerly had and should continue to have.

Some of the Federal excise taxes are imposed on what are essentially local services, such as local telephone calls and admissions. Others discriminate largely against certain sections of the country. Some discriminate against industries which are located largely in only a few geographic areas. Such discriminations should be eliminated, or at least mitigated by repealing the excise taxes enumerated in my bill.

We have recently experienced a serious economic downturn, from which we were fortunate in recovering before it reached a critical stage. One of the hardest hit areas was Detroit, the center of automobile production. This economic doldrum in Detroit had its repercussions in many sections of the country where parts and materials going into the production of automobiles come from. In spite of a serious curtailment of automobile production, no legislation was passed to reduce or repeal the 10-percent Federal excise tax on automobiles. Such action would have made it possible for the automobile industry to reduce car prices, and thereby stimulate automobile sales and general economic recovery. Repeal of this onerous tax on automobiles will be a welcome supplement to other Government action taken to avoid any recurrence of a similar depression of economic activity. The tax saving to the consumers will, I earnestly believe, help to maintain a thriving automobile industry, and, consequently, a

thriving general economy through its effect on all industries concerned with supplying automotive parts and materials.

On the whole, repeal of the taxes included in my bill will increase business activity and generate higher incomes which will provide higher income tax revenues to the Government. It will do this because it will lead to a reduction in the prices of goods and services to the consumer. Lower prices will stimulate demand for more of these products. Greater sales by these businesses will in turn have favorable effects on other businesses. Resulting higher business incomes will provide a larger income tax base. Thus, any loss in revenues from the repeal of these excises will probably be largely offset or even possibly exceeded by additional income tax revenues to the Government.

In conclusion, let me urge every Member of Congress, particularly those on the Ways and Means Committee, to act favorably on my bill. Removal of these excise taxes will corect some of the undesirable features of the present complex and unreasonable "system" of excise taxes. It will alleviate some of the burden which falls heaviest on the low income groups. And, it will contribute to a simplification of Federal-State-local relationships. Although the Government will in the short run lose revenues from the repeal of these taxes, it will recoup the loss largely from additional business induced by the removal of these taxes. At the same time, it will promote a healthier economic climate for industry. In view of these desirable benefits which will result from enactment of my bill, I urge immediate and favorable action on it.

Mikoyan, Master Spy, Is Coming

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BOSCH. Mr. Speaker, I think all of the American people are wondering why Anastas Mikoyan is in the United States. Past experience proves that there is usually an ulterior motive to a visit such as this. It behooves us to be wary.

Under leave to extend my remarks, I include an article from the Waterbury American of January 5, 1959, written by Julius Epstein, which gives a good background on the activities of Soviet Deputy Premier Mikoyan. I commend this article to the attention of my colleagues as I believe that it will give them a good picture of Mikoyan and what may be expected of him.

The article follows:

MIKOYAN, MASTER SPY IS COMING
(By Julius Epstein)

Soviet Deputy Premier Anastas Mikoyan has arrived in Washington, somewhat sooner than he was expected. The Soviet Government declared that it wanted Mikoyan to come to Washington in order to confer with Soviet Ambassador Menshikov. This, of course, is just a crude hoax. If the Soviet Government, meaning Khrushchev, really wants Mikoyan to confer with the Soviet Ambassador in Washington, one cable or long-distance call would have sufficed to order Mr. Menshikov by jetplane to Moscow.

The reason for Mikoyan's visit is quite another one. It is a political maneuver to probe into Washington's political climate, with the Berlin crisis looming dark over the world. What Mikoyan really hopes to discover in Washington are those "soft spots" which eventually might be skillfully used by Mr. Mikoyan's boss, Nikita S. Khrushchev. Mikoyan is an old hand in the business of Soviet espionage in the United States. His experience dates back to the year 1943.

ESPIONAGE

At that time, the Soviet Politburo of the purchasing commission had its vast offices—with more than 1,000 employees—behind an iron door at 3355 16th Street NW., Washington, D.C. There, a group of top Communists, well trained in espionage and other subversive activities, worked closely together.

The group consisted mainly of the chairman of the purchasing commission, Gen. Leonid Rudenko, who later became Soviet chief prosecutor at Nuremberg; Mikhail V. Serov, the infamous organizer of countless mass and individual murders, whom Khrushchev just purged recently; Gusev, head of Amtorg (the Soviet's trading corporation in New York), a specialist in setting up covers for Soviet spies who was later expelled by the U.S. Government after the FBI had him trapped and caught redhanded in the act of esplonage. There also was a special department within the purchasing commission. Its chief was Mrs. Arutunian, the daughter-in-law of a Moscow high official. All secret papers passed through the hands of that lady.

Victor Kravchenko, who was then himself a high-ranking official of the purchasing commission, testified later before the House Committee on Un-American Activities that, "all of us knew about the functions of the special department, but we never knew who the representative of the Soviet secret police was in the purchasing commission." Today, we know who it was: Mikhail V. Serov.

Anastas Mikoyan was at that time, as he is today, a member of the Moscow Politburo and people's commissar for foreign trade. He alone was the real boss of the purchasing commission and its spies under Serov. As head of the foreign trade commissariat, Mikoyan directed the whole Soviet espionage apparatus in the United States.

AUTHORITY

One of the great authorities on Soviet espionage is David J. Dallin. He has spent a lifetime studying Soviet subversive practices all over the world, and he has written a standard work on the subject, the book "Soviet Espionage" (Yale University Press, 1955). Here, Dallin writes about Mikoyan's American espionage activities as follows:

"One day in late 1943 or early 1944 all employees of the purchasing commission who were actual members of the Communist Party were summoned to a meeting behind closed doors. Mikhail Serov presented cabled orders from Anastas Mikoyan in Moscow, which directed every Soviet Communist working in the commission to gather information on industrial developments in the United States, especially in the war industries. After the cable was read, each member of the cell signed his name to a statement that he had been informed of the order and would make every effort to carry it out.

"An orgy of information-grabbing began; among the items obtained were designs of industrial plants, special machines, parts and details; photographs and blueprints of technical processes in the aviation, arms, oil, submarine-building, and many other industries; long-range plans for the development of large industrial units; hundreds of maps of the United States, the individual States, industrial sites, bridges; descriptions of railroads; reports on the building of cities and highways."

Victor Kravchenko described in his testimony before Congress some of the activities as follows:

"We transferred to the Soviet Union, not just this one package; we transferred dozens of tons of material, not just by airplane. We also were using Soviet ships that came from lend-lease for the Soviet Union."

It was under Mikoyan's orders that members of the purchasing commission persuaded Henry A. Wallace to let the Soviets have samples of American uranium ore. Long before Klaus Fuchs betrayed to the Soviets the secret of our atom bomb, we ourselves had already helped them in their early experiments to develop the bomb.

In view of Mikoyan's forthcoming visit, it may be useful to our administration not to go overboard, but to keep these facts in mind.

Congress Should Attempt To Understand South

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. SIKES. Mr. Speaker, under permission granted me to extend my remarks and include extraneous materials, I request that the attached editorial entitled "Congress Should Attempt To Understand South," which appeared in the January 5 issue of the Florida Times Union, be reprinted in the CONGRESSIONAL RECORD.

The editorial follows:

CONGRESS SHOULD ATTEMPT TO UNDERSTAND SOUTH

The 86th Congress convenes Wednesday, making this the season for considering possible legislative programs. Here is a conservative 11-point program that would do credit to the new Congress:

1. In the area of civil rights, the Congress should make an honest effort to understand the position of the people of the South. The legislators have the power to ease mounting tensions in the Nation's most critical domestic problem, but it can only be done with a full knowledge of the attitudes, customs, and will of the southern people.

2. Congress must address itself immediately to a labor union reform law. Such a law should apply antimonopoly regulations to unions to head off the threat of a super-union under James Hoffa. The law should return equilibrium to the business-labor relationship, protect members from gangsters and corruption, and prohibit the spending of union dues for political purposes.

3. The Congress should restore balance to national defenses by assuring necessary appropriations for ground and naval forces as well as air and missile programs. A careful eye to profiteering in gadgetry must be maintained.

4. An investigation of the Nation's economy should be originated with the purposes of arriving at the basic cause of price-push inflation and of strengthening the economy for the promised period of economic competition with communism.

5. Congress should pass a law specifying rules of conduct for legislative, executive

and regulatory officials in accepting gifts and favors.

6. The lawmakers should seek by example to rededicate this Nation in spirit and its Government in practice to the basic principles of Christianity, democratic capitalism and private enterprise.

7. The only logical approach of Congress to taxation problems is a firm belief that any program worth having is worth paying for.

8. Congress should reconsider the U.S. role in the United Nations and other foreign affairs fields with the purpose of increased emphasis on effective military arrangements.

9. New laws are required to stiffen the Nation's defenses against internal communism to repair damage done by the Supreme Court.

10. A realistic agriculture policy is long overdue. That policy should replace subsidy thinking with business logic.

11. Congress should set in motion machinery to amend the Constitution to abolish the electoral college.

Action along these lines would be to the everlasting credit to the men and women of the 86th Congress.

Brotherhood of Locomotive Engineers Confers Honorary Membership Upon Hon. J. Edgar Hoover, Director of the Federal Bureau of Investigation

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
Thursday, January 15, 1959

Mr. ROONEY. Mr. Speaker, under the permission granted me today by the House, I include the following statement of Mr. Guy L. Brown, grand chief engineer of the Brotherhood of Locomotive Engineers, upon the bestowal of honorary membership in the brotherhood a few days ago to the Director of the Federal Bureau of Investigation, Hon. J. Edgar Hoover.

Also included is a statement made by Mr. Hoover at the time of his acceptance of his honorary membership in the Brotherhood of Locomotive Engineers.

The statements follow:

Mr. Guy L. Brown, grand chief engineer of the Brotherhood of Locomotive Engineers, today conferred upon J. Edgar Hoover, Director of the Federal Bureau of Investigation, a certificate of honorary membership in division 160 of the brotherhood in ceremonies held in Mr. Hoover's office.

This bestowal of honorary membership is one of the few ever made in the brotherhood's long history. Mr. Brown stated at the time of the presentation that the award is being made to Mr. Hoover, "in recognition of your great contributions to humanity and your great services to our country. We deeply appreciate the magnificent work you have done and are continuing to do in defending the civil liberties and protecting the rights of the average citizen and the laboring man in this country."

Commenting upon the FBI Director's role in America today, the grand chief engineer stated to Mr. Hoover that, "by helping thwart efforts of those who would destroy our Government and our way of life by infiltrating and seizing control of our labor organizations, you have aided not only the individual workingman but also the entire labor movement. For this, we will be everlastingly in your debt."

Making specific reference to Director Hoover's role in law enforcement, Mr. Brown said, "This country will never be able to thank you enough for your part in seeing that our internal defenses have remained fair and just and that the Nation has not become a police state in order to resist police state tactics."

In addition to the membership scroll in Division 160 of the Brotherhood of Locomotive Engineers, Grand Chief Engineer Brown presented Mr. Hoover a personalized copy of the constitution and the bylaws of the brotherhood and also the brotherhood's war service lapel pin.

STATEMENT OF JOHN EDGAR HOOVER, DIRECTOR, FEDERAL BUREAU OF INVESTIGATION, UNITED STATES DEPARTMENT OF JUSTICE, ON RECEIPT OF A MEMBERSHIP SCROLL, A PIN, AND A COPY OF THE UNION'S CONSTITUTION AND BYLAWS IN CONNECTION WITH HIS ACCEPTANCE OF AN HONORARY MEMBERSHIP IN THE BROTHERHOOD OF LOCOMOTIVE ENGINEERS, JANUARY 12, 1959

It is a privilege to become an honorary member of the Brotherhood of Locomotive Engineers. The action taken by your board of directors in amending your constitution so that this membership might be granted, has touched me deeply. I am most grateful to all of you.

I take great pride in the fact that the oldest railroad labor organization in the United States—a union created with the objective of securing justice for the individual workingman—sees fit to bestow these symbols of brotherhood upon me. As a member of the law enforcement profession, the word "justice" holds a vital meaning for me and for my associates.

May I add that no one is more aware than I that the recognition afforded me today is based upon the results achieved through the ceaseless effort, dedicated spirit, and devotion to duty of the men and women of the Federal Bureau of Investigation. In their behalf, I am proud and happy to accept this great honor.

Depressed Areas Legislation

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. LESINSKI. Mr. Speaker, among the 40 bills I introduced on January 7 was H.R. 830 to establish a program of Federal assistance to those areas which suffer from persistent economic depressions, an area redevelopment program.

In essence my proposal is similar to the legislation that was considered and approved by the 85th Congress.

I was shocked and amazed last year when President Eisenhower refused to sign the depressed areas bill, because the need for that type of legislation is clearly indicated. As I pointed out last year, when one segment of the Nation suffers economically, the entire country is affected. The depressed areas are not isolated islands, alone in a wide ocean with no ties to the mainland; they, like the other sections of our country should be contributing their share to the continuing prosperity of the Nation. These contributions would be not only for the benefit of the total economy but also to the Federal Government which is losing great potentials from individuals and businesses in such areas, and in addition, is faced with increased costs of unemployment compensation and welfare aid.

It is true that the country appears to be recovering from the depression of last year. However, the picture in Michigan continues to loom dark and foreboding. Last year the unemployment rate was 15.4 percent of the labor force; this year it is being predicted that one worker in eight, or 12.5 percent, will be unemployed all through 1959. One certainly cannot view that situation as recovery. I am sure this condition is repeated in the other major depressed areas in the country.

An area redevelopment program is insurance in the future of America; it will pay rich dividends by aiding the growth and prosperity of this great Nation of ours. I urge the Committee on Banking and Currency and the Congress to take immediate favorable action on this legislation.

Hans J. Hagge

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. LAIRD. Mr. Speaker, the insurance industry of America has lost a great leader. The Congressional District which I represent and the city of Wausau, Wis., in particular, has lost a true friend and a great citizen. The editorial which appeared in the Wausau Daily Record-Herald on Thursday, January 8, 1959, sets forth the contribution which the late Mr. Hans J. Hagge made to Wausau, Wis., and our Nation.

The editorial is as follows:

HANS J. HAGGE

Employers Mutuals of Wausau in recent years has keyed its advertising and public relations program to the Wausau Story, an effort which has brought recognition to both the community and Employers Mutuals the breadth of the Nation and even in foreign lands.

The Wausau Story has been one, however, which was brought not only to those outside Wausau but carried an inspiring message to the people of Wausau as well.

The Wausau Story has been one of unique achievement in many respects both for Employers Mutuals and for Wausau, of teamwork, civic consciousness, and of an abiding faith in Wausau's future.

And it has occurred to us many times that the late Hans J. Hagge is as responsible for "The Wausau Story," and epitomizes it as much as is possible for any single individual. The long, distinguished, and highly productive career of Mr. Hagge in behalf of both Wausau and Employers Mutuals constitutes an inspiring chapter in the real "Wausau Story."

Coming to the firm when it was a young and struggling enterprise, he led a team which brought it to preeminence in its field. Of special significance to the people of Wausau, and for which the community should be ever grateful, is the fact that the Employers Mutuals team captained by Mr. Hagge kept in mind constantly Wausau's welfare, well-being, and future as well as its own.

Many another enterprise having grown as big and great as did Employers would have felt that it outgrew a community of Wausau's size and centered its operations in a metropolitan area, a move which has many advantages for a business of its type and magnitude. But Mr. Hagge and Employers Mutuals tied their faith in their own future with that of Wausau and remained here.

What that has meant to Wausau in purely economic terms is reflected in the fact that Employers Mutuals provides employment for more Wausau people than any other business or industry.

Besides playing a vital role in Wausau's economic well-being, the Employers Mutuals team led by Mr. Hagge has played a leading role in community affairs. It would be hard to name a community function, including that of city government, in which Employers Mutuals personnel has not played a leading role. That's not merely because there are a lot of Employers Mutuals people in Wausau, it is because Employers Mutuals is a civic-minded organization—so much so in fact that it has received national recognition for it. And Mr. Hagge, we understand, was largely responsible for that civicmindedness. He prodded and inspired Employers Mutuals personnel to work for Wausau as they worked for their own organization. His behind-the-scenes interest and activity in behalf of Wausau constituted a highly significant force for the good of the community.

The job of building he did as the leader of the team which has done so much to build both Employers Mutuals and Wausau stands as an enduring monument to Hans J. Hagge.

Bungling Benson and Bad Budgets

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. SMITH of Iowa. Mr. Speaker, when the machine age increased man's capacity to produce more per man-hour, the 40-hour week was adopted to spread the work instead of keeping some unemployed while others continued to work a 60- or 70-hour week. Farmers still work an average of over 60 hours per week. If farmers reduced their production enough to reduce the workweek to 50 hours per week, the so-called surplus problem would disappear without driving farmers into the cities to replace city workers and increase unemployment. The farm programs, properly administered, helped farmers to be able to make a living by working more nearly a normal workweek. Instead of administering those programs properly to keep farmers on the family-type farm, and instead of working toward a program which would aid in accomplishing for our agricultural economy what the wage and hour law accomplished in helping adjust our society to the machine age, the administration is still doing all it can to cause some farmers to work longer hours and produce more while other farmers are driven into the cities to complicate unemployment problems.

I invite the attention of the Congress and the country to an editorial which appeared January 4, 1959, in the Des Moines Sunday Register. It is a paper published in the heart of the feed-grain country which is now absorbing increased punishment due to several years of deplorable administration of the programs.

This editorial reviews the administration of these farm programs objectively and cites evidence that Secretary Benson has purposely bungled farm programs. While almost everyone in Iowa considers him the worst and most costly administrator in history, this editorial supports the theory that no one could make so many costly mistakes unless he intended to. Whatever the purpose of his actions, the President has permitted Secretary Benson to do more than any other person in the United States to throw both farmers' incomes and the national budget out of balance.

I commend the editorial to all who are interested in preventing more unemployment and in balanced budgets for both the farm economy and our Federal Government:

THE FARM PROGRAM MESS

The indications now are that in January 1961, after 8 years of Ezra Benson's dedicated effort to master the farm problem, the costs of the Federal programs and the size of the crop surpluses will be two to four times what they were in January 1953, when Secretary Benson came into office. This is the lead sentence of an article in the January Fortune magazine. The article goes on to ask: Why after 6 years of Eisenhower-Benson management, is the farm problem getting worse instead of better?

Fortune's answer is that Benson has made too many compromises and has not pushed harder and more consistently to dismantle the acreage control and price support programs.

Of course, if the farm problem is viewed simply as a matter of reducing the Federal budget, that is the correct solution. If the farm price support programs were abandoned, the cost of the programs would disappear. But not even Mr. Benson has recommended such a stern measure. It would mean a drastic further decline in farm income, which is already down substantially since 1947.

However, the Secretary has recommended consistently that price supports be reduced, and Congress has given him considerable authority to do so. Price supports are much lower now than in 1953.

Why has the cost of the programs gone up while price supports were going down?

One big reason is that weather has been favorable and production high. Secretary Benson hoped that as price supports were lowered, farmers would produce less of the basic crops. But it didn't work out that way. Farmers have been producing more corn and wheat than ever. Even though price supports are lower, it costs the Government more to carry out the program, because there is more grain to be covered.

In the last 2 years, by making corn loans available to everyone, Benson deliberately increased the cost of that program. Farmers who failed to comply with their acreage allotments could get loans about 25 cents below the regular rate.

Crop acreage controls never have worked very well in limiting production, but Secretary Benson has not tried to make them work even as well as in the past. The noncompliance corn loan was a strong incentive to farmers to grow as much corn as possible. The Secretary campaigned to get rid of the allotments, and this has now been accomplished as a result of the farmer referendum last November. In addition, Mr. Benson worked against limitation of production by refusing to require farmers to comply with allotments on all crops if they were to receive benefits on any. So wheat and cotton producers, for example, have been free to expand corn production.

It is paradoxical that the man who was going to get Government out of agriculture has got Government deeper into agriculture than ever before. Surpluses have mounted and are still mounting. Government expenditures for price support, storage, and disposal of surpluses have risen from less than $1 billion a year to more than $3 billion a year and are still rising.

The cost of farm programs would have been much lower in the last 3 years if Secretary Benson had done his best to make the crop acreage controls work—and had limited corn loans to those who comply with acreage allotments.

Secretary Benson has been so fanatically opposed to Government farm programs that there is considerable reason to believe that he has tried to make the programs look bad in the way he has administered them.

Baron von Steuben

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I would like to insert in the CONGRESSIONAL RECORD an address by Col. Pierre Marcel Honnell, Signal Corps, USAR, a professor of electrical engineering at Washington University in St. Louis, Mo., on the occasion of General von Steuben's birthday, Richard Barthold Unit, Steuben Society of America, on Saturday, October 11, 1958. I thought this was an excellent address and that others would enjoy reading it.

The address follows:

BARON VON STEUBEN, MAJOR GENERAL, INSPECTOR GENERAL, CONTINENTAL ARMY, 1778–84

(Address by Col. Pierre Marcel Honnell, Signal Corps, USAR, professor of electrical engineering, Washington University, on the occasion of General von Steuben's birthday, Richard Barthold Unit, Steuben Society of America, Edgewater Club, St. Louis, Mo., October 11, 1958)

Mr. Chairman, Congressman CURTIS, ladies and gentlemen, it is indeed a privilege to address the Richard Barthold Unit of the Steuben Society of America on the occasion of its patron's birthday, the 17th September 1730. The history of professional service of Frederick William Augustus Henry Ferdinand, Baron von Steuben, is now well known to all, and particularly to the members of this, the Steuben Society of America. Yet this history does bear repetition for the lessons it teaches: of honor; of integrity; of outstanding performance and devotion to duty; of opportunities and rewards in our land of freedom.

Baron von Steuben served with the extraordinary distinction in the Continental Army of the newly born Republic from 1777 to 1784, almost 7 years of continuous active duty. Reporting to General Washington at Valley Forge in February of 1778, he arrived at a time of dire stress for the Continental Army. Soldiers were suffering privations, were poorly fed, poorly clad, and poorly shod. The ranks were depleted by sickness, and from terminations of the short 1-year enlistments of the men. The Army lacked

stores and equipment of all descriptions. The recent campaign of 1777 had been relatively unsuccessful and the Battles of Brandywine and Germantown had been lost. The British occupied Philadelphia, the seat of government, and Staten Island and Manhattan Island.

Although the ranks could and would be refilled by drafts, and military stores and equipment were forthcoming, if slowly, General Washington and his generals well realized that the principal deficiencies of the Continental Army were its defective training, its poor military discipline, and its total lack of doctrine. A plan to remedy this situation had already been proposed: a special agency would be formed on General Washington's staff, to be known as the Inspector General, which would have as its principal function the preparation of a system of drill regulations and supervise their application to the training of the entire Army.

It was therefore a most providential set of circumstances which included his friendship with M. le Comte de St. Germain, the French Minister of War, and the acumen of Dr. Benjamin Franklin and Mr. Silas Deane, and the organization of Hortalez & Co., operated by M. Baron de Baumarchais, which finally brought the baron to Valley Forge. From his past 20 years of military service, culminating on the operations staff and as aide-de-camp to Frederick the Great, Baron von Steuben was superbly fitted by experience and by education for the office of Inspector General.

The accomplishments of the baron fully justified the judgment of his friend, St. Germain, and his American supporters, Franklin and Deane. The enthusiasm, energy, efficiency, and genius of Baron von Steuben brought a miraculous change in the state of training of the Continental Army. In the matter of 6 weeks, the new Inspector General brought the discipline and morale of the Army to such a state of proficiency that General Washington felt justified in a celebration. This he did by publishing in the General Orders of May 5, 1778, the particulars for a grand review to be held the following day in honor of the official confirmation of the French Alliance. The review was a great success; and details of the new state of training of the Army reached the British through spies.

Baron von Steuben's brilliant success at Valley Forge was known to Congress, which on May 5, 1778, appointed the Baron to the office of Inspector General, with the rank and pay of major general. General Washington communicated the appointment to General de Steuben at the reception held the evening of the Grand Review, announcing him to his guests as Major General Baron de Steuben, Inspector General of the Army of the United States.

The rebirth of the Continental Army as a disciplined, trained, powerful fighting machine is the greatest contribution of General de Steuben to the War of Independence. This he had accomplished almost as a personal tour-de-force; for, although knowing no English at the time, he himself drilled the first squad, then the platoons, then the entire company of the model company of instructors who were to carry to the Army his drill regulations learned in the Prussian Lestwitz Regiment some 30 years before. The example of the distinguished foreign general officer personally drilling troops was a lesson to both the officers and men of the Continental Army.

But these were not his only contributions. General de Steuben personally wrote the first drill regulations for the Army. They were written in French, and translated by his personal staff officers into English. These regulations were later published by congressional authority in 1779 as Regulations for the Order and Discipline of the Troops of the United States. He also instituted a much-needed system of strength reports, and established accountability and property management in the Army, thereby saving very large sums of money for our Government.

Do any of General von Steuben's accomplishments remain, after these many years? The answer is an emphatic "Yes," and in many areas of the Military Establishment. At the cessation of hostilities, the Baron put his mind to the needs of a permanent system of national defense. His recommendations to the Congress included a regular military force for the protection of the frontiers, a militia on a permanent footing, military schools, and military manufactories.

The United States Military Academy at West Point is a direct descendant of his original plans for the defense of the country. The regular service schools, and in particular the Command and General Staff College at Fort Leavenworth also stem from his original plans. It is no longer possible for a single officer, with a small personal staff, to conceive and establish the rules and regulations for a modern military nation; this now requires an enormous staff effort, almost completely unknown to the public at large. The establishment of a militia as an effective military oragnization did not take place until after the costly experiences of World War I; passage by Congress of the National Defense Act of 1920 provided for a National Guard and a Reserve Officer Training Corps, both indispensable to the success of our military efforts during and since World War II. When one visits a college or university campus and views young men in the military uniforms of the Reserve Officer Training Corps of the various branches of the military service of the United States, we witness again the fruits of General von Steuben's genius.

Full recognition of General von Steuben's achievements for the military security of the Nation has been emphasized only in recent times; but this has now changed. In 1937, John McAuley Palmer wrote: "There were two indispensable military men in the Revolutionary War, Washington and Steuben. When I say," he continues, "that their military services were indispensable, I mean that each of them contributed something essential to final victory that could not have been contributed by any other man then in the American Army. Brilliant as Greene's services were, it is conceivable that Lafayette or Wayne or some other general might have commanded the southern army successfully. But it is not conceivable that any other American soldier could have borne Washington's burden of supreme responsibility. Nor is it conceivable that any other man could have given the technical assistance, essential to military success, that Steuben gave to his chief. Washington was the indispensable commander. Steuben was his indispensable staff officer."

That these views are justified is clear from the famous letter of George Washington dated December 23, 1783, in which he wrote in part:

ANNAPOLIS, *December 23, 1783.*

MY DEAR BARON: Although I have taken frequent opportunities both in public and private, of acknowledging your great zeal, attention, and abilities in performing the duties of your office; yet, I wish to make use of this last moment of my public life to signify in the strongest terms, my entire approbation of your conduct, and to express my sense of obligations the public is under to you for your faithful and meritorious services.

* * * * *

This is the last letter I shall ever write, while I continue in the service of my country—the hour of my resignation is fixed at 12 this day—after which, I shall become a private citizen on the banks of the Potomac, where I shall be glad to embrace you, and testify the great esteem and consideration, with which, I am, my dear Baron, your most obedient and affectionate servant.

G. WASHINGTON.

"In all history, no soldier received nobler recognition of faithful and meritorious service." (J. McPalmer.)

In closing this brief account of General Von Steuben's contributions to American military security, I should like to bring your thoughts for a few moments upon one phase of the requirements of our military services for the future, in particular on the education of the officers in whose hands the destiny of our Nation will lie at the times of ultimate stress.

It was possible in Von Steuben's day to train an entire army in a matter of 6 weeks to 6 months, and to bring it to such a state of readiness that it could successfully meet the finest European military force. But that day has vanished. Today there are fission and fusion weapons and their means of delivery, intricate communication and guidance systems, and orbiting vehicles in the heavens. To utilize these military means intelligently and economically for the defense of this Nation, and to neutralize these military means in the hands of an enemy, demands an effort of the utmost magnitude on the part of this country. For, the complexities, that is, the intellectual content, of these new military weapons is extraordinarily great, and increasing at an enormous rate. It is very likely, therefore, that far-reaching changes will ultimately be required in the education of officers, the Regular and the Reserve and the Militia, so that they may better be able to conceive, develop, supervise the manufacture, and finally employ these complex weapons of the future.

The scientific content of the education required for the military services will soon be of an extraordinarily high magnitude and level. And this education cannot be acquired in a matter of 6 weeks or 6 months, but will take long years of preparation and application. Thus I earnestly beseech each and every one of you to consider these needs not merely of today but of the future. The preparations for the defenses of the Nation 20 years hence start today in the kindergarten. It will require men and women of ability, of honor, of integrity, and of education, in all the ranks, backed by a superlative economy capable of producing the complex mechanisms of defense for the future.

Support by each and every one of us of the educational processes, both civil and military, is an essential and all-important ingredient for the protection of our way of life; a way of life for which Baron von Steuben volunteered his services and which he chose to adopt by becoming an American citizen, so long ago.

Inflation: How Great the Danger?

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the text of the following article from the December 1958 issue of the magazine Nation's Business entitled "Inflation: How Great the Danger?" by Jules Blackman, an economist at New York University. I feel this article is well worth reading as it certainly presents a careful analysis of the economic problem our country is facing today.

INFLATION: HOW GREAT THE DANGER?

(By Jules Backman, economist, New York University)

Warnings that we are about to experience a new substantial inflation are tempered now with statements that the immediate prospect is for a lessening rather than an increase of inflation dangers.

An analysis of the forces now at work will help to keep the picture in focus.

Among these forces are:

Psychological factors.

Price trends.

Wage inflation.

The budget deficit.

Analysis of these indicates that present inflation pressures—which are real enough—may have a limited effect.

We may, for instance, be entering another period such as the late 1920's when inflation was reflected in booming stock prices but wholesale and retail prices were relatively stable.

PSYCHOLOGICAL FACTORS

Underlying the present fear of inflation is a conviction that the combination of fiscal inflation, wage inflation, and a national concern over full employment could provide an irresistible combination. Many of our public policies have an inflationary bias.

The failure of prices to decline in the 1957–58 period tended to reinforce this belief as many persons overlooked the fact that such price behavior had also occurred on several occasions in the past. (See Nation's Business, July 1958.) The easing of mortgage and installment credit terms also pointed in this direction.

It is claimed that these factors have created an inflation psychology.

The importance of psychological factors cannot be ignored. What is the evidence that such a psychology exists today?

Certainly, no such evidence is available in the actions of consumers or of businessmen. Retail sales or inventory policies have indicated no flight from money.

One Federal Reserve Board official has pointed out that:

"The first signals of inflation can [manifest] themselves in distrust of the dollar and a consequent trend to unhealthy speculative tendencies."

In fact, the only area where inflation psychology can be detected is in the securities markets. Many stocks and some of the stock indexes have moved above the peaks of the summer of 1957.

Even in that area, it is not quite clear to what extent the rise in stock prices represents an optimistic appraisal of the magnitude of business recovery and to what extent a flight from money.

Similarly, it is not clear to what extent the decline in bond prices reflects tightening money and a reaction to the speculative boom of last spring and to what extent it is a flight from fixed income securities because of fears of inflation.

PRICE TRENDS

The general level of wholesale prices recorded little change between 1952 and 1955. Late in 1955 these prices began to rise. From a level of 110.7 in 1955 (1947–49 equals 100), the index rose to 118.4 in August 1957. After a year of fluctuations within a narrow range the index was 118.5 late in October 1958.

	August 1957	October 1958 (1947–49=100)	Percent change
Total index	118.4	118.5	+0.1
Farm products	93.0	91.0	−2.2
Processed foods	106.8	109.7	+2.7
Industrial	126.0	126.1	+.1

Similarly, the sensitive price index, which reflects the changes in 22 basic commodities, has shown little change. In August 1957, this index was 89.3 (1947–49=100). Since then it has fluctuated between 84.4 and 87.3. Early in November 1958, the index was about 87. In light of the responsiveness of this index to inflationary influences, its failure to record much change during this period is a significant indication that inflation has not yet taken hold.

Most of the headlines dealing with prices have been devoted to the new highs in the consumer price index, month after month. Less attention has been given to the fractional nature of these new highs. Between August 1957 and September 1958, the consumer price index rose only 2.2 percent. Most of this rise had taken place by March so that between March and September, the index actually advanced only three-tenths of 1 percent.

Clearly, the trends of wholesale and retail prices have not yet reflected a new inflationary price spiral, and upward pressures seem likely to be less in the next few months.

In much of the postwar period, there has been an insistent demand for products to overcome the shortages built up during World War II and on a lesser scale during the Korean war. We no longer have large backlogs of deferred demand which create strong upward pressures on prices.

American industry built a record volume of plant and equipment during the 1955–57 boom. In many instances the current capacity far exceeds peak levels of demand in the past. For example, the steel industry has a capacity of about 145 million tons—almost 25 percent greater than the maximum tonnage ever produced in 1 year. In varying degrees a similar situation prevails in many other industries.

Thus, while a considerable volume of plant and equipment will be built for modernization purposes, there will be less eagerness to expand total capacity as such. In this connection, it may be recalled that the vigorous plant and equipment boom created tremendous pressure for price rises from the demand side during the 1955–57 period. The large surplus capacity also presents a barrier to runaway price inflation at this time.

Possible world conflict is another factor which cannot be ignored. The recurrent crises in the Near East and in the Far East provide potential tinder boxes. Should a war break out, inflation is a certainty. However, if war is averted, there should be only minor pressures as a result of these situations. It is interesting to note that the sensitive price index which jumped some 50 percent during the first 6 months of the Korean war and rose about 7 percent during the first weeks of the Suez crisis showed little responsiveness to the developments in the fall of 1958.

Farm prices, too, have begun to decline. The current agricultural crop is the largest we have ever had. It is estimated that the output is about 10 percent above the peak years of 1948, 1956, and 1957. Large supplies of farm products usually are reflected in lower prices—and some declines have already taken place. From a level of 98.5 (1947–49 equals 100) the index of wholesale prices of farm products has declined to about 91. However, this large farm crop has one inflationary effect because it is requiring larger Government expenditures to support prices. Approximately one-fifth of the increase in the Federal deficit is attributable to higher expenditures for agriculture.

The net effect of modifications of the Federal price support and loan programs will be to permit somewhat lower prices for farm products.

WAGE INFLATION

The most important pressure on costs and prices during the 1955–57 period was the increase in labor costs at a more rapid rate than national productivity. Thus, in the manufacturing industries output per man-hour rose by only four-tenths of 1 percent in 1956 and eight-tenths in 1957—substantially below the long term rate of gain. For the nonagricultural economy the average rise for those 2 years also averaged less than 1 percent per year.

In contrast, average hourly earnings in manufacturing industries rose 5.3 percent in 1956 and 4.5 percent in 1957. Inclusive of various nonwage benefits, the percentage increases were even larger. Substantial pressure on prices was created by increases in labor costs in excess of the lagging aims in output per man-hour. The increases in steel and aluminum prices in August reflected this pressure.

The magnitude of wage inflation is likely to be somewhat smaller in the year ahead. Business recovery usually is conducive to greater gains in output per man-hour as the rise in employment tends to lag behind increasing output. There is some evidence that a similar pattern is developing during the current recovery. While precise data are not available, the recent automobile settlement appears to have increased total labor costs by about 4 percent, or less than in the 1955–57 period. Although this rise in labor costs still exceeds national gains in output per man-hour, the net rise in unit labor costs appears likely to be smaller than in recent years. Hence, the wage inflation, while still a factor, could be less important than it has been.

THE BUDGET DEFICIT

The fact that the Federal Government is faced with a large increase in deficit financing is the most important single factor behind our present fear of inflation. We properly are concerned about the inflationary effects of a budget deficit.

The Government's budgetary deficits are among the most powerful creators of inflation. However, it is not the effect of a single budget which is important. Rather it is the manner in which the price inflation created by such deficits leads to new increases in Government expenditures and thus to bigger and bigger deficits as spending outpaces tax revenues. It is this spiral which has created the most serious inflationary consequences in the past.

A budget deficit of more than $12 billion, such as that projected for the current fiscal year (July 1, 1958, to June 30, 1959) is a serious matter. Such a deficit is inflationary. How inflationary, however, depends largely on how the financing of it affects our money supply.

There have been only moderate changes in the volume of demand deposits and in money in circulation in the past 2 years.

[Billions of dollars]

	Demand deposits	Currency outside the banks	Total
August 1956	104.5	27.5	131.9
August 1957	105.1	27.8	132.9
August 1958	107.6	28.0	135.6

Between August 1957 and August 1958, total demand deposits and currency increased by only $2.7 billion or 2 percent. A smaller rise took place between August 1956 and August 1957. Thus, our money supply has been expanding at less than the 3 percent long-term rate. However, the financing of the Federal budget deficit will inflate the supply of money and credit to the extent that new Government securities are sold to the banks.

The present outlook is for the commercial banks to carry the major burden of this financing.

It is not certain, however, even if the banks finance the entire budgetary deficit, that it will result in an equivalent rise in money supply. Much of the $8 billion increase in the commercial banks' holdings of Government securities in the year ending August 1958 did not result in larger demand deposits. However, total time and savings deposits increased by $10 billion during that period. To the extent that these Government securities can be sold to others rather than to commercial banks, the attending inflationary pressure would be reduced. It is important, therefore, to create the atmosphere which will encourage these and other groups to buy Government securities. Strong measures to improve the Federal budgetary picture would be among the most helpful in achieving this objective.

Meanwhile, some of the danger in this area will be sharply reduced as a result of business recovery.

The increase in the deficit projected for the current fiscal year results from a decline in revenues ($2.1 billion) and an increase in expenditures ($7.3 billion). For the following fiscal year, the projected deficit is cut in half due largely to an anticipated rise in tax revenues. The projected large deficit, then, is not expected to pyramid into a still larger deficit in the following year if Government spending for 1959–60 can be restrained.

It should be possible to curtail spending as a result of business recovery.

Economists usually point out that it is the cash deficit or surplus which determines the inflationary or deflationary effects of a budget. The cash budget includes the operations of the various Government pension funds and of the social security and unemployment insurance funds. On balance, the operation of these funds has usually resulted in a net withdrawal of cash from the economy:

[Billions of dollars]

Fiscal year ending June 30—	Surplus or deficit		Net cash flow from funds
	Administrative budget	Cash budget	
1956	+$1.6	+$4.5	+$2.9
1957	+1.6	+2.1	+0.5
1958	−2.8	−1.5	+1.3
1959 (estimated)	−12.2	−13.7	−1.5

During the current fiscal year, in contrast, a net payment of cash by Government is anticipated so that the cash deficit is forecast at $13.7 billion or $1.5 billion higher than the administrative deficit.

With business recovery, the deficit in the cash budget should be reduced more rapidly than the deficit in the administrative budget.

An examination of the trend of unemployment compensation payments shows why.

Unemployment insurance

[Millions of dollars]

	January–May		Change
	1957	1958	
Tax collections	$1,094.5	$1,064.6	−$29.9
Benefits paid	851.8	1,875.5	+1,023.7

At the low point of the recession—the first 5 months of 1958—total unemployment benefits rose by more than $1 billion as compared with a year earlier, while tax collections fell by $30 million.

As recovery proceeds, the unemployment benefits paid will decline sharply.

At the same time, tax collections will rise because of greater employment and the probability of higher effective tax rates in States with merit rating.

The recently amended Social Security Act provided for larger benefits but also established higher tax rates to go into effect in January. These changes are expected to put the system on a self-sustaining basis. This will also act to reduce the cash deficit.

Thus various funds should provide a moderate deflationary influence instead of adding to the inflationary pressure as at present.

Business recovery through its favorable impact on tax revenues and upon the net flow of cash into the unemployment insurance and other funds also should act to moderate the threat of inflation rather than to increase it. It is vital, however, that new Government spending programs be limited and that old programs be reviewed and pruned to wipe out the deficit. It will make little economic sense of full recovery does not bring about a budgetary surplus.

As for other types of Government action, both Congress and the administration have shown awareness of the inflation problem.

Congress' unwillingness to reduce taxes last year indicated its concern over budgetary deficits.

The President's veto of several measures involving larger Government spending and the order to cut back Federal personnel by 2 percent indicate that the administration realizes the need for economy. The fact that the rise in expenditures stems largely from activities not directly related to defense or to combating the recession indicates that there is room for cutting the $80 billion projected spending. Government spending ing can and must be cut.

There is certainly no reason for complacency over the Federal budgetary situation. Nor should we ignore the difficulties of control.

The Federal Reserve Board has already given notice that it will use its powers to curb price inflation. Early in August, margin requirements on security loans were raised from 50 percent to 70 percent. In October came a further raise to 90 percent. There also have been two increases in the discount rate—from 1¾ percent to 2 percent, and then to 2½ percent. A year earlier the discount rate was 3½ percent so that these are only mild steps. The Federal Reserve, as part of its easy money policy starting in November 1957, had built up excess reserves at the member banks to about $600 million as compared with a net deficiency of reserves of about $500 million before that time. Now, as part of the tightening-up process, this situation has been reversed. Excess reserves have been almost wiped out. Just as the Federal Reserve indicated early in the recession that it would act to make credit more abundant, so it has now indicated early in recovery that it will act to tighten credit.

Many have pointed out that this creates difficulty in marketing Government bonds. They have also pointed out that monetary policy alone cannot curb price inflation, as we have seen in the past.

This is all true. But it seems equally true that we must develop a growing public awareness of the dangers that are inherent in inflation, whether it be fiscal, monetary or wage.

The national objective of a high level employment economy must be supplemented by a national objective to take vigorous action against inflation.

Recognition of Red China

REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks, I want to include in the RECORD the following statement issued by Mr. Harry W. Flannery, president of the Catholic Association for International Peace, on the subject of recognition of Red China.

In view of the suggestions advocated by some people, to the effect that our Government and the United Nations Organization should revise our policy with regard to the recognition of Communist China, I believe that Mr. Flannery's statement is timely and very important. It reviews briefly, but very adequately, the compelling reasons which argue against any change in our policy with respect to the recognition of Red China, and her admission as a member to the United Nations.

I have made my position on this issue clear in the past, and I am in agreement with the views outlined by Mr. Flannery. I therefore wish to commend his statement to the earnest consideration of the membership of this body.

The statement follows:

RECOGNITION OF RED CHINA, STATEMENT BY HARRY W. FLANNERY, PRESIDENT, CATHOLIC ASSOCIATION FOR INTERNATIONAL PEACE

At the present time, there are demands and appeals from many sources for a revision of United States and United Nations policy with regard to recognition of Communist China. Those who are urging that the United Nations accept Communist China as a member, and that the United States establish diplomatic relations with the Peiping regime, should carefully consider the following points:

1. The Charter of the United Nations (chap. II, art. 4) sets forth that its members must be peace loving.

2. The United Nations General Assembly, on February 1, 1951, by a vote of 44 to 7, made it plain that Communist China is not peace loving. This resolution declared that "the Central Peoples' Government of the Peoples' Republic of China, by giving direct aid and assistance to those who were already committing aggression in Korea, and by engaging in hostilities against United Nations forces there, has itself engaged in aggression in Korea." Thus, Communist China was declared to be an aggressor against the forces of 17 members of the United Nations. This designation still stands.

3. Communist China also aided aggressors in Vietnam and has attacked the islands of Matsu and Quemoy. In the latter case, Communist China has asserted in Peiping broadcasts and in talks with the U.S. Ambassador in Warsaw that its real objective is the island of Formosa. Communist China declares that it will take Formosa by force if necessary, thus threatening further aggression.

4. The Communists gained control over the 600 million people of China by force. They were able to succeed because the Soviet Union turned over to them the vast military supplies taken from the Japanese in northern China after the United States had defeated Japanese imperialism. These supplies were turned over to the Communist Chinese at a time when the Soviet Union had a treaty of peace and friendship with the Republic of China.

5. The people of China have not been given the opportunity of choosing their own government, even though Mao Tse-tung, in 1937, before the Communists had taken over the China mainland, promised free elections in China.

6. Admission of Communist China to the United Nations would threaten the Repub. of China, now exiled on Formosa. Communist China, once recognized as the United Nations representative of the Chinese people, would then claim suzerainty over Formosa. It also could demand the seat on the United Nations Security Council now occupied by the Republic of China.

7. Admission of Communist China to the United Nations would conceivably threaten British control of Hong Kong. It would make it unlikely that Cambodia, Thailand, and perhaps other countries in the area would remain non-Communist.

8. Admission of Communist China to the United Nations would affect the status of 12 million overseas Chinese in southeast Asia. Since these Chinese are influential citizens in Malaya, the Philippines, Indonesia, and elsewhere, the non-Communist governments of these countries might conceivably face a new threat.

9. Admission of Communist China to the United Nations would threaten the freedom of refugees from Communist China now in Hong Kong, Formosa, and other parts of southeast Asia.

10. Article 4 of chapter II of the United Nations Charter declares that: "Membership in the United Nations is open to all peace-loving states which accept the obligations contained in the present charter and, in the judgment of the organization, are able and willing to carry out these obligations."

Among the obligations of members of the United Nations are the 18 essential human rights named in the United Nations Declaration of Human Rights, beginning with freedom of religion, and including, among others, freedom of opinion, speech, assembly, fair trial, property, education, and participation in government. Yet the leaders of Red China have consistently and continually violated the basic freedoms of the Chinese people. One has only to point out the tragic situation of Christian missionaries on the China mainland, and the persecution which they and their people have so long endured at the hands of a relentless and godless regime.

Can anyone seriously believe, on the basis of the record, that Communist China will live up to any of its obligations, and thus meet another requirement of United Nations membership?

Those who propose membership in the United Nations for Communist China cannot ignore the points here set forth, nor the tyranny that denies to the people of China the most elemental of human rights, including religion, and even life itself.

Small Business Tax Adjustment Act

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I have introduced H.R. 13, the Small Business Tax Adjustment Act, which is an identical bill to H.R. 2, introduced by my esteemed colleague, Congressman FRANK IKARD. These bills are similar to the bills that Congressman IKARD and I sponsored in the last Congress.

The passage of this legislation is urgent if we are to maintain the proper balance in our economy between small and large business. It is urgent if we are to have the growth we need to maintain a healthy and progressive economy.

The bills which Congressman IKARD and I introduced in the last Congress were the subject of extensive hearings by the Ways and Means Committee. The committee in its report accompanying a bill which sought to alleviate some of the lesser problems of small business recognized the soundness of the philosophy behind our bills, which hit at the basic problem.

Now is the time to implement the Ikard-Curtis philosophy by legislation.

What is the philosophy? That traditionally in the private enterprise system economic growth comes essentially from the small and new businesses. That the small and new businesses finance their growth essentially from retained earnings, not from bank borrowings, new equity capital or other sources which are generally not available to it.

This is the seed corn philosophy upon which America has grown great. We plant 1 acre of corn, but we retain enough seed from the harvest to plant 2 acres next year. Yet under our Federal tax structure we have been taxing the seed corn so that we are stunting the healthy economic growth we need.

There are those who are so blind to basic economics that they look upon relief from the seed corn tax as threatening the revenues of the Federal Government. It is quite the other way around. If we do not stop taxing the seed corn we will not have the economic growth from which we have been deriving our increased Federal revenues.

During the last recession we overanticipated our Federal tax revenues by about $8 billion. Why? Because we were counting upon an increased gross national product for a larger tax base. Instead of the increased GNP we had a decrease. Essentially this decrease came from the new and small businesses not going ahead with their planned expansions, because they did not have the financing necessary to do so.

Congressman IKARD and my theory of removing some of the tax on the seed corn is bound to produce more, not less, Federal revenues. The only basis upon which a business gets the tax credit in our bills is when it puts retained earnings into growth of the business. What is growth in a business other than increased payrolls, increased expenditures for capital outlays which mean increased payrolls in other businesses? The amount of tax the Federal Government obtains from this kind of expenditure is multiplied several times over.

Furthermore, there is no question but the Federal Government loses revenue when the healthy small businesses are made part of larger concerns through merger and acquisition, particularly when in many instances the purchase price of the small concern is partly paid out of tax-avoidance savings.

Many present-day mergers and acquisitions are not real economic growth. Indeed, many actually are stifling growth. There are, of course, mergers and acquisitions resulting from good economics, but the rate of mergers and acquisitions in the past few years clearly indicate reasons other than good economics lie behind this process. One does not have to look far to find the answer. The answer lies in our Federal tax laws, which discourage economic growth and place a premium on economic cannibalism of larger companies swallowing smaller ones.

The point is not whether the Treasury can stand the enactment of the Ikard-Curtis bill. The question is rather how long can the Federal Treasury stand not to have it enacted.

The bill (H.R. 13) follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. Deduction for additional investment in depreciable assets, inventory, and accounts receivable.

(a) ALLOWANCE.—Part VI of subchapter B of chapter 1 of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following new section:

"SEC. 178. Additional investment in depreciable assets, inventory, and accounts receivable.

"(a) GENERAL RULE.—In the case of any person engaged in a trade or business, there shall be allowed as a deduction for the taxable year an amount measured by the additional investment in such trade or business for the taxable year.

"(b) LIMITATIONS.—The deduction under this section for any taxable year shall not exceed whichever of the following is the lesser:

"(1) $30,000, or

"(2) an amount equal to 20 percent of the net income of such trade or business for the taxable year (computed without regard to this section).

"(c) ADDITIONAL INVESTMENT DEFINED.—For purpose of this section, the additional investment in a trade or business for a taxable year means the amount (if any) by which—

"(1) the aggregate, computed as of the close of the taxable year, of the adjusted bases of—

"(A) all property used in the trade or business of a character which is subject to the allowance for depreciation provided in section 167,

"(B) all stock in trade and property held primarily for sale to customers in the ordinary course of the trade or busines,

"(C) all accounts receivable attributable to sales to customers in the ordinary course of the trade or business, exceeds

"(2) a similar aggregate, computed as of the beginning of such taxable year.

"(c) SPECIAL RULES.—Limitation on Affiliated Group.—For the purposes of this section:

"(1) All members of an affiliated group shall be treated as one taxapyer, and

"(2) The Secretary or his delegate shall apportion the limitation contained in subsection (b) of this section among the members of such affiliated group in such manner as he shall by regulations provide.

"(3) AFFILIATED GROUP DEFINED.—For the purposes of this section, the term 'affiliated group' has the meaning assigned to it by section 1504, except that, for such purposes, the phrase 'more than 50 percent' shall be substituted for the phrase 'at least 80 percent' each place it occurs in section 1504 (a)."

(b) TECHNICAL AMENDMENTS.—The table of sections for such part VI is amended by adding at the end thereof the following:

"Sec. 178. Additional investment in depreciable assets, inventory, and accounts receivable."

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 1958.

Our Impoverished Diplomats

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article by David L. Cohn, from the January issue of the Atlantic Monthly:

OUR IMPOVERISHED DIPLOMATS

(By David L. Cohn)

The rich United States treats its Foreign Service career officers with pinchpenny niggardliness. It thereby, to its disgrace, exacts heavy sacrifices of devoted men and sharply lessens our diplomatic effectiveness.

Annually, at the expense of their families' welfare, these men spend upward of $200,000 of their own money in extending official hospitality to foreigners for the Nation's benefit. Large sums are spent by men in such ambassadorial posts as London, Paris, Rome, posts open only to the wealthy because the salaries and allowances attached to them fall far short of the needs. These posts are in effect bought by rich men who contribute liberally to the winning political party in a presidential election. They are therefore nearly always barred to the career diplomat, even though he be the embodiment of Franklin, Talleyrand, Metternich.

How does this affect us in the field? In Paris the informed knew that the young officer being removed from our Embassy there was exceptionally able, that his removal was the country's loss. Speaking of him, Secretary of State John Foster Dulles told the Senate Foreign Relations Committee: "When I was in Paris * * * I had luncheon with some prominent French people; they said what a tragedy it was that this fellow had gone. They said, 'Why did you take this man away?' "

He was removed because he had gone broke doing his job. Mr. Dulles continued: "He just could not afford to live there. He had already gone into debt and had neglected the education, health, and dentistry of his children. * * * So we had to pull out one of our most effective persons. * * * He spoke French perfectly and was our best at the operating level, the best counterpoise to the activities of the Soviet Embassy."

Thus the land of the $80 billion budget removed an able diplomat from an important post to one politically inconsequential, because it would not spend money to enable him to do his job well.

Like Paris, like Rome. At our Embassy there an officer recently spent $1,500 of his own funds entertaining official guests for the benefit of the United States. He is without independent income and has a family of four.

Why do these men make such sacrifices? It is because they cannot bear to see America poorly represented, because it pains them that their country should appear cheap and shabby in the eyes of foreigners, because they are professionals with the passion of their kind for perfection.

The whole difficulty stems from inadequate "representation allowances" appropriated by Congress. These are funds to cover the cost of hospitality tendered for America. They are not compensation for individuals. No personal advantage accrues from them.

For fiscal 1957 these allowances were only $800,000. But although living costs are rising everywhere and our competition with the Communist world grows daily more intense, Congress sharply reduced the allowances for fiscal 1958 to $600,000. For fiscal 1959 they will be $750,000. This is less than the appropriation of 2 years ago, yet more men are in the field, and the need for money becomes acute.

The $600,000 allowance for 1958 was spread thin. It was distributed among 80 diplomatic missions, 200 consulates, and approximately 1,600 officers. Since it was insufficient, almost no one had enough money to meet his minimal responsibilities. What are these responsibilities?

Our foreign service officer ought to cultivate local leaders in all spheres so that dealings might progress on a friendly, informal basis if the need should arise. Occasionally he must entertain these leaders and acquaint them with visiting Americans. He should, moreover, be able to talk lengthily and informally with local nationals about matters of common interest away from their offices. This is especially important in Oriental countries. In Japan, for example, even businessmen conduct much of their business in teahouses and restaurants, and many Japanese regard as vulgar the foreigner who insists upon doing business in the office.

These activities require more money than the $600,000 presently provided. Many American corporations spend larger sums entertaining customers and currying good will. Corporate expense spending, it is estimated, is now about $5 billion a year. This is equivalent to one-sixteenth of the whole Federal budget and is deductible from taxable income. But the same Government that is so lavish with businessmen's expense spending grudgingly grants pennies for the same purpose to the men charged with the awesome duties of discharging the Nation's foreign policy and winning good will for it against intense Communist competition nearly everywhere.

Let us see how this policy affects one consulate general. Its consular area contains 12 million people. It is located in a key city of more than 1 million people, engaged in shipping, manufacturing, trading. Aside from routine tasks such as issuing visas, the consulate interprets to Washington local political and economic trends, advises and entertains visiting American industrialists, calls upon and entertains local officials, businessmen, labor leaders, and all who may be useful to America in its economic competition with the West and in its economic-political competition with the Communist world.

The consulate general has a representation allowance that, in the opinion of Congress, is large enough to permit it, among other things, to maintain close, friendly contacts with hundreds of persons at all social levels. It is $345 a year, or about 90 cents a day.

Our consul general does not aspire to funds sufficient for the task. He merely longs for ample "lunch money." With it he could take local leaders to lunch and, he says, "do a little brain picking. I could entertain them for entertainment received and develop close contacts with labor leaders, teachers, and professional people, all of whom are important in opinion formulation."

The people here, as in huge areas elsewhere, are largely illiterate. For most of them the purchase of a radio would be unimaginable. "But," observes our consul, "here the personal approach pays rich dividends. Marvels can be achieved provided one enjoys personal friendships in the right places; lacking such friendships, the best laid plans may fail." How much personal approach, in terms of lunches, dinners, donations to local charities, may be had for 90 cents a day?

We compete with the Soviet Union and Red China throughout the continent where this consulate general operates. But our representatives are at a great disadvantage in terms of the personal approach. The Soviet Union, unlike ourselves, does not dole out representation allowances according to rigid formula. It allots them according to the demands of the task. Hence the representation expenditures of its embassies, and those of its satellites, are limited only by the number of people of present or potential importance who will attend their dinners and entertainments.

Look at our pinchpenny policy in the small, strategic southeast Asian country of Laos. We have poured nearly $150 million of aid funds into it. But our Embassy officers in Vientiane recently dug into their own pockets for $984 to pay for hospitality extended by them to Laotian and foreign officials.

We have also poured huge sums into neighborhood Cambodia. There we are in direct, open competition with nearby Red China for Cambodia's good will. Officers assigned to our Phnom Penh Embassy recently spent $1,750 of their own money for official entertaining. Last year a touring American track team visited Cambodia. In order to obtain the maximum benefit from the visit, our Ambassador held a luncheon in the team's honor to which he invited interested Cambodians. This display of patriotism on the Ambassador's part cost him $92.50.

One of our crucial posts is at Amman, in the beleaguered desert Kingdom of Jordan. In the fiscal year ending June 1957, every officer of our Amman Embassy dipped into his pocket to do his official tasks. In this period, marked by the Suez war, nearly all Americans were evacuated from Amman for 5 months, as were all Britons and many members of our foreign communities. The prevailing blackout and curfew sharply restricted normal contacts, but even under these conditions our Amman Foreign Service officers had to use their own funds to do their work.

We have a new consulate at Kampala, Uganda, a remote African area rapidly growing in importance to us. Uganda is approaching self-government. Hence the demands upon our consulate are the greater because it must deal with the semiautonomous Government and Parliament of the Kingdom of Buganda, which is destined to play a key role in determining the constitutional future of Uganda, as well as with the protectorate Government and National Legislative Council of Uganda. Our two officers at this important, demanding post are granted a total of $500 a year (about 65 cents a day each) for representation allowance.

During the first 4 months of this fiscal year these officers spent $525 on essential representation. At this rate they will have to spend $1,000 of their own money during the year, in addition to their $500 allotment.

Consider the plight of our consul at Tabriz, Iran. He was senior to his Turkish and French colleagues at a moment when the Shah was coming to Tabriz, and protocol dictated that our man must receive the Shah on behalf of the consular community. Protocol also dictated that he wear morning clothes for the occasion. The Shah could not know when our consul stood before him that the representative of the world's richest people owed his morning clothes to the willingness of a local tailor to wait a year for his money.

Our Government requires its officials to wear the clothes prescribed by protocol, such as tails, morning clothes, and so forth, but it does not help pay for them. Thus recently an officer with a wife and five children was forced to borrow $2,500 to make essential purchase of clothing and equipment in preparation for assignment overseas. While abroad he must continue to pay income, real estate, and personal property taxes to his domiciliary State of Virginia. How much, then, of his own money can this man afford to spend for the benefit of the United States?

We are the world's largest automobile manufacturers. Yet our diplomats use many broken-down cars. Regulations forbid the spending of more than $5,000 for an ambassador's car. The need is for a seven-passenger limousine, airconditioned for the hot countries, with a window partition for privacy in talks. Such cars cannot be had for our top price. The State Department is therefore forced to purchase discarded cars of cabinet members, secondhand funeral-home limousines, and the old cars of foreign diplomats in Washington who are buying new ones.

Naturally, the rolling junk we send our diplomats causes them trouble. Some time ago Loy Henderson, deputy Under Secretary of State, was our Ambassador to Teheran. This able officer had been sent an ancient car for his use. "But," he told the Senate Foreign Relations Committee, "we had so much trouble with it that we did not dare go very far from Teheran. I recall that on several occasions when we were going to the airport to meet distinguished guests it broke down on the way and we had to transfer hurriedly to other cars."

Our diplomats must do certain ceremonial entertaining. Everywhere they hold open house on the 4th of July to all Americans and invited local nationals. It may consume a year's representation allowance. The 4th of July reception in London costs the Embassy about $5,700. This is $700 more than the Ambassador's $5,000 representation allowance for a year.

The expense account is a fixed American business institution. But while we believe that it is a good thing for business to make friends by entertaining customers, we are only partially convinced that it is a good thing for our Foreign Service officers to do. Hence, while an American businessman in Rome may be spending hundreds of tax-deductible dollars dining his customers, down the street an American diplomat may be digging into his own pocket to pay for a pedestrian luncheon for an important Italian official. How can we entrust our diplomats with grave responsibilities and yet treat them with such parsimoniousness?

Our diplomatic corps is the basis of the operation of our foreign policy. Personal diplomacy is sometimes effective, and the politically appointed diplomat may be successful. Yet there can be no substitute for the well-trained, devoted diplomatic corps. As Senator LYNDON JOHNSON puts it, "A nation which does not have such a corps does not have a foreign policy." Yet no diplomatic corps can be at its best when it lacks the best tools in abundance.

A Latin American's Idea on Hemispheric Unity—I

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ANFUSO. Mr. Speaker, an interesting and thought-provoking little book has recently come to my attention which contains some excellent ideas for the improvement of inter-American relations. The author is Jose A. Benitez, a 34-year-old Puerto Rican, whom I consider an up-and-coming Latin American statesman. His major thesis is the urgent need for unity, understanding and cooperation among the peoples of the Americas as a way "to solve among themselves the common problems affecting the destiny of the hemisphere."

Despite his relatively young age, Author Benitez has already achieved a notable career in several fields. He served in the U.S. Army during World War II, was a columnist for a Puerto Rican newspaper, director of a radio program, secretary to the majority leader of the Puerto Rican Senate, assistant to the Secretary of Justice, president of the Democratic Party of Puerto Rico since 1952 and chairman of its delegation to the National Democratic Conventions in the United States in 1952 and 1956, member of the mayor's committee on Puerto Rican Affairs of New York, and numerous other accomplishments.

Benitez cites Puerto Rico as an example of how best to settle hemispheric differences, in order to develop all potentialities and share in the common destiny of the Americas. He stresses the need for breaking down the barriers of misunderstanding. Once this is achieved, he visualizes a united America, free of national complexes and ancestral bitterness, a pioneering America ready to perform unselfish services and provide leadership to mankind.

I have recently had occasion to visit several Latin American countries in connection with my resolution to create a Pan American Parliamentary Association to help unite the nations of the Western Hemisphere for their well-being and security. Because of Puerto Rico's close relationship with the United States on the one hand, and its historic and ethnic origin as a Latin American community on the other hand, Puerto Rico assumes a unique position in inter-American relations and may be destined to play an important role in cementing hemispheric unity.

Mr. Speaker, Benitez' book is entitled "Puerto Rico and the Political Destiny of America." It is a challenging little volume which should be read by our policy framers, Members of Congress, Government leaders, and all students of Latin American affairs. For this reason, I am inserting excerpts from the book and commend these to the attention of my colleagues:

PUERTO RICO AND THE POLITICAL DESTINY OF AMERICA
(By Jose A. Benitez)

PROLOG

The peoples of the Americas—North, Central, and South—urgently need the unity, understanding and cooperation that will help them to solve among themselves the common problems affecting the destiny of the hemisphere. The nationalist idea has become bankrupt, confronted with the changes of a world where geography has shrunken, while a gigantic wave of complications agitate a life already threatened by international pirates. There is no greater problem facing our part of the world than that of obtaining the understanding and cooperation needed to remove the barriers of indifference and to unite us in the objectives that are historically inevitable to the brotherhood of the future.

It is evident that in the great task of establishing an intercontinental understanding, the initiative is in its preliminary stages but is impeded by perhaps too much dialectic and a too laggard approach toward the fruits that the unity of America (and by "America" I mean all the countries of the Western Hemisphere) must yield. I hope I will not be accused of meddling censure when I say that North America as well as South America has turned its back on the responsibilities of their common fate. This lack of rapport among American communities creates, feeds, and expands prejudices, which operate against the interests of these communities, thus retarding the benefit that they may obtain through their association and understanding.

I know personally many heads of governing bodies who lead the affairs of American peoples. I have talked to politicians, to individuals in various professions, to newspapermen, to people who influence public opinion in the United States and Latin America. I have found in them a feeling for intercontinental understanding, a belief in a genuine American creed, and I dare to say that the furrow is ready for the seed that will bring forth the harvest.

I am a humble student of politics, who seeks to take advantage of its teachings—of the domestic type as well as the universal. My experience has taught me to believe in the virtue of honest communication. This is a thing most likely to prevent misunderstandings and to destroy suspicious feelings, thereby giving life to causes that honor mankind and exalt history. Distrust, especially unfounded distrust, is the product of sterile passions that impel toward the renunciation of human usefulness and greatness. To my way of thinking, the American peoples are separated by imaginary barriers, by surface puerilities, whose fragile mortar will fall apart when the leaders of the hemisphere accept and act on the idea that they must get closer together and try to understand each other.

I am convinced that our America cannot escape its Americanist destiny, that the people eventually will be in accord and will recognize that they have a common fate. Why, then, delay the natural process of our fruitful understanding? And why not speed the action with catalytic agents within our reach that will help bring us out of the impasse and into prosperity?

The tendencies that today separate the democratic nations of the free world from the enslaved bloc of the Communist countries call for a calm but rapid reconsideration leading toward the strengthening of our hemisphere. The north needs the south just as much as the south needs the north. The trouble here is not a matter of mistaken pride. The great task is for the serious and real initiation of cooperation among the American nations, and it is a task for everyone to consider. It is urgent to begin the work of creating and understanding, to gather

together in conference and make agreements in an atmosphere of generosity and brotherhood. It is necessary that our fellow men of the north get to understand better our brothers of the south, and that our brothers of the south likewise come to know those of the north.

Puerto Rico is a Latin American country, which preserves its traditions, history, and culture while maintaining a political association with the United States in bonds of brotherly fellowship, which include a common U.S. citizenship. Sixty years of family relations with that great nation give the Puerto Rican testimony concerning North and South Americans and their relationships with each other the quality derived from an exceptional experience. It is obvious to say that we know Latin America, as it is obvious also to indicate that we know the United States. With this knowledge, deriving from our origin and from the understanding that has flourished in the development and promotion of our country in the friendly orbit of the United States, we Puerto Ricans are puzzled somewhat by the state of things where, time and again, nations of warm, human qualities which, despite differences in race and language, could complement one another, nevertheless are somehow driven apart. It is sad to observe when it is so clear that by the gathering together of their respective virtues they could achieve mutual greatness.

Puerto Rico provides the best example of how the two main hemispheric sections could settle their differences, so as to attain the greatest good of their respective potentialities and share their destiny. By examining the experience of Puerto Rico, both the Latin American nations and the United States will find the proof that they can and must do away with their differences and start the work of unifying the hemisphere. Unquestionably, that is the mission of America. Its leaders have the responsibility of shaking off apathy and starting the task at once.

I offer this book as my humble contribution to the great work of bringing a better understanding between the countries of America. I present in it some points which reflect the efforts, the evolution, and the social achievements, economic and political, of the Puerto Rican people during the period of their relations with the United States. Without political or literary pretensions, I submit whatever is usable to the constructive judgment of the leaders who represent the north and the south and who are concerned for the destiny of the hemisphere.

I want to point out that to make possible this contribution I received valuable help from one of the most distinguished writers of Puerto Rico, who, giving freely of his experience, knowledge, and talent, worked with me at all times, guiding me in the ordering and application of my ideas. And so I make especial mention of my debt to my good friend, the writer Luis Antonio Miranda.

If my small effort gives some aid to the mutual interests of the leaders of America, I will feel greatly rewarded. May it be God's will that what I have sown will have some part in the blooming of a great intercontinental harvest.

ANTECEDENTS

Puerto Rico was discovered by Christopher Columbus during his second voyage to America, in the year 1493. The colonization of the island started some years later, in 1508, under Don Juan Ponce de Leon, the poet of the conquistadors, who gave credence to an Indian legend and set sail in search of the fountain of perpetual youth. Don Juan Ponce was the first Governor of Puerto Rico.

The island is by all means a Latin American community; it has the same origin, historical process, culture and political development as all the other Spanish-speaking countries in the New World. Our connection with Spain was similar to that of all other Latin American countries. However, the circumstances and historical facts that determined the branching off from Spain of the various Latin American countries were different in each case.

At different times, the Spanish colonies in America felt a strong desire for independence, but it was only after much struggling and fighting that they became free nations.

Puerto Rico, with an area of 3,435 square miles and overpopulated, having few resources to depend on and no possibility of success in an adventure of secession, faced its future realistically and negotiated with Spain the Autonomic Pact of 1897. Shortly after the Puerto Ricans had begun to enjoy their autonomy, war broke out between the United States and Spain, in 1898. The American troops landed on the island under the command of Gen. Nelson A. Miles, who in a historic proclamation told the Puerto Ricans that he had come to bring liberty and to vanquish the oppressors. Although all the incumbent officials kept their municipal or insular offices, a military government was established. This lasted until May of 1900, when a civil government was formed, having a North American governor and an executive council with power to enact laws. The civil government was established by virtue of the Foraker Act, approved by the Congress of the United States without ratification by the Puerto Rican people. The government given to the island constituted a regression to the former colonial status and brought to an end the autonomic powers enjoyed by the Puerto Ricans on equal terms with the other Spanish provinces.

The struggles between Puerto Rican patriots and the authorities sponsored by the United States began here, continuing with much uproar. Increasingly, the relations between the two countries were affected by the difficulties attached to misunderstanding and indifference. This created discouragement among the leaders who fought for greater liberties for the island and whose feeling contributed to divisions in public sentiment. This was the principal cause, as the years wasted away, for the retardation of advancement and of the solution of social, economic and political problems, while our country remained stagnant.

While don Luis Muñoz Rivera, an illustrious and prominent Puerto Rican, was Resident Commissioner in Washington, the Jones Act was approved by the U.S. Congress in 1917. This law gave the Puerto Ricans American citizenship. In doing so, it set up a new regime and established, 19 years after the change of sovereignty, a government that still granted few political concessions and that was quite inferior to that established by the Autonomic Charter obtained from Spain. The improvements came, in short, with snail-like speed.

Under the Jones Act, the executive power was limited to a governor, who was appointed by the President of the United States, and to the similarly appointed judges of the supreme court of the island and several members of the governor's cabinet, among whom were the chiefs of the treasury department and the department of public instruction.

Along with the gift of American citizenship, the greatest political concession to the Puerto Ricans consisted in the establishing of the legislative power formed by two Puerto Rican legislative branches whose members occupied their positions by popular vote. However, the concession was not a great one, for the laws of the legislative branches were subject to the governor's veto and finally to the decision of the President of the United States.

It was expected that the granting of American citizenship would end the extreme estrangement and misunderstanding existing in the political relations between the two countries. This hope soon began to wane because of the prolonged continuance of restrictive and vexing conditions inherent in the colonial status of Puerto Rico. The culture, patriotism, dignity and libertarian aspirations of the people of Puerto Rico inspired brave but impotent struggles against the powerful tentacles of colonialism. Social and economic evils increased. The interests of land monopoly and absenteeism took hold of the island. The exploiters of the laborers and of the peasants strengthened their position through the practice of vote buying, thus obtaining the nomination of their candidates, who made laws that suited their purposes and favored their personal interests. Many thousands of landholders disappeared under the voracious forces of the absentee corporations, which intensified the monoculture of sugar cane. Over the country spread the evils of unemployment, of misery, of famine, and of illness, until a total impoverishment spread its roots through the island.

Under the protective covering of an unrestrained colonial system, Puerto Rico came to be an enchanted paradise for the vicious alliance of politicians and exploiters, as well as a calvary for the crucifixion of the Puerto Ricans who worked hard and produced the wealth. The axiom that colonialism is not a political system but a system of economic exploitation found its cruel proof in Puerto Rico during that tragic period, which lasted up to 1940. But it should be pointed out in all honesty that the United States did not profit from the prevailing system—as it would have under the imperialists—but the industrial vampires benefited from the inaction and incomprehension existing in the relations between the two communities.

As the island went more and more adrift, due to the indolence of our politicians and to the indifference of our continental government, a new leader arrived on the political scene with a program leading to the repair of our social and economic conditions. This leader had in mind the moral and material vindication of the people of Puerto Rico. His program was first scoffed at as utopian by many of those who now back it and bless it. Their leader is our present Governor, don Luis Muñoz-Marín. Although a Puerto Rican, he was brought up in the United States; he made a study of the political problems of Puerto Rico to promote the island's true welfare. On his return to the island he made all possible efforts to reconcile the obstacles that handicapped the cordiality and good understanding between the United States and Puerto Rico, and that added to the indignity of colonialism.

Having founded in 1938 the Popular Democratic Party, with a numerous, determined, and experienced nucleus of leaders who loved Puerto Rico deeply, Muñoz-Marín traveled throughout the island preaching the need of uniting together so as to obtain justice. He condemned the immorality of vote buying as the most degrading act a citizen could commit. He introduced to the people of Puerto Rico the much-needed reform legislation, the immediate support of which was pledged in a solemn public act by the candidates for the legislature. In the elections of 1940 and during a civic movement without precedent the Popular Democratic Party came into power.

Since 1898, when General Miles announced that the American occupation troops had come to bring liberty to the Puerto Ricans, Puerto Rico, in spite of having enjoyed a dual citizenship since 1917, had done nothing toward the solution of its colonial problems. Up to the year 1950, the Jones Act of 1917 was still in effect. The President of the United States had the power of nominating and appointing the successive Governors who exerted the executive power in our country. These Governors had no knowledge whatso-

ever of our language, of our idiosyncrasies, or of our problems, and they had not lived with the interests and ideals of our people. As was said before, it was the President's task to appoint the judges of the supreme court of the island, as well as several members of the Governor's Cabinet. The colonial status prevailed fully, as did the exasperations and frictions that hurt the self-esteem of our humble but proud people. It was necessary to overcome the lack of comprehension between the two countries in order to establish the mutual trust and cooperation that might and should contribute to both communities as a respecful tribute to their relations as adult, civilized, Christian people.

For reasons that now appear to be naive in a political atmosphere of such dark aspect, with a resentful attitude that shut out all possibility of approach and comprehension, Puerto Rico threw overboard 42 years of precious time. This time could have been increasingly fruitful to Puerto Rico's endless undertaking of development and improvement, if it had been marked by the acts of mutual confidence that today it exchanges with its excellent fellow citizens of the United States.

There is a saying which claims that "through discussion, people get to know each other." Puerto Rico, thank God, conquered its historical scruples, erased its ethnic and idiomatic prejudices and established an honest and fraternal friendship with the people of the United States. Now we can say that it shares a perfect understanding with the great Republic of North America in a communion of a bountiful fraternity which becomes more fruitful each day.

The key to this fraternal understanding rested in breaking off the vexatious and stubborn shell of misconception, the handicaps of which lead only to sterility.

NEW HORIZONS

The first step in liberalizing our government was to be directed toward the full control of public powers, so as to wage without truce on multiple fronts a war urgently demanded by the social and economic problems of the country. The Governors from North America appointed by the President of the United States were sometimes mere beneficiaries of the political sponsorship of the North who, with their lack of interest in the welfare of the people of Puerto Rico, caused the legislative assembly to be too cautious and circumspect toward enacting the needed laws for fear of arousing the opposition and resentment of the great corporations controlling the financial condition of the island. It was necessary to overcome the indolent indifference concerning Puerto Rican interests in the political circles at Washington. A beginning had to be made in cutting a path toward comprehension, and for the stimulus of a sense of responsibility still undeveloped in the apathetic National Government.

It was lucky for the Puerto Ricans that, because of his former literary activities in the progressive press of the United States which brought him into close association with writers of international renown, Luis Muñoz-Marín was well known among the members of President Roosevelt's Brain Trust, as well as to Mr. Roosevelt himself. In this favorable situation, in the fellowship of the writing craft and with reliable collaborators, the great Puerto Rican leader started a personal campaign, beginning the agitation that induced Washington to face up to the Puerto Rican problems and to give attention to the island's claims for social justice.

The first victory of this campaign was the appointment of Rexford Guy Tugwell as Governor of Puerto Rico. He was a university professor and an advocate of the New Deal program. The liberal and just philosophy of this man who was to be the last North American Governor naturally favored the immediate approval of the laws that were to solve the social and economic problems of our people. To Gov. Rexford Guy Tugwell, Puerto Rico is indebted for the comprehensive and essential understanding of a pioneer labor that made posisble the flowering of our ideals. Tugwell assumed the governorship of Puerto Rico on September 19, 1941, and turned it over to Don Jesus T. Pinero on September 3, 1946. Pinero was the first Puerto Rican Governor; his historial appointment was made by President Harry S. Truman, successor to President Roosevelt.

The first steps had been carried out in full. The seemingly unconquerable wall of the island's subjugation was crumbling. At the beginning, necessary reforms were initiated in an organic act, an interim measure for the desired liberalization. The reforms projected therein were later approved by the U.S. Congress and by President Truman and were made law on August 5, 1947. They placed the appointive powers formerly held by the President of the United States in the hands of the Governor of Puerto Rico, subject to the advice and consent of the Puerto Rican Senate. The reforms also granted to the island the power to name its own Governor by popular vote in a general election. The first elected Governor, elected in 1958, was Muñoz-Marín.

As soon as these reforms were approved, other efforts for a more liberalized form of government were started in Congress and in the White House. These reforms demanded the establishment of a complete self-government based upon the exercise of the Puerto Ricans' self-determination. However, the association between the people of Puerto Rico and the United States was to be maintained through a state of reciprocity and by the bonds of the United States citizenship.

It was a case of an extraordinary experiment, this creation of a new form of government within the system of the U.S. Federal Government. It was a product of the ideals and thought of the leading Puerto Rican minds, a raising of a guiding light which has since proved to be the source providing a form of vital political relations for fruitful understanding among the peoples of different races, languages, and histories.

The efforts of the Puerto Rican leaders echoed in the democratic and liberal conscience of the national leaders in North America. It was President Truman, himself, who addressed Congress in three special historical messages, urging it to grant the people of Puerto Rico the establishment of a complete self-government, exercising their own determination and writing their own permanent organic act. The United States Congress approved, on June 4, 1951, the act known as law 600, which was submitted for the approval or disapproval of the Puerto Rican electorate; this act had no precedent in the United States Congress. The public feeling early manifested for the legislative changes brought an overwhelming majority of votes for the congressional law that gave Puerto Rico the right of free determination for the establishment of the official juridical regime which has the name of the Commonwealth of Puerto Rico.

By virtue of his powers, Gov. Muñoz Marín called the people to hold free elections to pick the members of the constitutional assembly. After the elections, 92 delegates occupied their positions in the inaugural session, which took place on September 17, 1951. The constitution was approved by the constitutional assembly on February 4, 1952. This document was submitted for the approval of the Puerto Rican voters, who approved it on March 3, 1952, by a very heavy volume of votes.

In accordance with U.S. Law 600, the Constitution thus approved by the people of Puerto Rico was sent to President Truman, who studied the document in all its articles and submitted it to Congress with his recommendation for approval. The Congress of the United States approved the Constitution of the Commonwealth of Puerto Rico as a treaty. The complete text of the constitution appears in the next chapter.

The new Puerto Rican regime was proclaimed in a solemn public act at San Juan, capital of Puerto Rico, on July 25, 1952, in the presence of the personal representative of the President of the United States, of Congressmen, and numerous other important dignitaries and personalities of North America, as well as illustrious ambassadors, politicians, and intellectuals of Latin America.

The last official act of Mr. Truman as Chief Executive of the United States consisted in addressing a message to the United Nations Organization, stating the fact that the United States was relieved from all further responsibility for reporting to the Economic Council on the social, economic, and political situation of Puerto Rico. This was due to the fact that the island had already established a complete self-government, pursuant to exercising its free determination, and was no longer a colony. President Truman requested the recognition of the Commonwealth of Puerto Rico by this international organization. After a debate giving vent to continental passions, which had nothing to do with the basic considerations of the foundation and establishment of the new Puerto Rican government, the General Assembly of the United Nations by a substantial majority vote recognized formally the regime recently established by our people.

The beautiful success of the political formula that freed the people of Puerto Rico, enabling them to manage their own affairs and cope with their own fortunes in reciprocal community affairs with the people of the United States, is a splendid living realization, which, in the warmth of a dynamic understanding with the United States, has permitted us to see the miracle of the loaves and the fishes. Our political ideal is on the march, open as a fountain of fraternal cooperation to the Spanish-speaking nations and to the United States to initiate and support to fruitful completion the speedy confraternization of the hemisphere.

The Puerto Ricans stand ready, with outstretched arms.

THE COMMONWEALTH OF PUERTO RICO

The Commonwealth of Puerto Rico is the regime adopted by the Puerto Rican people by means of exercising their free determination, establishing their complete self-government in social, political and economic association with the people of the United States.

The formula created and adopted by the island developed as a pact of mutual agreement worked out between the U.S. Congress, with the approval of the President of the Nation, and the Puerto Rican electorate, who expressed their will in free and democratic balloting during three different electoral processes. The first one was held to accept or to reject the law of the U.S. Congress in which that body acknowledged the right of the island to rule itself under its own constitution. The second one was carried out to elect the members of the constitutional convention. Finally, the third one took place on the occasion of the approval of the constitution. Each of the three elections elicited a very decisive number of favorable votes.

This form of government—a new creation—is offered by Puerto Rican political thought to all the people of the world who are subject to another form of government, as a guide for dignified orientation for the working out of local problems for the establishment of liberty in their own government, if the people in the case—as has been

the Puerto Rican case—are prepared for the possession of national citizenship.

The Jones Act of 1917 made the Puerto Ricans citizens of the United States. Notwithstanding this fact, historical causes of a complex diversity maintained the island in a colonial type of structure impossible to modify. There were especially difficult problems of economic or social character which made illusory the aspirations of liberty of our people.

The political parties of Puerto Rico divided their demands and efforts of emancipation between the formula of Federal statehood within the Nation—that is, the United States—and the formula of complete independence, separated from the Nation. This struggle of political tendencies, antagonistic as they were, appeared as soon as the earliest days of the North American domination of Puerto Rico, when the military occupation of the island following the Spanish-American War in 1898 was completed. The civil government of the island, following the occupation, was reestablished and the Puerto Rican political parties reorganized.

Having gone through the period of the Foraker Act, the statute which reconstituted civil government on the island in 1900, and through the period of the Jones Act, which extended in 1917 U.S. citizenship to the islanders, the Puerto Ricans engaged in an ineffectual struggle for independence or statehood. In neither of the two courses did we advance a single step; we simply regressed, losing ground in the direction of self-sufficiency, the economic base upon which the political aspirations of federation and separation had to be considered. The history of this epoch is rather tragic. The dispute between both aspirations produced a deep and resentful division of the Puerto Rican family which—although it has been ameliorated—we have not yet been able to eliminate as a whole.

In the hands of the leaders of this dispute, the crippling situation was aggravated to an alarming extent. The economic and social problems were augmented almost until asphyxia was produced, driving off to a remote distance all possibility of facing effectively the political problem. The population increased tremendously. Foreign investments and absentee parasites took hold of the marrow of our economy. The tentacles of the corporate system broke the resistance of our land. The army of peons and unemployed grew like an avalanche. Our astonished eyes saw an enormous increase in the danger of monoculture on our farmlands.

Through such evils, Puerto Ricans suffered maladjustments of income which brought privations, malnutrition, sickness, and misery. Due to the unjust distribution of the riches produced, countless Puerto Ricans in the fields, factories, and worshops were condemned to a prolonged and inhuman misery. The people of Puerto Rico were disintegrating as a living nation. The economic and social cancer was sucking our blood, gnawing our bones and tearing our flesh.

To make more effective their intervention in defense of their interests, the capitalists entered into politics and took hold of the legislative power. Consequently, Puerto Rico became a paradise for the exploiting class and a purgatory of sacrifice for the exploited class. Morally, the U.S. citizenship was strangled. The corruption of the purchase and sale of the vote undermined the strength of our traditional civilization. Puerto Rico met the enormous annual deficit of its budget with Federal help assigned to education, hospitals, roads, and other services of the public welfare.

It was in such chaos that we came to 1940, when the popular Democratic Party, with its program of social, political, and economic redemption, succeeded in destroying the ignominious chicanery of the bought vote and came to power under the inspiration and guidance of its leader.

Then, seeking ways to support the enormous population on our small territory, our people attacked their traditional hard adversity with the limited means at their disposal. They strongly hoped for a better material life and for a more secure one.

At this point, our political problem was in suspense, without any alternative. The economic and social maladjustment received prompt and industrious attention. The party which the people had created and backed for the winning of justice—as we said before—wrote emancipating laws, solemnly promising the people that these measures would be enacted at the first meeting of the legislature and would be made to take effect as rapidly as possible. This group of laws—which formed the backbone of the material and moral redemption of the island—doubtless constituted one of the most exemplary civic revolutions which a courageous people have won, standing upon the ruins of a community structure and struggling against all the handicaps of a colonial status.

These laws provided the groundwork for the best and most just distribution of the riches produced in the country. They began to redeem the Puerto Rican land and to remake the civic economy. The salaries, working conditions, living standards, employment opportunities, and essential services for the people were improved. The human dignity of the laborers and peasants was restored to them. The laws gave priority to the rescue of the Puerto Ricans as human beings.

For this continuing and dynamic battle the Government created public agencies as instruments for attaining the desired ends, and for them it selected and recruited the best available talent, providing these people also, at the beginning, with the help of wise advisers and indispensable technicians brought from outside the island. The problems that weighed upon the island were, and are still, attacked at their sources, on the basis of careful study and scientific planning.

When initial measures had appreciably improved the general welfare and the black line of the mortality graph had been brought down to a steadily lower level, the signal was given for an intensive battle of production, and, by means of plans and laws that have proved effective, the program for industrialization was begun, which, at its apogee, promises to attain the self-sufficiency of the country.

At this particular peak of the Puerto Rican achievements—let us locate it in 1948—the conflicting independence and statehood blocs were continuing their political contest, with their representative minority parties, the Independent and the Statehood, trying to reconcile their objectives with circumstances, realities and historical facts that were insuperable. Puerto Rico was—and still is, in fact—a long way from having found a modus vivendi for economic independence or from the discovery of a means to carry the expensive burdens of statehood. The annual deficit of the Puerto Rican subsistence was being covered at the stage mentioned above—and is being covered today—by the Federal aid previously referred to. On the other hand, the coldness, the incomprehension and the indifference that restricted the relations between the United States and Puerto Rico had been transformed into warm and reciprocal relations achieved by brotherly love, by the vigorous force of human equality, by civilized realism and by diminution of the xenophobia which existed on both sides.

Notwithstanding all this, much of the old colonial restriction continued in effect. The Puerto Ricans could elect their Legislative Assembly; but the President of the United States—it must be repeated—had the power of nominating the Governor of the island, several members of his cabinet and the judges of the supreme court, and he also had the last word to say regarding the possible reversal of the laws that were approved by Puerto Rico.

There is no need to say that the titanic effort of the Puerto Rican people in their struggle for social and economic emancipation required the means of political liberty, without which the whole plan would be like a ship adrift. Lacking for the time the self-sufficient resources requisite for settling the classic debate of independence or statehood, it was necessary to put aside efforts to solve this riddle. The case demanded political depth, conscientious objectivity and patriotic courage, to say nothing of a profound knowledge of the specific situation of our island. How to obtain then an honorable liberation from this unhappy voluntary confinement? The great convention of the popular Democratic Party approved in 1948 a resolution that authorized its leaders to deal with the problem. These men diligently pursued their task and obtained a substantial success when President Harry S. Truman appointed Don Jesús Piñero as the first native Puerto Rican governor of Puerto Rico. Right after this, further reforms were obtained providing positive liberation in the organic charter for the government of our country, reforms which established the right of our people to elect our own governor, and transferring to him the power of all the erstwhile presidential nominations.

While these achievements were still in the making, the most serious thought of the Popular leadership was centered on the search for the form of liberty that—without exposing to damage or destruction the gains that were giving promise of autosufficiency—would adapt itself, constructively and honorably, to the difficult and specific case of our people. It was in this manner, as though by way of a new road, that the crystallization and establishment of the Commonwealth of Puerto Rico came forth, whose constitution—published in the preceding chapter—lets the world see the form of liberty that we, the Puerto Ricans, have chosen, exercising our free determination, in unobstructed and democratic elections, so that we may deal with efforts to find solutions of the problems of our affairs, life, and destiny.

We are at present the Commonwealth of Puerto Rico, voluntarily associated with the United States by economic, social, and political bonds, and free to develop the growth that will support the future security of the island. The pact of mutual agreement effected between Puerto Rico and the U.S. Congress is fraternally backed up by the nexus of a common citizenship.

But the political formula that opened a door to the complex condition prevailing in the island has the striking feature that it does not impede the growth or hinder the free will of the Puerto Ricans and the destiny that may be worked out in the future, as the Commonwealth of Puerto Rico was politically designed for all sorts of growth, on all lines and on all fronts.

God will light the future.

New England Has the Best There Is

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BOLAND. Mr. Speaker, the January 14 edition of the Boston Herald carried a very timely and interesting article

written by Managing Editor George E. Minot about New England entitled "Great New Era Already Here." Under leave to extend my remarks I ask that the article be printed in the Appendix of the Record.

The article follows:

GREAT NEW ERA ALREADY HERE

(By George E. Minot)

New England is the best place in the world to live, bring up your children, educate them and do your own business. It is the best place to spend your spare time. Nowhere else can you find the unexcelled stretches of sandy beaches, the craggy rocks where mountains meet the sea, or so many opportunities to hike in summer or ski in winter.

No other section meets the exacting requirements of those who love to pursue the little white ball over fairways or out of carefully landscaped traps. No place you can think of in the United States is better adapted to that great, new and rapidly growing sport, motorboating. Here a score of rivers wend their way seaward, and here literally thousands of safe harbors and lakes beckon those who in the last few years have found perfect weekend outings for their families.

Recreation is only a small part of life in New England. Consider another for a moment—education. If this is something you underwent as a youth, or if your own children are not yet old enough to go away to school, perhaps the tremendous growth in this field has escaped you.

AMAZING GROWTH IN SCHOOLS, COLLEGES

Within your lifetime schools and colleges have shot from under you. Thirty or forty years ago when you thought of education in New England, you considered first Harvard and Yale among the larger institutions and Massachusetts Institute of Technology, Bowdoin, Amherst, and Williams among the smaller. Today MIT is one of the great institutions of the world, and right under your nose, almost out of nowhere, has come another technical school—Northeastern—now with a student body approaching 18,000—that is ready to rival it.

Tufts, only yesterday a small college, now is a great university. Brandeis, unexcelled anywhere in America where scholarship and faculty are considered, within the last few years started from scratch on an almost abandoned hillside in Waltham, and now has a student body of 1,200.

Harvard, oldest and greatest university in the United States, is well on its way to raising the unprecedented sum of 80-odd million dollars so it may be an even better place to receive an education. Boston College, which you thought of half a century ago as a small Jesuit school in Newton, now has 9,600 students, including a school of nursing. Boston University, whose dingy quarters were scattered all over Boston, has a magnificent set of buildings along the Charles and an enrollment of almost 20,000.

WORLD CENTER OF MEDICINE

Yet education is only a small part of life in New England. You might consider medicine. Once again the temptation to indulge in superlatives almost overcomes you. Yet it is hard to avoid them. The day never passes in Boston when a trans-Atlantic plane does not bring to these shores patients who have come here in the hope Boston specialists and Boston hospitals can find the answer to their ills.

You pick up your newspapers many, many times a year and read of some new operation that has been performed here, perhaps the transplanting of one organ from a relative or a volunteer to the body of another. If you have read the record of the past, you know that a great many of the "firsts" in this field took place in Boston hospitals.

If you are interested in the record of the present, as is more likely, you should know that these advances are continuing month by month, even week by week. Students from all over the world know that in no other place can you get the training that comes from the Harvard and Tufts and Boston University medical schools or from the Massachusetts General, the Beth Israel, or the Massachusetts Memorial Hospitals, to mention only a few of a great many that do equally distinguished work.

SYMPHONY, CONSERVATORY LEAD IN MUSIC

Hospitals, recreation, schools and colleges all are big businesses in New England. So is music. Critics from many cities have told us the Boston Symphony Orchestra is the best in the country. The New England Conservatory of Music for 50 years has set a standard other institutions continually try to meet.

This is a business and industrial review. It is greatly interested in the things that make New England a good place in which to live. It is equally concerned with the reasons why this is a fine and profitable place in which to work, in which to establish or conduct your business. This section points out some of the remarkable things that have been going on here and it emphasizes where we stand now and where we are headed.

Elsewhere in this section you may read what has been happening in the field of transportation and travel hereabouts. For years motorists complained about getting through Boston. The old Route 1 was a nightmare for those who wished to go somewhere in hurry. Narrow Boston streets, some said to have been laid out by the meanderings of cows pastured on the Common, plagued the unwary.

Boston's highways have gone modern. We have the best that skill and money can produce. Great new expressways lead to the north and the south. The Mystic River Bridge bears an ever-increasing load. Route 128 is a motorist's dream come true.

Or perhaps you are interested in travel by water. Then there is the great port of Boston. Or if it is by air, the Logan International Airport is the easiest to reach of any in the country's major cities. It has the runways to take care of the great new jet transport planes.

Boston is the hub of all this. Legislators from other Massachusetts communities often overlook this. So do officials from other States in this region. Without a growing and prosperous Boston there can be no growing and prosperous New England.

Here are the port and the airport, closer to Europe by air and by water than New York or Philadelphia. Here are the great parent concerns without which many of the new and fabulous shopping centers in the suburbs would be impossible. Thus Boston's rapid transit problems, its commuter problems, and its tax problems are ones that do not concern the city alone but all the rest of the area.

ONE HUGE COMMUNITY

Take your own case. If you live in the suburbs consider how much you take out of Boston and how little you may contribute. Naturally you are primarily interested in the schools, fire and police departments, town employees, tax rate and hospitals in the community where you and your family live. That doesn't mean Boston's problems are not your's, especially if that is the place where you work.

Or if you live anywhere in Maine or New Hampshire, for instance, consider how much the city of Boston influences your life, or how much you depend on what is manufactured, printed, or institutionalized in Boston. Or how often you come to great sport events for entertainment here.

It's one great community. The success of one depends on the success of the other.

Anybody going into business here, or anybody coming from another part of the country to look over the prospects here, is entitled to an answer to his most obvious questions: Why should I place my plant in New England? Why, when the area obviously is far removed from many of the sources of raw materials and from markets for finished goods, should I build in New England and thus be saddled with more costly freight charges?

Why should I situate here, instead of perhaps in South Carolina, where the taxes are lower and where perhaps I can get a better break from local authorities who often are willing to overlook such things as taxes for a period of years? Why should I build a plant in New England where obviously I will have to pay more heating and lighting bills than I would if I built, perhaps, in Florida?

UNEXCELLED SKILLS

Any good chamber of commerce man can give you any number of answers to these and other questions. You will get only the most important answer here. That is that here in New England you can get a supply of skilled labor unexcelled anywhere in America. You can get a diversification of talent undreamed of elsewhere. You can get a know-how, a dedication to the job, and a realization that because of other obstacles the worker here knows he must produce a little more and a little better quality in order to hold his job and keep his employer in business.

Oh, yes, say the unwary, that may have been true 25 or 50 years ago, but in these days of automation, when you have machines that can almost think for themselves, when your laboring man can almost stand blindfolded and punch a hole in a sheet of metal as it passes in front of him on an endless belt, not even knowing what part he plays in the process—today, the unthinking man says, skilled labor isn't as important as it used to be.

There's where you're wrong, brother, and all you have to do is to ask any manufacturer, any employer, any businessman who is running a plant. You will learn that today the percentage of engineers, technicians, scientists, trained personnel is far higher than it ever was. You will learn that ordinary run-of-the-mill labor is plentiful anywhere, but that more than in any other place in the Nation, New England offers an abundant supply of the skills.

They have smart cookies running the great industrial empires in Detroit and Pittsburgh, and they know what they are doing when they sublet hundreds of contracts to the little factories in New England—to the plants that employ 50 or 75 men—that turn out precision instruments, gears, electrical gadgets and complicated bits of machinery cheaper and better than can the big plants themselves.

And if you look at scores on end of small businesses in cities and towns in Massachusetts, southern New Hampshire and Maine and all over Rhode Island and Connecticut, you will find they are working on Government contracts for instruments so complicated, often secret, that they stagger the imagination.

And again you come back to the proximity of the big universities, the technical schools and colleges, where scores of teachers are available on a few minutes notice for consultation—men of national reputation whose services are in demand in Washington and in big plants everywhere.

It's easy to say that in this day of rapid transportation, they can fly from the Atlantic to the Pacific in a few hours, but in New England they are there—Where else is there for them to go?

It is easy but hardly correct to say that Boston and New England stand on the

threshold of a great, new era. The era is here already. Work already has started on the great new Prudential Center—a veritable city-within-a-city. It isn't enough to say that Boston has a great tomorrow. It has a great today. One look at the great new overhead highways, the beautiful new buildings in the process of going up, and you know that without being told. And with this for a start, the only way can only be up and ahead.

Bituminous Coal Industry

EXTENSION OF REMARKS
OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. SAYLOR. Mr. Speaker, this week's issue of the Saturday Evening Post contains an excellent article on the bituminous coal industry. It emphasizes the stability of labor-management relations, an important consideration in a consumer's long-range fuel-supply plans.

I congratulate the executives in coal companies and the United Mine Workers of America for the manner in which they have conducted contract negotiations without work stoppage. They have demonstrated conclusively that coal may be depended upon to serve the Nation in both industrial and domestic capacities. Mine owners have invested vast amounts of capital in mechanizing the mining processes. The UMWA has welcomed this progress, despite displacement of a substantial number of workers, because this union is so practical and farsighted as to realize that scientific and engineering advancement contributes to the general welfare and living standards.

The Saturday Evening Post article describes the costs of some of the machinery that has given the U.S. bituminous coal industry an output per man day of at least four times more than that of any other country in the world. The article also points out that many miners displaced by the advent of mechanization are finding new employment opportunities in plants of manufacturing and processing industries which have come to recognize the advantages of locating in coal areas.

Western and central Pennsylvania, as well as other coal-producing regions, invite industry leaders to take notice of what we have to offer in the way of guaranteed fuel supplies, manpower, and transportation facilities. Unfortunately, even this new trend toward coal will not entirely solve our surplus labor problems. We are going to have to have legislation by the Congress to remove the existing inequities responsible for so much of the unemployment that is plaguing coal communities. Immediate action is required to reduce the excessive shipments of foreign residual oil that inundates east coast amrkets defiance of an executive department order and an amendment to the Reciprocal Trade Agreements Act. Congress must also take steps to prohibit the dumping of natural gas in industrial markets at prices below those imposed upon the homeowner for this specialty fuel.

One of the other threats to the coal industry is mentioned by Mr. Ben Pearse, author of the Post article. He mentions the high cost of producing electricity through atomic energy as compared with power generated by coal. Congress must be alert to prevent subsidization of an atomic electric industry that would place another heavy burden upon taxpayers and at the same time further impinge upon opportunities for the thousands of families dependent upon coal as a means of livelihood.

Mr. Speaker, I ask special permission to print in the RECORD the article, "The Indestructible John L.," from the Post of January 17, 1959.

The article follows:

THE INDESTRUCTIBLE JOHN L.

(By Ben Pearse)

Twenty years ago the Nation shook when he barked. Today he's a mellower man—but still able to drive a hard bargain.

"John L. Lewis," the headline writer muttered to himself as he skimmed through a sheet of press copy on his desk, "I thought he was dead. Haven't heard of him for years."

The copy announced briefly that the bushy-browed leader of the United Mine Workers of America, very much alive, had signed a new agreement with the Bituminous Coal Operators' Association. A few years before, that would have climaxed weeks of banner headlines about picket lines, court battles and factories shut down for lack of coal, illustrated with the frowning visage of the miners' chief.

But this story said nothing about strike violence, court orders, or shutdown factories. There were no ultimatums, no recriminations. With a shrug, the headline writer gave it routine treatment for wage raises and thumbed on through the copy before him for something more exciting.

Who tamed John L. Lewis? For nearly 9 years now—March is the anniversary month—his union has called no major strike against its employers. Since 1950 most of their wage agreements have been negotiated and signed with so little fanfare that they attracted only passing notice or none at all. The Senate select committee's hearings on the sad state of some labor-management relations ran for more than a year without mentioning the word "coal."

"What is this," one operator said recently, crossing his fingers, "the millennium?"

Except to students of labor relations, the question would be academic but for one surprising fact. Coal is staging a comeback. The industry so often pronounced sick and dying mined 500 million tons of bituminous coal in 1956—the point of some return on investment—and came within 2 percent of hitting that mark again in 1957, despite the recession. Barring a brief flurry during the oil shortage of 1947–48, it hasn't dug that much coal under peacetime conditions since 1929. Coal production last year fell off with the rest of industrial production, especially in steel. But electric utilities are using more coal year by year. By 1975, they expect to be burning about 490 million tons of coal, as much as total production for all purposes last year. Bank brochures recommend coal-company stocks for long-term investment, and L. Newton Thomas, retiring as president of the National Coal Association, declared, "The only thing the coal industry is sick of is being called sick."

It will probably be news to most people that they had anything to do with the industry's comeback or are even concerned. But it takes a pound of coal to make every pound of steel in your car. An increasing proportion of the aluminum all around you is made with electricity generated from coal. Except in hydropower areas, 7 chances out of 10 anything electrical you own, from your toaster or air conditioner to the band saw in your hobby room, is powered by coal. It comes into your home in other forms you never suspect—nylon stockings, medicines, plastics—and without leaving dust or ashes. Indeed, ashes are now too valuable to throw away or scatter on icy sidewalks. Fly ash makes a superior concrete. Thousands of tons of it are in Hungry Horse Dam in Montana, the huge new span over Straits of Mackinac in Michigan, in highways and in building blocks and soil pipe of new housing developments. If the coal-fired gas turbine now in the testing stage proves successful, you will again be traveling on trains and ships, perhaps even in automobiles, powered by bituminous coal.

The story behind this revolution in the Nation's basic fuel is a documentary in hard-bitten personalities. It is no coincidence that the hazardous, back-breaking business coal digging is should beget belligerent leader on both sides of the bargaining table. But neither is it a coincidence that the peace agreed upon between them in the unofficial treaty of Washington nearly 9 years ago opened an era that has since put the industry in black ink and miners' wages at an alltime high. In this about-face from open warfare to undeclared peace, the hard-bitten personalities haven't changed, except for their stance. Instead of fighting each other, both are now fighting their competition. Their banner bears a strange device, "cooperation," is a word quite foreign to the industry's vocabulary for so many decades.

Several things combined to topple bituminous coal from its 1947 pinnacle, 631 million tons. But one of the most important was the labor turmoil that cost it many of its best customers. Elimination of the strike threat has won many of them back again.

Coal salesmen today, as though they had never heard of a coal strike, are guaranteeing firm delivery schedules on long-term contracts. With, say, a 20 million ton order—1 million tons a year for 20 years—they have learned they can finance a wide variety of machinery and equipment that would be prohibitively expensive otherwise. Under a 15-year contract, for example, the Consolidation Coal Co. recently completed the first coal pipeline that will deliver 1,200,000 tons of coal a year from its mines near Cadiz, Ohio, to the Cleveland Electric Illuminating Co., 108 miles away. The $12 million cost will be liquidated by savings in freight. In the old days no coal operator would have had the temerity to guarantee a firm schedule for 1 year, much less 15, or spend $12 million to meet it. The introduction of new equipment has kept coal prices stable for the past 8 years, despite wage increases and inflation. President W. C. MacInnes explains why the Tampa Electric Co. built the first coal-burning generating plant in Florida and is building another, a 240,000-kilowatt plant.

"We don't buy fuel by the ton, gallon, or cubic foot any more, but by the B.t.u. (British thermal unit). Coal gives us a million B.t.u.'s for 32 cents compared to 38 cents for the competing fuels we've been using. When we start getting coal by barge instead of by rail on a 20-year contract, we expect to get the cost below 30 cents per million B.t.u.'s."

What happened and how long can it last? Could it possibly have been the coal operators, not John L. Lewis, who underwent the quick change that has made dependable delivery the industry byword instead of stabilizing periods of inaction? The answer lies behind the scenes at the last performance they appeared in together in public, when they suddenly laid aside their battle garb to

sign the treaty of Washington, officially the National Bituminous Wage Agreement of 1950. This climax came after 10 months of spirited skirmishing at the bargaining barricades, in the courts and across the front pages of newspapers from coast to coast, that accomplished nothing, but did raise blood pressures on both sides to a common high. With the mines shut down completely the blustery first week in March, President Truman asked Congress for authority to take over the mines again—for the sixth time in 7 years. The last act of this drawn-out melodrama was short.

As the curtain rises, the operator representatives, red-eyed from lack of sleep, are sitting around a conference room in a downtown Washington hotel, chewing their cigars and cussing and discussing the proposed Government seizure. A telephone rings with a call for George H. Love, who was acting as chief negotiator for the operators, exit Love. Thirty-five minutes more of cigar chewing, cussing and discussing. Enter Love, who announces that he and Lewis have agreed on terms that he will sign for his company, the largest in the industry. A pin drops. Then there is a sudden exodus for long-distance telephone booths—one operator guessed the tolls reached $10,000—as the curtain falls. The final tableau—set portentously on a sunny Sunday afternoon, as I remember—shows operators and union representatives queuing up to sign the contract that ushered in what is now frankly proclaimed as a new look in labor-management relations.

What went on offstage? Without any shouting, shooting, or hullabaloo, Lewis and Love settled a 10-month deadlock in 20 minutes—allowing 15 for the walk to a nearby hotel and back. Neither of them elaborated on their conversation at the time, but the late Harry M. Moses, head of United States Steel's captive mines—an ex-coal miner whose father and grandfather were miners before him—filled it in afterward.

"Since the first Federal commission made the first investigation of labor relations in coal back in 1902," he said, "we have been mediated, conciliated, legislated, and regulated. We had been partially seized, wholly seized, unseized, and reseized. We had been beaten over the head in all sorts of fancy places, including that famous oval-shaped office on Pennsylvania Avenue. We wanted to keep the Government out of our business."

On several past occasions, Lewis had benefited from Government intervention—the union's welfare and retirement fund was established while the mines were under Federal control—but the two fines totaling $2.1 million that had recently been imposed on the union were enough to convince him that Government intervention was a fickle thing. He wanted no more of it either. The settlement was a surrender by neither side to the other, but by both to a mutual ogre, Government control.

To make the new look permanent, Moses took the lead in organizing the Bituminous Coal Operators' Association with a permanent staff in Washington to replace the old once-a-year conference. His colleagues called him "the man who worked out a way of doing business with John L. Lewis." His formula was simple.

"Under the old joint wage conference procedure," he explained, "almost every coal operators' association and every union district were entitled to a representative, and enough of them always showed up to fill a good-sized hotel ballroom. Lewis would kick off the meeting by presenting outrageous demands and vehemently castigating the industry's shabby treatment of its underpaid and underprivileged employees. Then whoever was in best voice among the operators would arise to reject each and every one of the union's demands and plead that the industry was no more than a few days away from total bankruptcy. Finally, after several days of speeches everybody knew by heart, a couple of the leading operators would get together with Lewis and Tom Kennedy, U.M.W.A. vice president, in a hotel room somewhere and work out a deal that could be ratified by everybody.

"The new system merely eliminated the speeches. Both sides had instructions from their membership. Both sides had frequent meetings with their policy committees before and during negotiations. This businesslike method of arriving at a contract was best for all parties concerned, including the public."

He proved his point the following year, when, without any public disclosure that negotiations were going on, a new contract was signed 2 months before the old one expired.

Peace did not immediately lead the coal industry out of the financial woods. Dieselization of the railroads after World War II cut their coal consumption nearly 90 percent in a decade. The swing to oil and gas for home heating cut that market in half during the same period. Operations held up through the emergency in Korea, but in 1954 fell abruptly to the lowest point in 20 years, only 392 million tons. Labor peace did, however, lay the groundwork for the upswing that came in 1955, and has continued since, because it gave a new impetus to mechanization.

Mechanization was not new in the coal industry. Cutting machines were introduced early in the century, and loading machines in the twenties. Productivity rose gradually from 3 tons a day per man in 1900 to about 6½ tons by 1950. But in the late forties came the first continuous-mining machines, that drilled out the coal without cutting or blasting, carried it to the surface on belts and automatically dumped it onto railroad cars or barges ready for shipment. For surface or strip mining, more powerful equipment became available—45-ton trucks, for example, and a huge shovel that lifted 90 tons of overburden at a bite to a height of 100 feet or more. For mining in hilly sections augers up to 6 feet in diameter were developed that bored 200 feet into a seam and reamed out the coal like shavings from a carpenter's bit.

The only trouble was, this machinery was expensive. One continuous-mining machine cost about $100,000. That 90-ton shovel cost $2,500,000. To equip a mine of 2 million tons a year capacity with machinery like that might run up to as much as $10 million. And money tied up in machinery doesn't earn dividends unless the machinery runs steadily. Thus, peaceful labor relations were the cornerstone on which the heavy investment in modern mechanization rested. Probably some operators had their doubts about a labor millennium, but the industry as a whole took a chance and poured millions of dollars into new machines in the first 5 years after the peace pipe was smoked, a few companies as much as doubling their investment. Productivity zoomed from 6½ tons a man-day to more than 10 tons, a larger increase than in the preceding half century, and is still rising. Some mines average 25 tons a day per man, and the record is nearer 100. The European average, incidentally, is less than two.

And so, if the investment was a gamble, it paid off. The operators took their losses in the railroad market, at least temporarily, and the home-heating field, much of it permanently—together about 140 million tons a year. But the gains mechanization made possible in the electric-utility, steel and export markets have largely recouped that deficit, and offer even greater opportunities for the future. How far in the future? Can Lewis and his miners survive the advent of atomic power?

The whole coal industry has given a lot of thought to the threat of atomic power. But most of it has been devoted to maintaining the lead coal has in relative costs. The first commercial-scale atomic reactor, at Shippingport, Pa., is generating electricity for about 64 mills per kilowatt-hour, admittedly high because of its experimental nature. The most optimistic estimates are, however, that this can be reduced to from 7 to 11 mills a kilowatt-hour in the next 10 or 15 years. According to the Federal Power Commission, coal is now producing electricity in the midcontinent area for an average of eight mills and in some of the newest utility plants for as little as three mills. By still further cutting down transportation costs—that coal pipeline is the newest wrinkle—that often account for as much as 40 percent of the price of coal, the industry is providing a constantly lowering target for atomic power to shoot at. Tom Pickett, executive vice president of the National Coal Association, the industry trade organization, puts it this way:

"We recognize the need to continue development of nuclear power in view of the Nation's rising demand for energy. But the United States Bureau of Mines estimates that the country will still need a minimum of 784 million tons of coal by 1975, and may need as much as 1 billion tons—more than double the amount mined last year. Some experts forecast that atomic power will be furnishing perhaps 25 percent of our total electric energy by that date. In many parts of the world where transportation is a major factor, atomic energy may someday be the cheapest energy fuel. But in the United States we believe atomic power will supplement, not eliminate, other fuels. Barring excessive Government subsidies, the coal industry should be able to maintain a competitive price for many years to come."

A report by the Investment Bankers Association of America would seem to agree. "Atomic power," it states, "offers an early competitive threat only to the extent that it may be subsidized by the Government to accelerate its acceptance," and concludes that "the near- and long-term future of the bituminous-coal industry is a bright one."

Mechanization has not been an unmixed blessing to the union. It has raised wages, but the 200,000 miners working last year produced as much coal as roughly twice that number did 10 years. What happened to the 200,000 miners who have been displaced by technological progress? About 75,000 of the older ones have reached 60 and been placed on the pension rolls. Some have turned to other jobs, but the U.M.W.A. now numbers its unemployed at more than 100,000. It's a problem unions besides the miners' are facing today, and the solution isn't an easy one. Nevertheless, the union is maintaining the stand expressed by Lewis several years ago, that "it is better to have a half million men working at good wages and high standards of living than it is to have a million working in poverty and degradation."

The long-range prospect for absorbing these unemployed miners is better than it might seem at first glance. In the area served by the Tennessee Valley Authority, electric power has attracted new enterprises that have indirectly increased employment. The rapid expansion of electric power now going on in the Appalachian coal region is expected to produce a similar result. For example, a new mine that opened last June at Cresap Bottom, W. Va., will employ 600 men. But the new generating plant being built beside it burning coal practically at the mine mouth will employ up to 100 men, and a new aluminum plant built across the Ohio River at Clarington, Ohio, to use only half the electricity will employ more than 1,200. New factories to turn the aluminum into consumer goods will employ more men, and service industries attracted by these payrolls will contribute to the upward trend. Union officials I talked to believe that if

temporary relief can be afforded the distressed areas where unemployment is greatest, the downward trend will be completely reversed over a period of a few years.

Can the idyllic labor peace last that long or are pressures building up beneath the surface that will eventually blow the "new spirit of tolerance," as Lewis calls it, sky high? In a survey covering the twenties and thirties, rating 17 industries on the general pattern of their strike propensities, Chancellor Clark Kerr and Abraham Siegel, of the University of California, placed miners at the top of the list, followed closely by sailors and dockworkers. Those workers, the study covering 11 countries pointed out, lived in isolated groups, with their own codes, myths, heroes, and social standards, and experienced the same hazards, bad living conditions and intermittent employment. The hard, unpleasant, seasonal nature of the work, they noted, attracted tough, combative and virile workers, among whom the force of public opinion was weak because they never saw the public. In these circumstances, the authors observed, the totality of common grievances after they have been verbally shared may be greater than the sum of the individual parts. A strike for these isolated groups, they concluded, was a kind of colonial revolt against far-removed authority, an outlet for accumulated tensions.

If these were indeed the underlying causes of the notoriously bad labor relations in the coal industry, the prospect of the new look surviving would seem to be pretty good. The old company store, company houses, and company scrip the coal miner lived by in recent memory are things of the past. Mechanization is making him more of a skilled workman and less a pick-and-shovel man every year, with correspondingly better pay. Thanks to the boom in air conditioning, he works in summer as well as in winter. A health and welfare program is giving him more security for his family and his old age. More and more he is getting around in his community and becoming a part of the public he serves.

That doesn't mean John L. Lewis can now retire with no more worlds to conquer. There were enough scattered wildcat strikes last year to lose almost a million tons of production. That's a far cry from the 107 million tons lost in 1949—the last year before the new look suffused the industry's shining face. But it was enough for Lewis to impose disciplinary action and fines on more than 20 locals to enforce the contract that has made coal miners patricians of American labor groups with average hourly earnings above those in the automobile, steel, construction, and manufacturing industries. Miners' average wages broke the $100-a-week barrier—by $5.94, to be specific—3 years ago.

There have been other evidences of the cooperative spirit. When high shipping rates threatened our booming exports a few years ago, the U.M.W.A. joined with a group of coal companies and railroads to form the American Coal Shipping, Inc., subscribing a third of its $50 million capital from the union treasury. Shipping rates later slumped and most of the 30 Liberty ships A.C.S. had recommissioned from the mothball fleet were returned, but Walter Tuohy, of the Chesapeake & Ohio Railway, called it an unprecedented cooperative effort.

Last summer Lewis was invited to attend the American Mining Congress convention for the first time in his life; he was introduced by the former Secretary of the Treasury, George M. Humphrey, now a steel-company official, who described him as his friend for 40 years, "sometimes more friendly than others, but a friend." Lewis responded by pointing out that the Russians will surpass us in coal production this year and that the industry needs an agency composed of management, investment, and manpower to speak with one voice. His union, he said, would be glad to cooperate.

The signing of the recent contract between the union and the operators is only the latest example of cooperation. Both as U.M.W.A. and the B.C.O.A. issued bristling statements regarding the agreement, each in their separate offices, but simultaneously. Simultaneously, that is, after the contract had already been signed. That, one reporter remarked, is cooperation to the 2th degree.

You might say that John L. Lewis and the coal operators tamed each other. Now, they are bristling cooperatively.

Mr. Kaiser's Closing Remarks

EXTENSION OF REMARKS
OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. YOUNGER. Mr. Speaker, in October 1958 Edgar F. Kaiser, president of the Kaiser Industries Corp., presided over one of the panels discussing the subject "Interdependence of Businessmen in the Free World," held at New Delhi, India, in connection with the annual meetings of the Boards of Governors of the International Bank for Reconstruction and Development and the International Monetary Fund.

His closing remarks to the panel are worthy of study by all those who believe in our individual enterprise system; and under leave to extend my remarks in the RECORD, I wish to insert Mr. Kaiser's closing remarks to the panel, as follows:

MR. KAISER'S CLOSING REMARKS

While I have been listening, I have been impressed with the fact that our panelists were not representatives of one particular philosophy, or point of view but, rather, that they were each individually demonstrating a sincere dedication to the world in which they live.

Each of them, in his own life, has demonstrated a true definition of what is meant by the words "private enterprise."

Private enterprise is not just a way of doing business. I would define it as individual enterprise. It is made up of the qualities of individual strength, integrity, tolerance of others, courage, faith, determination, and dedication.

It is private, in the very true sense of the freedom of the individual to contribute to his world in the fullest of terms. It is not a mass movement. It is not something we have created in opposition to, or in conflict with, the institutions that men build into their societies. In my opinion, it is the freedom to create and build whatever institutions and agencies are required to best accomplish man's objectives.

Private enterprise is weakened only through the most extreme regimentation. When its power is granted only to the favored few, when the right of decisions rests only in purely autocratic or bureaucratic concepts, its vitality is infinitely lessened. It is as much a part of good government as it is of good business. And, certainly, the positions that you men here hold in the structures of your governments, in the agencies of your broad business interests, are as truly private enterprise as those functions you perform in the industrial organizations of which you are a part.

It need not be defended and protected, for it is inherent in every contribution any one individual makes, to the general welfare and advancement of the world's people. The world's progress is measured in how widespread is the belief in private enterprise. The Renaissance in Italy and France, the great flowering of Elizabethan England, were not only periods of intense literary and artistic productivity, but times of explosive free economic growth and development.

In the world of today, we may speak of the flowering of private enterprise in terms of increased national income, standards of living, and economic development. These are the shared goals of good government, an enlightened people, and a business and industrial structure dedicated to principles of private enterprise in its correct sense. Yet, these things are not private enterprise in themselves, but, rather, the result of a broad base of dedication and understanding on the part of individuals in government and industry.

ECONOMIC TOOLS

Profits, capital investment, professional skills, know-how are the tools with which we work, and are not to be confused with the driving force which we mean when we say "private enterprise." Because such tools are familiar to us, because the present shape and structure of our economic systems and our methods of doing business suit our work and progress, we have a tendency to regard them as the only possible means of achieving our objectives. We may forget that these are only tools, and our strength lies in our ability to adapt them, or create new tools if needed.

If obstacles and problems are not solvable in what we now accept, and have used in the past, we must have the courage, faith, and skill to create whatever is required for us to do the new job which always lies ahead of us. We must have the courage to explore. We must not be defenders of the past, but creators of the future. One of our responsibilities is to find the means by which our jobs can be done.

Beyond and behind the structure of what we discuss here lie the millions of the world's people who have a tremendous need, not for refrigerators and television sets, for their lives will not become suddenly richer through these, but, rather, for the rights of free choice, and free growth, which must be a part of any ordered and intelligent world.

The part that we may play in this is somewhat less and somewhat greater than we have defined. It is less, in that what we can accomplish economically may be only contributory to the goals and ambitions which a people may have. More, in that our responsibility is greater than the merchants and the builders that have gone before us. We are charged, not with simple responsibility for our own success and growth, but for contributing through our own efforts, to the understanding and potential of the peoples with whom we are privileged to work. For we, too, have much to learn from them.

WORLD CITIZENS

It seems to me that it is impossible for any of us to keep our own jobs, and ourselves, separated from the broadest and deepest problems of our world. We have accepted the responsibility of being world citizens whatever our national loyalties may be.

As businessmen from all over the world, we face certain practical problems which are tied to the specific things we would accomplish. Yet, our work is not performed in a vacuum. It is interwoven into every area of national and world life and, to succeed, we must participate in the most enlightened aspirations of the countries in which we work.

We are subject not only to economic law, but to an ultimate moral law. For, unless what we do is identified with, and made a

part of the ambitions and goals of the people of the world, unless, in building the structures of our industries we also participate in the freeing of a people's vitality, both spiritually and economically, we shall have failed to demonstrate the validity of private enterprise.

All of you know the satisfaction of building a team, building an organization that shares a common spirit. Certainly in my life in business there has been a constant realization that progress is only possible when belief in an enterprise is translated throughout our entire organization into positive action.

In the field of international business and the development of economic areas throughout the world, there is the same need for shared enthusiasm which must include every force with which we work. The spirit of the people is the essential quality and it must extend itself into the fields of government, private business, and all institutions which share the responsibility for economic development.

Each of the men who have spoken with you has given us a clearer definition of the decisions that we must make. It is not the purpose of such a panel to arrive at decisions.

The effectiveness of this conference will, like every step in the progress of man, be written in our individual decisions and actions. The translation of the broad principles of development into action and accomplishment will take place in the corridors and in the rooms and in the discussions between you, individually. And it is right that it should be this way, for here there is no regimentation. There is, instead, the dedication of each of us, as individuals, to a principle of growth and progress for all men, and the justification of our own personal existence in freedom.

"Why build these cities great
If man unbuilded goes?
In vain we build the world
Unless the builder also grows"
—EDWIN MARKHAM.

Capital Gains

EXTENSION OF REMARKS
OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. BERRY. Mr. Speaker, I ask unanimous consent to insert in the Appendix of the RECORD the analysis of Roy Wenzlick, publisher of the Real Estate Analyst, in his December 18 issue, on "Capital Gains." This thought-provoking article is as follows:

CAPITAL GAINS

I am opposed to a capital-gains tax. A tax of this sort is not necessarily a part of the income-tax structure. For example, there is no such tax in Canada. I believe that our economy in the United States would be stronger and would progress more rapidly without it.

My greatest objection to the capital-gains tax is that in a large percentage of cases it is levied where there is really no capital gain. If a person invested $10,000 in 1948, today, in order to secure the same purchasing power, he would have to receive $12,000 for his investment. The $2,000 which the Internal Revenue Service claims as capital gain is merely a greater number of smaller dollars representing the original amount invested. If we use this hypothetical investment as a sample, the probability is that the $2,000 of so-called capital gain would be taxed at a 25-percent rate, or a capital-gains tax of $500. If the capital-gains tax of $500 is subtracted from the $12,000, the $11,500 left is about 4 percent less in purchasing power than the amount invested 10 years ago. Our hypothetical investor has paid a $500 capital-gains tax to come up with a loss of principal of 4 percent.

Any investment in the period ahead which does not increase at a rate faster than the loss in purchasing power will share this same experience.

My second objection to the capital gains tax is that it reduces the mobility of capital and freezes many investments. An investor in the stock market who, let us say, has a paper profit at the present time of 25 percent above his original investment, may hesitate to sell because 25 percent of his so-called profit will immediately be subtracted, and he may doubt whether he can find some alternate use for his money, paying a high enough return to compensate for the reduction in his principal.

I have always been a great believer in the freedom of the market as the most powerful factor in controlling our economy. If investors are allowed to buy and sell freely, taking their risks of loss or gain, this factor, of itself, will reduce the price swings in the market. Whenever an investor believes that an item is underpriced he will buy. Whenever he believes it is overpriced he will sell, and a large group of persons constantly trying to make a profit will keep the market from getting very far out of line on either side of normal value at the time. In 1929, the excesses of the market were not due to investors but were due primarily to the tremendous number of shares bought on very slim margins, expanding demand among ill-informed speculators to the point where the market went through the ceiling and later through the floor when these loans were called.

My third reason for being opposed to a capital gains tax is that the great need in any expanding economy is for risk capital. This last Congress was so convinced of the need for risk capital that it passed the Small Business Investment Act of 1958 setting up finance companies to finance what amounts to equity investments in small businesses, partly at the taxpayers' expense. A small business is defined in this legislation in such a way that it includes the great majority of all firms.

Equity financing should not be done at the taxpayers' expense. The small business loan provision realizes that great risk does exist in this type of financing, and tries to compensate for the risk by various tax advantages. Many of the banks of the United States are being forced against their better judgment to participate in this plan, and I have yet to find a banker who believes that the plan is fundamentally sound.

It would be far better to allow complete flexibility in the investment and reinvestment of funds by the individual, allowing him to select those companies which, in his opinion, merit his confidence. If his judgment is in error, he will lose a part of his principal, but the taxpayer will bear no part of his loss. If his judgment is good, he will make a profit, and his profit can be realized without penalty at any time he thinks it has reached its maximum.

I have said many times in these reports that if we play a heads I win, tails you lose game with the Government—where if there is a profit we keep the profit and if a loss the taxpayer pays the loss—all kinds of ill-advised plans will be foisted on the taxpayer. There is then no chance of limiting the increase in Government expenditures and in Government debt, with its resulting effect on the value of the dollar.

In my opinion, the losses which will be experienced under the new plan for financing small-business enterprises will be great if the plan is used. I am sure it will be used by many ill-advised groups who would like to expand their activities.

If sound business judgment is used as the basis for lending money to the small concerns, the money is now available without setting up new methods and new sources. This whole idea smacks of the same political philosophy which believes that if informed investors will not buy low-interest mortgages at par the solution is for Fannie Mae to buy them at par at Government expense. Any Government expenditure seems to be justified if it increases the business volume of some particular group, in spite of the fact that the taxpayers are not willing to pay the cost. The unbalanced budget which has resulted in 24 of the last 29 years levies a tax no less real than the tax collected directly by the Internal Revenue Service. Every time that currency and credit is inflated to take care of unbalanced budgets a part of the value of all bonds, savings accounts, mortgages, social-security payments, pension funds, life-insurance payments, and other dollar obligations is confiscated by the Government.

The fourth reason I am opposed to a capital gains tax is that in the past the capital gains tax has yielded highly variable amounts as a source of Federal revenue. During periods of rising capital values the tax may produce tremendous dollar revenue resulting from the fictitious capital gains brought about by inflation. On the other hand, after a persistent decline of capital values at the end of a boom period, realized capital losses may far outweigh capital gains and the gains tax may produce a negative amount.

For instance, in 1928 the Federal capital gains tax on individuals produced slightly more than half a billion dollars. This was almost as much as the tax on current income at that time, as Federal income tax rates then were still low. On the other hand, in 1931 the deductions for capital losses under the capital gains provision resulted in a net reduction in Federal revenue of $89 million from the $335 million which would otherwise have been paid on current income if these losses had not been deductible. Inconsistent and erratic movements in revenue yields make attempts at budget balancing difficult and help to further endanger the Government's credit position.

A great part of our difficulty in our economic thinking is ignoring the consumer. In the costly and unwise agricultural program which we have been following since New Deal days we have maintained the prices of farm products above world prices in order to benefit the farmer. As a result we have lost many of our foreign markets, and the consumer in the United States has had to pay higher prices for farm products than he would otherwise have paid. In addition he has been taxed to pay the billions of dollars of subsidy which this program has paid to the farmer. By reducing the income available for the purchase of food and by increasing its price the consumer pays double indemnity.

The capital gains tax also hurts the consumer. Anything limiting the accumulation and free flow of capital into the industries which need it most hampers the production of consumer goods and increases the price of the goods that are produced. Anything that wastes capital, like unwise investments under the provisions of the Small Business Investment Act, retards the progress which otherwise would be made if investments were made solely on the basis of sound business judgment.

In a country where the population is increasing as rapidly as it is in the United States it is essential that new employment possibilities be created rapidly enough to absorb the increase in the number of persons seeking employment. In many lines of busi-

ness it requires an average capital investment of $5,000 to $10,000 per employee, and anything limiting the free flow of capital to those industries that need it most will prevent greater employment.

We never seem to learn that relatively few panaceas cure the disease for which they are prescribed. They generally treat the symptom rather than the cause. It is difficult for some Congressmen and politicians to realize that the profit motive is the greatest incentive to our enterprise system, allowing the man who can build a better mousetrap a profit on his endeavor. If the profit is great, the supply of mousetraps will increase faster than the supply of mice, and the price of mousetraps will drop. However, the man who endeavors to develop a useful business finds that the incentives for success have been weakened by his less competent Government-subsidized competitor. He therefore suffers twice, once from unfair competition and again from increased taxes used to subsidize his less efficient competitors. He becomes discouraged and no longer puts forth the effort necessary for the success of his project.

Smokescreen of Cowardice and Deceit

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a memorandum and white paper on the "Operations of the British-American Tobacco Co.," prepared and distributed by the foreign affairs committee of the Jewish War Veterans of U.S.A., together with a revised edition of "A Report on the Arab Boycott Against Americans," released by the presidents of major American-Jewish organizations. The text of these releases follows:

MEMORANDUM

To: Department, council and post coordinators, Arab boycott post, county and department commanders, members of the national executive committee, members of the foreign affairs committee.
From: PNC Abraham Kraditor, chairman, foreign affairs committee.
Subject: Progress report on British-American and Brown & Williamson Tobacco Corps.' reaction to white paper.

Since the national convention in Los Angeles in August, approximately 50,000 copies of JWV's white paper have been distributed by the national office to the lower echelons for dissemination in the communities. As a result of this effort, the pressures have been felt at Brown & Williamson's headquarters in Louisville, Ky. Brown & Williamson have issued statements which their sales representatives have been displaying, affirming the willingness of Brown & Williamson to sell its cigarette products to Israel. These documents purport to present evidence that Israel is to blame for the discontinuance of cigarette shipments by Brown & Williamson to Israel.

Our members should not be deceived or deterred by this propaganda. This smokescreen is identified as a half truth in the white paper (see pp. 8–10). Israel acknowledges that Brown & Williamson wants to sell its cigarettes to Israel but British-American in London, the parent organization, still refuses to sell its brands of cigarettes (the preferred brands in Israel). Israel maintains quite properly that it could not trade with Brown & Williamson while being boycotted by British-American, for in so doing, it would be condoning the action of British-American. The allegation that Israel does not have the dollars to pay for Brown & Williamson shipments is a phony issue. Actually, these cigarettes are sold mainly to tourists who bring dollars to Israel. It is to Israel's advantage to buy these cigarettes for the dollars which it earns thereby. Israel has always paid Brown & Williamson in dollars. Obviously, Israel would gain more if it could buy the British-American cigarettes in sterling exchange and sell these cigarettes for dollar exchange.

The white paper asserts that British-American refuses to ship Israel because of Arab treaties. This is once more documented by the letter of September 4, 1958, from Mr. Addison Yeaman, general counsel of Brown & Williamson in a letter to Mr. Lester Duberstein, executive director of the Department of New York, JWV, as follows: "* * * the refusal of British-American to ship its brands to Israel being the direct result of a most grievous threat made against that company by the so-called Arab nations."

To sum up, the two major arguments being advanced by Brown & Williamson are: First. Brown & Williamson is attempting to divorce itself from the actions of its parent body, the British-American Tobacco Co. This is sheer deception. Brown & Williamson is a wholly owned subsidiary and subject to complete control from the London office. Second, Brown & Williamson pleads leniency for British-American because the Arab nations threaten economic reprisal. It is this very cowardice which the white paper is attempting to expose. Let the British-American directors stand up to the Arab nations as other international companies have done and successfully too.

While Brown & Williamson is putting up this counterattack to the white paper, the Foreign Affairs Committee has reliable information that the top officials of Brown & Williamson have visited London to plead with British-American directors to reverse their policy regarding shipments to Israel. Until they do so, our energies must be directed at maintaining unrelenting pressure. Your task is to give the white paper the widest circulation and to encourage the American people to express their indignation. Use the pamphlet and this release as your source material for answering the allegations by the Brown & Williamson representatives.

Coordinators and commanders are reminded that booklets may be ordered for distribution by writing to national headquarters. The price is $33 per thousand. Refer to previous releases on how the pamphlet is to be distributed. All inquiries or questions concerning this campaign should be directed to me at 38 Park Row, New York 38, N.Y.

SMOKESCREEN OF COWARDICE AND DECEIT—A WHITE PAPER ON THE OPERATIONS OF THE BRITISH AMERICAN TOBACCO CO.

(Prepared by Foreign Affairs Committee, Jewish War Veterans of the U.S.A.)

I. INTRODUCTION

This white paper has been prepared by the Foreign Affairs Committee of the Jewish War Veterans of the U.S.A. to inform its members and their friends of one phase of the committee's efforts to meet the challenge of the Arab boycott against Israel and Jews throughout the world.

This is not a success story. Rather, it tells of failure thus far by this committee to convince the British American Tobacco Co. to discontinue its cooperation with Arab nations in boycotting Israel, a freedom-loving nation of the Middle East and this country's most reliable ally in that troubled area.

The white paper should not be construed by its readers to be a final report. It is an interim statement on the committee's negotiations with the British American Tobacco Co. It should arm our members and their friends in the American community with the facts, enabling all of us to work in common cause to convince the British American Tobacco Co. that their present ethics in international transactions can only arouse a sense of deep moral indignation among all freedom-loving people.

The British American Tobacco Co. remains today in international trade one of the few major corporations which has admittedly changed its trade policies as a result of Arab pressures to boycott Israel.[1] But before such open admission of cooperation with the Arab boycott program, the British American Tobacco Co. attempted to create a smokescreen to conceal its motives in cutting off trade with Israel. Such cowardice and deceit in international trade should be exposed and every effort should be made to prevent other companies from appeasing those Arab nations which seek to permeate their medieval trade practices throughout the world.

The attempt by Arab nations to spread their hateful boycott against Israel and to Jews throughout the world poses a serious challenge to American security and our country's efforts to unify and strengthen the countries of the free world. For the past 25 years, our Government, with the full support of the Jewish War Veterans, has been advocating and implementing a sound foreign policy of seeking to eliminate artificial trade barriers and to promote free and unfettered trade among the nations of the free world. The major exception to this liberal trade policy has been our Government's restrictions against trade with Communist countries in strategic war materials. Through this trade program and augmented by American funds for economic and military assistance to our worldwide allies, this country has helped to forge a strong alliance of free nations of the world to resist Communist aggression. Any trade practice which establishes new artificial trade barriers among our allies or seeks to divide nation against nation, people against people, weakens our alliance, permits Communist exploitation of these differences and saps our strength against our most formidable enemy, the Kremlin rulers.

A quarter of a century ago, the Jewish War Veterans alerted the American people to the scourge of nazism by launching a boycott against German imports. History proved our judgment correct in identifying Hitler and his gangsters as the real threats to world peace. The Jewish War Veterans hold with equal firmness today that the Arab boycott is an international disease which in epidemic proportions can undermine our national security. In international affairs as in medicine, quick quarantine can spare needless deaths.

II. THE BRITISH AMERICAN TOBACCO CO. AND THE ARAB BOYCOTT

A. History of the Arab Boycott: The Arab boycott, launched 10 years ago, sought originally to prevent Arab nations and their citizens from trading with Israel or her nationals. The Arab League which directs this boycott then widened the scope of its activities to blacklist or bring "economic pressure against any company that maintains branch plants, assembly operations or agency offices

[1] On previous occasions, this committee reported to the Jewish War Veterans membership on its negotiations with the Shell Oil Co. and the American Express Co. Both companies have altered their trade policies and now resist Arab pressures regarding their trade with Israel.

in Israel, permits licensing arrangements by or has financial interests in Israel firms or provides consultant and other services to Israel. The products and services of such firms are denied admission to Arab lands."[1]

While many firms and governments throughout the world have resisted Arab approaches to boycott Israel and knuckle under to the Arab intimidations and threats, some companies, among them, the British American Tobacco Co., have capitulated to such pressures. Before discussing how British American capitulated to the Arabs, it is pertinent to report on the history of this international tobacco giant.

B. History and operations of British American Tobacco Co.: This company, operating out of London, England, was organized in 1902 to serve as an international distributor of tobacco products. It controls through stock ownership, numerous operating and holding companies throughout the world but principally in the sterling area. (The company, as a matter of policy, does not disclose the number or location of all its subsidiaries.)

In the United States, British-American conducts both a domestic and international sales operation, through its wholly owned subsidiary, the Brown & Williamson Tobacco Corp., which was incorporated in 1927. Brown & Williamson markets the following tobacco products in the United States:

Pipe tobacco: Sir Walter Raleigh, Granulated Tobacco, Old North State, Golden Grain.

Cigarettes: Viceroy, Raleigh, Avalon, Kool, Wings, Life, Du Maurier.

Cigarette tobacco: Bugler, Target, Kite.

Plug tobacco: Blood Hound, Sun Cured.

Snuff: Tube Rose.

C. British-American yields to Arab pressures: On March 26, 1956, Brown & Williamson wrote to Hamashbir Hamerkazi, an Israeli importer, that "We are unable to accept this order nor will we be able to accept any other orders from you until further notice." Similar letters were received by other importers seeking those tobacco products which British-American Tobacco Co. sells under license throughout the world. In explanation for this cessation of trade, a British purchasing agent[2] wrote to his Israeli correspondent, "We think you know what this means. Apparently, pressure has been brought to bear upon British-American Tobacco Co. by the Arab countries to such an extent that they have made this decision."

When officials of Brown & Williamson Tobacco Corp. were queried by an American correspondent in October 1956 about its failure to ship those brands where it acts as exporter for British-American Tobacco Co., Brown & Williamson officials attempted a buckpassing deceptive maneuver and were quoted as saying, "with respect to British-American Tobacco Co., Brown & Williamson was agent for export only."[4]

Israeli Government officials noted at the time that through its refusal to maintain normal business affairs with Israeli importers, British-American Tobacco Co. and its American subsidiary, Brown & Williamson, took unprecedented action in international trade by relinquishing its neutrality and supporting the Arab position to the detriment of Israel. This behavior was sheer cowardice.

III. NEGOTIATIONS BETWEEN BRITISH-AMERICAN TOBACCO CO. AND JEWISH WAR VETERANS—1956

The foreign affairs committee, department of New York, in April 1956, initiated an investigation of the facts surrounding the report on the boycott of Israel by British-American and Brown & Williamson. It determined and reported to its department convention (June 1956) that Brown & Williamson had refused to ship its products to Israel. The convention passed a resolution asking for appropriate action on those facts by the national organization. At the national convention in August 1956, the national foreign affairs committee was requested to meet with officials of British-American and recommend further action by the national organization.

On September 5, 1956, Mr. Addison Yeaman, general counsel for the Brown & Williamson Tobacco Co.,[3] met with officials of the Jewish War Veterans. He stated that Brown & Williamson had not refused to sell and ship to Israel any of its brands—Viceroys, Kool, Raleigh, etc.—but that it could not ship to Israel brands owned by British-American. In a letter following this meeting, Mr. Yeaman wrote on September 14, 1956, "You will recall that I offered to appear before your committee at its meeting on Tuesday, September 18, should you so wish and that it was your view that such an appearance was not desirable. With that in mind, I should like to repeat that I stand ready to appear before your committee at any time you wish should your decision in that matter be altered."

On September 25, 1956, Mr. Abraham Kraditor, chairman of the foreign affairs committee, sent the following letter to Mr. Yeaman in reply:

"SEPTEMBER 25, 1956.

"ADDISON YEAMAN, Esq.,
"Brown & Williamson Tobacco Corp.,
"Louisville, Ky.

"DEAR MR. YEAMAN: This will acknowledge receipt of your letter of September 14, 1956.

"You were kind enough to write as you did and Mr. Chasin and I appreciate the frank and forthright spirit in which you discussed the problem that concerns us both.

"The foreign affairs committee of the Jewish War Veterans of the United States met in New York on Tuesday evening, September 18, 1956. Your letter was read to the group and the consensus of opinion was that no action should be taken at a time when the British economy as a whole finds itself under stress because of the events in the Suez area. This, of course, does not in any way alter our conviction that the British American Tobacco Co.'s decision to terminate shipments of tobacco products to Israel was unworthy of a responsible business organization in a free community. We take no comfort from the unhappy fact that those states whose insistence presumably led British American to adopt its current policy are now applying to Great Britain the same epithets and overt hostility they have hitherto reserved for the State of Israel.

"Current traffic problems in Middle East waterways suggest that British American may be preoccupied just now with problems somewhat more troubling than how to get cargo through to Israel. Nevertheless, our organization continues to feel that the company's present policy richly merits revision and we hope you will find it appropriate to convey these sentiments accordingly. We find ourselves, after all, in a time when a gesture of fundamental good will from one decent, civilized country to another can strengthen bonds that will serve us all well in a time of common adversity.

"Sincerely yours,

"ABRAHAM KRADITOR."

[3] He acknowledged that he also acted as counsel for British American Tobacco Co. in this country.

IV. NEGOTIATIONS BETWEEN BRITISH AMERICAN TOBACCO CO. AND JEWISH WAR VETERANS—1958

The Suez crisis of 1956 was followed immediately thereafter by the Sinai campaign, the ill-fated French and British involvement, and ensuing events which occupied the interest and attention of the Foreign Affairs Committee. In 1957 and 1958, the Committee engaged in negotiations with both the Shell Oil Co. and American Express Co. to have them reverse their policies of cooperation with the Arab boycott. Subsequently, those companies altered their practices to our satisfaction.

In the opinion of the Foreign Affairs Committee, its position with regard to British American Tobacco Co. should be reexamined.

The Brown & Williamson Tobacco Corp. was included among the American concerns in the pamphlet, "Bigotry and Blackmail" which had capitulated to Arab pressures to discontinue trade with Israel. Jewish War Veterans distributed over 15,000 of these booklets. Mr. Abe Shefferman, a member of the Jewish War Veterans JWV Post No. 58, Washington, D.C., who read this pamphlet, wrote an indignant letter to the "National Jewish Post and Opinion" which was printed on April 11, 1958, criticizing the Post for accepting advertisements from Brown & Williamson for Viceroys, noting that "the makers of Viceroys have become an accessory to the fact (of a boycott of Israel) with its Arab boycotters."

This letter brought a reply from Mr. Addison Yeaman, general counsel of Brown & Williamson. Excerpts of his letter of May 15, 1958, to Mr. Shefferman are reproduced below:

"Brown & Williamson Tobacco Corp. acts as manufacturing and shipping agent for British-American Tobacco Co., Ltd., in respect to those brands, of American-type blended cigarettes, which the British-American Co. owns (by way of owning the trademark) in various countries of the world including Israel. Among these brands are Lucky Strike and Pall Mall. As of course you know, both of those brands are owned in the United States by American Tobacco Co. There is no connection of any kind between the British American Co. and the American Tobacco Co., and the American Tobacco Co. has absolutely nothing to do with the brands, Lucky Strike and Pall Mall, in those countries where the trademarks are owned by British American.

"As I have said, Brown & Williamson manufactures these brands as agent for British-American, and Brown & Williamson ships these brands as agent for British-American and as its agent merely. Some time ago Brown & Williamson was instructed by British-American that until further notice Brown & Williamson should not ship Lucky Strike or Pall Mall cigarettes to Israel. As agent, Brown & Williamson had no part in that decision and as agent it could do nothing but comply with instruction of its principal.

"It subsequently developed that the British-American had given such instructions as a consequence of very grave and serious threats made by certain of the Arab countries. The decision was a very hard and difficult one to make. No element of prejudice, racial, religious or otherwise, entered into the decision.

"Brown & Williamson has never declined or refused to sell its own products—Viceroy, Kool, and Raleigh—to customers in Israel. We regret that the volume in these brands in Israel had always been very low and it virtually disappeared when the Israel Treasury declined to issue permits for the use of

dollar exchange for the purchase of tobacco products, as we are advised. Apparently that restriction has been somewhat eased as we have in recent months had one or two small orders from customers in Israel for Brown & Williamson's products. These orders were very promptly filled and I assure you that when we receive any more orders for our products for which payment in dollars can be made, we will just as promptly accept and fill them."

In analyzing this letter to Mr. Shefferman, the foreign affairs committee came to the following conclusions:

1. The open admission that British-American was yielding to Arab pressures should be made public knowledge. The American people should be afforded the opportunity to react to this cowardice on the part of British-American.

2. Efforts by Brown & Williamson to relieve itself of responsibility for its refusal to ship cigarettes to Israel should be denounced as a fraud and an attempt to deceive the American people. Brown & Williamson as a wholly owned subsidiary of British-American should not be permitted to weasel out of its responsibility for cooperating with the

3. The Brown & Williamson claim that

immoral Arab boycott.

the "Israel Treasury declined to issue permits for the use of dollar exchange for the purchase of tobacco products" demonstrates clever use of half-truths. The facts are that the Israeli Government formulated its policy on the basis of principle. It has always permitted its importers to pay Brown & Williamson in dollar exchange for tobacco sales in Israel. The Israelis, however, refused to permit the imports of Brown & Williamson products unless all British-American controlled brands were made available. Obviously, if Israel permitted Brown & Williamson to withhold some brands, it would indicate that the Israelis condoned British-American's yielding to Arab pressures.

On June 27, 1958, the Foreign Affairs Committee extended an invitation to Mr. Addison Yeaman to appear before the commitee to interpret his client's position in light of the above analysis. This invitation was extended based on Mr. Yeaman's written statement: "I should like to repeat that I stand ready to appear before your committee (Foreign Affairs Committee) at any time you wish should your decision in that matter be altered." (September 14, 1956.)

That invitation was respectfully declined by Mr. Yeaman on June 30, 1958. He wrote, "* * * it does not seem to me that there is anything I could usefully add before your committee and for that reason alone I believe no purpose would be served by my appearance."

V. SUMMARY AND CONCLUSIONS

The record reveals indisputable evidence that the British-American Tobacco Co. and its wholly owned American subsidiary, the Brown & Williamson Tobacco Corp., have knowingly and wittingly cooperated with the Arab League nations in boycotting Israel. This act of economic cowardice in yielding to Arab pressures has been accompanied by a Brown & Williamson public relations campaign to place the burden for the severance of this trade in tobacco products on Israel rather than British-American policy.

Jewish War Veterans, through its foreign affairs committee, has not been deceived by the Brown & Williamson smokescreen. After 2 years of independent study and investigation followed by negotiations with representatives of Brown & Williamson, the foreign affairs committee believes firmly that British-American and Brown & Williamson stand guilty before the American people for their cooperation with the illegal and immoral Arab boycott. Such cooperation has only served to spread the venom of this economic weapon from Israel to the shores of our country and other freedom-loving nations.

History teaches that dictators feed on appeasement. Our country and our people, after the ill-fated Hitler appeasement before World War II, have learned that sacrifices are necessary to meet the aggression of dictators. This explains the firm and bold actions taken by our political leaders since World War II to face up to the Russian rulers in the Kremlin.

The Arab boycott and the other machinations of Nasser and his followers in the Middle East (the illegal seizure of the Suez Canal, the infiltration tactics among pro-Western countries) should serve as ample warning that the actions of these people undermine the security and welfare of our Nation and our freedom-loving allies throughout the world.

The Jewish War Veterans stands committed to combat the antidemocratic forces. Through this pamphlet, this organization appeals to its membership and the American people to bring the full force of its moral weight to convince British-American Tobacco Co. to reverse its present policy of yielding to the Arab boycott.

A REPORT ON THE ARAB BOYCOTT AGAINST AMERICANS

A STATEMENT BY THE PRESIDENTS OF MAJOR AMERICAN JEWISH ORGANIZATIONS

The Arab blockade and boycott of Israel has now been extended by the Arab League to a systematic boycott and blacklisting of any American enterprise that maintains permanent business connections with Israel or with Israel firms and indeed to a worldwide effort to boycott any business owned by Jews.

The Arab League maintains a public blacklist of American and other companies that invest in Israel, maintain branches, assembly operations or distribution outlets there, or that license patents for Israel use.

American vessels that stop at Israel ports are denied permission to make calls at Arab ports.

American planes that land in Israel are forbidden to fly over Arab territories.

No American is permitted to enter an Arab land from Israel except on official business.

Americans who are Jews are a special target of the Arab boycott. Saudi Arabia, particularly, refuses to allow the Arabian-American Oil Co. or other concessionaires to employ Jews for work in Saudi Arabia. Most Arab League States refuse visas to Jewish travellers and some refuse to allow Jews to land even in transit. Saudi Arabia has prevailed upon our Government to screen American military, diplomatic, and civilian personnel so that no Jew is assigned to the United States airfield at Dhahran.

In July 1956, the U.S. Senate, in a resolution adopted unanimously, condemned religious discrimination against Americans by foreign countries. Our Government, however, not only has failed to voice vigorous objection to this discrimination but in fact thereafter renewed the discriminatory Dhahran Agreement. As a result, American Jews are no longer equally protected in their rights of citizenship.

The Arab League has been circulating questionnaires to chambers of commerce and individual companies throughout the world inquiring whether specified companies were controlled by Jews or employed Jews.

Holland, France, and Switzerland have denounced the Arab boycott and have instructed their nationals not to answer such questionnaires. West Germany has refused to yield to Arab threats to cease business with Israel. Our own Government, however, thus far has taken no public stand against the boycott.

The Arab boycott has been described recently by the Secretary General of the United Nations as a "deadweight" upon the efforts of the U. N. to achieve peace in the Middle East. The boycott is a chronic source of conflict which undermines American efforts to allay tensions in that area.

The Arab boycott of Americans is international intimidation; it thrives on appeasement and capitulation. We are confident that Americans deplore the Arab boycott and will want to resist this impairment of the rights and privileges of American citizenship. We are confident, too, that if the U.S. Government would strongly oppose this international blackmail and medieval bigotry, the Arab boycott against Americans inevitably would end.

In the light of the foregoing, we, the undersigned, declare our repugnance of the Arab boycott and urge all commercial firms to resist it with every legal means at their command. At the same time, we express our firm hope that our own Government will prohibit racial or religious discrimination against American citizens in the administration of any treaties or executive agreements to which it affixes its signature:

David L. Ullman, chairman, National Community Relations Advisory Council.

I. INTRODUCTION

The Arab League boycott of Israel has now been extended to a systematic boycott of American companies maintaining business connections with Israel or Israel firms and, increasingly, of American Jews. This attack upon Americans takes various forms: The boycotting and blacklisting of American firms and vessels, the denial of entry and transit visas to American Jews, the barring of U.S. military and civilian personnel who are Jews from our airfield at Dhahran, Saudi Arabia, the obstruction of international travel by air, and similar interference with the rights and privileges of citizens of the United States.

In order to coordinate and intensify the boycott activities of its constituents, the Arab League has established a general boycott office in Damascus, Syria. Arab League boycott regulations are administered by the various branch boycott offices, whose activities usually fall within the responsibilities of each country's ministry of commerce. Blacklists are maintained in each branch office and Arab commercial and consular representatives abroad endeavor to expand the boycott. Arab diplomats accredited to the United States engage on our soil in efforts to direct the boycott against American Jews and against products manufactured or sold by them. Iraq's administration of the boycott illustrates the operating procedure. Imports

and exports to and from Iraq require special licenses, certificates of origin and destination, and endorsement by Iraqi or other Arab diplomatic personnel in the foreign countries involved. Iraq also sends to the general boycott office in Damascus lists of her exports to foreign countries, including America, so that Arab missions in these countries may check to see that none of the Iraqi goods are transshipped in violation of boycott regulations (Business International, May 31, 1957).

II. THE BOYCOTT OF JEWS AS JEWS

The Arab boycott applies to Jews as such regardless of their nationality.

The following letter, sent on November 13, 1955, to the chairman of the board of directors of Verkoopkantoor Van der Heem N. V. The Hague, Holland, is typical of similar letters sent throughout the world:

"Dear Sir: As you are aware the Arab countries are in a state of war with Israel and for this reason we are making an economical [sic] siege around Isarel. This siege is administered by a special control and investigation office with members of all the Arab States.

"An officer in said office visited us today and requested that following information be supplied about your company:

"1. Do you have any business relations with Israel, whether you sell your products there and name of your agent and address?

"2. Do you import any materials whatsoever, raw materials or parts from which your products are made, from Israel?

"3. Do you have a branch factory or utilizing any of your capital in any factory in Israel?

"4. Is any part of your capital paid by Israelites? If yes, what is the amount of said part?

"5. Do you have any Jewish employees in your company? If yes, how many and what are the positions held by them?

"6. Are there any Jews on your board of directors as members?

"7. Are any of your managers or branch manager Jews? If yes, please give name of the department headed by such a man?

"8. Is any of the persons authorized to sign on behalf of your company a Jew?

"9. What is the number of Jewish laborers in your factories and offices?

"We have been requested to give full detailed answers to each of the above questions but as we do not know each information, we are now writing this letter to you for being kind enough to give the required information so that we pass your letter to the Economical Siege of Israel Office, on your behalf.

"Your reply is to be please in two copies and signed by the chairman of the board of directors.

"We advise you to give accurate and frank information because of any difference between your answers and the information the government office may obtain by investigation will create legal complications."

Saudi Arabia has taken the lead in discriminating against Jews and any firm employing them in any capacity. The March 5, 1956 issue of the U.S. Commerce Department's Foreign Commerce Weekly reported:

"Saudi Arabia intends to boycott all Jewish or Jewish directed firms from trading with that country, according to information received by the Bureau of Foreign Commerce.

"This new policy greatly extends the provisions of the existing boycott against firms having branches, assembly plants, or general agents in Israel, as well as firms having shares in Israeli companies.

"Implementation of the new policy normally would be accomplished by Saudi Arabian Consulates, who are responsible for legalization of commercial invoices and certificates of origin."

Earlier, the New York Daily Mirror on December 29, 1955 reported that "at the Saudi Arabian Consulate in the Chrysler Building, a trade attaché admitted that American firms either owned or headed by Americans of the Jewish faith cannot do business with the Arab countries."

Letters sent by Arab importers to American exporters notify them of the restrictions. One of these letters, dated January 7, 1956, states:

"With reference to your letter No. IW:ek of the November 21, 1955, we have to inform you that you will have to get the original certificate attested and certified by the Saudi Arabian Consulate in your country to the effect that firm which exports the machine is not a Jewish firm, without which we cannot have dealings with your firm."

An editorial in Fortune magazine of August 1957, reports: "Businessmen throughout the world were in receipt some months ago of a strange questionnaire. Dated Cairo, Egypt, the questionnaire pressed them for information on whether their firms were guilty of having Jewish ownership or participation." A recent study by the Public Affairs Institute of Washington, D.C., reports that "the boycott was applied to foreign firms having Jewish directors" ("Regional Development for Regional Peace," p. 276). The London Chamber of Commerce was requested some time ago to certify that British firms wishing to deal with the Arab countries were not Jewish (New York Times, October 15, 1957).

In a debate before the Second Committee of the U.N. General Assembly, held on October 14–15, 1957, representatives of Iraq and Egypt denied the charge that the boycott applied to Jewish concerns having no connection with Israel but offered no evidence in support of their denial (A/C.2/SR. 461, 464).

Saudi Arabia, Jordan, Iraq, and Syria refuse entry or transit visas to Jews, as Jews regardless of their nationality. (Americans and other visiting Israel are not allowed to enter Arab countries directly from Israel, except on official business. They are not granted visas to Arab lands if there is evidence that they intend also to visit Israel.) The Department of State informs all passport applicants that Jews will be denied the right to visit many of the Arab lands. Passengers on cruise ships of American Export Lines touching at Arab ports are told beforehand that those of Jewish faith or with "Jewish" names will be denied certain travel privileges in Arab countries freely available to other passengers. American airlines flying regularly to the Middle East indicate in their schedules that Jewish passengers will not be allowed to leave the plane at Arab stopping points. Pan American World Airways, which flies to the Orient, informs passengers that Jews are allowed on flights to Beirut, Lebanon, but they cannot disembark or change at Iraq.

Until last year American teachers of the Jewish faith were barred from tours to a number of Arab countries sponsored by the National Education Association. As a result of protests, Jordan was dropped from the 1957 list of countries eligible for NEA-sponsored trips. Lebanon and Syria continued to receive NEA sponsorship because of "oral assurances" by their diplomatic representatives here that Jewish members of the National Education Association would receive visas if they were not Zionists.

Syria boycotts phonograph records of musicians like Yascha Heifetz and Yehudi Menuhin, solely because they are Jews. For similar reasons, Danny Kaye was barred from entering Arab lands, although on a mission for the United Nations Children's Fund (UNICEF).

III. DISCRIMINATION AT DHAHRAN

Although the United States has had installations at Dhahran, Saudi Arabia, since 1945, American Christians are restricted in the practice of their religion at the airfield and American Jews are totally excluded both from the field and the country. Ever since the United States first used the field there has been an atmosphere of religious bias and discrimination surrounding it. Among the clauses of the basic agreement (signed in 1951 and renewed in 1957) governing American rights and obligations at Dhahran are provisions requiring the United States Mission to submit "a detailed list of the names and identity" of its members and employees so that there will not be included individuals "objectionable to the Saudi Arabian Government." If the mission is requested by the Saudis to remove or replace any of its personnel, it must do so promptly. Furthermore all civilian contracting firms and their workers must likewise "not be unacceptable to the Saudi Arabian Government." (U.S., "Treaties and Other International Acts Series," No. 2290.)

The practical effect of these provisions is that American Jewish military personnel are never posted to the American military airfield at Dhahran. American Jews are not permitted to be employed by the Arabian American Oil Co. (Aramco) or any other private American firm. Aramco is owned jointly by the Standard Oil Company of New Jersey (30 percent), Standard Oil Company of California (30 percent), the Socony Mobil Oil Company, Inc. (10 percent) and Texas Oil Company (30 percent). American Christians may not publicly practice their religion or display the symbols and insignia of their faith. The United States forces at Dhahran are forbidden to maintain chapels.

IV. THE BOYCOTT OF AMERICAN ENTERPRISES

In the earliest stage of the boycott, the Arab League required only that all Arab nations and citizens refrain from any connection with Israel or her nationals, goods and services. But not content with preventing Israelis from dealing with Arabs and Arabs from dealing with Israel, the Arab League has extended the boycott and blockade to foreign ships.

The League now blacklists and engages in other forms of economic pressure against any company that maintains branch plants, assembly operations, or agency offices in Israel, permits licensing arrangements by, or has financial interests in Israel firms or provides consultant and other services to Israel. The products and services of such firms are denied admission to Arab lands. American and other foreign vessels may not stop at Israel ports on the same run on which they put in at Arab ports. American Export Lines, for example, must, at a considerable expenditure of time and money, operate a separate Middle East service to the Israel ports of Haifa and Tel Aviv.

An illustrative boycott decree is Regulation No. 11299 of the Saudi Arabian Ministry of Commerce which warns "all the importing merchants to notify their agents abroad not to ship their goods on Israeli ships or through Israeli navigation companies or on foreign ships which may anchor during trips to Arab countries in Israeli ports. In case of contravention of these instructions, the shipped goods will be confiscated." Some 100 vessels of foreign registry have already been blacklisted by the Arab countries for sailing to Israel (Fortune, August 1957), including the following American ships: *Anniston City, Indian Bear, Kern Hills, Memory, Mobilube, Sacconet, Steel Designer,* and *Trinity.* Many other American-owned vessels under foreign registry also have been blacklisted. American vessels carrying Israel exports and imports have been subjected by Egyptian authorities to discriminatory and illegal delays and obstructions in traversing the Suez Canal, in violation of the Security Council resolution of September 1, 1951, which condemned such "unjustified interference with

the rights of nations to navigate the seas and to trade freely with one another."

Instead of protesting the boycott restrictions on American enterpirse, our Government has notified American shippers of the regulations of the boycott office (Foreign Commerce Weekly, January 4, 1956, published by the U.S. Department of Commerce). Moreover, the United States Navy's Military Sea Transport Service has advised American tanker owners who offer their ships to MSTS that if the tankers are on the Arab blacklist and can therefore not load at Arab ports, any travel deviation caused by this fact will be at the expense of the owners.

There are similar restrictions against American and other airlines. Planes using the airports of Israel are forbidden to fly over Arab territory or to receive flight information or rescue services from Arab sources (New York Times, October 15, 1957). Saudi Arabia has even gone so far as to threaten to shoot down any aircraft flying over her territory on the way to or from Israel. All of these restrictions violate the Convention on International Civil Aviation as well as the International Air Service Transit Agreement.

American newspapers report similar experiences by American businesses throughout the world (e. g., New York Herald-Tribune, February 12, 1956; the New York Times, October 15, 1957). In a statement quoted in the New York Post of February 3, 1956, the Iraqi Consul in New York, Gen. A. K. Gailani, said:

"Our policy is that all firms, be they Christian, Jew, or Moslem, are not allowed to do business with the Arab countries if they have a subsidiary or branch in Israel. This was a decision of the Arab League not of Iraq alone, and the reason is that Israel is at war with the Arab countries."

V. RESISTANCE TO THE BOYCOTT

In the past year, the Arab League has blacklisted some 25 companies in 19 countries and coerced 50 others into discontinuing or not undertaking commercial relations with Israel (Chemical Week, Apr. 6, 1957). However, a number of firms throughout the world have steadfastly refused to yield to the boycott and have therefore been placed on the blacklist. These companies refused to be intimidated, even in the face of possible financial loss. The following American companies have been boycotted by one or more of the Arab States, according to Business International of May 17, 1957:

Air Electric Corp., American Biltrite Rubber Co., Chemical Construction Corp., Continental Import & Export Corp., Elliot Import Corp., Emerson Radio & Phonograph Co., Empire Brushes, Inc., General Shoe Corp., General Tire & Rubber Co., Herman Hollander, Inc., Hudson Pulp & Paper Co., International Latex Co., Jacques Torczyner & Co., The Lock Joint Pipe Co., Moller Dee Textile Corp., National Plastics Co., P.E.C. Diamond Corp., Pilot Radio Corp., The Plough Sale Corp., Sinclair & Valentine, Inc., United States Near East Laboratories, Willys-Overland Corp.

One of the above companies, in a letter that it insisted be confidential, recently wrote: "Ever since the advent of our support toward the Israeli economy, our products have been boycotted in every Arab country wheretofore our export sales amounted to substantially better than seven figures annually and undoubtedly would be double these figures today if it were not for the boycott. * * *" Despite these severe economic losses, the company, well known in America, still maintains its business in Israel as a matter of principle.

The American Express Co.: In February, 1956, this company closed its offices in Israel and kept them closed until the spring of 1958. On June 19, 1958, the company, after completing negotiations with the Israel Government Tourist Corporation, issued the following statement:

"The Israel Government Tourist Corporation and American Express Co. representatives have had discussions in Jerusalem resulting in a program for joint promotion of travel to Israel. American Express undertook to reorganize and improve its representation in Israel. Its agencies will be enlarged and modernized in order to provide full range of services to an increased number of both local and foreign customers.

"The Israel Government Tourist Corporation stated: 'We are pleased with the constructive outcome of these recent discussions. American Express is promoting travel to Israel, and we are confident that as a result of this new promotion effort and the improved representation of American Express in Israel, results greater than heretofore will be accomplished.'

"The joint promotion campaign will include advertising, window displays in American Express offices in the United States and around the world, posters, publicity, and a variety of other promotion activities jointly financed by the Tourist Corporation and American Express. This campaign will stress both the traditional values of Israel as the Land of the Bible and the new sun and sea vacation attractions which are being developed in Israel. The 10th anniversary celebrations have proved to be a strong stimulus to Israel tourism."

After considering the American Express-Israel Government statement, the presidents of major American Jewish organizations commented:

"We are confident that the new joint plans of the Israel Government Tourist Corporation and the American Express Co. will be as beneficial to American Express as it will to the development of Israel tourism. The action of American Express exemplifies the best traditions of the American business community. It strengthens the unhampered flow of international trade and commerce free of any extraneous considerations."

VI. YIELDING TO THE BOYCOTT

Some companies have facilitated the operations of the boycott.

The Brown & Williamson Tobacco Corp.: In March 1956 this wholly owned subsidiary of British-American Tobacco Co., Ltd., of London (not to be confused with the American Tobacco Co.) began refusing orders for the most important brands of cigarettes distributed by it. This is the only instance of a foreign corporation refusing orders from Israel importers. That this capitulation was due to Arab pressure is admitted by Brown & Williamson in a letter dated May 15, 1958, which says that its parent organization, the British-American Tobacco Co., was motivated by very grave and serious threats made by certain of the Arab countries. The Brown & Williamson Tobacco Corp. produces Viceroy, Kools, Raleigh, Du Maurier, Wings, Avalon, and Life.

Aramco: The Arabian-American Oil Co. (Aramco), in addition to denying oil to Israel, has threatened to cancel its contracts with European firms producing such innocent apparatus as floating roofs for water tanks if those firms do business with Israel (Fortune, August 1957). In addition, Aramco and its subcontractors, with the acquiescence of the State Department, have refused in New York State to hire persons of Jewish faith for work abroad or to allow their non-Jewish employees to bring into Saudi Arabia products manufactured by firms on the Arab blacklist. The New York State Commission Against Discrimination questioned the State Department about this Aramco policy. It was told of the importance of not having anything interfere with the existing relationship between the Arabian Government and the Arabian American Oil Co., explaining that this relationship was the basis for the harmony between this Government and the Arabian Government and should it be disturbed in any way the international interests of the United States would be seriously affected. (New York State Commission Against Discrimination, 1950 Progress Report, p. 48.)

VII. THE OIL COMPANIES AND THE BOYCOTT

For the last 10 years, the major American and British oil companies have yielded to the Arab boycott. These companies are the Standard Oil Company of New Jersey, the Standard Oil Company of California, the Texas Co., the Socony Mobil Oil Co., Inc., the Shell Oil Co. and the British Petroleum Co. Their yielding to the boycott has taken various forms:

1. The flow of oil from Iraq to the petroleum refinery at Haifa was interrupted in 1948 and has never been resumed.

2. The Haifa oil refinery, owned and operated jointly by the Royal-Dutch Shell Group and the British Petroleum Co., has not been used to its full capacity. Shell and British Petroleum refused fully to utilize the capacity of the refinery even during the Korean War when the free world underwent a shortage of refined petroleum products.

3. Tapline, the pipeline carrying oil from Saudi Arabia to the Mediterranean, is owned and operated by the Arabian-American Oil Co. (Aramco). Completed in 1950, the pipeline terminates in Syria and Lebanon. Although a contract was signed with the Palestine Government scheduling the terminus of the pipeline in Acre in what is today Israel, the original terminus was deliberately by-passed because of Arab pressure.

4. Since the institution of the Arab boycott, the major oil companies have refused to send tankers with oil destined for Israel through the Suez Canal so that Israel has been compelled to pay a considerable premium for her oil shipped in other ways.

5. All the major oil companies that had been operating in Israel have withdrawn from oil marketing there in conformity with Arab boycott demands.

6. All the major oil companies declined to engage in oil exploration in Israel.

7. The oil companies have discouraged other firms connected with or dependent upon them from doing business with Israel.

VIII. THE INTERNATIONAL WHEAT AGREEMENT

Even the operation of the International Wheat Agreement has been affected by the boycott. The objective of this agreement is to insure, at equitable and stable prices, supplies of wheat to importing countries and markets for wheat to exporting countries. The United States is a member of the agreement as an exporting country, and Egypt, Lebanon, Jordan, and Saudi Arabia participate as importing nations.

While the International Wheat Agreement does not control the production of wheat in any member country nor the method by which wheat can be sold pursuant to the agreement, all sales under the IWA must be within the minimum and maximum prices set by the agreement. For example, under the 1956 arrangement the price range was from $1.50 to $2 per bushel (New York Times, Apr. 22, 1956).

Because the market price for wheat in the United States is higher than the maximum allowable export price under the International Wheat Agreement, our Government has since 1949 been subsidizing American wheat exporters so that we would be able to meet our quota of guaranteed annual sales. Most of this wheat is exported from their own stocks by private U.S. businessmen who are paid a direct subsidy by our Government. The terms of each sale are worked out privately by the U.S. exporter and the foreign buyer, after which the former files a notice of sale with the Government, applying for an export payment. In 1954 the Secretary of Agriculture reported that the average

wheat subsidy payment amounted to $0.47 per bushel (report of the Secretary of Agriculture, 1954). The amount of wheat and flour exported by the United States under the IWA between 1949 and 1955 to the Arab countries totaled approximately 36 million bushels (Annual Reports for the Crop Year, 1949–55). Calculating on the basis of $0.47 per bushel, this means that the United States has subsidized the export of wheat to these countries to the extent of some $17 million out of tax funds supplied by all our citizens.

The Arab League states refuse to ship their American wheat on blacklisted vessels or to buy wheat from American exporters who are Jews or who have dealings with Israel. As a result shipping costs increase. Our Government has declined to take the necessary administrative, legislative, or diplomatic action to end this discrimination. In effect, therefore, the United States submits to the operation of the Arab boycott and Americans are taxed for a wheat subsidy plan from which they are barred.

IX. THE UNITED STATES INVOLVEMENT IN ARAB DISCRIMINATION

Unlike other countries, the United States has become enmeshed in this boycott against some of her own nationals and has permitted the rights of American Jews to be placed in an inferior category. Our Government did not effectively resist the demand of Saudi Arabia that American Jews be barred from American installations at Dhahran, Saudi Arabia, nor did it resist the refusal of certain of the Arab States to grant visas to American Jews. Our Government has not encouraged American businessmen and shipowners to ignore the Arab boycott and blockade and to refuse to furnish to the Arab boycott office information as to the religious composition of American companies.

Spokesmen for our Government have sought to justify American inaction in a variety of ways. For example, as regards Jordanian and Saudi Arabian visa restrictions against American Jews, the Secretary of the Air Force on June 20, 1955, wrote to then Senator Herbert H. Lehman: "These restrictions are promulgated and enforced by the Arabic countries and are not within the prerogative of the State Department or the military to change." On May 22, 1956, the State Department's Public Services Division issued a statement which said in part:

"International law and practice recognize the fundamental right of a sovereign state to determine whether and under what conditions aliens may enter its territory. We believe that American citizens should enjoy all the rights and privileges in a foreign country which we allow the nationals of that country in the United States. However, we are obliged to recognize that any attempt by this country to force our views on a foreign nation would be considered intervention in the domestic affairs of that nation and therefore greatly resented."

At one time the State Department attempted to explain away the boycott of Jews as merely the work of a number of private individuals in the Arab countries rather than the result of official policy in the Arab League. Thus in a letter to Senator Lehman, dated December 15, 1953, the then Assistant Secretary of State, Thurston B. Morton, declared:

"The Department hopes that these instances are in the nature of sporadic, out-of-bounds actions based on excessive zeal or misunderstanding on the part of certain individuals rather than an indication of fundamental intensification of boycott practice by the Saudi Arabian Government."

As a result of widespread protest, on July 26, 1956, the U.S. Senate unanimously adopted a resolution (S. Res. 323) which stressed the primary principle of our Nation that there shall be no distinction among U.S. citizens based on their individual religious affiliations * * * [and that] any attempt by foreign nations to create such distinctions * * * generally is inconsistent with our principles. At their presidential nominating conventions in 1956, the Republican and the Democratic Parties adopted platform planks opposing foreign discrimination against Americans such as now exists in Saudi Arabia. A year ago, both the President's Committee on Government Contracts and the President's Committee on Government Employment Policy asked the Departments of State and Defense to eliminate the discriminatory practices involving Americans in Saudi Arabia.

Despite the Senate resolution and other protests, the State Department renegotiated the Dhahran agreement in April 1957 without obtaining any change in the Arabian discriminatory practices. This policy of allowing foreign governments to discriminate against American citizens on religious grounds represents a sharp reversal of earlier official attitudes by our Government. When the Czarist regime in Russia sought to deny visas to naturalized American Jews and to question visa applicants in the United States about their religion, William F. Wharton, Acting Secretary of State, informed Russia on February 28, 1893:

"It is not constitutionally within the power of this Government or any of its authorities to apply a religious test in qualification of equal rights of all citizens of the United States; and it is therefore impossible to acquiesce in the application of such a test, within the jurisdiction of the United States, by agents of a foreign power, to the impairment of the rights of any American citizen or in derogation of the certificate of this Government to the fact of such citizenship.

"His Majesty's Government, however, surely cannot expect the United States to acquiesce in the assumption of a religious inquisitorial function within our own borders by a foreign agency, in a manner so repugnant to the national sense." (U.S. Department of State, "Papers Relating to Foreign Relations," 1893 (Washington, 1894), pp. 536–537).

Despite this protest, however, the issue was not resolved and Russia continued her discrimination against American Jews. This discrimination became an issue in the presidential campaigns of the day and culminated in a resolution adopted by the House of Representatives by a vote of 300 to 1 on December 13, 1911 (J. Res. 166). In response to this overwhelming sentiment of the American people, 2 days later the State Department notified Russia, a world power, that the United States had decided to cancel the commercial treaty of 1832.

X. NONCAPITULATION BY OTHER GOVERNMENTS

The greater the capitulation to the Arab boycott, the greater are the demands made upon those who capitulate to it. First a company is simply asked not to maintain a branch or office in Israel. Then it is asked not to trade with Israel. Finally, it is warned not to hire Jews in executive capacities on pain of losing Arab favor.

Conversely, there is ample evidence that when faced with firm resistance the Arabs back down. Despite threats of economic reprisals, West Germany continues reparations payments to Israel and continues to trade with her. Yet between 1953 and 1955 the combined dollar value of German exports to Egypt, Iraq, Jordan, Lebanon, Saudi Arabia and Syria rose from $94,929,000 to $123,862,000. (Figures supplied by the German Consulate General in New York, June 5, 1957).

In 1956, the Central Organization for Foreign Economic Relations at The Hague advised the members of the Dutch branch of the International Chamber of Commerce not to supply Arab importers with information about the number of Jews working in Dutch export houses. On September 23, 1957, Dr. Willem Drees, Foreign Minister of the Netherlands, reiterated that his Government would resist all Arab boycott measures infringing upon Dutch interests. He declared that as a United Nations member Holland shares responsibility for Israels' existence and that the boycott is "illegal and conflicts with the armistice agreements" (Netherland News Bulletin, Sept. 21, 1957). As for resistance on the part of individual firms, the following statement by a British concern could well serve as a model for all governments and private companies beset by the Arabs:

"We vigorously contest the right of any overseas body or government, to dictate to us where we shall or shall not market our goods. Our business is that of selling our products anywhere in the world, and in this we are actuated by commercial considerations alone, politics playing no part whatever in our sales policy. We do, in fact, maintain strict neutrality in all our dealings with various countries, and that, in our opinion, is eminently more desirable than taking sides on issues completely unconnected with the affairs of England. The only edicts we obey are those of our own Government and provided they do not impose restrictions on the export of our goods to any particular destination, we regard ourselves as free to sell wherever there is a demand."

XI. CONCLUSIONS

The Arab boycott activities encroach upon the elementary American freedoms to trade, to invest, and to travel. There is a Treaty of Friendship, Commerce, and Navigation between the United States and the State of Israel. But because of the Arab boycott, American business firms are compelled to assume a posture toward Israel which is not in conformity with the spirit of that treaty. American citizens in this country are questioned about their religion by consular and diplomatic officials of the Arab States. American Jews are denied, because of their religion, privileges granted to non-Jews.

Arab economic warfare places a wholly unwarranted burden upon the American taxpayer. By imposing unnecessary expenditures and losses upon all of the countries of the Middle East, the boycott subverts the purposes of United States economic assistance, making the area increasingly more dependent upon such assistance.

While the boycott lasts, progress toward peace in the Middle East is impossible. This has been resognized by Secretary General Dag Hammarskjold who at a press conference on August 8, 1957, referred to the boycott as a deadweight upon our efforts.

In the broadest sense, the Arab boycott therefore constitutes political and economic aggression. By creating and maintaining tension, the boycott helps keep the Middle East in a state of near-war, continually threatening world peace and stability.

While the boycott lasts, interests vital to America are jeopardized. On political, economic, and moral grounds, it must therefore be resisted by the U.S. Government, by American business and by American public opinion.

A Latin American's Ideas on Hemispheric Unity—II

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to

insert into the RECORD additional excerpts from the book by Jose A. Benitez, "Puerto Rico and the Political Destiny of America," which was published recently:

A HEMISPHERICAL REALITY

Can the difficult struggle of the people of Puerto Rico during recent years serve as a useful case history for our brothers of Latin America, so as to assist them in their approach to intercontinental relationships?

The case of Puerto Rico is one that typifies the determination of a courageous people to overcome effectively the adversities of a difficult transition, without sufficient natural resources, living in dire privation, sickness, misery, and want, depending almost exclusively on a one-crop type of agriculture, devoted to the raising of sugarcane, supplemented by a little tobacco, a little coffee, and some other minor crops. In short, a declining type of agriculture, and, what was worse, one depending on a precarious reciprocal relation with the people of the United States. This is a fight the people are determined to win and are winning.

As the politicians dedicated themselves to academic struggles, they contributed to the promotion of divisionism, which stagnated the progress of the people and increased the economic and social maladjustment suffered by our island. It is evident that the people, exploited as they were by the greedy practices of the large landowners and of absenteeism, dominated as they were by colonialism, were almost at the point of despair in their discouragement.

The hard fight that initiated the awakening of the Puerto Rican conscience began—as I said before—in the year 1938. In 1940 at the polls the Puerto Ricans gave control of power to the right type of leadership. That was the overwhelming civic action which gave origin to the emancipating revolution of Puerto Rico.

Today, after 18 years of hard struggle which the people of Puerto Rico carried out with strong determination, the island—that fraternally contributes from the treasure of its experiences to the friendly people of the free world through the various programs of technical assistance of the United States—is nothing less than a gigantic and diversified workshop, in a constant, dynamic program of activities, well planned and equitably distributed among the 76 municipalities of the country.

The instruments and agencies necessary to fight the miseries of the population were established with diligence and generosity. Public services were increased to press on the fight against privation and sickness. The welfare and hospitalization programs were enlarged. The units of the public health service were increased, as were school dining rooms, milk stations, direct relief, and social security. An unemployment insurance program was tentatively created. The urban and rural sectors were provided with abundant, pure, fresh water. The electrification program was also increased to include the rural areas. New schools, roads, and lanes were built. The enormous slums which have housed thousands of humble laborers, workers providing the sinews of our productive energy, will very soon be totally supplanted by clean living quarters in excellent housing programs, modern and comfortable. Labor legislation has provided for the care and social elevation of the laborers and has improved notably their standards of living.

The economic problems have been faced with energy. Agriculture is being diversified and strengthened by new techniques. The industrialization program to increase the wealth, wipe out unemployment, and raise wages to a point which will improve the general welfare of the people promises to bring, within a few more years, the self-sufficiency which is still lacking in Puerto Rico. Agricultural experiment stations, a scientific system of cooperatives, training centers, and the work of social education of the community stimulate and facilitate the coordinated effort toward greater production.

The program fostered by the leaders of the Commonwealth of Puerto Rico is controlled and directed by a planning board whose technicians pass on—approving or rejecting—the promotions suggested as features of the organized development.

The University of Puerto Rico—recently admitted to membership in the American Association of Universities—provides the lawyers, doctors, pharmacists, engineers, architects, agronomists, public administrators, accountants, teachers, and others who are constantly joining the legion of executives and various public servants who work together in the fight against poverty and for the creation of a highly civilized level of life. The university is in charge of developing continually the vocational school—the largest of its kind in the world—where men are trained in all manual and industrial occupations, and which thus serves as a generator providing power for the great shop which is the island of Puerto Rico.

In a project of similar significance, the department of public education—which expends in its work the greatest share of the budget—in addition to pursuing its plan of general education—is giving emphasis to the complete elimination of illiteracy on the island. To that end, adult education is carried on at night schools throughout the land.

Those students who, having obtained scholarships from the United Nations and the technical assistance program, come to Puerto Rico to gain the benefit of experience there, as well as various other visitors, such as intellectuals, politicians, newspapermen, and statesmen, know of the cordial anxiety of the people of Puerto Rico to share the fruit of their struggle for improvement and security with their brothers of Latin America and the people of the rest of the world.

Hundreds of students and professional men from Europe, Africa, Asia and various islands of the Pacific, and especially from many of the republics of Latin America, come to the island to study procedures, programs and techniques used in Puerto Rico by various institutions, so as to carry the wealth of the knowledge thus acquired back to their countries where it will be put to use in their respective communities and special fields of endeavor. These friendly people are the best ambassadors for the good will and the cooperative spirit of the people of Puerto Rico.

The resulting achievements, which are the fruit of the initiative and struggle of the Puerto Rican leadership, would never have been attained without the favorable disposition, the generosity, and spirit of helpfulness of the United States. It was a matter of finding avenues of understanding in the official circles at Washington, of talking to the leaders of the Nation and interesting them in the responsibility of their historical commitments. Soon the democratic, liberal, and human traditions of the great Republic of the North came to bloom. Past indifference changed to mutual cordiality in the cooperative efforts which have brought about in a short time the social, economic, and political development of our people.

Puerto Rico is a community genuinely Latin America. Its historical, ethnical, and idiomatic origin is the same found in all the nations of Latin America. Our personality preserves intact its fundamental attributes. Upon entering the political orbit of the United States, we faced the same problems of misunderstanding and indifference that still estrange South American nations from the dynamic and busy colossus of the North. We ourselves lost much valuable time in not correcting our early attitude of negligence, incomprehension, and aloofness. But new men without xenophobic complexes and conscious of the necessity to bring an end to barren apathy, soon produced proof of the capacity of generous and intelligent nations—regardless of their differences in race, traditions, history, and culture—to bring forth the mutual blessings of an understanding and fertile fellowship.

Puerto Rico broke down the barriers of misunderstanding with the United States, and has thus developed, under the cordial influence of the resulting rapprochement, its multiple and vigorous potentialities. This privileged position enables the Puerto Rican people, intellectually, politically and psychologically, to serve as a responsible spokesman to the United States concerning the values which the Latin American people could contribute on behalf of the general good of this great hemisphere of ours. In the intercontinental evolution, neither the North nor the South can evade the common duties of their destiny. Why not begin the task which is obvious before us, the logical and full completion of reciprocal arrangements, which cannot long be delayed?

The world more and more is tending to lose its nationalistic barriers. It will be ripe, in the course of time, to accept the idea of a single governmental organization administered on the concept that there is only one humanity. The leaders of the great geographic communities—as the Europeans, the Asiatics, and the Arabians have begun to do—are under the obligation of grouping and strengthening their energies, to spread the greatness that dissolves selfishness, shares potentialities, ennobles life, and perfects civilization.

Puerto Rico wishes to sow its humble portion of seed in a furrow of the planting of brotherhood that will bring forth the mighty unified America that is on its way.

Such, in short, is the hemispherical reality which may be inspired by our people, who, filled with enthusiasm for perfecting the Puerto Rican civilization and sharing it fraternally with our brothers of the globe, may hope to spread their influence even further—to building a better world.

OUR PARTICIPATION IN NATIONAL POLITICS

Puerto Ricans, because of our condition as U.S. citizens, are free to go in and out of the country, and to settle down in the U.S. territory just as the same as those who are U.S. citizens by the circumstance of birth within the States. Constitutionally—due to the fact that Puerto Rico does not pay taxes to the Federal Treasury—the Puerto Ricans who live on the island take no part in the election of the President nor in the elections of the other national officials who are named by ballot; but the Puerto Ricans who reside within the national boundaries take part in the political campaigns of the parties and cast their votes in favor of their candidates.

Higher standards of living due to better salaries have been incentives to the Puerto Ricans who have flocked to the United States, enlarging the Puerto Rican colonies there. They are established permanently today in large towns and in such cities as New York, Chicago, and Philadelphia, and in many communities throughout Florida, California, and New Jersey, taking part in all types of professional and manual activities as a leading North American productive force.

With the cooperation of the government of Puerto Rico, of the States and the Federal Government of the Republic, and of religious, civic and political organizations, the Puerto Ricans who emigrate to the national territory adapt themselves well and are soon integrated in the North American way of life. The process of adaptation has revealed to the people of the communities where Puerto Rican have settled the social, political, and economic contribution that

Puerto Ricans can give, especially because of the openhearted spirit in which they approach everything that surrounds them.

The Pureto Rican showed his importance in the democratic structure of the United States when he inscribed his name on the rolls of voters and participated in local elections and in general followed the course of other important immigrant groups who became United States citizens, became integrated in the national life and obtained advantageous positions. There is no doubt that the Puerto Rican will perform a prominent role in the politics of the nation. In support of this belief, we see that the number of Puerto Rican residents is continuously increasing and their interest in public life is constantly becoming more effective.

Probably most of the world knows that the two great political organizations of the United States are the Republican Party and the Democratic Party. Both of these organizations—who constantly contend for the ascendancy in political power, finding fortune favoring sometimes one side and sometimes the other—joined to abolish colonialism in Puerto Rico, and which ever party has the leadership of the national administration sets aside partisan considerations in maintaining a friendly understanding between government and government with the Commonwealth of Puerto Rico.

The National Republican Party, with which the Statehood Republican Party of Puerto Rico is affiliated, not long ago had a promise in its platform of statehood for the island. It is very significant that this promise was changed in the last convention to a compromise proposal favoring social, economic, and political development under the present form of the Puerto Rican regime. Whichever party governs in Washington, the relations with Puerto Rico will be from government to government.

There exists the political realty that the Puerto Ricans are United States citizens, and, since there are Puerto Rican voters in national elections, both major United States parties have officially recognized two committees, one Republican and the other Democratic, which were organized and actually function in Puerto Rico. These committees, acting within their respective national groups in the United States, have the same essential importance and enjoy the same privileges as do the committees of the various States of the Union. The Puerto Rican committees offer constant help to the committees of their respective parties in those States where there are Puerto Rican residents.

Both political committees of the island have the same relationship to their national committees as do the State committees within the United States. Each names two national committee members, a committeewoman and a committeeman, to take part in national party activities. The committees of the island have equal rights with the committees of the States of the Union.

For those unfamiliar with the U.S. national politics, it is interesting to note how the country's principal executives are selected and how Puerto Rico and other non-States of the United States hegemony exert their influence in these matters.

Every 4 years the political parties of the United States hold conventions to nominate their candidates for the presidency and the vice presidency of the Nation. Of the 178 million citizens who live in the United States, a total of, say, 1,372 delegates of each party will vote in such conventions. The nomination is attained with only 687 votes (based on the above total), one vote over one-half the number of votes. It is also worth noting that the representation to these conventions is divided chiefly according to the number of inhabitants of each State.

The National Democratic Party—of whose Puerto Rican Committee I am the president—divides the votes of its convention as follows:

Alabama	21
Arizona	14
Arkansas	16
California	70
Colorado	18
Connecticut	22
Delaware	12
Florida	26
Georgia	23
Idaho	14
Illinois	60
Indiana	32
Iowa	26
Kansas	22
Kentucky	26
Louisiana	20
Maine	16
Maryland	24
Massachusetts	38
Michigan	46
Minnesota	28
Mississippi	15
Missouri	32
Montana	14
Nebraska	18
Nevada	12
New Hampshire	14
New Jersey	36
New Mexico	16
New York	98
North Carolina	36
North Dakota	8
Ohio	58
Oklahoma	28
Oregon	16
Pennsylvania	74
Rhode Island	16
South Carolina	20
South Dakota	8
Tennessee	32
Texas	56
Utah	12
Vermont	6
Virginia	32
Washington	26
West Virginia	24
Wisconsin	28
Wyoming	14
Alaska	6
District of Columbia	6
Hawaii	6
Puerto Rico	6
Virgin Islands	3
Canal Zone	3

The listing of vote distributions reflects the importance that the political parties of the United States give to the Commonwealth. We have, within the party, the same number of votes as the State of Vermont, the District of Columbia, Alaska, or Hawaii. We have two votes less than the States of North and South Dakota, respectively. And although Puerto Rico does not vote for a President or a Vice President, it does vote in the conventions of the political parties of the Nation, and with these votes has influence in the selection of party candidates for these great offices, and it participates jointly with the delegations of the Federal States in the resolutions, agreements, and other political actions they take in their efforts for leadership of the Republic.

No great imaginative effort is needed to envision the diversity of relations and associations through which the Puerto Ricans affect life in the United States, aside from the part they play, as indicated above, in the strife and fate of the national political parties. The successes springing from this political brotherhood enjoyed by the Puerto Ricans in North America have already borne fruit abundantly in such populous cities as New York, where the Puerto Rican votes, if not decisive in themselves, at least affect the balance in the results of the local elections.

As a result of the organization of the Puerto Ricans in New York City, the city district in which he lives has selected as its representative in the State assembly, or legislature, the Puerto Rican attorney, Felipe N. Torres. Among the New York City judges, we have the Puerto Rican, Manuel A. Gómez, and another of Spanish descent, Emilio Nuñez. There is a district leader, Antonio Méndez, who leads the Democratic Party in district No. 14 of the city. Attorney José Ramos López has served on the State workmen's compensation board. The Republican Party recently has nominated a Puerto Rican as a candidate for the U.S. Congress. The horizons promise to continue enlarging for civic duty, calling upon the capacity and strength for the Puerto Ricans in the United States in the same way in which we had the good fortune to see such opportunities arise in the more limited sphere of our land, Puerto Rico.

On the other hand, we have had powerful and enthusiastic collaborators in the national leaders, both Republican as well as Democratic. Now and then these come to Puerto Rico to learn our points of view and perhaps to study the Spanish character as it is revealed in the Puerto Rican, so as to know better their reactions, habits, and customs, and thus to learn what conduct to follow not only with the Puerto Ricans but also with the other Spanish inhabitants who live in the United States.

Through the influence of their votes in the elections of Governors, Congressmen, mayors and other public officials—an influence which is well recognized—Puerto Ricans in the United States have had the strong satisfaction of seeing direct results in benefits to their fellow Latin American immigrants.

Our condition as citizens of the United States, with the knowledge we have gained of the Nation's political life from our participation in the activities of national political parties, added to our condition as Latin American people, assuredly puts us in an exceptionally suitable position to serve between the United States and Latin America to help provide the warm and comprehending approach needed to erase old differences and misunderstandings and bring about a fellowship of all the people of the American continents.

Puerto Rico feels itself up to the task.

THE MISSION OF THE AMERICAS

I made a brief allusion in a previous chapter to the interest of such illustrious statesmen as Winston Churchill concerning the feasibility of creating a federation of Europe. I referred, also, to the consolidation of nations being carried forward by Asiatic and Arabian leaders.

In view of the forbidding political situation overshadowing the shrinking world in which we live, it is to be hoped that the great international leaders of the free world will come to recognize the necessity of strengthening and securing the life of their people, uniting them in commonwealths of maximum potentialities. The differences between nations having great territory and large population together with powerful economic resources, and the nations possessed of small territory, small population and scanty resources can be adjusted only by the unification of peoples with the same ideals, interests and common ambitions, unification directed toward the end of becoming greater through such federation.

In a world such as ours, full of driving and competitive tendencies, with some nations engaged in the barbaric domination that enslaves weaker ones, our chief problem is no other than that of assuring our survival by making ourselves the fittest, through mutual defense and cooperation with the other nations in our orbit.

From the early days of tribal life up to the present, humanity has moved always toward greater community concentrations. This beneficial tendency has proceeded, however, at a dishearteningly slow pace, a gait that

has dragged heavily on the potential advancement of civilization.

It is a shameful fact, and the fault of the peoples' leaders, that scientific progress has had its greatest and most rapid advancement in the forced culture of wartime. But such is the case. Nations that could develop with more splendor and nobility in time of peace have been very busy consuming the acid fruits of their selfishness, giving little consideration to the magnificent possibilities for their own enlargement through the fraternal growth of humanity.

The evolution toward a unique government of the human race—which is inevitable in the centuries to come—would have no civilized virtue if it were to come into being through the domination of man by man. Paradoxically, however, the present leader in the movement toward the gathering of peoples is a piratical colossus. He is indeed swiftly forming mighty conglomerates, both in population and in geographical expanse. And that being the case, prudence dictates that we face the inevitable conclusions and not delay a moment the labor that must be done for our progress toward the conquest and the fulfillment of the future.

Our hemisphere cannot ignore the realities of life at the crossroads where its nations stand today. The countries of the two Americas should earnestly and deeply meditate the historical implications of the moment in which they are immersed; the destiny that they may or may not fulfill; their weakness in their present isolation in the stormy international currents; the greatness which they could achieve in a hemispheric bloc, and the energy which could be generated in social, economic, scientific and cultural interchanges among the American nations. In a word, it is necessary to rationalize and to see the mission which a united America, pioneering and unselfish, could accomplish for the peaceful and fruitful organization of the genuinely civilized world of the future.

The incalculable natural wealth that the enormous territory of the American continents holds—still largely neglected, or unsuspected, in the soil—once developed to capacity could supply all the needs of the world.

The American nations occupy a comparatively virgin land. They are not subject to the grievous pressures for existence that bear upon communities of the Old World, where feelings of discouragement, despair, and desperation have driven the people often to take the road to war as a means of escape.

There lies before America a future free of the contamination of national psychological complexes. The hemisphere has no tares of ancestral bitterness. Its spirit is intact for the unselfish service it can give in the great intercontinental affairs of the globe. Perhaps its continued separation from the rest of the world helped it to preserve its purity. These considerations should encourage its people to accept the role of leadership that is indicated for them. The American people cannot continue divided but must join together to make the most of the wealth within their vaults, not only for themselves but for all the human race.

Our hemisphere must turn its eyes to its fitting and unexplored greatness, developing and directing it, and offering its fruits generously to the nations that now fight for a place under the sun. The contribution of America thus offered loyally for human fellowship could and should reestablish the equilibrium of those tormented nations whose construction has induced them to make war and thus to retard the advancement of civilization.

America could and should provide the rest of humanity the additional resources needed for its happiness, abandoning all reserve and hostility. Because of its youth, our hemisphere has all the conditions, qualities, riches and strength needed for the task of fraternally reconstructing the world to a degree which up to now has been spoken of only in a theoretical way. Its healthy youth, its unselfish and graceful spirit, place America in the privileged historic position to be the human bloc that will find ways of removing disputes and problems of the world through brotherly devices, doing away with the dark barbarity of violence.

The American nations could very well come to the year 2000 as leaders of the earth, exerting a leadership not to enslave or to destroy but to be useful in the building of the patterns of fraternal companionship that the world needs in its advance to greatness, spirituality and perfection. But this would require setting aside national and ethnic jealousies and recognizing the difficulties, and being conscious that only the more populous regions, regions having also territories of unlimited potentialities, could be the directors of the extraordinary and ambitious mission.

The United States very evidently is the most highly developed and efficient power in the American sphere. Its strength not only could establish its leadership from Alaska to Patagonia but also could extend it to the most distant corners of the world. As the chief defense against the antagonistic attitude shown by Russia to the nations of the Occident, dominated as Russia is by an imperialistic greed for expansion and world control, the United States is under an obligation to protect the right of liberty and the useful life, and to continue in this role, maintaining through various alliances the means to safeguard conservative and altruistic ideals. These alliances must be effected even with nations which are in many respects quite different in their character and interests, to the end that there will be a universal human fraternity and the development of a common civilization which will endure forever. But she should give first thought to the protection, security, and survival of the occidental nations that have a mutual area of interests. In this time of continuous threats to world freedom, the United States has no alternative; it must put all its resources at the service of the defense of all friendly nations, whose fortunes are tied to its own security.

Her responsibility for concern regarding affairs more distant certainly does not mean that the United States should not give first attention to the historic mission closest at hand, that of establishing a fraternal union with the Latin American nations of the hemisphere. It is to be hoped that the leaders of the great republic of the north will consider giving unrgent precedence to work for an understanding with their nation's neighbors in Latin America, so as to begin the germination of hemispheric unity as a starting point toward the greater, world wide work which destiny seems to have reserved for our hemisphere.

On the other side, I feel sure that the leaders of the Latin American countries will do no less in the vital appointment that they have with history.

All the leaders must stubbornly strive to give creative objectivity to the mission which is theirs to fulfill in their respective communities, to build the new world that is to come, even if the hemisphere does not at first accept their initative. The United States and Latin America could provide preponderantly the techniques and resources and, above all, the virtues of brotherly unselfishness which would be required for the achievement of the great task.

It is unnecessary, perhaps, to point out that the peoples of all the Americas are equally obligated not to shrink from the massive demands of the glorious gesture that the desperate, cornered state of humanity calls for.

The task is there. It is for its missionaries to carry it through to victory.

SOME LAST CONCLUSIONS

In the course of the historic mission that the America Nation could jointly fulfill to obtain the world fellowship that is advocated here, an immeidate benefit to all the nations of the hemisphere would be a rapport established with each other, erasing the frictions and prejudices that grew up in the creation of the intercontinental society. In a great measure, these prejudices and frictions are ghosts of doubts and suspicion begotten by the distrust and lack of communication which has predisposed the various races. In a lesser way—also ghosts, because they belong to errors of the past—the prejudices of Latin America are the result of the intervention of the United States on Latin American soil, prior to the time when President Franklin D. Roosevelt established a policy of hemispheric friendship.

As the two continents were drawn to each other in a cordial and loyal approach, they would remove frontiers that today separate North, Central, and South America, not geographically and politically, but with regard to interests and abstractions that are equally formidable.

Such an approach, based on fraternity and cooperation, would relieve the United States of an outside search for that which she needs to prosper and to enlarge herself and would similarly put within easy reach of Latin America all the productive resources that are lacking within its geographical limits. The two would contribute their respective potentialities—those already developed and the much more copious ones which are yet undeveloped—so that in a few years the resulting social, economic, scientific, and cultural advancement would be enormous.

It is evident that the task is work for a Cyclops, so far as it concerns the need of attaining genuine comprehension and pure magnanimity, whose breath would dissolve all the disagreements which today hold apart American nations. Both—the United States and Latin America—have their peculiar systems of life, with differences in history, customs, traditions, language and even objectives. But does this mean that they cannot get together, understand one another and share the common destiny that lies ahead?

Puerto Rico is by origin Latin American, as I said before. It entered into political relations with the United States in 1898. The island suffered from the same problems of misunderstanding and remoteness that exist today between the United States and other Latin American communities. Puerto Ricans faced incomprehension and indifference. There could be no success for us that was not based on the greatness of both the people of the United States and the people of Puerto Rico. As soon as we began to draw together, all incomprehensions and prejudices fell apart, and our association, fortified today by the bond of a common citizenship, thrives in the rich interchange on which our development is based.

If our Puerto Rican leaders succeeded in helping accomplish this American union, why could not the leaders who today orient the policies of other Latin American communities broaden and advance such diplomatic gains?

Communist Russia knows that its cunning expansionism cannot undermine, even in a clandestine way, the compact and powerful unity of the North American people. That is why it is maneuvering desperately to infiltrate its germs of anarchism, weakness and demoralization in the vital organs of the Latin American countries, through seemingly advantageous economic offers that doubtless could endanger the stability and free determination of those communities. Can we be so deceived as to yield to an economic infiltration over which hovers the steel expansionism and the grasping domination that have enslaved so many satellites in Russia's barbarous orbit?

Probably there will be a stern rejection of these devices by the Latin American leadership before the germ of the deceitful and subtle diplomacy of communism can undermine the future of Latin America and the destiny of our hemisphere.

Nothing that Latin America and the United States could wish for to improve their respective communities needs to be searched for in the Old World. They have everything needful in their own territory, or if anything is lacking temporarily it can be found by exploration of hemispheric resources. The continents, under the infinite guidance of God, must hope that the leaders of the several nations may have the vision of their enormous destiny.

The task of developing American fellowship is one for men of good will and not for Cyclopes. Both the Latin American and the North American people have equally the key that could put an end to their differences. A few examples will indicate the remedies that should be applied for the removal of causes of discontent.

Before anything else, we should go into the field of communication, not with the hauteur, reserve, and conventionalisms of diplomacy, but with a humane and brotherly attitude that assumes that all are equally dignified and useful and can exchange the most noble contributions.

After that, all practices of trade lacking equitable reciprocity and having an unfairly selfish end should be restricted until they are totally eliminated.

To the United States may be pointed out, as guides to rectifications it needs to make in the economic field, some facts that, beyond doubt, have to do with the justified suspiciousness of the Latin American people.

Development of the economic potentiality of the hemisphere should not be directed toward the north or toward the south, but to both equally.

The United States will benefit by buying more products from its neighbors of the south.

The tariff barriers that have established the existing unilateral utilitarianism should be increasingly reduced until they are abolished.

The U.S. importation quotas for Latin American products must disappear, thus establishing genuine reciprocity.

The inversion of capital should be planned to flow toward the underdeveloped countries so as to create the economic power of a distributive situation in the southern continent having neither overstrong nor overweak sides.

The program of technical assistance should be increased to incorporate the development on the southern continent of more numerous and more skillful professionals, so as to promote the growth of all productive fountains and fight the endemic misfortunes that interrupt the advancement of the countries south of the Rio Grande.

Business should be regulated by just rules and laws.

Such institutions as the Export-Import Bank should correct their lending system. In the indirect way in which the Bank offers its help it seems to favor expressly the North American industrialists, agriculturists, and businessmen in a manner mainly directed at supporting the interests of the U.S. economy, while at the same time it seems to exert an encroaching control over those countries that obtain its loans. The idea of creating an inter-American bank—actually under consideration in Washington now—to rehabilitate the Latin American economy seems to be the remedy of the obvious drawbacks of the Export-Import Bank.

Interventionist laws such as the Internal Revenue Act of 1950, which extend their fiscal collections to the independent nations of Latin America to extract revenues that are rightly the Latin Americans' income and which are needed for their full economic progress, have no possible justification and create a bitter disaffection among Latin American leaders. Such laws, besides being injurious to the promotion of the economic interests of U.S. citizens in Latin America, give aid to the penetration and competition of Old-World interests in Latin America.

In addition, the problem of Washington's relation with the dictatorships of Latin America—of which, fortunately, there are few left—deserves a complete revision, to reduce drastically the military assistance that is offered and, instead, provide cooperation in projects of social significance, such as housing projects, health projects, and programs to raise standards of living and expand public services.

It is possible also to give some hints to the Latin American countries of matters they might rectify in order to encourage the people of the United States to take a more interested attitude toward them.

Although we Latin Americans are conscious of the European blood flowing in our veins, we must think, feel, and act according to American realities. It is not a good attitude to despise the interchanges and reciprocities which we both, the Latin Americans as well as the North Americans, could cultivate, so as to promote trade among ourselves, rather than to go looking for business in distant quarters.

A thoughtless predisposition to distrust should not be directed against persons possessed of the good human endowments of the people of the United States. Latin America should recognize that the root cause of its haughtiness (presumably deriving from the hurt done by the lamentable interventions of the past or by the pressure of the old dollar politics) has been removed, and should see the actual disposition, the proved magnanimity, of the U.S. people.

The xenophobes are abundant in Latin America. Among them we find the politicians who, for personal reasons unnecessary to discuss here, cherish passionate grudges against the United States; the agitators who take a communistic line and spread discord, playing upon various feelings of inferiority to promote sentiment against the United States, or propagating the same grudge among youth of frustrated ambitions. The Latin American peoples must be very careful to guard themselves from these fanatic elements, which are their worst enemy, purveying anarchy dressed as patriotism, or injecting the microbe of communism into the blood stream.

In summary, the North and the South must end their disagreements and each one get rid of the limitations that hinder this settlement. And instead of addressing each other in stilted diplomatic language they should start to speak the vernacular of the family.

The hemisphere may hope that the United States and Latin America will gracefully accomplish the part which is required of each one. The destiny of both is the political destiny of all America.

Perhaps God will order affairs so that the lesson of Puerto Rico will guide the achievement of the task that the American nations can fulfill for the progress of human relations.

World Peace Through Law

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address delivered by Charles S. Rhyne, Washington, D.C., president of the American Bar Association, before the first session, the assembly, American Bar Association convention, in the Philharmonic Auditorium, Los Angeles, Calif., August 25, 1958. The text of the address follows:

WORLD PEACE THROUGH LAW

The privilege of serving this great association as its president is an honor for which I shall always be most grateful. These past 13 months have been an interesting, rewarding, and gratifying experience. I earnestly hope that those who evaluate the record since London will conclude that this has been a period of progress for the association's programs of service to the public and to the legal profession.

The presidential addresses of my predecessors have considered the contemporary facts of their day and the duties and responsibilities thrust upon lawyers by the great issues and problems of their time. These distinguished presidents of our association have challenged our profession to face up to those issues and to solve the legal problems which arose therefrom. In emulation of precedent I now speak of the No. 1 problem of mankind in the world of today: How to achieve and maintain world peace.

As a foundation for my thesis that peace between nations may be achieved and maintained through use of the rule of law in a new worldwide system of courts, it is helpful to recall the rapid forward rush of events in our era of unprecedented change. History teaches that these dramatic new advances are mere promises and preludes to even greater achievements in the future. One who would postulate any plan to solve any problem of our day must therefore also look beyond the present to the new horizons and the new frontiers envisioned by the world in which we now live.

1. THE WORLD TODAY

We live at a turning point in the history of civilization—in a time when the whole world is being made over socially, economically, scientifically, and even intellectually. Our era has witnessed such dramatic achievements as flight faster than sound, the splitting of the atom, miracle drugs, satellites in space, and many others. Rapid and turbulent changes in the scientific, economic, and social fields, almost too numerous to name, daily defy evaluation on the basis of prior standards and experience. Vistas of endless space have opened as man's horizons have widened to encompass the universe. At a pace beyond dreaming the whole pattern of our existence is being reshaped. As we inventory our strengths and weaknesses we must conclude that concepts of the past are no firm foothold for the dynamic present and the uncertain future.

Amid tremendous developments for good and evil, a revolution in international affairs is taking place. Due to rapid communications and transportation, ours is a physically indivisible world. Age-old barriers such as seas and mountains, weather and climate, even time and distance, are fading into insignificance. The many economic relations and intellectual exchanges between nations are steadily increasing. The birth of new nations, and the newly won independent status of other nations, have created a rising tide of intense nationalism and anticolonialism.

The whole world is involved in an accelerated industrialism and caught up in a tide of rising expectations. Yet there are vast discrepancies of economic development with widespread poverty, hunger and disease. The world Communist conspiracy is capitalizing on a growing spirit of rebellion against social and racial discriminations and low living standards. But while we can deplore

this Communist exploitation of human misery, we cannot condemn the social and economic aspirations of millions of human beings. We applaud their desire to compress centuries of social and economic development into mere decades and wish to aid them in achieving that goal.

The International Communist conspiracy has extended its colonial empire to include one-third of the people of the world, and it is working constantly to further its plan for complete world domination. The Kremlin has achieved its major conquests not by force of arms but by subverting the minds of men through political, economic and sociological warfare and other subversive tactics These tactics create an almost constant crisis and tension. Communist words are used for concealment and confusion rather than enlightenment. The peril from false Communist propaganda is putting the very idea of a free society to its greatest test in all history. In a world where strength resides in man's mind not his muscle, the loss of the fight for the minds of men could mean disaster. Yet peoples in other countries, and in our own country, all too often fail to recognize this threat to their freedom in this new guise.

The use of mass-psychology headline barrages is a major diplomatic development of our era. But people have grown weary of the constant strife and bickering in international affairs. In this situation wrong ocncepts may sometimes be unknowingly accepted. A man who gets wrong concepts, whether from reading misleading charges and countercharges, or otherwise, cannot fail to arrive at wrong conclusions. Thus many of our people are often bewildered and benumbed to the point where they react apathetically to even clear statements of the Communist menace.

We have been forced into spending billions on military expansion in an ever-accelerating arms race with Russia. Every such arms race in all history has ended sooner or later in war. We live constantly on the bring of catastrophe as we go from crisis to crisis. The Damoclean sword hanging over all the wonderful scientific achievements of our era is the knowledge that man's achievements could lead to the suicidal extinguishment of the human race. No one doubts that an all-out nuclear war today would be so incredibly destructive as to produce mass extermination.

As we listen to the roar of current history it is absolutely clear that mankind—men, and nations, and races—must learn to live together or else see civilization as we know it perish in the senseless devastation of war. The atomic and hydrogen bombs, the ICBM's, the sputniks, the explorers, and vanguards have attuned the minds of the people of the world to an overwhelming desire for peace which is stronger than such desire at any other time in all history. There is a growing realization that if the holocaust of all-out war explodes, every man, woman, and child will be in the front lines for the first time since the Indian Wars. The cause of peace is thus the cause of human survival.

Today, when man has learned how to destroy the world, his greatest need is for instrumentalities and institutions which can save mankind from the mass extermination of nuclear war. The sands of time have about run out in the hourglass of our civilization. Few will dispute that the No. 1 problem of our day is how to achieve and maintain true peace. This situation presents a unique and unparalleled opportunity to lawyers, for it is the rule of law which contains the key to a peaceful world.

2. MANKIND'S NO. 1 NEED: A WORKABLE PLAN FOR PEACE

It is obvious that to secure for mankind the marvelous benefits provided and promised by present-day civilization, and avoid the evils and dangers which hover over the earth from pole to pole, the greatest need of the world today is a workable plan to achieve and maintain peace. We must realize the inescapable fact that peace does not prevail in the world today. The existing situation has been described by Sir Winston Churchill as a "truce" maintained by "mutual terror," by President Eisenhower as a status of "balanced terror," and by others as military deterrence based upon "retaliatory terror." But no matter how it is described and by whom, it is not peace.

Peace means something more than the absence of war, something better than the truce in which we now live. The difference between a peace and a truce is that where there is peace there is no fear and no threat.

3. THE MACHINERY NOW USED HAS NOT CREATED PEACE

A look at the policy of the United States today reveals that our Government is maintaining the current truce through (1) military force, (2) diplomatic negotiations, agreements and treaties, (3) trade and aid, (4) the United Nations and alliances with friendly nations, and (5) measures designed to off-set Communist propaganda. But all of this together has not achieved true peace.

Weapons of horror cannot either guarantee the security of our Nation or form a foundation for peace.

The chessboard of diplomacy has not achieved peace.

Artificial barriers to the free flow of trade between nations present seemingly insoluble problems.

Financial aid has not always brought us friends, for friendship, among men or among nations, cannot be bought.

The United Nations has performed magnificiently within its limitations, but it is out of date, and cannot even prevent little wars, nor even slow down the ever-accelerating arms race with its threatened consequences.

We are being far outstripped in the propaganda field by adversaries who use the very cry for peace as a propaganda weapon. We have not resharpened the truth into an effective instrument of combat against the "big lie" technique utilized by the Kremlin. And even a winning effort in the propaganda war will not bring peace.

No one can successfully contend that this existing machinery, which has brought only a truce so far, is an effective plan for peace. International tensions, anxieties, fears, and threats are the lead story in nearly every news medium day by day. They are increasing rather than on the wane. And there is no prospect for improvement through the instrumentalities now in use. Man's number one problem remains how to end the buildup of hot and cold weapons in such a way that peace may prevail. The stalemate of the current standpatism of our foreign policy must be broken. And the existing apparatus of our cold-war effort certainly does not provide a formula for such a breakthrough.

To end the ever accelerating arms race before mutual doom replaces the truce of mutual terror, we must go beyond the instrumentalities and institutions used in the past and adopt a new approach—a new plan—for peace. We must look forward, not backward. We must make a new start based upon a new concept. We must think and act boldly and meaningfully to adapt our peace-seeking effort to the realities of today and tomorrow.

I do not say we should abandon our diplomacy, our weapons, our agreements, or our other present mechanisms, but simply that we must go beyond them and do the job they have not done.

We cannot stand still and let the world dissolving time bomb of all out nuclear war explode. Our circumstances are urgent. The time for forward movement toward peace and away from war is now. The opportunity to move in that direction may be lost forever if we do not grasp it while we can.

4. A UNIVERSALLY COMPREHENSIBLE NEW PLAN: THE RULE OF LAW

To pull the world out of its present drift toward destruction, and to set it on the path of progress toward peace, a dramatic new approach to peace is essential. Such a plan must capture and fire the imagination of men the world around. It must be a plan which all peoples can understand. It must be related, therefore, to their ordinary everyday knowledge and experience. Settlement of international disputes through law in the courts is such a plan.

"Law" and "courts" are universal terms all men comprehend. All peoples know the law and courts have proved their worth as a keeper of the peace within nations. They will readily grasp the concept, content, and the value of this plan of going to court instead of to war. They know what law and the courts have done nationally, and if proper leadership is given they can be brought to see what law can do internationally.

5. LAW IS CIVILIZATION'S BEST CONCEPT TO CREATE PEACE

An evaluation of the ideas, ideals, and concepts which mankind has developed since the dawn of history leads to the inescapable conclusion that the rule of law offers the best attainable route to peace. In a world sundered by differences of language, color, creed, and belief, and by background in diverse forms of government, the rule of law is the one concept universally understood as an ideal nearly all men have in common on a worldwide basis. It therefore offers a common ground which mankind possesses upon which to erect an edifice for peace.

In the beginning of social order disputes between man and man were settled under the rule of the jungle by brute strength. Later sticks and stones were used, then spears and arrows, then guns and powder. Today in all civilized nations, disputes between man and man are settled in the courts under the rule of law. But the law of the jungle still prevails as the ultimate mechanism to settle disputes between nations.

Of all human concepts, law has the best historical claim as an instrument to satisfy the need for peace and order. Man knows that peace reigns where law prevails. People everywhere experience law's use almost daily in courts in their local communities. Out on the vast new frontier of the international community disputes previously settled by the bloodbath of war must come to be settled by similar tribunals of justice.

Man has not realized what law can do for him internationally, and that is the reason why law has not been used in this field as it can and must be. The basic ungrasped fact of our time is that the lack of the rule of law in the world community is today the greatest gap in the growing structure of civilization. A community, whether local, national or international, can remain peaceful only so long as it is subject to the rule of law. Down through the ages, people have lived in terror and fear wherever the rule of law has not prevailed within nations. And this is true today in nations under Communist domination. We of our generation must find a way to implement the best answer to our number-one problem of peace—the application of the rule of law to relations between nations. We must apply this formula for living together before we dissolve together in nuclear flame.

6. THE RULE OF LAW DEFINED

The rule of law is not a new concept. There is no mystery about its principles. Throughout the recorded history of mankind the rule of law has meant the application of

reason and fairness.[1] All peoples understand it to carry such a connotation. They know it means a decision according to what is morally right to insure liberty, equality, and justice in relationships between man and man and between man and government. It will have the same meaning when applied between nation and nation.

Contrary to the thinking of many, the principles of our Constitution, including our renowned Bill of Rights, do not represent original ideas created by the draftsmen thereof. The Constitution is in fact a restatement of the principles of the rule of law as borrowed from the great lawgivers of the ages. The world and our Nation have changed beyond the imagination of the writers of our Constitution, yet their restatement in that great document of the fundamental principles of the rule of law still stands relatively unchanged. This firm foundation in the wisdom of the centuries is the reason our Constitution of basic legal principles has been able to meet the ever-changing needs of our rapidly growing and expanding Nation.

A study of Hammurabi's Babylon Code of 2100 B.C., the law of Moses in 1450 B.C., Justinian's Roman Codes of 600 A.D., and the Magna Carta in 1215 A.D. reveals that there is no basic difference in the legal principles espoused by the great lawgivers of the ages. A survey of the writings of Solon (600 B.C.), Confuscius (500 B.C.), Skotaku Taishi (600 A.D.), Bracton (1250 A.D.), Bartolus (1350 A.D.), Colbert (1165 A.D.), and other celebrated legal scholars down through the centuries, reveals that in all the great legal systems (i.e., Chinese, Hindu, Hebrew, Greek, Roman, Germanic, Japanese, Islamic, Slavic, civil and common law) there is no fundamental difference in concept of the underlying legal principles. The rule of law has no boundaries, and is of its very nature international in character.[2]

There is no need to await the writing of an elaborate new code of international law[3] before utilization of the rule of law in the settlement of disputes between nations. To wait until a written code is perfected and accepted could delay interminably the progress toward world peace through law. The fact is that utilization of the principles of the rule of law could begin today.[4]

The rule of law of which I speak is applied daily by all lawyers in assessing the legal problems they evaluate. It is not law known only to international lawyers under the mysterious title of "International Law." The fight for application of the rule of law internationally—or, to state it more bluntly, the fight for mankind's survival through law—is therefore the duty and responsibility of every lawyer. None can shirk this task on a plea of ignorance or lack of experience. All lawyers know the rule of law of which I speak. All lawyers, therefore, share the responsibility that flows from that knowledge.

7. LAW PLUS A WORLD COURT SYSTEM

History reveals that success in the use of the instrumentality of law has always required the institution of a court system.

For Moses to have received the Ten Commandments on Mount Sinai and then to have done nothing about them would have rendered them worthless. Moses realized his responsibility and set about preaching and teaching the value of living under the law. He also created an excellent system of courts. He knew that the law could not function to end friction without a court system. The message and work of Moses should be an inspiration to us lawyers of today. But unless we set up the courts to use the rule of law internationally the lesson taught by Moses will have been wasted.

History also teaches that creation of a court system must precede disarmament within nations. One excellent illustration of this lesson is what happened in England where only after the King's courts were created, and had proved their worth, did the lords and the barons dissolve their armies and let the courts decide their disputes. Another illustration is what took place in the western part of our own country where, after the courts began to function, disarmament for both the good and bad men gradually came about.

The law is in many ways like a giant river. A river can run on for generations with slight use for navigation, and it is only when the river is harnessed for hydroelectic power development that tremendous service and its greater potential for the benefit of mankind is realized. So it is with law. Law has been around since time immemorial. It has a tremendous potential value, but in any given area, until the institution of the courts is created so that law can be used there, the law is never harnessed to realize its full potential in benefits to mankind.

8. EXISTING COURT INADEQUATE

We therefore have the instrumentality of the rule of law readily available; but the sine qua non of this plan for peace is a worldwide court system to make law accessible and usable. Within nations we have thousands of courts, local, state, regional and national. But for the entire world community we have only one court. It is the International Court of Justice. The Court has 15 judges. It has decided 10 cases in the 12 years of its existence. The major nations of the world seemingly ignore its availability and utility.

Our own country—despite the American Bar Association's express opposition to this policy[5]—reserves to itself the right to decide whether complaints filed in the International Court of Justice are within the domestic jurisdiction of the United States. Such a stultifying provision says to the world that we decline to trust the Court to rule correctly on such an issue. This lack of respect by us, and by other nations with similar reservations, has laregly destroyed the prestige and usefulness of the Court. The inaccessibility of the Court also contributes to the failure of nations to use it. It is the present practice of the Court to hold all of its hearings at The Hague.

The United States should assume leadership in creating respect and prestige for the Court by removing our reservation on jurisdiction. The Court can itself make its processes more useful and accessible by sitting constantly at the seat of the United Nations in New York. The Court should also announce its willingness to sit all over the world in chambers of three judges. Its charter now authorizes such action by the Court, but it has done nothing to make this provision meaningful. These are things which the United States can do, and which the Court can do, to move the Court forward toward its potential use as a mechanism for peace. But more is needed to make law and the courts serve as they can and must in this vital field.

Applying the lessons of history, we need to go beyond the present structure of the International Court of Justice and create an entirely new and additional worldwide system of courts to make law as an instrumentality for peace accessible to the people throughout the world. A system of circuit courts under the International Court of Justice is needed. Perhaps we should go beyond that and have one judge sitting constantly in a branch of the world court system in each sovereign nation. There could be intermediate courts of appeals on a regional basis with a final appeal to the International Court of Justice. Such a world legal system would parallel in the international community the setup of the Federal court system in the United States.

Without the institution of the courts the rule of law cannot be made effective internationally. An international judicial system would throw a blanket of law over the world. Any nation refusing to participate would be automatically branded as "outlaw" by world public opinion.

The cost of a world judicial system is estimated at about $10 million per year. The cost of military expenditures for our Nation alone is $40 billion, and worldwide it is more than $100 billion yearly.[7] Elimination of all military costs is not a reasonable expectation, but the small cost of a world judiciary and its great potential stand in stark contrast to the ever-mounting budgets for military needs.

9. JURISDICTION OF NEW WORLD COURT SYSTEM

The jurisdiction of the new world court system should include all disputes between nations whose resolution depends upon facts and the application of the principles of the rule of law: Such cases as our flyers who recently wandered off course behind the Iron Curtain, the truth or falsity of propaganda charges which so often bring the world to the brink of war,[8] the Suez controversy, the Spanish-Morocco boundary dispute, many of the current Middle East controversies, and hundreds of similar incidents and disagreements which are fast multiplying in our shrunken world with its rising number of international contacts. If the proposed treaty guaranteeing world investment becomes a reality, disputes thereunder could go to the international judiciary for resolution. Disputes arising under the European Economic Community already are resolved by the new international court created for that express purpose. I have not the slightest doubt that a world judicial system will prove its value once it is in operation.

10. ENFORCEMENT OF WORLD COURT JUDGMENTS

Enforcement of World Court decrees and judgments would depend in the first instance, as it does now within nations, upon voluntary compliance. The pressure of public opinion is such that very few nations would want to stand before the world branded as an outlaw for defying a decree of a world court. Full faith and credit could be granted also by national courts to the decrees and judgments of world courts, thus permitting enforcement to be sought in such national forums. If enforcement is refused, or prevented, diplomatic and economic sanctions could be imposed. Finally, some kind of world police force has been suggested for use in extreme cases under proper safeguards. The latter idea would certainly require extreme caution, care and insurance against misuse and abuse but experience with such a force already indicates it can be useful in proper situations.

11. SUPPORT FOR WORLD PEACE THROUGH LAW

Support of the idea of world peace through law comes from many of the leaders of the world. President Eisenhower said in his Law Day, U.S.A. message that "the world no longer has a choice between force and law; if civilization is to survive, it must choose the rule of law."

Secretary of State Dulles said in his Law Day, U.S.A. message:

"In international affairs it is impossible to sustain a just and lasting peace unless that peace is based upon law and order."

Henry R. Luce, who has done more than any other person to further world peace through law, wrote in a full-page editorial in Life magazine:

"There is a hunger and thirst for the rule of law throughout the thinking part of the world."

The Chief Justice of the Supreme Court of Japan, Kotaro Tanaka, has said:

"The realization of justice is a thing which interests not only one nation, but all the nations of the world."

Footnotes at end of speech.

The Chief Justice of Pakistan, Muhammad Munir, in dedicating the new Pakistan Legal Center, paid tribute to the rule of law and called upon lawyers to lead toward a lawful world, saying:

"The task is essentially one for lawyers because they are the technicians of democracy and specialists in man's relation to man."

The president of this center, Chaudri Nazir Aham Khan, said:

"For us Muslims the rule of law is like an article of faith. When we talk of the rule of law we are talking of an Islamic concept and an Islamic way of life."

Daulet Ram Prem, editor of the Indian Law Quarterly Review, in an open letter to the American Bar Association, concludes:

"Let us join hands and cooperate in the sacred trust of bringing about equality, justice, right of self-determination, and dignity of man not only in our respective countries but throughout the world."

These are illustrative only. There have been many other recent statements from leading jurists, lawyers, and laymen all over the world strongly supporting world peace through law.

In our own country many leaders of the bar and others have expressed strong support for this great ideal, and have urged the American Bar Association to intensify its work in the field. Gov. Thomas E. Dewey has headed a special American Bar Association committee on international law planning which will report to this convention on the current status and future possibilities of peace through law. State and local bar associations have created new committees to work specifically on this idea.

The International Bar Association has made world peace through law its major program. Many newspaper editorials written in connection with Law Day, U.S.A. and our association's effort in the world law field have strongly endorsed the objectives of this idea. And judging from letters to magazine and newspaper editors, as well as from other writings and discussions, the public at large is evidencing a rapidly increasing interest.

A world law conference is being planned for May of next year. Duke University has created a new world rule of law center and one of President Eisenhower's assistants, Arthur Larson, has resigned to head that center. The President retained Mr. Larson as a special Presidential consultant, however, and charged him with the responsibility of reporting on ways the Federal Government can help achieve world peace through law.

Grenville Clark and Louis B. Sohn have written a most outstanding book entitled "World Peace Through World Law" which presents a plan for reorganization of the United Nations. While theirs is a different, more far-reaching, and more complicated plan that that of utilizing law in a world court system the ideal is the same.

There is, therefore, a rising tide of interest throughout our country and the whole world in peace through law. But we need to get beyond words to action. The ideal of today must become the reality of tomorrow. Pious phrases and slogans will not create peace. For if mere wishing would create peace, we would have had peace years ago.

12. OBJECTIONS TO WORLD PEACE THROUGH LAW

World peace through law is not put forward as a Utopian scheme for a perfect world community, and the plan here espoused is limited to use of law in a world court system. But there are those who oppose even this modest beginning toward settlement of conflicts between nations in a civilized manner. The objections can be classified as follows: (1) This plan is an idealistic dream, (2) law has been around from time immemorial but has not stopped wars, (3) the international judiciary might make some wrong decisions, (4) the plan is just too difficult to create and get into operation, (5) such a plan would never work because Russia would not join in it, and (6) the world community needs more than just a judiciary.

To say that peace through law in the courts is an idealistic dream which therefore cannot be realized is to deny the facts of history. America was built on idealism. Idealism burned fiercely in the breasts of Washington, Jefferson, Madison, and all of those other great forefathers of ours who founded our Nation as a government under the rule of law. They utilized law and the courts to make our rulers subject to the ruled. Such a plan was pure idealism when adopted, but it has worked. If we ever reach the stage when idealism is a curse rather than a virtue our Nation will have lost the ingredient which has made it the greatest the world has ever known. Woodrow Wilson said: "The world is run by its ideals. Only the fool thinks otherwise."

Certain it is that law has been around for many years, and granted, it has not stopped wars. The outlawing of war through the Kellogg-Briand Pact did not stop wars because that pact had no institution of a world court system to implement it. The mechanism of law plus the institution of the courts has never been tried in the way herein urged. In this respect, law is like religion. It has not failed; it has never really been tried. Within nations law plus the courts has certainly brought peace. On such a record of accomplishment it is reasonable to believe that such a mechanism can do the same if utilized in the world community.

Certain it is also that the world court system would be manned by humans and those humans may sometimes decide contrary to our wishes and even make wrong decisions. Law plus the courts is not a cure-all. It will not end disputes and quarrels between nations. It does not end them now within nations. There will still be conflicts, and there will still be lawbreakers among nations as there are now within nations. But court decisions if contrary to fact and reason are always subject to change, while the millions of gravestones all over the world are mute testimony to the unchangeability of the results of war. A few wrong court decisions do not destroy the value of this plan, any more than a few wrong court decisions destroy the value of the use of law in the courts within nations. Few will deny that it is better to have a few wrong court decisions than millions of deaths in all-out nuclear war.

As to the objection that an effective international judicial system will be too difficult to create and get into operation, 20th century man has not let difficulties prevent him from accomplishing other seemingly impossible goals. A short time ago the splitting of the atom was looked upon as an unrealizable dream but now it is a reality. A short time ago the satellite was a fantastic dream, but now it is a reality. Twentieth century man has developed a technique for concentration of the talents of many people on seemingly insoluble problems so as to achieve a "breakthrough." So it was with the atom and so it was with the satellite. And so it can be with world peace through law. We know the goal and the general outline of the mechanism just as well as we knew the goal and the general outline of the mechanisms to use in connection with splitting the atom and launching the satellite. If we move forward with the same kind of crash program, the same concentration of brainpower and money, that we utilized in reaching those goals, the achievement of this great goal of peace through law is not only possible but extremely probable.

We must face the fact that despite the interest expressed by Russian lawyers on the recent visit of the American Bar Association delegation to the Soviet Union, Russia will probably not agree to use of the rule of law in a worldwide court system as a mechanism for settlement of international disputes, particularly those in which she is involved. But to let Russia exercise a veto preventing the creation of this world court system would give the Kremlin an unthinkable control over world progress toward peace. The world court system can operate without the Soviet Union. After this court system is established, and as it demonstrates its worth by use outside the Iron Curtain, it will have a tremendous attraction for the neutral and uncommitted nations. These nations want peace so that their social and economic development plans can go forward and will want to join in any system which brings world peace. Russia's propaganda which is now directed so strongly to those nations would have no answer to the liberty, equality and justice which the world court system offers as contrasted with slaughter on the battlefield. If Russia refuses to use this mechanism, and the free world does use it, Russia's adherence to lawlessness would be crystal clear to the whole world. Here only actions would count. With the increasing education of the Russian people, and the strong desire for peace which persists in the hearts of men even behind the Iron Curtain, perhaps this plan might even reduce the depth of the Iron Curtain itself. Adherence to this plan by nations seeking freedom from the Russian Colonial Empire is certainly a very real possibility. The lawyers of Yugoslavia with whom our American bar delegation conferred in Belgrade recently indicated tremendous interest in this idea.

I quickly concede that the world community has been reluctant to make much use of law in the past, and that it needs more than just a new world court system. All I contend for here is that use of law in the courts will aid in preventing wars so that the other needs of the world community can be met through other mechanisms. It is my sincere belief that law in the courts could settle many disputes between nations and thereby create a favorable—a peaceful—climate within which better progress can be made toward solution of the other great problems of mankind. And any war that is prevented leaves more living people to work on such problems and more material strength to devote to constructive rather than destructive purposes.

13. OTHER PLANS FOR PEACE

Disarmament agreements have been given much prominence as a plan for peace. But since the failure of the London disarmament discussions last year that idea has lost much force. Disarmament conferences have been held down through the centuries but no agreement resulting from such a conference has ever contained a successful formula to maintain peace. The best evidence of this is the fact that every disarmament agreement has been followed sooner or later by an arms race—then war. A study of these agreements reveals that the reason they have failed is an inherent inability to devise a method for so weighing armed might that all participants would always feel that they were treated equally. The rule of law avoids this inherent defect, as all nations would be on a basis of equality before the law.

World government has not made progress because a world legislative assembly with weighted representation has not gained widespread acceptance. The idea of redoing the United Nations into an effective world government has now been put into a concrete proposed plan by Clark and Sohn. But a study of their plan reveals that there is too much to do, and too many stumbling blocks, to hope for rapid progress toward such a

mechanism. Applying the judicial concept on a working basis seems to be a much more realistic approach to peace in the world of today.

Religion as a moral basis for peace has strong appeal to those of us who believe in God and the natural law. But there are differences in dogma and belief which have stood as roadblocks to the use of religion as a universal foundation for peace. Separation of church and state is basic in our way of life even though our system of government is in its ultimate essence based upon strongly felt religious and moral principles. But religion is, as was said so well by Dr. Harold A. Bosley in his recent baccalaureate sermon "Pardon My Idealism" at the Duke University commencement, something beyond and above government under law. He said that religious faith "stands far beyond the forms of democracy as we now know and enjoy it and says 'come on up higher.'" Acceptance of law as a plan for peace can be a first hopeful step toward a climate for better acceptance of the great principles of religion in places where they are not now favored. After we arrive at such a step we can concentrate on "coming on up higher."

14. HOW TO ACHIEVE PEACE THROUGH LAW AND THE COURTS

We already have the principles of the rule of law, and the beginnings of a world judiciary in the International Court of Justice. Our problem is how to put this mechanism to work to achieve and maintain peace. We should begin by putting the International Court of Justice to work now while awaiting the creation of the additional world system of courts which is essential to the achievement of world peace through law.

We live in a world of ideas. Strength today resides in man's mind. When people throughout the world understand what law and courts can do to prevent the unimaginable horrors of world war III, public opinion will crystallize behind the rule of law in such a powerful way as to insure its use. When the value of going to court instead of to war is fully understood, the people of the world will demand, and get, the worldwide judicial system that effective application of the rule of law requires.

The immediate need here is for leadership—for leaders who can see beyond the turmoil of today and take the initiative to lead toward a peaceful tomorrow. Lawyers are by training and tradition leaders in the discussion of the great public issues of the day. Already our profession through Law Day, U.S.A., has laid the beginning of the foundation in public opinion for progress toward peace through law. We have identified law and lawyers with man's yearning for peace. But this is not a job for the short-winded. It is not a task which can be completed in a day, or in a month, or in a year, or even in a decade. There is an old Chinese proverb that "the longest journey begins with the first step." The sooner we take this first step and many more steps the sooner the world will move toward peace and away from its present drift toward war.

Public opinion largely controls governmental action today. Without a demand from the people new programs are rarely adopted. It is the lawyer's job to create the ground swell of public support that is needed to advance the concept of law in the courts as an answer to war. The legal profession must continue to educate our people on the value of law by another Law Day, U.S.A. We must help other nations of the free world conduct their own "law days" so as to create a favorable climate for law on a worldwide basis. We must then join hands with lawyers all over the world and stage World Law Day. Finally we must plan and execute a World Law Year to focus the attention of the people of the whole world upon what law can do for mankind. Just reflect upon what the International Geophysical Year has done for science. And remember that law, unlike science, can be used only for peace. Expansion in the use of law can mean only peace. But our people do not yet realize that great truth.

We need to convince the leaders of governments that they should assume leadership in the cause of peace through law. Governmental acceptance of this concept and governmental action toward its effectuation is obviously essential to its success. And it is governmental creation and use of a world judiciary which is our major objective.

Our Nation which prides itself upon its government under law should announce to the whole world that the rule of law is our No. 1 plan for peace. It is logical that the United States be the nation which proposes this plan and which takes the lead in an active program to make it work.

We must remind our leaders in Government of what James P. Warburg said: "The United States cannot, alone, save civilization, but by default of affirmative leadership, it can come perilously close to insuring civilization's end."

We American lawyers have a tremendous duty and responsibility. We of all groups appreciate that law used in a world judiciary is the key to world peace. We can and must explain this idea to all peoples. We must explain our mission of peace through law in such a way that it will ring a bell whose clarion call will reverberate around the entire world. President Eisenhower is correct in his thesis that if we do not adopt the rule of law, civilization cannot survive. Our job as lawyers is to make that point clear to all peoples.

The lawyer's responsibilities from the world of today therefore present the greatest challenge ever faced by any professional group. I am proud of our profession and proud of its tremendous accomplishments of the past. I feel certain that it will rise to this challenge and live up to this new responsibility. We lawyers will give to this task all the hard and arduous years of effort that are required to make peace under law a reality. We will succeed because we must. Failure is unthinkable when the result of our failure could be a world reduced to ashes.

The most important public service open to our legal profession today is this opportunity to mobilize the prestige and the power, the sanity and the skill, the judgment and the judicial temperament of the lawyers of the world in behalf of this goal of peace under law. Never in all history has the climate been more favorable for success if we but move swiftly, surely, and carefully to meet the need that exists. We must build upon the experience of the past and the possibilities of the present to insure a peaceful future for the world.

An idea can be more powerful than the atom. And nothing can deny an idea whose time has come. We lawyers must make certain that the time of this idea of peace through law arrives before atomic annihilation overtakes mankind.

I am confident that we will.

---

[1] Aristotle defined the rule of law as "intelligence without passion." Bodenheimer, "Jurisprudence" (1940), p. 44.

[2] Briely in "The Law of Nations" (1955), writes: "* * * It was out of the conception of a law of nature that the early writers on international law developed their systems * * * under a terminology which has ceased to be familiar to us the phrase stands for something which no progressive system of law ever does or ever can discard" (p. 16).

"Over against the theory of sovereignty, standing for the new nationalistic separation of the states of Europe, was set the theory of a law of nature denying their irresponsibility and the finality of their independence of one another * * * the belief that, in spite of all appearances the whole universe, and included in it the relations of sovereigns to one another, must be ruled by law, remained" (pp. 18–19).

[3] The International Law Commission is compiling and codifying the rules of law in many fields of international intercourse. Where applicable such codifications should be considered along with the principles of the rule of law in deciding any case before any international court. As Dean Pound has said so well: "The vital, the enduring part of the law is in principles—starting points of reasoning—not in rules. Principles remain relatively constant or develop along constant lines. Rules have relatively short lives. They do not develop. They are repealed and are superseded by other rules."

[4] Brierly, supra, note 2, says at page 68: "* * * International law, as well as domestic law, may not contain, and generally does not contain, express rules decisive of particular cases; but the function of jurisprudence is to resolve the conflict of opposing rights and interests by applying, in default of any specific provision of law, the corollaries of general principles, and so to find * * * the solution of the problem. This is the method of jurisprudence; it is the method by which the law has been gradually evolved in every country resulting in the definition and settlement of legal relations as well between States as between private individuals."

[5] 71 Abar 91, 316.

[6] Factfinding would be an important part of the functions of the New World court system. John Watson Foster, grandfather of Secretary of State John Foster Dulles, in an address entitled "The Foreign Wars of the United States," delivered before the American Society for Judicial Settlement of International Disputes on December 15, 1910, reviewed the facts leading up to all the wars of the United States up to that date, that is the War of 1812, the Mexican War, and the Spanish War. He concluded that some began under mistakes as to existing facts and that each could have been settled under the rule of law in tribunals of justice without resort to war. His final observation was, "I do not say that we shall have no more foreign wars, but I do say that our experience teaches that if we exercise justice, forbearance, and patience, and seek peace through methods proposed by this society (i.e., the law and a judiciary) an honorable way may be found of adjusting all our international differences."

The Enemy Grows Bolder

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
OF
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. SCHERER. Mr. Speaker, about a year and a half ago a nationwide drive was started by the Communists and apologists in this country to abolish the House Committee on Un-American Activities and to curtail the powers of the Federal Bureau of Investigation, discredit its Director, J. Edgar Hoover, and repeal the Smith Act, the Internal Security Act and the Communist Control Act of 1954.

This Operation Abolition was sparked by decisions of the Supreme Court which handcuffed investigating committees and

nullified much legislation aimed at meeting the Communist threat from within.

Members of Congress and the news media have been bombarded with anti-committee and anti-FBI propaganda, instigated by the Communist apparatus and joined in by some well-meaning and not so well-meaning people.

Mr. Speaker, on Wednesday, January 7, 1959, the Richmond (Va.) News Leader, in a lead editorial entitled "The Enemy Grows Bolder," effectively analyzes this Operation Abolition. In its January 1 issue the American Legion publication Firing Line makes an equally good analysis. I feel that my colleagues in the House should have the benefit of excerpts from this editorial and the Legion publication:

[From the Richmond (Va.) News Leader, Jan. 7, 1959]

THE ENEMY GROWS BOLDER

Although numerically small, the American Communist Party is becoming bolder and more powerful. This is no paradox. Communist influence grows because non-Communists, consciously and unwittingly, are doing the party's work.

Perhaps the greatest assistance comes from the Supreme Court, which in the past 2 years has handed down no fewer than 20 rulings favorable to the Communist conspiracy. Today' America's legal defenss against communism are a shambles, chiefly because the High Court has willfully destroyed them.

Equally helpful to the Communists are the civil libertarians who seek to repeal every antisubversion law, to hamstring the FBI, and to abolish the House and Senate investigating committees that have told the American people what little they know of the traitors in their midst.

As FBI Director J. Edgar Hoover said in his annual report: "Sensing a more favorable atmosphere, the Communist Party, USA, and its dupes and sympathizers gained further courage and became more vocal in their attacks upon law enforcement and other professions which are dedicated to preserving our freedoms." Mr. Hoover knows whereof he speaks.

The program of the Communist Party, published recently in its official organ, Political Affairs, calls for the repeal of all anti-subversion laws and the abolition of the House Un-American Activities Committee and the Senate Internal Security Subcommittee. As an illustration of the party's mounting influence, consider the platform of the Emergency Civil Liberties Committee (ECLC):

"The House Un-American Activities Committee has denounced the ECLC for our avowed campaign to end it. * * * They are correct. The purpose of ECLC in 1959 is to work unceasingly for its abolition.

"We will work for congressional investigation of the FBI's unlawful and unconstitutional conduct, and we will support individuals who resist such conduct.

"We will seek the introduction and passage by Congress of bills to repeal the Smith Act, the Internal Security Act, the Communist Control Act, the McCarran-Walter Immigration Act, and various industrial screening provisions."

Recognizing the chief source of their blessings, the ECLA adds:

"We will oppose * * * legislation undermining the Supreme Court decisions on civil liberties and civil rights."

On December 15, at the Hotel New Yorker, the ECLC raised $33,000 within a half an hour to accomplish its goals for 1959. Pledges rained down from such notorious fellow travelers as Corliss Lamont and from such eager liberals as Judge Hubert T. Delany, identified by the New York press as "a member of President Eisenhower's Civil Rights Commission for the State of New York." The judge gave $1,000.

Confident that the Supreme Court has been won, the ECLC is turning to Congress, where the climate has warmed encouragingly as a result of November's elections. Congressman JAMES ROOSEVELT, of California, has promised the ECLC that he will work to abolish the House Un-American Activities Committee. So has Representative ROBERT N. C. NIX, of Philadelphia. Other stalwards praised by the ECLC include Representatives ROY WIER, of Minnesota, CHESTER BOWLES, of Connecticut, QUENTIN BURDICK, of North Dakota, and W. H. MEYER, of Vermont. * * *

Few patriotic Americans know their Communist enemy or the many guises he assumes. Only a small minority are familiar with the fully documented reports circulated by the House and Senate committees that are now under attack. And very few informed Americans, who call themselves anti-Communists, are as ready with their checkbooks as Corliss Lamont, Rockwell Kent, or Judge Delany, who do not seek tax exemption to reinforce their convictions.

Thus, the ignorance and apathy of most Americans lend immeasurable strength to the Communists, who already are bulwarked by a gullible High Court and by influential civil libertarians. Actually, in the crucial contest that looms in the 86th Congress, the pro-Communist minority is far stronger than the anti-Communist majority, for the former are fully mobilized and the latter are not. Without a swift, unyielding counterattack by those who understand America's peril, the success of the Communist blitzkrieg of 1959 is virtually assured.

[From the American Legion Firing Line, Jan. 1, 1959]

REPORT ON THE CAMPAIGNS TO DESTROY THE HOUSE COMMITTEE ON UN-AMERICAN ACTIVITIES

With the convening of the 1st session of the 86th Congress on January 7, 1959, certain subversive and leftwing organizations in the United States are expected to launch vicious attacks against the House Committee on Un-American Activities (HUAC) for the avowed purpose of terminating the committee's existence. Activities of several of these groups which have been mentioned in previous issues of the Firing Line, while strikingly similar in purpose, do not all reflect origin from a common source.

One of the major organizations initiating an abolition campaign is the leftwing American Civil Liberties Union (ACLU) and its southern California affiliate. Foundation for the latest ACLU attack against the HUAC was actually laid on February 19, 1958, when the ACLU's national organization petitioned the Supreme Court of the United States "to rule conclusively that the House Un-American Activities Committee has no right to inquire into a person's political beliefs and associations." The ACLU statement was in support of Lloyd Barenblatt, a former Vassar College psychology instructor, who appealed a contempt of Congress conviction. Barenblatt was cited for contempt following his appearance before the HUAC on June 28, 1954, based upon his refusal to answer numerous questions regarding alleged membership and activities in the Communist Party. (See ACLU, Civil Liberties, March 1958, p. 1.)

Following his conviction, Barenblatt appealed to the United States Cricuit Court of Appeals for the District of Columbia. When the court of appeals upheld Barenblatt's conviction in January 1957, he promptly took his case to the Supreme Court. On the basis of the Court's decision in the John T. Watkins case, the Supreme Court remanded the Barenblatt case to the court of appeals for reconsideration on June 24, 1957. For a second time, the court of appeals on January 16, 1958, upheld Barenblatt's conviction. Shortly after the ruling the ACLU joined in a second appeal to the Supreme Court, on which there has been no decision to date. (See HUAC, annual report, 1957, p. 10; the New York Times, Jan. 31, 1958, p. 16; and the Washington Daily News, Nov. 18, 1958, p. 14.)

According to the ACLU, "the significance of the union's petition (in the Barenblatt case) lies in its request that the High Court rule that its decision June 17, 1957, in the Watkins case specifically prohibits inquiry by the Un-American Activities Committee into political beliefs and associations. The Watkins decision, in a case also supported by the ACLU, reversed a contempt conviction because the witness was not informed of the nature of the inquiry and the 'pertinency' of the questions concerning Communist associations. However, it also criticized the committee's 'exposure' of persons accused of Communist ties and the vagueness of the term 'un-American.'" In announcing the ACLU had "assumed primary responsibility" for the Barenblatt case in February 1958, ACLU Executive Director Patrick Murphy Malin said, "the union hoped the Supreme Court would 'finally determine the unconstitutionality of the committee's (HUAC) mandate.'" (See ACLU, Civil Liberties, March 1958, p. 1.)

On July 31, 1956, Malin stated the ACLU "believes that the letter and spirit of the first amendment make the mandate of the HUAC unconstitutional or unwise, or both. That has been the union's belief ever since the committee was established in the late 1930's. * * * So this is the time to urge that no committee with such a mandate should be appointed when the new Congress convenes next January (1957)." An ACLU brief filed with the Supreme Court on September 6, 1958, on behalf of Barenblatt directly challenged the authority of the HUAC. The ACLU brief asserted that the HUAC "lacks authority to conduct any investigation or to compel testimony * * * (and that the Committee violates due process and unconstitutionally tries to restrain freedom of belief, expression, and association protected by the first amendment." (See the New York Times, Oct. 27, 1958, p. C-29.)

ENTER ACLU OF SOUTHERN CALIFORNIA

Supplementing the national ACLU's spearheading attack against the HUAC is the probing flank movements of its southern California affiliate. The September 1958 issue of the Open Forum, a monthly organ of the southern California ACLU, stated it had filed a $20,000 damage suit in the Ninth United States District Court charging that the HUAC "is an illegal committee of Congress." The suit was on behalf of Donald Wheeldin and Adm. George Dawson, who had been subpenaed by the HUAC to appear before committee hearings scheduled to commence on September 2, 1958. The complaint asked the court to "quash the subpenas issued to Wheeldin and Dawson pending a hearing on the legality" of the HUAC.

According to the Open Forum, Wheeldin and Dawson claim they would be publicly accused of disloyalty, adjudged guilty without a hearing, and rendered unemployable if forced to appear before the committee. Wheeldin left the Communist Party because of fundamental differences with it, but would not be a cooperative witness before the committee. Dawson also would not be a cooperative witness. It is noteworthy that the September 1, 1958, edition of the National Guardian reflected Wheeldin was a former employee of the People's World, "the official organ of the Communist Party on the west coast. (See HUAC, "Guide to Subversive Organizations and Publications," 1957, p. 100.)

The Southern California ACLU, at its legislative action conference held at Baces Hall, 1528 North Vermont, Los Angeles, on November 15, 1958, launched a month-long petition

campaign urging 17 California Congressmen to offer at the opening of the 86th Congress a resolution to eliminate the Committee on Un-American Activities from the list of Standing Committee's of the House of Representatives. On the basis of the Southern California ACLU's total membership of 4,000, every member was asked to secure 25 signatures to meet the petition campaign goal of 100,000. Alan Barth, who has been an ACLU national committeeman since 1952, was the keynoter at the aforementioned conference. Currently on leave as a chief editorial writer for the Washington Post and Times Herald, Barth was identified in the March 15, 1954 Firing Line as a severe critic of the FBI. In addition to mailing out petitions to its own members, the National Guardian of November 24, 1958, p. 1, reported the Southern California ACLU has asked other organizations and individuals to do the same. The Los Angeles edition of the People's World, dated November 15, 1958, page 3, stated one organization to announce immediate support and assistance was the Los Angeles Committee to Preserve American Freedoms (accurately known as the Citizens Committee To Preserve American Freedoms), whose central aim has been the outlawing of the Un-American Committee and similar State inquisitorial committees. Mrs. Dorothy Marshall is the citizens committee's chairman and Frank Wilkinson is the group's executive secretary. (See the Open Forum, November 1958, p. 1.)

Both Mrs. Marshall and Wilkinson described the southern California ACLU "petition campaign as 'the most important development in the country' in the move to end the 20-year reign of the un-Americans (HUAC." Accompanied by a letter, Mrs. Marshall reportedly mailed ACLU petitions to "5,000 homes" in that State. In its report entitled, "Operation Abolition," dated November 8, 1957, the HUAC stated the "major adjunct of the Emergency Civil Liberties Committee (ECLC) in the California area is an organization designating itself as the Citizens Committee to Preserve American Freedoms." Full disclosures concerning the activities of the ECLC, an identified Communist front, have appeared in recent issues of the Firing Line. (See HUAC, "Guide to Subversive Organizations and Publications," 1957, p. 38.)

On August 13, 1958, the House of Representatives cited Wilkinson for contempt of Congress and forwarded his case to the Department of Justice for possible prosecution. This action stemmed from Wilkinson's uncooperative appearance before an HUAC hearing in Atlanta, Ga., on July 30, 1958. Wilkinson has been identified as a member of the Communist Party. HUAC Chairman FRANCIS E. WALTER stated on August 8, 1958, the HUAC "had information that Wilkinson is 'the guiding light' of the ECLC, and had ben designated by the Communist Party to manipulate that committee and some of its affiliated organizations." According to an ECLC mimeographed letterhead, dated August 12, 1958, Wilkinson amicably left the employ of the ECLC prior to August 1, 1958, however, remains a member of the ECLC's National Council. (See the Evening Star, Washington, D.C., Aug. 14, 1858, p. A–21.)

During September 1958, the southern California ACLU inserted political advertisements in five Los Angeles newspapers attacking the HUAC for conducting hearings in that city. The ACLU statement was signed by 98 individuals who urged that letters of protest be sent to Members of Congress. In addition to the ACLU sponsored petitions and letterwriting campaigns, the Communist Party and its 600 fronts are obviously very actively engaged in similar projects to attempt to abolish the HUAC during the 86th Congress. It is reliably reported the Communist Party, "making use of their fellow travelers and dupes, plus their 'united front tactic,' can have 50,000 letters on any issue sent to Capitol Hill or the White House inside of 72 hours." As a Legionnaire or as another patriotic American who has wholeheartedly endorsed the effective anti-subversive efforts of the House Committee on Un-American Activities, What are you going to do to counteract these intensified abolition campaigns?

Failure of Britain's Experiment in Socialism

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. CEDERBERG. Mr. Speaker, we hear ever increasing demands for Federal participation in management and greater Government investment in ownership of enterprises that have been privately operated.

Before we advance any further along this line we should pause and study Britain's experiment in socialism, which is now an admitted failure.

I am firmly convinced that our country grew and became great as the result of our private enterprise system.

If wise investment and sound economic practices are to continually be threatened by intervention and competition from the Federal Government we are in for some gloomy days ahead.

Let us take a lesson from Great Britain's disastrous experiment, the results of which are related in the U.S. News & World Report for January 9, 1959:

BRITAIN'S VERDICT ON SOCIALISM: IT'S A FAILURE

LONDON.—Britain's 13-year-old experiment in socialism, it now appears, is being written off as a failure. Private enterprise emerges stronger than ever.

Searching inquiries just completed by a parliamentary committee, by industrial and management organizations and by individual experts reveal that the British public has soured on Government operation of basic industries. Even the Labor Party, which brought socialism to Britain, is reversing its stand.

Facts emerging are these:

Efficiency in nationalized industries is shown to be considerably lower, over all, than in comparable private industries.

Costs are higher because managers of nationalized industries are not under pressure, as are private owners, to show a profit or even to make ends meet. Deficits are covered by huge Government subsidies.

Prices in most nationalized industries are kept artificially low by political pressure, bear no relationship to costs. The consumer gets stuck for higher taxes and inflationary financing that is required for subsidies.

Labor relations in nationalized industries turn out to be no better—and sometimes considerably worse—than in private industries, contrary to Labor Party expectations. The record of strikes and noncooperation between workers and management in the nationalized coal mines and transport industries is among the blackest in Britain.

Coal, a case report: Between 1946 and 1951, the Labor Party's program to make Britain a Socialist state took over as public enterprise coal, electricity, gas, rail and highway transport, steel, cable communications, the Bank of England, and civil aviation.

A case study of coal shows this:

One billion dollars has been poured into the mines since 1946 to modernize and maintain them.

Despite this investment program and the recruitment of 11,000 additional miners, British mines in 1957 produced slightly less coal than in 1951. Rationing of coal, held over from wartime, was in effect until a few months ago.

Red ink and strikes: A parliamentary committee that investigated the coal industry in 1958 termed the investment program for the mines a failure. It warned that a second program, now underway, also is in jeopardy.

Year after year, with a few rare exceptions, the nationalized coal industry has gone into the red in its current accounts. During a 10-year period of scarcity and a sellers' market, the mines accumulated a $75 million loss. This had to be covered by government subsidies in addition to the $1 billion provided for capital investment.

The attitude of the miners is blamed in part for the coal industry's troubles. Strikes and absenteeism are chronic problems. In 1947, production of more than 1.6 million tons of coal was lost because of labor disputes. The loss from such disputes in 1957 was slightly greater.

In steel, a contrast: Steel, an expanding industry, was nationalized for a brief period and then returned to private ownership. It provides a striking contrast to the declining coal industry.

Steel production has increased from 12.7 million tons in 1946 to 21.7 million in 1957. The target for 1962 is 29 million.

The steel industry has not only earned a profit, but has financed a substantial part of its $1.5 billion program of expansion from its own resources, while still managing to cut prices and pay its workers wages that are among the highest in British industry.

The record of labor relations in the steel industry is equally impressive. There have been no major strikes, and losses due to labor disputes are less than in almost any other industry.

A promise unkept: The promise by the Labor Party that nationalized industries would, in time, stand on their own feet without Government subsidies is proving to be as unrealistic as the party's promise of labor cooperation.

Here is the record so far:

The cumulative deficit of the nationalized coal industry in the 11-year period of 1947 through 1957 exceeded $80 million.

For the British Transport Commission, which operates railroads and all other public-transport facilities except long-distance trucking, the deficit was nearly $425 million.

British Overseas Airways Corporation lost $75 million, while British European Airways lost nearly $40 million, if direct Government grants are omitted. BEA is now in the black but BOAC continues in the red.

Cable & Wireless, another Government-operated facility, has barely broken even.

Only the nationalized gas and electricity industries show a profit over the years—$280 million for electricity and $44 million for gas.

Government to the rescue: This record, dominated by deficits, is only part of the picture. All of these industries have relied heavily on the Government for assistance in their capital-investment programs. The gas and electricity industries, between 1949 and 1956, obtained Government help in the amount of $625 million. Since 1956, these and other nationalized industries have received Government loans running into hundreds of millions.

Private industries, meanwhile, have managed to meet more than two-thirds of their capital-investment requirements from sav-

ings, and have raised the balance from private investors.

These contrasts have caused many Britons to ask: What's really wrong with nationalized industries as they've operated in Britain for the last dozen years? Why can't they pay their own way? One answer that shows up in both private and public inquiries is this:

The men who run Britain's nationalized industries are influenced more by political pressures than by commercial realities. The Government in power, whether Labor or Conservative, finds it expedient to keep consumers and workers happy.

To keep consumers happy, the Government resists price increases when they are indicated. To keep workers satisfied, the Government is loath to take a strong stand against union demands for wage increases and other concessions. Opposition might bring the risk of major strikes.

The result is that managers of nationalized industries have been forced to hold down prices while allowing wages to rise. That invariably has meant a loss at the end of the year.

Extra employees: There are other things, too, that cut profits.

The Government-operated BOAC, for example, reports a substantial deficit every year. Its management blames high costs. Yet a recent investigation revealed that BOAC employs 3,000 more workers on its engineering staff than the investigators felt are needed.

As part of a multi-billion-dollar program of modernization, the nationalized railroads are replacing steam locomotives with diesels, which can be operated by one man. Yet, under union pressure, the railroads are keeping two men in the cabs, nullifying much of the anticipated saving.

In the transport industry, there is this example: A number of bus lines in the London area have been steady money losers. The management wants to drop them and cut costs. The unions have resisted, and, until recently, political considerations prevented management from forcing a showdown..

Victory for capitalism: The experts who have been conducting inquiries into this 13-year experiment in socialism have reached the conclusion that most Britons—after watching socialism and private enterprise working side by side—have made private enterprise their choice.

Nationalized industrfes, they agree, are often wasteful and inefficient, and are kept solvent only by continuing transfusions of Government funds. Private industries, generally speaking, provide better service at lower cost without dependence on tax revenue for financial help.

One result is that political lines are being redrawn.

In effect, more and better capitalism is the new campaign slogan of Britain's Labor Party. Old-fashioned socialism is quietly being ditched.

Battle Against U.S. Bankruptcy

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. YOUNGER. Mr. Speaker, in view of the fact that the House will shortly be considering the President's budget for fiscal 1960, it seems wise to review information bearing on this subject.

Under leave to extend my remarks in the RECORD, I include the following column by David Lawrence which appeared in the Washington Evening Star of January 13, 1959.

BATTLE AGAINST U.S. BANKRUPTCY—NATION'S SOLVENCY SEEN ENDANGERED BY ADVOCATES OF HEAVY SPENDING

The battle of the century has begun. How it turns out will affect the future of the American dollar for decades to come. On the way the die is cast in the next few months depends the purchasing power of the pay envelopes of millions of Americans. Will the dollar remain stable or will it decline still further? For today the dollar is worth 48 cents in terms of what it was worth just 20 years ago—and if the forces of confiscation have their way, it could go down to 25 cents in another decade. The whole world is watching to see what America does. It affects trade everywhere.

The battle against a stable dollar is being waged here right now under respectable auspices by men in Congress who scorn the label "radical" but who would commit the United States to expenditures far beyond the President's budget. Already the American people are being told by the political partisans that a balanced budget means insecurity or indifference to the military safety of the country. To play upon such fears, the devotees of the doctrine of spending evidently believe, is to get sanction for big appropriations—more billions for missiles or expeditions to the moon.

The insidious argument made is that the President gives too much weight to the balanced-budget idea and that he is neglecting national defense. Will this campaign undermine the President's influence and open the floodgates in Congress so that billions more than he recommends will be appropriated even in the face of a $12 billion deficit this year?

Mr. Eisenhower has been absorbed for months formulating the new budget. He has held lengthy conferences with our military leaders and with our economic experts. Honest, patriotic, experienced military men, without any political bias, helped to make the new budget. It was no casual decision by one man that led the President to announce that he believed the budget for the next fiscal year could be balanced.

What is the biggest single fact about our military position? The intercontinental missile is not yet perfected, but the intermediate missile can be fired from bases in Europe close to Soviet Russia.

The truth is, moreover, the Soviet leaders know their country can be devastated in a matter of hours. Both sides know a mutual deterrent has come into being. There's a stalemate on the military side.

The urgent question now, therefore, is not the spending of unlimited amounts on military defense, but giving more attention than ever before to economic defense. As for those who say that military spending should be expanded, no matter what it costs, there is a simple test of sincerity. Would they support heavier taxes and—more important even than higher taxes—would they vote for Government wage and price controls? Why, if the cold war is so hot, shouldn't American labor unions and business corporations be held in check so that the price of the same bomber that the Government buys today will not be twice as much 2 years hence? For that's what has happened in the last 5 years to push a large part of our defense budget upward.

President Eisenhower's well-reasoned state of the Union message was printed in full text only here and there in a few newspapers of the country. He will have to go on the television, again and again, and issue more and more written expositions of his policy to make real headway against his opponents. The critics get more space in the press and on the air than do the defenders.

What is needed now is confidence in the Nation's Chief Executive—the very man who commanded all the Allied armies in Europe just a few years ago, and whose integrity and lifetime devotion to the military security of his country ought not to be questioned. Would Dwight Eisenhower ever fail to recommend any military proposal that was really needed? Would he neglect the defense of America?

Partisan-minded people and those Members of Congress with a vested interest in currying favor in their home States and districts through more and more spending on defense factories and local facilities, which could mean bigger payrolls for their constituents, are demanding more defense and arousing fears about the Nation's security. Only an informed public opinion can win this crucial battle against bankruptcy. For this is what the battle of the century in Washington really means.

Unless the American people can see through the maze of propaganda and alarmist talk, and put into proper perspective the selfish ambitions of some of their legislators, Macaulay's prophecy of more than 100 years ago that the American Ship of State is doomed to destroy itself because it is "all sail and no anchor" could, indeed, come true.

Veterans' Legislation

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of the following bills which I have introduced for the benefit of our veterans:

A bill to provide that veterans age 65 shall be deemed to be permanently and totally disabled for pension purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 502, title 38, United States Code, is amended by redesignating subsection (b) as subsection (c), and adding a new subsection (b) to read as follows:

"(b) For the purposes of this chapter, a person shall be considered to be permanently and totally disabled upon reaching the age of 65 years".

A bill to provide that veterans suffering from active pulmonary tuberculosis shall be deemed to be permanently and totally disabled for pension purposes while hospitalized.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 502 (a), title 38, United States Code, is amended by striking the period and inserting a semicolon and "or" in lieu thereof, and by adding a new paragraph (3) to read as follows:

"(3) active pulmonary tuberculosis, but only during periods of hospitalization therefor".

A bill to increase the annual income limitations governing the payment of pension to veterans of World War I, World War II, or the Korean conflict, and their dependents.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 522(a), title 38, United States Code,

is amended by deleting "$1,400" and "$2,700" and inserting in lieu thereof "$1,800" and "$3,000", respectively.

SEC. 2. Section 545(a) Title 38, United States Code, is amended by deleting "$1,400" and "$2,700" and inserting in lieu thereof "$1,800" and "$3,000", respectively.

SEC. 3. This Act shall take effect on the first day of the second calendar month after its enactment. Pension shall not be paid for any period prior to the effective date of this Act to any person whose eligibility for pension is established solely by virtue of this Act.

A bill to provide pension for widows and children of deceased World War II and Korean conflict veterans on the same basis as is provided for widows and children of deceased World War I veterans.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 543(a)(1), title 38, United States Code, is amended by deleting (a) the comma following the word "title" and (b) the words "and at the time of his death had a service-connected disability for which compensation would have been payable if 10 per centum or more in degree disabling".

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Hon. Thomas H. Kuchel, of California, Before National Conference on Air Pollution

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Public Interest Demands Clean Air," which I delivered before the plenary session of the National Conference of Air Pollution, Sheraton-Park Hotel, Washington, D.C., on November 18, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PUBLIC INTEREST DEMANDS CLEAN AIR

(Speech of U.S. Senator THOMAS H. KUCHEL before the plenary session of the National Conference on Air Pollution, November 18, 1958, Washington, D.C.)

Several recent days of intense personal discomfort in a choking atmosphere which sometimes envelops Los Angeles make me intensely aware of the deep importance of this conference.

So, as a recently escaped smog refugee, I welcome this opportunity to engage in thinking out loud on the matter of the public interest in air pollution. I appreciate the invitation to present some personal reflections to this assembly because of the inescapable fact that the communities in which I have spent most of my entire life often are painfully plagued by contaminated air in its worst form.

This conference is unmistakably a significant event. Scientific and technical problems of great moment will be discussed and examined in the earnest hope, I am sure, of promoting the public interest and serving the public welfare.

There is no question in my mind that public interest is the overriding consideration which must be the goal of all efforts to overcome the curse of air pollution. Certainly there can be no private interest, especially from a pecuniary viewpoint, in prolonging smog and other atmospheric contamination.

All of you present are aware that this meeting is occasioned by the fact that a little more than 3 years ago the Congress enacted legislation known as Public Law 159, the Air Pollution Research Act. By that measure, the Federal Government entered the fight to identify causes of air pollution and an assortment of Federal agencies became allies of public and private, State and local bodies endeavoring to conquer this public enemy.

The enactment of this legislation was no simple accomplishment.

Unfortunately, for a number of years, smog was regarded as a unique Los Angeles phenomenon. Comedians attached to it a made-in-southern-California label.

With the passage of time, and after the laughs became strained, our Nation gradually and thankfully came to the realization that air pollution is one of the distinguishing, built-in, undesirable features of the growth and advancement which our country has been enjoying.

The progress of all agencies operating under the Air Pollution Research Act is of deep concern to me because I authored that act. The conclusions of this conference will be equally meaningful to me because my interest in removing this curse of our industrialized, motorized civilization is of long duration.

When I first came to Washington as a new Senator appointed by the then-Governor of California, Chief Justice Earl Warren, I early attempted to bring about Federal participation in the fight to eliminate smog. I did this because my experiences as a State official indicated plainly the problem has so many ramifications it must be attacked on a nationwide basis.

Personal exposure to the discomfort and the inconvenience from day-long sieges of greasy, eye-irritating murk encountered in Los Angeles undoubtedly has strengthened the determination of many of you here today—as it did me—to employ all of the resources of our great Nation in eradicating a scourge which menaces the physical health and well-being of millions of Americans, which causes vegetables and fruits to wilt and shrivel, which brings property deterioration, which adversely affects livestock, and which triggers a host of economic consequences.

The public interest in air pollution at that time was not so widely appreciated in Washington as to bring success to the first efforts in which I participated. Happily, however, the public interest had attracted the attention of people in the executive branch of our Government. It was a matter of considerable satisfaction to me, therefore, when President Eisenhower, in response to a suggestion I made in association with my colleague Senator HOMER CAPEHART, of Indiana, formed what carried the formidable label of "Ad Hoc Interdepartmental Committee on Community Air Pollution."

Even though smog still occurs, millions of people should be eternally grateful for that committee, because from its deliberations resulted the legislation which I introduced, with the cosponsorship of several Senate colleagues from divergent areas who agreed something must be done.

Underlying all of my thinking and my conversations was a conviction that actual control over air-pollution sources and causes was and must be a local and a State responsibility. This view was shared by all of those who took part in framing and pushing through the Air Pollution Research Act. Throughout, the principle has been observed that the Federal Government should not and cannot impose or enforce regulations designed to prevent air pollution, regardless of how desirable such activity might at times appear.

Yet, the Federal Government has a natural and a proper role in our national war against smog and other forms of atmospheric pollution. It has unequaled resources and unmatched experience in the field of meteorology, for instance. It has immediate access to basic statistics assembled from every corner of our country on health conditions. It is in an unmatched position to coordinate investigation and research. It can mobilize from assorted sources skilled scientific and engineering personnel.

Those are among the reasons I wanted the Federal Government to play an active part in the smog fight. Those are the reasons why I am prepared to introduce next year new legislation which will implement, extend, and carry forward Public Law 159 under which present work is carried on.

As a Californian from a semiarid region, I long have been aware of the precious character and the imperative necessity of adequate water supplies. As a human being, I likewise know that clean air is basic to existence, comfort, and happiness. As a southern Californian I also realize that my section of the country, unfortunately, has encountered serious and prolonged difficulty in assuring itself of a sufficient, reliable supply of both clean air and clean water.

Those grave needs are not peculiar to California. Today they are nationwide in scope. With constant and steady increase in our population, with characteristic continuing movement of people, with development of an economy almost wholly dependent upon industrialization and motorization, the public interest demands basic factfinding which will make possible sound measures to conserve and to prevent pollution of air and water alike.

Regretably, despite startling achievements and amazing discoveries, science has not yet found a way to purify air in quantities or with the ease with which we do water. We must reduce and, to the maximum possible, prevent contamination of our atmosphere.

When a room becomes smoke-filled, one generally can open a window or turn on a blower. But no one yet has come up with a means of lifting a veritable ceiling over an entire metropolitan area which would be the only way of ventilating a community filled with smog of the sort which occasionally plagues many American cities. We still do not know how to sweep away what meteorologists call inversion layers of superheated air which serve as a lid over our steaming kettle of closely packed people.

The lack of a window to bring in sweet, fresh air to whole communities is the justification for control measures such as have been adopted in several regions of California. Such regulatory procedures have a palliative effect and have been evolved through costly and painly trial-and-error approaches. In many instances, they have been remarkably successful. Yet, they have not solved the problem because the problem itself is so complex.

Unfortunately, a permanent solution apparently still is some distance off. Hence, the significance of this conference.

Congress will be guided by the conclusions of this meeting. Our committees will be indebted for your evaluation of the progress made thus far, for your criticisms and your recommendations about the future course to be followed.

We on Capitol Hill are highly conscious that our people want relief from the curse and the menace of air pollution. Daily it is made plain to us that the human stake in this fight is great, because of the tremendous price our Nation may pay for continued contamination of the air all of us breathe, every moment of our lives.

The American people have been disturbed by reports of qualified medical observers that air pollution has harmful effects on persons with respiratory troubles. Is it any wonder

there also is grave concern among our populace which repeatedly undergoes irritations of eyes, nose, and throats?

From many quarters comes evidence that smog causes slums and upsets the balance of communities. Foul, polluted air influences our citizens in building homes and selecting places to dwell.

The public interest in the war on air pollution has reached the point where monetary, selfish aspects cannot be ignored. Take, for instance, the situation in Los Angeles County where constituted authority can order a shutdown of industry and a cessation of motor traffic when smog reaches a specified degree of intensity.

The cost of such countermeasures are incalculable, but they are beyond question tremendous. Businesses and industries, particularly small enterprises, cannot long afford to absorb the expense entailed by drastic action to curb pollution of our air. Yet, until we learn the secrets of what causes smog, we are merely fumbling in our attempts to prevent its occurrence.

Even though periodic shutdowns because of "smog alerts" may be infrequent or brief, a community which gains the reputation of being afflicted by serious air pollution inevitably loses its appeal to tourists and visitors. Unchecked continuance of atmospheric contamination undeniably and eventually will halt the growth and progress of any community as surely as a Chinese wall around its perimeter.

The urgency of identifying every single source of pollution and of laying bare all secrets about the mystic natural forces which cause smog is emphasized by the fact that effects of contamination can be and often are far reaching. Counties surrounding heavily populated cities are not immune since the vagaries of the winds can roll clouds of fumes across man-made boundaries. Contiguous territory from which come food supplies no longer is unconcerned following discovery that some 40-odd separate crops can be injured by polluted air.

Problems of such character cannot be solved at local levels. Nor can public agencies of Government—whether State, Federal, county, or municipal—cope with all the factors. Active cooperation of industries and private organizations is essential.

We are fortunate indeed that some of our leading enterprises, notably the petroleum and the automobile industries recognize the serious implications in the presence of air pollution. Their efforts to help check the menace have been substantial and are most commendable. Yet, they and others with related interests continue to have a public obligation to work unceasingly in the public interest in finding means by which aerial garbage will be eliminated from our environment.

For their own welfare, the petroleum and automobile industries cannot shirk their responsibility. Already public clamor has been heard in some quarters for action on the part of constituted authority which would have heavy consequences to those industries. Though scientists may scoff, none of us should lightly regard a wave of suggestions that certain types of motor fuels be prohibited by ordinance or regulation. We cannot overlook the resolutions now reaching Washington urging Federal promulgation of standards governing the emission of hydrocarbons and other products of combustion.

The program envisioned when Public Law 159 was enacted was to be of 5 years' duration. The authorized total expenditure was to be $25 million. Our Federal agencies now are in the fourth year of that program, for which the Congress has appropriated almost $12 million. A host of research and investigation projects has been set in motion.

This law expires at the end of fiscal year 1960. Hence, it will be incumbent upon the Congress in its forthcoming session to decide whether activities should be halted or the law extended. For my part, I am convinced the act which I sponsored should be continued in effect, and I wonder if possibly it should not be broadened.

I regret that more funds have not been made available. However, there were forceful reasons and circumstances for limiting the appropriations. But our people, especially those who undergo from time to time the irritation and inconvenience of smog occurrences, now and then wonder whether the expenditure has been sufficient. Others question whether it has been worthwhile.

It is difficult for the man in the street to appreciate the proportions and the complexity of the air pollution problem. This conference has a rare opportunity to reassure every citizen that we are expanding our knowledge and that we are pressing forward for his relief with undiminished determination.

This is vital, because the people of America, from the earliest moment of comprehension, believe in free air.

More and more, it is being demonstrated that freeness is relative.

Just as we have seen water supplies in various regions near the point of exhaustion, so must we awaken to the fact that our supply of pure air is in real danger of running out.

Public apprehension about effects of radioactive fallout—notably about what might happen when and if—has been expressed often in dramatic fashion. Yet the insidious influence of air pollution right now is a present and a continuing threat to physical and economic health.

Air is a natural resource and like all natural resources must be husbanded and conserved with all the ingenuity and determination we possess.

Public and private agencies join hands to solve the increasingly acute water problem. Local irrigation districts participate with the Federal Government in building dams and reclamation projects. Our Department of the Interior shortly will embark on an ambitious program of erecting full-scale field-test plants for converting saline water to sweet, potable supplies for municipal, agricultural, and industrial uses.

The problem of air pollution is of comparable importance and warrants similar earnest mutual attention. Perhaps it should receive a higher priority. For, without fresh, uncontaminated air, people will not congregate or remain in thickly settled communities. In that event, the demand for ever-larger water supplies might easily be altered.

The foundation for future growth and development of many American communities may well rest on solution of the smog problem. Suggestions already have been thrown out that air zoning be undertaken. This would attempt to make certain that industrial expansion—vital and welcome as it may be—is so directed as to take advantage of prevailing winds or features of terrain in reducing potential air pollution.

Likewise, the public stake in cleansing our atmosphere may warrant radical innovations in traffic engineering. Admittedly, our Nation as a whole, and most of its major cities, confronts real headaches in constructing and rebuilding streets, highways, freeways, and other arteries to handle the furiously mounting traffic volume. But unless other means can be found to control the way mechanical horses emit foul-smelling breaths, it is conceivable that we one day will ask engineers to channel fume-spouting automobiles, buses, and trucks away from smog-prone centers.

The obvious public interest in relieving air pollution appears to be multifaced. In promoting that interest, I sincerely trust this conference will be dedicated to the principle of pooling resources in the traditional American fashion so that the public welfare may be benefited to the greatest degree of which we are capable.

Address by Hon. Jennings Randolph, of West Virginia, Before American Federation of Government Employees

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. HUMPHREY. Mr. President, our colleague, the distinguished senior Senator from West Virginia [Mr. RANDOLPH] last evening, Friday, January 16, 1959, addressed the annual civil service banquet of the American Federation of Government Employees, AFL–CIO, at the Norfolk Naval Shipyard, in Portsmouth, Va. His address was delivered on the occasion of the 76th anniversary of the signing of the Pendleton Act, the Civil Service Act.

The distinguished Senator from West Virginia formerly was chairman of the House Committee on Civil Service and has a splendid record in support of the civil service and merit system.

I commend to the reading of all Senators this splendid address. The Senator from West Virginia has traced the history of the development of the Civil Service Act and has set before us a challenge in terms of improvement of the civil service.

Mr. President, I ask unanimous consent that the address delivered by the Senator from West Virginia be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY U.S. SENATOR JENNINGS RANDOLPH, DEMOCRAT, OF WEST VIRGINIA, AT ANNUAL CIVIL SERVICE BANQUET, AMERICAN FEDERATION OF GOVERNMENT EMPLOYEES, AFL–CIO, PORTSMOUTH, VA., FRIDAY, JANUARY 16, 1959, ON THE OCCASION OF THE 76TH ANNIVERSARY OF THE SIGNING OF THE PENDLETON (CIVIL SERVICE) ACT

It seems fitting to me, ladies and gentlemen, on this occasion of the 76th anniversary of the Pendleton Act, to present a brief consideration to the context out of which the act emerged—as well as the historical development of the Federal service—and thereby attempt to gain some view of the tendencies and needs of the future.

Now I do not intend merely to catalog the milestones in the advancement of the Federal service, important though such achievement may be.

I am concerned, rather, with the pattern of development and the relation of the career Federal service to the other branches within our structure of government. One might argue with considerable force that the civil service, which has grown from a few thousand people in 1883 to approximately 2½ million in 1959, has assumed the proportions of a fourth branch of the Government, equal in importance—if not in constitutional status—to the traditional branches of the executive, the legislative, and the judiciary.

It behooves us, therefore, to pause occasionally—amid our concern for the multitude of details of classification, efficiency ratings, retirement plans, health insurance, and others—and give thought to the overall condition of the civil service.

In this respect, it is worth noting—as Professor Van Riper has remarked in his "His-

tory of the U.S. Civil Service"—that the original reform movement which brought forth the Pendleton Act was animated by the desire to maintain individual liberty of opportunity in the Federal service.

Such men as Carl Shurz, John Jay, and Richard Henry Dana, among others, were strongly moved by John Stuart Mills' doctrine of liberty and by the denial of that doctrine in the spoils system of the Grant administration.

The fervor of this movement is aptly expressed in the concluding statement of the first report of the Civil Service Commission by George William Curtis in 1871, when he stated that "the improvement of the civil service is emphatically the people's case, the people's reform, and the administration which vigorously begins it will acquire a glory only less than that of the salvation of the Union."

However, this reform was not to be won by rhetoric alone. Another decade of a predatory and acquisitive spoils system and the assassination of a President were required before a merit system would be inaugurated. It is worth observing, in passing, that although the classified civil service has grown from coverage of only 10 percent of 140,000 employees in 1883 to 85 percent of approximately 2½ million employees today, the Pendleton Act has remained without any fundamental changes.

But just as the act itself was a long time in arriving, so have further improvements in the civil service been characterized by obstructionism and delay.

For example, from 1883 to the expansion of Federal activities in World War I, there existed no coherent pay-classification system in the Federal service, while the pay of Government clerks remained stationary from 1854 to 1916. And yet the New York Evening Post, at the turn of the century, editorialized that Government employees "average to receive twice as much, on a conservative estimate, as persons similarly employed on the outside world." That sounds familiar; doesn't it?

Not until 1923—40 years after passage of the Pendleton Act—was there any further basic legislation to improve the condition of the civil service. This came in the so-called Classification Act of 1923, which covered barely 10 percent of the total employees.

One could well ask: Why, in a democracy, do we handle the needs of our Federal service in such a casual and dilatory manner? Although we might find the explanation in the times, for example, in the belief then that the business of America is business or in the lack of concern on the part of the individual Chief Executives, or in the opposition by such men as Senator Smoot, the cause, I believe, lies deeper than any of these. It is to be found in the popular American attitude which places service in government in a lower category than private endeavor. Surely this is an incongruous and anomalous condition for a democratic society, the development and even the survival of which depends so heavily upon the intelligence, the integrity, and the creativeness of its Federal service.

As a Nation we can ill afford the license of ignoring the people of our civil service, much less the practice which was so widespread a few years ago—and still lingers on in some quarters—of making them the whipping boys and girls for default in our affairs as a Nation.

But in spite of the persistence of the national attitude of devaluing the Federal service, we can look back to significant advances in recent years. A number of these gains, I am pleased to report, occurred under the administrations of Presidents Franklin D. Roosevelt and Harry S. Truman, while I was a member—and, later, chairman—of the House Civil Service Committee.

During that period we passed the Ramspeck-O'Mahoney Postmaster Act of 1937, the Hatch Act of 1939 and 1940, and the Ramspeck Act of 1940. Under the latter we authorized the President to extend the merit system to an additional 200,000 employees; we extended the authority of the President and Civil Service Commission in the field of position classification; and we provided for the revision of the efficiency rating system.

Under the provisions of the Ramspeck Act, President Truman, in 1945, extended Civil Service Commission authority of position classification and merit system to the field service.

In addition, one of the major advances during this period—one in which I took a particularly keen interest in drafting—was the first Federal Employees' Health Act of 1946.

Finally, we also passed in 1946 the efficiency rating legislation which led to the Performance Rating Act of 1950.

I have not intended, in this brief survey, to do more than touch the high spots of the developments of the past 75 years. Nor have I intended to convey the idea that the status of our civil service is satisfactory. Your own views on this matter have been noted with interest in your legislative proposals for the present Congress. And I hope that this Congress will give earnest and attentive concern to your program.

However, in the light of this summation, I believe we can safely make at least two generalizations:

First, that the principle of the merit system in our Federal Service is assured; and,

Second, that—belated though the progress has been—Federal employees are beginning to share increasingly in the welfare benefits that have come in recent years to employees in private industry.

But there is an issue more fundamental than either of these which I would now consider. I mentioned earlier that the Federal service has, in a sense, become a fourth branch of the Government. In stating this I am implying, of course, that government bureaucracy has become a permanent and integral part of American life. Therefore, rather than rail against the existence of a bureaucracy as such, it is time that we give thought to the kind of bureaucracy our society demands.

Our civil service, in recent years of relative political stalemate—when we have moved with increasingly less strength of purpose and direction—has been subjected to a degree of congressional and Executive scrutiny never before experienced in our history.

But from both sides—from Congress as well as the White House—this scrutiny has too often been of a restrictive nature, rather than a positive one. Some people believe too much attention has been given to the business of policing the actions of the Federal service and too little to finding ways of releasing the creative potential of our public servants. And herein lies one of the chief responsibilities in the years ahead—to reconstruct our ideas of administrative responsibility in keeping with the present complexion of our civil service.

My esteemed colleague, the Honorable OLIN JOHNSON, chairman of the Senate Committee on Post Office and Civil Service, is deeply interested in furthering a strong civil service.

We have at last achieved what Professor Mills calls a representative bureaucracy, having tried the closed system of the Federalists and the spoils system of the Jacksonians and early Republicans. We now have a bureaucracy which shares the same values and interests as the community at large—and it is time that we tap the tremendous creative potential which such a system implies.

But this can hardly be done when the basic legislation under which our civil service operates still bears the mark of a reaction to a spoils system that we no longer need. Present concepts of personnel management and administrative responsibility have outdistanced the centralized and hierarchial system of administration of our Federal service.

I would, therefore, in closing, offer the suggestion that your organization might profitably consider the question of some such study of our civil service as the Rockefeller studies of our military security system, our international economic policy, and our educational system—a study which would be made with a view toward releasing the creative potential implicit in the most responsive and representative civil service of our time.

Inaugural Address of Gov. G. Mennen Williams, of Michigan

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. McNAMARA. Mr. President, on January 1, 1959, G. Mennen Williams took the oath of office as Governor of Michigan for the sixth consecutive time.

His election to this high office on six occasions sets a Michigan record and is a national achievement of considerable magnitude.

On assuming office for his newest term, Governor Williams delivered an inaugural address outlining Michigan's gains over the past 10 years and setting goals for the future.

I ask unanimous consent that the text of Governor Williams' inaugural address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INAUGURAL ADDRESS BY GOV. G. MENNEN WILLIAMS, LANSING, MICH., JANUARY 1, 1959

On behalf of all of us in your State government, I extend most cordial greetings for the New Year. May God bless you all in the years which lie ahead.

In electing me for the sixth consecutive term, the people of Michigan have honored me above any Governor in the history of the United States. I am profoundly grateful. I accept this honor with deep humility. And I solemnly pledge to serve all the people to the utmost limits of my ability.

We've come a long way together in the past 10 years. The magnificent Mackinac Bridge, then a fond hope, now a majestic reality, symbolizes the progress of this decade. The people have built new schools and hospitals, improved social services and health care, embarked on a mammoth highway program, gained national recognition for traffic safety, enlarged farm marketing programs, expanded the tourist industry, acted to end job discrimination, and done many other things to carry Michigan forward. At the same time, business and industry have grown and diversified and new jobs have been added. By all important measuring rods, Michigan has grown bigger and stronger.

It is my firm belief that the growth we have known in the past 10 years is only a preface to the growth we're going to achieve in the next 10 years. Ahead of us lies a

better life of almost unlimited material and spiritual abundance. I have every confidence that the people are going to realize that abundance to the full for themselves and for their children.

But to get where we want to go requires a frank recognition that we live today in a time of great change. Scientific and technological advances occur with amazing rapidity. These advances permitting new and expanded products and services open the way to a greater economic abundance. But they involve new industries and new skills and far-reaching transition.

Michigan has been vitally and heavily involved in providing the leadership for the Nation's economic successes to date. There is now a real challenge to also provide new leadership in our new and changing era.

Michigan has a history of always being in the front ranks in times of great change. We put the whole world on wheels in the first 40 years of this cenutry; and then we turned to producing the vehicles of war, and by gargantuan feats of production we brought about the ultimate victory much sooner than anyone dared dream possible at the outset of World War II.

A people who did it so magnificently before can do it again. Let me make one thing crystal clear. We're going to rise to new peaks of prosperity in this era of electronics, missiles, atomic energy and automation. We're going to add a new industrial preeminence in these new industries as great as the industrial heights of the age of the automobile.

There is no easy path from where we are to where we want to go. It will require real vision, a deep understanding of the times, and courage to act. It will require present sacrifice in order to gain future dividends. It will demand unselfish leadership from labor, business, agriculture, and Government. It will need the best ideas of people everywhere. It will require a deep understanding of the human hardships brought on by times of transition, and a compassionate determination to relieve these hardships. It will require cooperation—cooperation of labor, business, agriculture, Government, cooperation of every section of our State and every segment of our society.

It will take the same kind of productive teamwork on which we built our industrial supremacy in the age of the automobile. Inventive genius combined with managerial know-how and labor skill then brought both record profits and high wages by pouring out products at prices people could pay.

We need to strengthen that teamwork so that we can again outproduce, outsell, outprofit, and outearn any competitors in our changing world.

Today, management hesitates to utilize fully competitive automation for fear of labor reaction, and workers tend to fear automation will result in loss of jobs. We must bridge this gap, or our plants and labor skills will lose out in competition with our neighbors. We must transform any outmoded facilities and obsolescing skills into ultramodern automated plants and upgraded workers, and take care of the human problems created during this transformation. Then automation will become the friend, rather than the bogeyman, of labor and industry in Michigan.

The goals we seek are worth the effort to attain them. A Michigan of full employment, full production, and full prosperity, making possible a full and better life for everyone, can be attained if we cooperate in common effort to achieve it. I see a Michigan where diversified industry provides employment opportunity for anyone able to work, a Michigan where high wages, high profits, and high prosperity go upward together. I see a Michigan with great centers of research serving as magnets for clusters of new business enterprises. I see a Michigan of such economic size as to be able to care for the aged as they should be cared for, and for the mentally ill, the youth in trouble; a Michigan which generously supports education at every level, where recreation facilities are adequate, where discrimination is banished, where the arts flourish, and where morality and religion are cultivated.

State government has a vital role to play in all this, but to play its role financial stability must be restored to State government. We must provide funds not only to pay off the deficit, but also to permit services to keep up with the growth of our State.

This will require new taxes. Let me assure the people of this State that we will seek the fairest formula that can be devised, whatever that formula may be.

While we face the fiscal problem, we need to proceed rapidly with plans for the future.

To this end we have set up a blue ribbon commission of leading Michigan citizens, headed by an outstanding business leader, William Day, president of Michigan Bell Telephone Co., to assess realistically our present assets and liabilities. This is the Commission on Michigan's Economic Future—or COMEF for short—and from its work will come a blueprint for progress for the coming quarter of a century or more.

COMEF numbers among its members leaders of all phases of our business life, with farm and labor representation as well. It is in itself a splendid example of the kind of cooperation we need to do the job.

At the same time that COMEF develops broad plans for progress, we will be pushing for action in direct and immediate ways. Our economic development department must be strengthened. Local industrial development organizations must be encouraged. Small business opportunities must be promoted.

A science advisory board, composed of top research men from industry and the universities, is helping Michigan get more fully into the missile field and into other pioneering industries. Along this line we need to establish an institute of science and technology at the University of Michigan both to enhance our leadership in learning and to attract more new industries.

As I said at the beginning, I have every confidence that the people of Michigan are on the threshold of an era of unparalleled achievements. It will take our best cooperative efforts to get to where we want to go, but I have no doubt that such effort will be put to the task. Michigan will then enter an era more fruitful for private profit and wages, for public good and for the spiritual well-being of our people than any previous time in the remarkable history of our State.

A time of inaugural is a time of renewal. I believe the people of Michigan want to set their hands, their hearts, and their minds to the great tasks before us. I believe they want those who have been entrusted with leadership to face up to the job of leading. I believe the people are not afraid to make sacrifices today for the sake of a better life today and tomorrow for themselves and for their children.

It is with these beliefs that I pledge my administration to cooperative effort with the leaders of Michigan so that we can, with God's help, achieve the new Michigan we know lies within our grasp.

Problems of Metropolitan Area Growth

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. CLARK. Mr. President, one of the great problems presently confronting the country is what to do about the explosive metropolitan growth which is occurring all over the Nation and, indeed, all over the world. I hope very much that the 86th Congress will come to grips with this problem, particularly as regards Federal relationships to it.

The mayor of Philadelphia, the Honorable Richardson Dilworth, made a significant and timely address on the subject before a group of community leaders in Philadelphia earlier this week. The group was called together by the publisher of the Philadelphia Inquirer, Walter H. Annenberg, who has taken a great interest in the development of the Delaware River Valley. I ask unanimous consent that excerpts from Mayor Dilworth's address be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS BY HON. RICHARDSON DILWORTH, MAYOR OF PHILADELPHIA, JANUARY 14, 1959

I have been asked to present for your consideration what we believe the next 10 years will bring to the great Delaware Valley; and especially, what Philadelphia can contribute to the Valley's growth and welfare.

Population is rapidly moving into our urban areas. Almost 95 percent of the Nation's 15 million increase in population since World War II has settled in some 140 urban areas. Those same 140 areas now contain more than 65 percent of our population and produce more than 70 percent of our wealth, and there is no doubt that the present trend to an urban civilization will continue throughout this century.

Let us just see what this will mean to the Delaware Valley. The population of the 11 county metropolitan area, which makes up the Delaware Valley is now approximately 5 million. In 10 years, it should be at least 6,100,000 persons. Ninety percent of that increase will be in the suburban counties.

A few people view this startling growth with alarm.

It does present tremendous challenges, but even greater opportunities.

Now, what must we do to meet this challenge? We must plan and think and act in terms of the entire area. We cannot permit sectionalism, or county boundaries to thwart us.

As to the basic problems, the most serious are (1) crime; (2) the problem of population; (3) the problem of housing, which is very much tied up with the population problem; (4) the problems of transportation; and finally (5) the problem of area cooperation.

First, crime: The crime situation is serious in every big city, and adds to the difficulty of reattracting people and industry. What must be done in this field is a speech in itself. Just let me say that we are moving vigorously; we are beginning to get results, but there is no use kidding anymore, it is going to take time and great concerted effort by all of our law enforcement agencies and the public's support to get the crime problem under proper control.

Second, the problem of population, and of the great increase in the nonwhite population: This problem, too, requires a speech in itself, and it is a problem which affects the entire area. I want to re-emphasize that this problem affects the entire area, not just Philadelphia. Let me just say here that certain chronic pessimists, including David Lawrence and his U.S. News & World Report, are determined that the great Northern cities are headed for disaster because of this problem. And this has been their constantly reiterated chant. But, they are people of little faith. The fact is that in the past 100 years our cities have been confronted at least

three times with a very similar situation. On each of those occasions, confronted with great migrations of persons with little education, no preparation for living in large cities, and no background of democracy, a few people of little courage literally deluged the newspapers and magazines with articles and letters predicting the death of the cities.

Let's just look at a few facts. The statement is frequently made that politicians encourage nonwhites to come here from the South. The fact is that of the five cities of over a million, Philadelphia is receiving less non-whites, both in numbers and percentages than the other four largest cities. Fear-mongers say that another 10 years will see nonwhites in the majority in our large cities. The fact is that the nonwhite population of the Delaware Valley is a little less than 14 percent, and a little less than 25 percent of the population of Philadelphia.

The fact is that less than half as many nonwhites are now coming here each year as during the war years when the demands for labor were high, and produced an inmigration of 15,000 nonwhites for a period of several years.

The fact is that better than 95 percent of the nonwhites come here to find work and freedom from oppression, not just to go on relief. The proof of this is that there is every indication that despite a continued flight from the South, Philadelphia has had no substantial increase in its nonwhite population in the last two years. Employment opportunities for nonwhites here having apparently reached the saturation point, the nonwhites are spilling over into surrounding industrial communities, such as Reading, Allentown, and Bethlehem.

It is also said that crime by nonwhites is out of hand. There is a high incidence of crime in nonwhite areas and a high incidence of senseless crimes of brutality, but the crime rate is no higher than the crime rate in corresponding very low income white districts.

In addition, there are encouraging factors. Per capita income of nonwhites is steadily rising. Ten years ago, the per capita income of nonwhites in Philadelphia was only 55 percent that of whites, today it is almost 70 percent that of whites. Twenty years ago, only 10 percent of the nonwhites owned their homes, today 45 percent of all nonwhite families own their homes. And, they are improving their homes. Ten years ago, 35 percent of the homes owned by nonwhites were in violation of housing regulations, today that has been reduced to 20 percent.

What's more, three-fourths of the total increase in population in the entire Delaware Valley area in the past 10 years has been white; and it is anticipated that the large increase in population in the Delaware Valley in the next ten years will be more than 80 percent white.

That brings us to the problem of housing. The real danger which threatens the Delaware Valley in this regard is the attempt to make of the city a sort of ghetto into which all of the low income minority groups are thrust. That would endanger the health, and growth of the entire area; but, I am confident it will not occur for several reasons: First, the increase in income and improved living conditions of all minority groups; and second, the efforts Philadelphia is making through redevelopment to hold and reattract middle and upper income residents.

Now, as to transportation. Our overall highway program is in fairly good shape. And the $2,500,000 area survey now being made of the Valley's entire transportation needs should be most helpful.

There is, however, much which must be done with regard to mass transportation. It is clear that if we are to move freely in the area, we must do something to solve our commutation problem. We are fast approaching the complete saturation point on highways and automobiles. We must, of course, have a fine and extensive highway system; but, if we let it get beyond a certain point it becomes a wasteful, consuming extravagance.

I envision in the next 10 years a rail commutation system which will carry people frequently, rapidly, and comfortably throughout the area in modern equipment. In order to accomplish this, the communities in the entire area will have to join in a plan which will make such service possible. It is our rough estimate that the annual added cost of such service should not exceed $5 million a year; and, that's little more than $1 per person in the area.

Our Operation Northwest has demonstrated that rail commutation service can be made attractive to riders at not too great a cost to the communities being served. As regards essential new equipment, we shall have to seek Federal aid, probably in the form of a Federal guarantee of long-term, low-interest purchase agreements for the acquistion of modern equipment. As you know, we are working on that now.

In addition, we must arrive at an areawide agreement for better station facilities, to be served, if necessary, by feeder buses as well as greatly increased and improved parking facilities at all commutation stations.

Finally, we have the problem of area cooperation. I feel confident that each year will see increased cooperation, not so much because we'll all be so much more enlightened, but because our problems will become more and more alike, and more and more pressing each year. The areas in which I foresee such cooperation are in planning, in air-pollution control, in sewerage and water supply, in transportation, and regional parks. And, that is one of our critical problems. A recent National Park Association survey makes it clear that the 5 southeastern Pennsylvania counties should now have a minimum of 66,000 acres of area parks; yet, today we have only 1,500 acres of such parks. Open space is one of our most precious resources, and it is rapidly vanishing; and, the price of what there is, is soaring. We must, therefore, act promptly, and in concert with the State to remedy this situation.

To conclude, we have many problems, both in our city and our area. But, there are none we cannot solve, provided we work together and have bold, courageous leadership.

Our greatest asset is our people. We are blessed with wonderful people, devoted to the area, and confident of its future.

We must not be afraid to plan, and to dream. Not just idle dreams; but fine dreams which we shall labor to translate into reality.

We can, and we must make the next 10 years the finest this grand valley has ever had.

Address by Former Representative Robert Hale, of Maine

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mrs. SMITH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address made by former Representative Robert Hale at Portland, Maine, on December 30, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, ladies and gentlemen, as the year draws to its end the term of office for which I was elected to serve you in Congress also draws to its end. Indeed I have spent the last few weeks closing my office here in Washington just as I closed my Portland office in September. This has not been an easy task, nor shall I pretend that it has been a pleasant one. Every file—every letter even—brings reminders of the past and oftentimes revives the memory of warm friendships with those who are no more. So some sadness is inevitable at the close of my eight terms in Congress.

The 16 years which I have passed here in your service have been crowded, crucial, and difficult ones. The responsibilities have been heavy and the work arduous. However, my service has brought me many satisfactions and rewarding experiences. I should be indeed ungrateful if I did not take this occasion to thank you again for your confidence, your support, and your consideration over all these years. No one ever represented in Congress or anywhere else a better constituency than the First Maine District. Bigger constituencies there are, and richer, but there are no people anywhere who will ever stand so high in my affections as those of Oxford, Sagadahoc, Cumberland, and York Counties. I have with them every tie of affection and spiritual kinship.

Often here in Washington, as years ago in the State legislature, have I been besought by proper means to vote for this measure or against that one, but seldom have I been pressured or threatened. The voters have not sought to put fetters on my judgment or my conscience; they have trusted to my discretion. I have exercised my discretion fearlessly, well knowing that no decision of mine or of any legislator could ever meet with unanimous approval.

If the time ever comes when a Member of Congress from this or any other district is obliged to be a mere rubber stamp for some particularly powerful or well-heeled pressure group in his constituency, membership in Congress would cease to be either an honor or a pleasure. This would be all the more true if the pressure group were one based on a selfish class or economic interest or on social or economic prejudices.

In the 16 years that I have been here, I have seen many changes in Maine, in our country, and in the world at large. I have seen the end of World War II and the tragedy which came in the wake of victory when we realized that our wartime ally, the Soviet Union, could not share our desire for a free world—was in fact opposed to anything that we hold dear. The hot war which raged when I took my seat at the beginning of 1943 was succeeded by 5 brief years of uneasy peace and then by the localized but tragic war in Korea lasting from 1950 to 1953. We are now back in a cold war which shows no sign of slackening. It imposes on any Member of Congress, and indeed on everyone connected with the Government, problems as difficult and situations as dangerous as any that ever confronted this country. In my years in the Congress I have put the objective of national security above all others. If we cannot remain a free people we shall have lost all that matters. No statesmanship that endangers our liberties or suffers them to be endangered can be anything but sterile.

In my years here I have served under two Democratic Presidents and for the last 6 years under a Republican. I have served in two Republican Congresses and in six Democratic. In Maine, Democratic Governors have succeeded Republican, though our legislature remains Republican. Through all these political changes I leave Congress as I entered it, a strong party man, believing that in a democracy such as ours responsible political parties alone can provide sound government.

It may be that the charms of television have romanticized political personalities, built up personal loyalties, and weakened concern for the principles of government, for political ideas, and for such serious and critical issues of the day as defense, foreign policy, inflation, and education. If such be the case, I hope that as television loses its novelty, the political party to which the candidate belongs will again be recognized as the major instrumentality of popular government.

Of one thing I am certain; no profession can be nobler or more rewarding than public service in a democracy. I hope that no future generation will be forgetful of this. It is easy to speak slightingly of politicians. No doubt, ignorant, selfish, and evil men seek and obtain political office. No electorate can be too vigilant in its choice of public servants. Bad men may discredit a great profession but we must see the profession above the men.

For Congress as an institution I have the highest respect. Undeserving people obtain seats in both House and Senate. Sometimes they succeed in holding office for many years. They may deceive their constituents but they seldom deceive their colleagues in the Congress. Just as the best measure of the worth of a lawyer or a doctor is the esteem which he enjoys in his profession, the best criterion of a legislator's worth lies in the appraisal of his fellows. SAM RAYBURN, after nearly half a century of service in the House, has said that every Member of the House has two constituencies; that which elects him and the House itself. This is true. Partisanship often runs high in the House, but integrity and ability never fail of recognition, regardless of party lines.

When in 1898 Thomas B. Reed made his farewell to the people of this district after moer than 20 years of service he said:

"Office as a ribbon to stick in your coat is worth nobody's consideration. Office as opportunity is worth all consideration. That opportunity you have given me, untrammeled, in the fullest and amplest manner, and I return you sincerest thanks. If I have deserved any praise, it belongs of right to you."

I am proud to have followed in the footsteps of Speaker Reed and of having served this district longer than any of his successors. With a heart full of gratitude and good will, I wish you all a happy new year and a happy succession of new years. I hoep that I shall enjoy your friendship and your society through many years to come.

Difficulty of Obtaining College Education

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Saturday, January 17, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD one of a series of reports by Erwin Knoll, education writer of the Washington Post and Times Herald, on the serious problems faced by American students who wish to continue their education beyond the high school. Mr. Knoll's article, published on January 11, 1959, highlights the discussion of a group of educators who met recently in Carmel, N.Y.

His report notes that Frank H. Bowles, president of the college entrance examination board, predicted increased use of facilities for evening classes and develment of the 2-year community college.

During the 85th Congress I proposed consideration of an emergency program of Federal aid to provide classrooms at 2-year colleges through grants-in-aid to the States. I intend to introduce similar legislation in this Congress.

The 2-year college would bring colleges to many areas where such facilities are now unavailable. For the youth who lacks either dormitory fees or tuition, or both, it may be his only chance for higher education. In general, the 2-year colleges would try to meet the needs of two groups of students: First, those seeking 2 years of college preliminary to taking 2 or more years at another institution; second, those planning to wind up their college career in the 2 years and who therefore want terminal courses in general education and vocational fields. Many colleges which now offer this kind of program have attempted further to meet the needs of the community by adding a program of adult education for those who are employed, but feel the need for additional training.

We must approach the critical problem of expanding educational facilities with the constant awareness that if we fail to act soon, the Nation will forever lose much talent and brainpower. Unless we move quickly, the chance for an adequate education for life, for a profession, and for citizenship will be denied to many of our finest youth.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLLEGES SEEN FACING HUGE INFLUX IN 1968

(By Erwin Knoll)

The number of Americans going to college will triple in the next decade. By 1968, 2 out of 3 men and women in the college age group of 18 to 21 will be getting a higher education.

These predictions come from Frank H. Bowles, president of the College Entrance Examination Board. They highlight a problem that is perturbing to more and more parents—how to get their children into college and how to foot the bills.

The problem was discussed last week at a Carmel, N. Y., conference of college admissions officers, high school principals, and education writers, held under the auspices of the college board.

The consensus among the educators present was that the nature of higher education would change radically in the coming years, that costs would rise substantially, but that educational opportunities would not be denied to students who are capable of college work and flexible in their plans.

TEN MILLION STUDENTS

Within 10 years, Bowles predicted, about 10 million students will be enrolled in the Nation's colleges. It will be as customary to attend college as it is to attend high school now, he said. And many who now settle for 4 years of higher education will go on to do 2 to 4 years of graduate work.

But a college education in 1968 won't be precisely what it is today, Bowles warned. He referred to the "emergent vocationalism" in higher education, which will include the training of shop foremen, technicians, and industrial workers.

CHANGES PREDICTED

He predicted increased use of facilities for evening classes, development of many 2-year community colleges and incorporation into formal higher education of many programs now regarded as adult classes.

"The colleges which attract most of the candidates are east of the Alleghenies and west of the Rockies," he declared. "With a few exceptions, the inland colleges are not crowded."

The "prestige colleges" of the East will not be increasing their capacities very much, educators at the conference agreed, and they will be pricing themselves out of the market for many students.

The result will be an increasing realization that it is the student, not the college, that makes an education. State universities and less famous colleges will be bearing the brunt of much of the enrollment boom.

BETTER COUNSELING

The educators agreed that most colleges have done a poor job of letting the public know what standards must be met for admission. They called for better high school counseling—only one school in five now has an organized guidance program, closer liaison between high schools and colleges, and more informative college catalogs.

College admissions officers stressed that no one criterian assures acceptance or rejection by any school. Despite increased use of college entrance examinations, test scores are only one factor considered.

"There is no such thing as an ideal candidate," said C. William Edwards, director of admissions for Princeton University.

There is an ideal class, but no two boys in that class are alike. We don't want all geniuses or all athletes or all editors of school papers.

"We want some Joe Smiths—the boys who haven't been No. 1 in anything. You can't select students by formula or machine."

QUALIFICATIONS TOLD

John S. Hafer, dean of admissions at Syracuse University, outlined the qualifications considered by his school. In the order of precedence they were:

1. High school record.
2. Score on the college board examination or other standardized test.
3. High school class rank.
4. Recommendation of high school principal and teachers.
5. Geographic representation.

Admissions officers said much of the present chaos in college admissions will be eliminated as schools develop better coordination in handling applications. Some predicted eventual development of a single admissions center which would screen applications to all or most schools.

As costs of higher education continue to rise, another desperation round of tuition increases is in the offing, Bowles asserted. What of the youngsters who can't afford to pay the price?

TIPS FOR INDIGENT

He shouldn't look to too much help from scholarships, the educators agreed. Though there is a trend toward awarding them more on the basis of need than as prizes for outstanding work, no great expansion of scholarships programs is in the offing. Instead the emphasis is now on student loans—on buying education by the installment plan.

Here are some tips for students who think they can't afford to go to college. They come from Rexford G. Moon, Jr., director of the college board's scholarship service:

Consider a nearby college. It's better to go to any college than to go to none—and your money might better be spent on education than on railroad or airline fares.

Don't neglect city or State institutions. Their fees are lower because they have tax support.

Borrow. In an inflationary period, you get more by learning now and paying later than by saving now to learn later.

Work. Students now earn 30 to 45 percent of their education costs.

Write to the college of your choice for information on available financial aid.

Enter national, State, and regional scholarship competitions.

Preservation of Old Films and Prints

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, January 17, 1959

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Old Films and Prints Making Historic Movie," written by Grace Bassett and published in the Washington Evening Star of November 5, 1958. Last year Congress, because of the interest which has been manifested in this subject, appropriated money to the Library of Congress to refurbish priceless prints which are in the possession of the Library, but which, unfortunately, have been crumbling and are in a state of decay.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OLD FILMS AND PRINTS MAKING HISTORIC MOVIE

(By Grace Bassett)

A 5-year job of converting brittle film and faded prints into a motion picture record of America since 1891 has begun at the Library of Congress.

Renocare of Hollywood won the first contract for the unique operation ordered by Congress last session.

The California corporation will work within a $60,000 appropriation. Its bid was on a film footage basis. Library officials hope the contractor will finish work on about one quarter of the prints to be saved.

In all, 1,803 paper prints and 35 million feet of old-fashioned film filed between 1894 and 1912 would have disintegrated except for the congressional action.

Among the prints are pictures of the battleship *Maine*; the world's first atomic submarine, the U.S.S. *Nautilus*, and an on-the-spot record of the Klondike gold rush. The Baltimore fire of 1904 and the San Francisco earthquake of 1906—these and thousands of other headline events and personalities are saved for posterity only on paper rolls, many tattered and warped.

THREE HUNDRED THOUSAND DOLLARS NEEDED

Preserved on film that crumbles and gives off toxic gas are shots aboard the ill-fated Titanic and along the C. & O. Canal at the turn of the century. These old fashioned nitrate films almost beyond repair are protected in vaults at Suitland, Md.

Urged primarily by Senator KUCHEL, Republican, of California, Congress appropriated $60,000 to shift pictures onto modern film. This is the first chunk of $300,000 needed to finish the preservation chore.

The focus of fuzzy prints is sharpened by a Rube Goldberg kind of mechanism developed first by the Academy of Motion Picture Arts and Sciences, according to Col. Willard Webb, who heads the Library's Stack and Reader Division.

Firms bidding for the job are bound to use a similar process—which involves dunking old film into a chemical solution, watering, drying, doctoring, and then transfering picture images onto movie film that can be projected.

NO MOVIE COPYRIGHTING

Pioneering movie producers filed pictures at the Library to get copyrights. Thomas A. Edison, inventor of the moving picture, sought the first protection by filing 8-by-10-inch cards with still picture frames of his movie, "The Sneeze," printed on them.

This was in 1894 when there were no motion-picture copyright laws. So picture makers simply filed sequences of their stills as evidence of their pictures. Nobody saw any use for the filings except to win copyrights.

The practice continued until 1912, when copyrighting of motion pictures was written into law. After that the Library took only descriptions of the films, not the actual reels except in selective cases.

Fifty years later, Library officials realized their early American films were priceless. Film scenery in those days was real. Props were few. If a railroad were in a picture, it was a real railroad. Cameras caught major sociological and historical developments of the Nation in one of its most flourishing periods.

DUBBED-IN SOUND

"We are not in the entertainment business," Colonel Webb emphasized. "But because we are not does not mean that we should not make available to a biographer of President McKinley, motion pictures of his career."

He said the films, dubbed with sound recordings, could be displayed to the public, too, in educational shows like the recent Theodore Roosevelt exhibit at the Library. After they push a button, visitors hear the ringing, cultured voice of Mr. Roosevelt at the same time his career as Rough Rider, big-game hunter and statesman is flashed on the screen.

Once converted, all the old films will be stored in the basement of the Library Annex. Colonel Webb, with no money but lots of organization, has set up an ambitious file there already. When it's filled with America's film firsts, Colonel Webb—a job done for future generations—plans to retire.

Curbing the Filibuster

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Washington News of January 14, 1959, complimenting the Senate on its solution of the controversy over the modification of rule XXII.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE STOP-TALK RULE

The Senate has brought off its dispute over curbing the filibuster a good deal more peaceably than might have been expected.

The result is a compromise, the Senate's usual method of doing business, and extremists at neither end are satisfied. But it is a reasonable, workable compromise. The Senate can live with the new rule and get on with its work.

The issue was how to prevent obstructive yack-yack and still preserve the right to free debate which is the essence of the parliamentary system. The Johnson compromise permits two-thirds of the Senators present and voting to shut off a filibuster.

Under the old rule, it took two-thirds of the total membership to do this. Thus a Senator could support a filibuster by merely staying away.

There is such a thing as the tyranny of a minority, and its weapon is the filibuster. The new rule diminishes its power. There also is the tyranny of a majority. If the rule were so relaxed that a mere majority could silence a near majority, free debate, and hence the public interest, would be jeopardized.

The two-thirds rule is standard on other issues—on ratification of a treaty, on overriding a Presidential veto, on proposing a constitutional amendment. It has worked well on these questions; it should work well on the filibuster question.

We think the Senate has solved this problem with practical good sense.

Carleton Putnam Presents South's Position

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. HUDDLESTON. Mr. Speaker, on October 13, 1958, Mr. Carleton Putnam, of Washington, D.C., addressed a letter to President Eisenhower, stating in a very forceful manner the South's position on the segregation-integration controversy. Mr. Putnam, prominent writer and airlines executive, has through the years been active in various business interests in the South and is exceptionally well informed on the region's problems, opportunities, and aspirations.

Mr. Putnam's letter to the President has received wide distribution through the effort of individuals and also through the editorial and letters to the editor columns of many of our leading newspapers. Last week a group of citizens of Birmingham, in my district, after having raised funds by private subscription, inserted the letter as a full-page advertisement in the New York Times. It is planned to run additional advertisements in the Christian Science Monitor and several other papers.

With the thought that my efforts will lend assistance in giving the letter the type of currency it merits, I am pleased to insert same herewith in the CONGRESSIONAL RECORD, under permission heretofore given.

Mr. Putnam, a member of the famous New England Putnam family, is a native of New York City, a graduate of Princeton and Columbia, and founder and president of the Chicago & Southern Airlines—1943–48. He is presently on the board of directors of Delta Airlines. In addition to being an outstanding business executive Mr. Putnam is also a writ-

er of note. He recently published a widely praised biography of President Theodore Roosevelt.

The letter which follows is commended to the careful reading and study of every Member of the House:

WASHINGTON, D.C., *October 13, 1958.*
The Honorable DWIGHT D. EISENHOWER,
President of the United States,
The White House,
Washington, D.C.

MY DEAR MR. PRESIDENT: A few days ago I was reading over Justice Frankfurter's opinion in the recent Little Rock case. Three sentences in it tempt me to write you this letter. I am a northerner, but I have spent a large part of my life as a business executive in the South. I have a law degree, but I am now engaged in historical writing. From this observation post I risk the presumption of a comment.

The sentences I wish to examine are these: "Local customs, however hardened by time, are not decreed in heaven. Habits and feelings they engender may be counteracted and moderated. Experience attests that such local habits and feelings will yield, gradually though this may be, to law and education."

It is my personal conviction that the local customs in this case were hardened by time for a very good reason, and that while they may not, as Frankfurter says, have been decreed in heaven, they come closer to it than the current view of the Supreme Court. I was particularly puzzled by Frankfurter's remarks that "the Constitution is not the formulaton of the merely personal views of the members of this Court." Five minutes before the Court's desegregation decision, the Constitution meant one thing; 5 minutes later, it meant something else. Only one thing intervened; namely, an expression of the personal views of the members of the Court.

It is not my purpose to dispute the point with which the greater part of Frankfurter's opinion is concerned. The law must be obeyed. But I think the original desegregation decision was wrong, that it ought to be reversed, and that meanwhile every legal means should be found not to disobey it but to avoid it. Failing this, the situation should be corrected by constitutional amendment.

I cannot agree that this is a matter involving "a few States," as Frankfurter suggests. The picture in reality is of a court, by one sudden edict, forcing upon the entire South a view, and a way of life, with which the great majority of the population are in complete disagreement. Although not from the legal, in fact from the practical, standpoint the North, which does not have the problem, is presuming to tell the South, which does have the problem, what to do.

To me there is a frightening arrogance in this performance. Neither the North, nor the Court, has any holy mandate inherent in the trend of the times or the progress of liberalism to reform society in the South. In the matter of schools, rights to equal education are inseparably bound up with rights to freedom of association and, in the South at least, may require that both be considered simultaneously. (In using the word "association" here, I mean the right to associate with whom you please, and the right not to associate with whom you please.) Moreover, am I not correct in my recollection that it was the social stigma of segregation and its effect upon the Negro's mind and heart to which the Court objected as much as to any other, and thus that the Court, in forcing the black man's right to equal education was actually determined to violate the white man's right to freedom of association?

In any case the crux of this issue would seem obvious: social status has to be earned. Or, to put it another way, equality of association has to be mutually agreed to and mutually desired. It cannot be achieved by legal fiat. Personally, I feel only affection for the Negro. But there are facts that have to be faced. Any man with two eyes in his head can observe a Negro settlement in the Congo, can study the pureblooded African in his native habitat as he exists when left on his own resources, can compare this settlement with London or Paris, and can draw his own conclusions regarding relative levels of character and intelligence—or the combination of character and intelligence which is civilization. Finally, he can inquire as to the number of pureblooded blacks who have made contributions to great literature or engineering or medicine or philosophy or abstract science. (I do not include singing or athletics as these are not primarily matters of character and intelligence.) Nor is there any validity to the argument that the Negro hasn't been given a chance. We were all in caves or trees originally. The progress which the pureblooded black has made when left to himself, with a minimum of white help or hindrance, genetically or otherwise, can be measured today in the Congo.

Lord Bryce, a distinguished and impartial foreign observer, presented the situation accurately in his "American Commonwealth" when he wrote in 1880:

"History is a record of the progress toward civilization of races originally barbarous. But that progress has in all cases been slow and gradual * * *. Utterly dissimilar is the case of the African Negro, caught up in and whirled along with the swift movement of the American democracy. In it we have a singular juxtaposition of the most primitive and the most recent, the most rudimentary, and the most highly developed, types of culture * * *. A body of savages is violently carried across the ocean and set to work as slaves on the plantations of masters who are three or four thousand years in advance of them in mental capacity and moral force * * *. Suddenly, even more suddenly than they were torn from Africa, they find themselves, not only free, but made full citizens and active members of the most popular government the world has seen, treated as fit to bear an equal part in ruling, not only themselves, but also their recent masters."

One does not telescope three or four thousand years into the 78 years since Bryce wrote. One may change the terms of the problem by mixed breeding, but if ever there was a matter that ought to be left to local option it would seem to be the decision as to when the mixture has produced an acceptable amalgam in the schools. And I see no reason for penalizing a locality that does not choose to mix.

I would emphatically support improvement of education in Negro schools, if and where it is inferior. Equality of opportunity and equality before the law, when not strained to cover other situations, are acceptable ideals because they provide the chance to earn and to progress—and consequently should be enforced by legal fiat as far as is humanly possible. But equality of association, which desegregation in southern schools involves, presupposes a status which in the South the average Negro has not earned. To force it upon the southern white will, I think, meet with as much opposition as the prohibition amendment encountered in the wet States.

Throughout this controversy there has been frequent mention of the equality of man as a broad social objective. No proposition in recent years has been clouded by more loose thinking. Not many of us would care to enter a poetry contest with Keats, nor play chess with the national champion, nor set our character beside Albert Schweitzer's. When we see the doctrine of equality contradicted everywhere around us in fact, it remains a mystery why so many of us continue to give it lip service in theory, and why we tolerate the vicious notion that status in any field need not be earned.

Pin down the man who uses the word "equality," and at once the evasions and qualifications begin. As I recall, you, yourself, in a recent statement used some phrase to the effect that men were equal in the sight of God. I would be interested to know where in the Bible you get your authority for this conception. There is doubtless authority in Scripture for the concept of potential equality in the sight of God—after earning that status, and with various further qualifications—but where is the authority for the sort of ipso facto equality suggested by your context? The whole idea contradicts the basic tenet of the Christian and Jewish religions that status is earned through righteousness and its not an automatic matter. What is true of religion and righteousness is just as true of achievement in other fields. And what is true among individuals is just as true of averages among races.

The confusion here is not unlike the confusion created by some left-wing writers between the doctrine of equality and the doctrine of Christian love. The command to love your neighbor is not a command either to consider your neighbor your equal, or yourself his equal: perhaps the purest example of great love without equality is the love between parent and child. In fact the equality doctrine as a whole, except when surrounded by a plethora of qualifications, is so untenable that it falls to pieces at the slightest thoughtful examination.

Frankfurter closes his opinion with a quotation from Abraham Lincoln, to whom the Negro owes more than to any other man. I, too, would like to quote from Lincoln. At Charleston, Ill., in September 1858, in a debate with Douglas, Lincoln said:

"I am not, nor ever have been, in favor of bringing about in any way the social and political equality of the white and black races; I am not nor ever have been in favor of making voters or jurors of Negroes, nor qualifying them to hold office. * * * I will say in addition to this that there is a physical difference between the white and black races which I believe will ever forbid the two races living together on terms of social and political equality. And inasmuch as they cannot so live, while they do remain together, there must be the position of superior and inferior, and I, as much as any other man, am in favor of having the superior position assigned to the white race."

The extent to which Lincoln would have modified these views today, or may have modified them before his death, is a moot question, but it is clear on its face that he would not have been in sympathy with the Supreme Court's position on desegregation. Many historians have felt that when Lincoln died the South lost the best friend it had. This also may be moot, but again it seems clear that for 94 years—from the horrors of Reconstruction through the Supreme Court's desegregation decision—the North has been trying to force the black man down the white southerner's throat, and it is a miracle that relations between the races in the South have progressed as well as they have.

Perhaps the most discouraging spectacle is the spectacle of northern newspapers dwelling with pleasure upon the predicament of the southern parent who is forced to choose between desegregation and no school at all for his child. It does not seem to occur to these papers that this is the cruelest sort of blackmail; that the North is virtually putting a pistol at the head of the southern parent in a gesture which every northerner must contemplate with shame.

Indeed, there now seems little doubt that the Court's recent decision has set back the cause of the Negro in the South by a generation. He may force his way into white schools, but he will not force his way into white hearts nor earn the respect he seeks. What evolution was slowly and wisely

achieving, revolution has now arrested, and the trail of bitterness will lead far.

Sincerely yours,

CARLETON PUTNAM.

Foreign Aid Waste

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the January 5, 1959, issue of the Concord (N. H.) Monitor Patriot newspaper.

This editorial, entitled "Foreign Aid Waste," presents clearly the situation with which Members of Congress are faced annually in connection with our spending of billions of dollars for foreign-aid programs.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN AID WASTE

Both of New Hampshire's Senators have from time to time cast a cold and appraising eye at items in the foreign-aid budget and even closer scrutiny should be given when demands for more funds are considered.

In the years since 1950 this country has spent more than $42 billion in its foreign assistance programs. About $20 billion was earmarked for technical and economic help and about $22 billion went to military build-up.

There is a tendency in Washington to label any cariticism of foreign-aid spending as a personal attack upon Eisenhower and Secretary of State Dulles. But there is ample evidence that a considerable number of foreign-aid projects have been misdirected and poorly administered.

BRIDGES and COTTON should do everything possible to halt at once, so far as they are able, the appalling waste in expenditure of money abroad. There are few areas where American aid has not produced records of shocking misuse of money taken from taxpayers.

A lot of Americans are wondering why their money is being poured into areas where there are strong indications of Communist support and equally strong evidence that heads of some countries have ample funds for their own use.

The sheik of Kuwait is boasting over construction of a new palace that will cost millions. The structure will have 90 rooms, all completely air conditioned. There will be a 20-room section for a harem whose occupants will enjoy an elaborate swimming pool. A theater will have 500 seats and a dining room will be a forest of crystal chandeliers.

Kuwait is a small British protectorate on the Persian Gulf. Its sheik would be just another Arab in a drafty tent save for the fact that his land reeks with oil. This enables him to engage in personal extravagances while most of his subjects live in squalor.

Kuwait is in a global area where American dollars are being poured out to raise living standards. It is in that part of the world where the United States is grimly fighting Soviet propaganda and promises of a better life. And it is not too far distant from where another Arab named Nasser is spreading discontent.

There seems to be agreement in both political parties that foreign aid cannot be wholly eliminated. There can and should be insistence that where and how this money is spent should be more closely watched.

The Battle in the Ether

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. JAVITS. Mr. President, in thinking of that phase of the cold war usually referred to as the battle for men's minds we are usually prone to consider only United States and Soviet efforts beamed at third countries. Nevertheless, there are a substantial number of broadcasts beamed to American listeners, in English, from every corner of the world, Communist, free and neutral. I ask unanimous consent to have printed in the Appendix of the RECORD an article from the January 1959 issue of Town and Country by Arthur Settel, director of public relations of the Metropolitan Educational Television Association—META, describing this activity.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GOOD LISTENER
(By Arthur Settel)

Little did my father dream when he told me, an incurably shy and a social creature of 13, to be a good listener, that some day I would not only carry out his injunction to the letter but make it a highly enlightening if frequently expensive pastime as well.

Everyone has his weakness. Mine is listening. To this exnewsman and former expatriate, there is nothing so intriguing as the happy game of gluing myself to my radio set and listening to the nations of our allegedly civilized world screaming insults and invectives at each other through the unwalled ether.

With a simple receiving set which can be purchased at any appliance shop or department store for as little as $139, any resident of the United States or its possessions can enjoy a ringside seat on the main arena of the cold war, observing first hand the war of words, sometimes called by more succulent names such as the battle for the minds of men, the war of ideas, the truth campaign, psychological warfare, and others ad infinitum.

Call it what you will, it is a Zoilean game apparently without end, waxing and waning while one side regroups its forces, its sputniks, it muttniks, and the other builds bigger and better transmitters on land, on ships at sea—making use of leaflets, folders, balloons, musical jingles, postage stamps, trade fairs, grants-in-aid, and even match box covers to put across an idea, tell a story, convey a message, or just let people on the other side know they haven't been forgotten.

Tuning in to the correct frequency can be frustrating to the beginner in the art of listening, who sits back enjoying a charming little fireside chat in the Russian language only to discover, after a few minutes, that it isn't Moscow at all, but the Voice of America broadcasting on shortwave from Washington, D.C., beamed to the Russian listening public.

On the other hand, an English-language broadcast is likely to originate anywhere—Moscow to Dakar, and back again. Or the curiously pleading voice can just as readily be the Voice of Germany, the Voice of Spain, the Voice of Turkey, or—yes, it could even be the BBC, London.

The listener soon ascertains that the ingratiating and fawning Moscow newscasters with the New York accent aren't giving the news at all, but something far different and alien and charged with little bolts of electricity—news which is not entirely in accord either with the facts or with the best interest of anything or anybody except the policies of the Kremlin.

It is essentially for the benefit of the international eavesdropper that I've tried to unscramble the modern Tower of Babel which modern radio broadcasting has created, although my glossary will doubtless be useful to the reader of present-day political propaganda as well as to the radio listener.

The first point, then, is that content and slant, rather than language as such, are the clues to the source and origin of a broadcast. Thus, while the Voice of America in Washington addresses itself to the Soviet Union in Russian, you can readily pick up, with the right kind of shortwave apparatus, such other oddities as Spanish-language broadcasts originating in Peiping, capital of Communist China; Arabic-language broadcasts from Tel Aviv, in the State of Israel; Hebrew-language broadcasts from Cairo, Egypt; talks in French with a pure Parisian accent coming from Cologne, Germany; Indonesian from Holland, and so on.

The second point I should like to make is that no one need feel excluded from the big brainwash simply because he can't afford to own a shortwave radio. The copywriters of Agitprop, a department in the Kremlin which devotes much of its time to the business of planting subversion in the United States and elsewhere, are just as anxious as anyone else to have listeners, and so quite naturally they make it as easy as pie for Americans to tune in and be brainwashed. Thus, they are on the air daily and Sundays on a bewildering variety of wavelengths, offering a not unimpressive assortment of music, news, and commentary which reveal that the people who masterminded the transmissions were well trained for their jobs.

Once you own your set and have settled down to a quiet evening of eavesdropping, you will find that European, Asia, and even some African states are vying for your sympathetic attention and think the best way to do this is via the propaganda route, interspersed with music by Gershwin, Nat King Cole, and Elvis Presley. You will listen to Radio Sweden from Stockholm; Radio Nacional de España from Madrid; the Thai National Broadcasting Station at Bangkok; the Radio Sarawak from Broadcasting House in Kuching; and programs from a host of other cities—all bombarding you, Mr. and Mrs. Average American, with their ideas as well as their ideologies.

Thus, with our own little sputniks in the propaganda business via the unstoppable voice of radio, a conscientious listener who wants to know who is saying what may find himself hesitating before definitely identifying the source of a broadcast. Even the seasoned practitioner may find himself in difficulty, unless he has familiarized himself with the A B C of modern propaganda.

As an aid to the perplexed shortwave listener to assist in spotting instantly the subtle brainwash, in separating fact from fiction, to keep you and you and you from becoming a member of the Ananias club—I have drawn up a set of helpful suggestions which are the first, I believe, ever published. They are designed to make the battle of the ether as simple as possible to the American public, which is at one and the same time a prime target and a sideline observer of the

most decisive struggle in history and is scarcely aware of it.

LANGUAGES

As already indicated, the only language you need to know is English. If you are interested in shortwave monitoring. Of course, if you know the Russian language, you can listen to the Voice of America broadcasts, although you should be cautioned that these programs generally consist of straight news which you've probably already heard on your domestic radio program. With a mastery of English, you can listen to any of two score nations, all trying to win over the mind of America.

TUNING HOURS

The best listening time is after dark. Broadcasts are clearly audible with a good set and a radio antenna virtually any time of the day on Sundays, and during the evening on weekdays. Program schedules are obtainable from the broadcast capital of each individual country in which you are interested.

GLOSSARY OF RADIO PROPAGANDA

Aggressive bloc: Name-calling device, used by Radio Moscow and Egyptian Broadcast Service (Radio Cairo). Refers to anyone Moscow doesn't like.

Atomongers: Fell into disuse with the advent of sputnik.

Aspirations: The striving of Western nations to be liberated from the yoke of capitalism.

Baghdad Pact: Conspiracy of certain Western and Middle Eastern nations bent upon some kind of mischief not clearly defined.

Blackmail: Any action by Western (NATO) Powers taken in self-defense against the Soviet bloc.

Bourgeois rightists: Mysterious forces in the Western World conspiring to preserve the evils of capitalism against the march of utopia; phrase employed in Peiping transmissions and not heard recently from Moscow.

Bourgeois intellectuals: Misguided eggheads who resist subversion by Kremlin propagandists.

Bulwark of defense of world peace: Soviet description of its position in world affairs—not employed in radiocasts beamed to United States or Western Europe.

Capitalist rightists: Tycoons and empire builders who would just as soon crush their wage slaves as not, all for the sake of political and territorial advantage.

Colonial adventures: Any activity involving U.S. economic aid to underdeveloped countries.

Colonial servitude: The association of any country with the North Atlantic Treaty Organization (NATO). Also used to describe supposed attitude of an anti-Communist-oriented nation after receiving a defense appropriation.

Creative labor: Peasants working in a collective farm. Agricultural workers in capitalist countries are referred to as "subjected peoples" and "slaves of capitalistic monopolistic exploitation."

Cultural delegation: Usually a cadre of propagandists for communism.

Democracy: Loosely used term, often employed in derision as well as in praise. Impossible to define out of context. Beware of trying to fix meaning with precision.

Eisenhower doctrine: Booby trap for unsuspecting countries in the Middle East; purpose, to perpetuate their enslavement to capitalistic imperialism.

Exploitation: Bleeding an underdog nation white by plundering its wealth; e.g., Britain's exploitation of Egypt until latter country joined Soviet bloc.

Forces of peace: Members of the "peace-loving bloc" of nations (under Moscow control).

Forces of reaction: Members of war-mongering bloc of nations (under U.S. control). Also, those forces which drag modern man back.

Fraternal friendship and cooperation: Soviet economic and political penetration of a country not yet under Communist domination but willing to accept Russian grants and other economic aid and know-how.

Imperialist circles, imperialist cliques: Malodorous messengers of evil bent on enslaving independent nations of the world in some sort of imperial network, with general headquarters in Washington.

Landlords: Human birds of prey who, without a twinge of conscience, rob families of their sustenance for the benefit of capitalism.

Little peoples: Defenseless nations of the NATO bloc who can't do a thing about it.

"Long live world peace": Phrase employed by Kremlin inspired orators to punctuate every public speech.

Mendacious fabrications of the ideologists of colonialism: Expletives by anti-Communists.

Paper tiger: Sneering reference to America's military posture. (Used by Communist China. Not heard elsewhere since 1949).

Path of progress: The road to socialism (i.e., communism).

Peaceful coexistence: (The Big Socko in propaganda.) Phrase has been used tirelessly for the last 5 or 6 years in Moscow and in her political satellite broadcasts and is the supertrademark of all Agitprop output. Has hypnotic power over the unwary because of its appeal to peace-loving people everywhere.

Peace-loving countries: All captive nations within the Soviet orbit.

People's republics: Countries living under Communist utopia, supposedly with the people, rather than capitalist warmongers in charge.

Position of strength policy: America's naked military might, employed as a threat to support political and economic policies not in accord with Moscow's way of doing things.

Proletarian internationalism: Obscure, but generally meaning a workers' paradise in which monopoly capitalists have been obliterated.

Push-button war: Capitalist-engineered war.

Propaganda: When it comes from capitalist sources, it's propaganda. From Communist sources, "enlightenment" and "rectification."

Puppets: Tools of the monopoly capitalists.

Rectification campaign: Campaign currently being waged by Communist China, to rectify deviationists; e.g., ideological nonconformists and peasants who refuse to give up their land to cooperatives.

Rightists: General category; includes capitalists, monopolists, warmongers, deviationists, and even bourgeois intellectuals.

Socialist camp: The Communist-dominated bloc; includes Communist China. No relation to socialism.

Socialist realism: Recognition of the "facts of life" by writers, artists, etc., under Soviet domination; e.g., art has to be harnessed to Moscow ideology and purposes.

Solidarity: Union against the decadent capitalist states by the "forces of freedom," i.e., Soviet utopia.

Soviet satellites: Within Soviet orbit, "satellite" means sputnik; outside, "satellites" include countries in the Soviet political orbit.

War-thirsty elements: Any country not inside the Soviet political orbit which wants to defend itself against aggression; those accepting defense armament given by Western countries.

Working class: Labor within Soviet-controlled areas; any group opposed to capitalism.

Worker-peasant state: Synonym for country which has accepted Moscow ideology.

Seaton Defies Congress in Refusing To Build Powerplant on Trinity Project

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. ENGLE. Mr. President, while the administration talks about balancing the budget and saving money, it is preparing to cost the Federal taxpayers money by failing to request funds for the power installation on the Trinity River project. This project is currently under construction as part of California's Central Valley project, and unless the powerhouses are started now they will not be ready to operate when the dam fills with water. Every day those powerhouses are idle, when they could be operating, will cost the taxpayers of this Nation the income from power sales, which will be substantial.

The Trinity Project Act provides for a federally built powerplant. An effort is being made to amend that act and to give approval to the so-called partnership deal whereby the power-generating facilities would be turned over to the Pacific Gas & Electric Co. However, this legislation failed in the last Congress, and has less chance of being passed in this Congress. The Secretary of the Interior, in failing to request funds, is in effect telling the Congress of the United States that he does not intend to build and operate the project the way Congress authorized it. An editorial in the Modesto Bee of January 11, 1959, points this up very clearly. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BLOCKING TRINITY FUNDS WOULD BE IMPROVIDENT

Speaking at a convention of the California Irrigation Districts Association in Santa Barbara, Elmer F. Bennett, Undersecretary of the Department of the Interior, stated:

"The position of the Secretary of the Interior is clear. He does not propose to request funds for Federal construction of the Trinity power facilities."

He made it clear also that the Eisenhower Administration plans to continue its rear-gaurd fight for approval of the so-called partnership deal whereby the power generation facilities at Trinity would be turned over to the Pacific Gas & Electric Co.

And this notwithstanding the fact such legislation failed to budge out of committee in the last session of Congress and Bennett admits:

"In the coming year it will be even more difficult to obtain such legislation."

Seldom has a statement so inconsiderate of the public welfare been made by a high public official.

If the generators at Trinity are to be ready to turn when falling water is available, a start must be made this year on the powerplant.

Each year the construction of the plant is delayed means the loss of millions of dollars in potential revenue for the Federal Treasury from the sale of electricity.

And yet, by Bennett's admission, the Administration is willing to sacrifice this revenue to continue its fight for partnership, which he concedes has little chance to succeed.

From what Bennett says it is plain the Administration has no intention of including funds in the budget for Federal construction of the Trinity power facilities.

The Trinity Project Act provides for a federally built plant.

If the Administration, in its obeisance to the private power company, fails to carry out this mandate, then Congress on its own should make funds available and thus end this improvident nonsense.

The Views of the Supreme Court on Integration and Civil Rights

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column appearing in the December 1958 issue of Farm and Ranch magazine signed by Tom Anderson. The article is entitled "Straight Talk" and deals with the views of the Supreme Court on integration and civil rights.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STRAIGHT TALK

The SUPREME COURT OF THE UNITED STATES,
Washington, D. C.

DEAR LIFERS: Just because President Roosevelt vilified the Supreme Court is no excuse for the common man to. After all, by rewriting the Constitution to suit modern life you are saving the people all the time, trouble, and expense of having to amend the Constitution.

The reactionaries who have to be pulled into the 20th century dragging their feet and clutching the Constitution to their breasts naturally can't understand you fellows. They're used to having judges on the Court. They don't realize that human values are what count today—not law—and that you Justices were appointed because of your social, economic, and political backgrounds and ambitions. How could you make America over if you were tied down to the rulings of past Courts, the laws of Congress, or that ancient Constitution?

You threw out the convictions of 14 California Communists; you ruled against firing a Government worker suspected of being a security risk; you turned loose a dope peddler because the Government agent who sold the stuff to him had to remain anonymous so he could trap other citizens; like good sports you decreed that FBI files must be opened to criminal or Communist when the contents of those files are being used to prosecute him; you ruled that past membership in the Communist Party is not a bar to the practice of law; you released three men who harbored a convicted and fugitive Communist leader because the FBI agents raided the house without a warrant; you held the Justice Department can't bar Communist activity by an alien who is under a deportation order; you destroyed the right of States to try Communists on sedition laws, saying all sedition cases must be tried by the Federal Government only. Betcha you can turn Communists loose faster'n J. Edgar Hoover can lock 'em up.

Since 1932 the Court has departed from decisions previously rendered on 35 occasions, whereas there had been only 29 such reversals in the entire history of the Court before 1932. So the recent law of the land is sorta like a movie actress' hair—whatever suits the mood and the occasion. The Constitution is your hula hoop to be played with according to your fancy.

Can't you make the States righters realize that schools and things must be federalized if we are to compete with Russian schools and things? Like the Kremlin, you must make all States under your domination conform to whatever national educational and social standards in your great wisdom you deem best for the world and us. Back when States and communities were free to run the schools any way they wanted to, they had little one-room schoolhouses where the only thing red was the schoolhouse itself and where about all they had worth having was freedom—and, of course, that's out of date now.

Let's not make the same mistake on integration and civil rights that we made on prohibition. Just because the people didn't want prohibition and it couldn't be enforced, Congress repealed it. But everybody knows people just can't drink equally, although many do separately. Separate but equal, you've ruled, is not equality. And all men are created equal as anybody who'll just look around him can plainly see. We must force togetherness in churches, parks, theaters, swimming pools, subdivisions, dancing classes, farm organizations, editorial staffs, boards of directors, garden clubs, fraternities, society pages, living rooms, and boudoirs. Twenty-four States have laws against intermarriage of whites and Negroes. Why don't you make that against the law of the land?

This head-on battle for power between the Federal and State Governments goes back to Noah. He had to bring into the ark "of every living thing of all flesh, two of every sort." If he had just forced integration on the boat, we wouldn't have all this trouble now. Just think of the possibilities: A woodpecker housed with a carrier pigeon might have produced a pigeonpecker that not only would deliver a message across a continent but would knock on the door when it got there.

The racists should take a more tolerant view of racial amalgamation (they call it mongrelization). When we're like Brazil, Cuba, and Puerto Rico everybody will be the same color. For amusement, we can have white-face musicals and books like "Old Beige Joe" and "Grey Beauty." There won't be any more Sammy Davis, Jr.'s, on TV, cause there won't be any more Sammy Davis, Jr.'s. Ain't that fabulous?

Isn't it unfair that citizens in some areas of the Nation do not have an equal opportunity to really mix with their colored brothers? Would you please pass a law requiring those little exclusive commuter towns around the big eastern cities to benefit by living with, going to school with, working with, and socializing with their share of Negroes? I am sure you'll agree that it's unmodern-American to let the Negroes be discriminated against by being forced on poor whites only. The Burning Tree and Augusta National Golf Clubs, the DAR and the Junior League, Princeton and Groton must be Little Rocked.

Aren't you worried about the clear and present danger that the southern diehards might really make a go of private segregated schools? Suppose Arkansas decided to refund to each student his or her per capita share of school tax money to be used to go to the school of his choice—couldn't you make a law of the land against that? Some pupils would choose an integrated school, some a white, some a Catholic, some a colored—what a horrible un-modern-American mess, freedom of choice.

Some people who recognize that the Supreme Court—not the Constitution—is the law of the land, say that integration is inevitable, we might as well accept it. Reactionaries say a people integrated against their will is a people unintegrated still. Abraham Lincoln said "To sin by silence when they should protest, makes cowards of men." But Abe lived a long time ago, before the Supreme Court chamber became a mixing mortar—which is a bowl in which the ingredients are broken, crushed, and ground together—with all deliberate speed.

TOM ANDERSON.

The Commuter Problem of New Jersey

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. CASE of New Jersey. Mr. President, I have heard from Mayor Thomas T. Taber, of Madison, N.J., and Mayor James M. Henderson, of Chatham, N.J., two leaders of a committee of mayors in Morris County which has been devoting a good deal of time to a study of the commuter problem in New Jersey.

I would bring to the attention of the Congress proposals developed by Mayor Taber and his committee. The program as outlined sets forth thoughtful suggestions of what might be done to preserve this indispensable service by the railroads, by government at all levels, and by an interested public.

The Newark Evening News has now commented on the efforts of the committee, applauding the industry and initiative of the mayors. The commuter problem is a matter of urgency and great importance to our people, and I ask unanimous consent that the letter from Mayor Henderson, the suggestions of Mayor Taber and his committee, and the editorial be printed in the Appendix of the RECORD.

There being no objection, the letter, suggestions, and editorial were ordered to be printed in the RECORD, as follows:

BOROUGH OF CHATHAM,
Morris County, N. J., January 6, 1959.

The Honorable CLIFFORD P. CASE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR CASE: As you doubtless know, the passenger service situation with the Delaware, Lackawanna and Western Railroad has rapidly worsened to the point where its president threatens discontinuance during 1959.

I know you are, and have been, actively interested in the matter and in trying to arrange some remedy so that this catastrophe would not fall upon the many thousands of commuters who use its service to and from their places of business employment.

The Delaware, Lackawanna and Western Railroad is currently seeking permission to discontinue 42 suburban passenger trains in New Jersey and, while it does not affect our Morristown line, in which I am most principally concerned, it does have implications or forebodings of what lies ahead with Mr. Shoemaker's threat.

A number of we mayors in Morris County have gotten together on a number of occasions and discussed all phases of the problem as well as possible solutions. The chairman of our group, Mayor Taber, of Madison, has gotten what I consider as some practical remedies on what could be done in preserving this indispensible service, and I felt that particularly those as to what Congress could do would be of pointed interest to you. Personally, I think all of the suggestions make sense, and I hope that it may be feasible to put into effect at least the most significant ones.

Your thoughts on this will be greatly appreciated as well as any other comment on what has been developed on the railroad situation in Washington.

With personal regards and all good wishes,

Sincerely yours,

JAMES M. HENDERSON.

SUGGESTIONS FOR KEEPING NEW JERSEY RAILROADS IN THE SUBURBAN PASSENGER BUSINESS

(By Mayor Thomas T. Taber, Madison, N.J.)

Specific, practical proposals as to how to provide immediate and reasonable financial relief to New Jersey railroads, and to help them out of the "slough of despondency" in which they wallow, are now required. As endless talk continues without any constructive action resulting from it, railroads continue to take off trains, and further downgrade their passenger train service—and the end is not in sight.

There are two basic railroad problems. The immediate problem is that of keeping existing trains running without further deterioration of service, until the second, less-acute problem can be solved. This is equally important, however, since it relates to the future operations, coordination, and improvement of all railroad and other public transportation service in the metropolitan area, including the determination of how and by whom it shall be provided.

Although the Congress of the United States and the New Jersey State Legislature must provide the basic relief required, the railroads must show some interest in helping themselves and promptly divest themselves of the dubious distinction of being the world's worst merchandisers. All parties directly involved, or otherwise interested in the railroad problem share a common responsibility to do their part in achieving by cooperative effort, results which will be fair to all concerned and in the public interest. Everyone must contribute something—now—toward keeping the existing service operating.

The end of the road has been reached on fare increases, since the present fares are at their peak for the service rendered. Each time an additional increase is sought to bring in more revenue, more customers desert the railroad so the net gain in revenue is less than expected. More trains are then taken off to reduce expenses, and with poorer service more passengers leave the railroad—so a further fare increase is sought—further continuing the deadly, vicious cycle.

The suggestions which follow are "thought starters" and certainly can be improved or supplemented, but since they do provide a means for starting constructive action at all levels, they are preferable to the existing lack of specific, practical ideas.

WHAT CONGRESS COULD DO

1. Amend the Transportation Act of 1958 to require the Interstate Commerce Commission to consider and protect the public interest and human rights when interstate abandonments are applied for. Return responsibility for permitting intrastate abandonments of service or trackage to State regulatory bodies, which are closer to public local needs than the ICC.

2. Require a review of all abandonments of service, facilities, or trackage by the Department of Defense to determine if the requested abandonment will impair national or civilian defense.

3. If national or civilian defense requires the maintenance of railroad service, equipment, or facilities, a suitable cash payment for the standby service should be made to the railroads concerned and be charged against the national defense budget.

4. Reduce all foreign railroad aid programs at least 50 percent, and make this sum available for the rehabilitation of such of our railroads as need help. So far we have given over a half billion dollars to foreign railroads, and if these railroads are important certainly ours are even more so.

5. Require the Post Office Department to use railroad service whenever practical to do so.

6. Eliminate all types of subsidies now granted to airlines, steamship, or other transportation companies, or grant equal amounts, and under the same conditions, to the railroads.

7. Merge the Railroad Retirement and Social Security Acts so that railroad contributions will be the same as those paid by other forms of transportation, instead of being double.

8. Permit railroads to provide contract, incentive, or experimental rates so that they may be better enabled to attract and compete for traffic. If a railroad wants to try lower rates, do not permit a competitor to block such action, if the proposed lower rate is expected to return a profit to the railroad.

9. Prohibit consolidations or mergers of railroads, unless it is proven that the public will benefit to a reasonable degree by such action.

10. Allocate 10 percent of the funds for the Federal roadbuilding program for low-cost long-term loans to railroads needing funds for capital improvements having an estimated minimum useful life of 20 years.

11. Repeal the wartime 10-percent tax on passenger transportation so as to encourage the use of public, instead of private, transportation.

WHAT THE STATE LEGISLATURE COULD DO

1. Immediately reduce assessments standing against all railroad property in the State by 25 percent; and then make a further reduction of 25 percent in the assessment of passenger equipment, facilities, structures, and property.

2. Levy some appropriate form of franchise, gross receipts, business, user, or other type of tax against the operations, activities, and properties of the Port of New York Authority in New Jersey, and distribute the proceeds of such tax among the counties and municipalities which would lose the most revenue through reduced railroad assessments. (There appears to be no good reason why the Port of New York Authority cannot contribute financially to the problem, since their activities and facilities have been the principal cause of the railroads' loss of passengers.)

3. Seek a new basis for railroad taxation in the State, whereby a substantial percentage of the total levied will be based on gross or net earnings within the State of New Jersey.

4. Increase the scope of activities of the rate counsel in the public utilities commission to serve as a public defender in all transportation operating matters brought before the board.

5. Prohibit issuance of all free passes for travel within New Jersey, except to bona fide railroad workers whose duties require them to travel and work over the railroad. No complimentary passes to be issued to other railroads and steamship lines, nor any pass to be used for commuting to and from work.

6. Create a nonpartisan joint transportation committee of the State legislature, to be charged with the responsibility for studying, coordinating, and improving all public passenger transportation media within the State, and for working with all organized rail transportation groups.

7. Instruct the Port of New York Authority to postpone all new major projects, until the railroad transportation problems have been satisfactorily solved, and require the Port of New York Authority to do its part in achieving coordinated and improved rapid transit in the New York metropolitan area of New Jersey.

WHAT THE COUNTIES COULD DO

1. The board of chosen freeholders to create a county railroad transportation committee, made up of municipal mayors and qualified interested citizens; or designate a presently-organized and efficiency-functioning group to represent the county, to serve an official watch-dog committee for the entire country. This committee should investigate, study, and report to the board of freeholders on all railroad service matters affecting the county as a whole, or any of its municipalities.

WHAT MUNICIPALITIES COULD DO

1. Encourage the greater use of railroad service, both passenger and freight.

2. Work with the railroads to improve commuter parking facilities.

3. Participate in and support the work of the county railroad transportation committee.

WHAT COMMUNITIES CAN DO

1. Write to Congressmen and State legislators urging that immediate action be taken to preserve existing railroad transportation facilities and service, as being in the public interest as well as that of national security and civilian defense. Urge friends to write such letters and do so promptly.

2. If possible to do so, commute by train instead of private car, in good weather as well as during periods when highway travel is hazardous.

3. Encourage the use of passenger-train service, and help to build up patronage, especially on the offpeak hour trains.

WHAT RAILROAD BROTHERHOODS COULD DO

1. Work with the railroads to achieve better utilization of personnel; to eliminate waste; to achieve more productivity per worker; and to eliminate unnecessary of "featherbedding" jobs.

2. Seek ways of improving service; improving public relations; raising employee morale; increasing pride in the railroad; and obtaining more traffic for the line.

3. Purchase stock of the railroad, so that there will be an added interest in it. If the employees purchased enough stock they might be able to have representation on the board of directors, and thus have a voice in the setting of policy.

WHAT THE RAILROADS COULD DO

1. Change present retrogressive policies and thinking to a constructive determination to improve the service, and build up patronage for the line. Work to divest themselves of the distinction of being the world's worst merchandisers of the service they offer for sale.

2. Establish and maintain good public and employee relations. Try to make friends for the railroad; raise employee morale, and restore pride in the line.

3. Encourage freight and passenger traffic men to seek ways and means of improving service; and give them bonuses based on the amount of new business they obtain for the railroad.

4. Subordinating the operating department to the traffic department. Require the operating department to furnish service as requested by traffic—which then has the responsibility of making it pay. Require prior approval of traffic department before operating department can downgrade or eliminate any service, equipment, or facilities. Devote the same amount of time and effort to the

acquisition of new business as is devoted to the cutting of expenses.

5. Confer periodically with county railroad transportation committees, or other recognized organizations interested in the subject, and always before initiating any formal action which could have a deleterious effect on the service to any municipality. Seek, consider, and try to adopt all good practical constructive suggestions, and regardless of the source of such suggestions.

6. Try to improve and build up traffic through coordination with bus lines, Newark city subway, etc., in an effort to have such services complement, rather than compete with, the railroad service.

[From the Newark (N.J.) Evening News, Jan. 12, 1959]

MAYOR TABER'S PLAN

Mayor Taber, of Madison, has offered 34 suggestions which he thinks would help preserve railroad commuter service in New Jersey.

They would require action by Federal, State, county, and municipal governments, by the railroads themselves, the railroad brotherhoods and the commuters. They embrace tax relief and subsidy, more progressive management, more labor productivity and better coordination of public transport.

Some of Mayor Taber's proposals are practicable, some are debatable. He would tax the facilities of the Port of New York Authority to compensate for railroad tax reduction. This would be like taxing the New Jersey Turnpike or the Brooklyn Bridge. He would use 10 percent of the Federal highway fund for railroad improvement loans. This fund is being raised by a gasoline tax on motor vehicle owners, who will find it hard to understand why they should help subsidize those who prefer to travel by rail.

But to pursue a critical analysis of Mayor Taber's program would be to obscure its valid claim to consideration. It represents a thoughtful official's earnest effort to stimulate interest in a critical situation and it accurately describes the dimensions of the problem.

Mayor Taber makes a modest presentation. He refers to his suggestions only as "thought starters" and offers them as a basis for continuing constructive action.

On this basis, his plan deserves attention. The more people who start worrying about what is happening to local railroad service, the sooner we can hope for a solution.

The Fight Against Inflation

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Saturday, January 17, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Arthur Krock entitled "A New Campaign Against a Tough Foe," appearing in the January 13 issue of the New York Times.

Mr. Krock, taking note of the President's expressed determination to halt the rising cycle of inflation, writes most penetratingly of the difficulties involved and candidly outlines the problems which must be met if inflation is to be halted. Mr. Krock echoes the point I have been making for some time that the inflationary pressures of unbalanced budgets and deficit spending must be brought home to people by examples related to the family budget. The stability of our dollar, now viewed with some concern by leading economists, depends on a public awakening to fiscal problems and the dangers of inflation.

Mr. Krock has performed a distinct public service in his clear analysis, and his article should be distributed as widely as possible.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NEW CAMPAIGN AGAINST A TOUGH FOE

(By Arthur Krock)

WASHINGTON, January 12.—The forecast that the President had decided to engage in house-to-house fighting against the rising cycle of inflation began as a reliable report in the press, is now semiofficial and may become official when the President speaks Wednesday to the National Press Club. But experience must now have proved to the General that a commando tactic is necessary if he is to turn the tide against the principal, enduring threat to national solvency and the stability of the dollar.

It is predicted that the President will attempt to impress this threat upon the people by homely household examples of increases in the cost of living that have followed rising costs of production. These are statistics, readily available in Government reports, which cannot be successfully assailed as politically partisan or slanted to promote the interest of special economic groups. They are well supported by analyses from private sources of equally good reputation. They have been reflected in the budgets of every individual American. If there is any method by which the people can be roused from their apathy toward unbalanced Government budgets and the endless upward cycle of production costs, this is the method. And only the President can furnish the necessary leadership.

But he cannot win this most difficult of his battles unless he strikes at his targets with the force and the constancy he employed in the military field. Special groups already are massed against him, and these are fortified by economists of great diversionary skill and by Members of Congress who are debtors to these groups for support at the polls. And because of the national doubt raised by sincere and informed critics that the President can balance the national budget without sacrificing an adequate defense, he must persuade the public he can.

He will be required to assert all his personal prestige and the unmatched prestige of his great office to accomplish the task he is reported now to have undertaken with a resolution he had not shown on some other occasions. And his cause cannot be won merely by illustrations of inflation that citizens can plainly recognize in their own economic experience.

WHAT CANNOT BE DENIED

The labor unions, their economists and their political allies deny that the unending cycle of wage increases is a root cause of the steady increases in the cost of living. But they cannot deny that constant rises have been contemporaneous in the cost of the services, rents, and food which take the largest slices of personal earnings. If this time relation can be demonstrated by facts of common experience, the burden of proof will fall on those who contend that it is a mere coincidence, the product of other causes. People who live in every street and on every country lane in the United States have had word to the contrary from the mechanic, the grocer, the butcher, etc. Each has explained his markup was due to higher costs of the producer (both of raw and fabricated materials), who in these instances has just had his own costs increased by rises in the pay of his labor.

Responsive to this same trend, the Federal Government has intensified its search for tax revenues, and maintains high tax levels because it is the largest buyer in the market and its expenses have gone up accordingly.

If the President plans, as some have forecast, to show how inexorably this inflation takes effect on the household budget, he can easily make the demonstration. But to arrest inflation he will have to specify the causes, with evidence that will bring popular support for correctives he may have in mind. And this would mean open political warfare against strong forces entrenched in politics and in the economy: labor unions which use their special legal immunities, and picket lines aided by deliberately lax enforcers of law and order, to compel employer submission in so-called collective bargaining; employers who make "sweetheart" contracts and pass the unwarranted increases on to the public; legislative wasters and the same breed in the executive establishment.

Also, in the anti-inflationary steps he proposes, the President must convince the people that he knows best what is required for the maximum military security obtainable and will provide it.

St. George never fought a fiercer dragon with more heads. But St. George's swing had followthrough.

Fallacies, Foibles, and Failures in the Halls of the Mighty

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Saturday, January 17, 1959

Mr. PROXMIRE. Mr. President, the economic fallacies, foibles, and failures of those in the seats of power in America were brilliantly dissected at the recent annual meeting of the American Economic Association, in Chicago, late last month. Yesterday, Mr. Bernard Nossiter, of the Washington Post and Times Herald, wrote a revealing and entertaining comment on what some of the top professional economists think of what has been going on in the halls of the mighty in America. I ask unanimous consent that the article, entitled "Heresy in Economics" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HERESY IN ECONOMICS—LACK OF REVERENCE APPEARS GENERAL

(By Bernard D. Nossiter)

If President Eisenhower, Budget Director Maurice H. Stans, Commerce Secretary Lewis L. Strauss, and Treasury Secretary Robert B. Anderson had gone to Chicago over Christmas week, they would have been mighty upset.

For there, the American Economic Association held its annual meeting. And this normally sedate academic body found heresy running rampant in the ranks. As Prof. Ben W. Lewis, of Oberlin College observed in a paper, "Recent years have witnessed the display of some questionable manners toward persons in High Places."

The capitalization is the professor's own. He was talking about the economic behavior of the citizenry—"When in due course we are admonished in the name of our way of life to stem the flood of inflation by spending less than we want to spend, we wave our checkbooks; and when we are admonished to break the bonds of recession by spending more than we are inclined to spend, we sit on our hands. All of this is very disrespectful to those in high places and may very well lead to dire consequences."

But his comments about a lack of reverence were equally applicable to his fellow sages.

For example, Robert J. Lampman of the respectable National Bureau of Economic Research was making statistical hash out of the "People's capitalism" idea. His complicated tables boiled down to findings that—

In 1953 the wealthiest 1 percent of the population owned about 30 percent of all wealth, at least 90 percent of all common stocks and virtually all State and local government and corporate bonds.

The richest group increased its share of all stocks from 70 percent in 1949, 53 percent in 1929, and 61 percent in 1922. However, the top group's holdings of all assets did decrease some from 1922, thanks to the widespread ownership of consumer goods (like TV's, autos, refrigerators and the like).

John Blair, the iconoclastic thinker for the Senate Antitrust Subcommittee, was almost as disturbing. He concluded that no matter what, prices in the big concentrated industries (oil, steel, autos, aluminum and others) go up.

In depression, Blair figured, the producers cut output and hold prices steady because they figure a reduction won't generate enough offsetting extra demand; in prosperity, they go up for obvious reasons, although not as much as in highly competitive industries; in between times, like now, when plants are running well under capacity they still go up.

This, Blair contends, results from: a cost push by big unions seeking higher wages; the rising costs of nonprice competition (money spent on advertising to make similarly priced products seem different and model changeovers to make similarly priced items actually different); the drive by industrial giants like General Motors and United States Steel to earn a "target" rate of return on their investment (so that when demand falls, prices have to be increased to hit the "target" with a smaller output); and the fear by the lesser giants—Ford, Bethlehem—that if they don't raise prices to meet the leaders, the leaders will drop back to meet them and nobody will win.

Another Professor Lewis, John P. of Indiana University, said this is nothing to get very upset about.

"We are not wrestling with sin," the professor said, but "a plodding inflation" that stems from the nature of our economic institutions. He is much worried about the concentrations of power that are flowing to giant companies and unions. He wants some device to make their wage and price decisions more accountable to the general public.

The antitrust approach, he concludes, is a waste of time. He suggests some form of Government intervention before the key price-wage decisions are made. Lewis (John P.) warns against Government's trying direct orders, since the producer groups are political as well as economic power centers and the Government is in some respects an agent confronting its political superiors.

Lewis (Ben W.) also takes a dim view of antitrust, or making little ones out of big ones, as politically absurd and historically fantastic. "Bigness is here to stay," he observes, and we are being taught to love it.

He says this of the large corporations: "Tutored by its attorneys, bathed, barbered and cosmeticised by Madison Avenue, nourished and sanctified by war and cold war, and enthroned by public opinion, which sees only 'goodness' in bigness that is well mannered and well behaved, bigness exhibits the supreme confidence and gracious assurance that bespeak stature, status, and a clear conscience. Bigness was once the bad boy in Sunday school; now it sits in the vestry. It may not yet have acquired a full-sized soul, but the contract has been let and the press has been alerted."

The trouble with these fellows, an orthodox economist might say, is that they don't tend to their knitting. They are squeezing political science, sociology, psychology, empiricism, and all kinds of alien thought into what used to be a nice, specialized little discipline. In the good old days, our man might say, economists talked only to economists and nobody else either listened or understood what they were saying.

Asians Lead Among Foreign Students in the United States

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. JAVITS. Mr. President, for the 1957–58 academic year there were 43,391 foreign students pursuing courses of education in United States colleges and universities among whom the greatest number were from the Far East. This number contrasts with the 1,099 students from the non-Communist world who are now studying in the Soviet Union and other nations of the Communist bloc. While the figure for the United States is the largest number in our history, the Soviet bloc can advance a similar boast, having doubled the number of free-world students from the previous year. The greater part of this increase is in students from underdevleoped areas. This is indeed a war for men's minds in which the Soviets are bending every effort.

It is also of interest that today there are 22 Americans studying in the U.S.S.R. while 17 Soviet citizens are in U.S. universities.

As the students of today are the leaders of tomorrow, it is encouraging to note the large proportion of young people from the Far East enjoying an American education. These students are following in the steps of Mme. Chiang Kai-shek, Syngman Rhee, and Kwame Nkrumah, all of whom received American educations.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from the September 16, 1958, issue of the Asian Student detailing the facts concerning the great number of young people from the Far East studying here. It tells an important story of our efforts in preserving the spirit of freedom and free institutions throughout the world:

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FAR EAST SENT MOST STUDENTS IN 1957–8

During the past academic year a total of 43,391 foreign students—the largest number in history—were studying in the United States and the greatest number of these came from the Far East, according to a report of the Institute of International Education. The previous record was 40,666 in the 1956–57 academic year.

These 43,391 students and scholars attending 1,801 schools were from 145 countries and territories.

By individual countries, Canada led the group with 5,271 students. Among the top 10 countries sending students to U.S. schools, Nationalist China was second with 3,230, India third with 2,589, Korea fourth with 2,404, Japan fifth with 2,017, and the Philippines sixth with 1,882.

TOP 10 COUNTRIES

The rest of the top 10 were Iran, 7th, 1,478; Greece, 8th, 1,157; Cuba, 9th, 1,046; and the United Kingdom, 10th, 982.

Setting a record for the same year was also the number of physicians studying in the United States, with 7,622 compared to 6,741 of the previous year. The Philippines headed the list with 1,598 medical students, Turkey was second with 587, followed by Canada, 535; Mexico, 500; Germany, 319; Korea, 313; Greece, 289; Iran, 279; Japan, 275; and Italy, 230.

An analysis of the IIE report shows that the typical foreign student in the United States in the year 1957–58 was from the Far East and was more likely to be an engineering major than anything else. The number of engineering students was largest with 4,881, followed by that of the social sciences majors with 2,289.

MEN OUTNUMBER WOMEN

Men students from foreign countries outnumbered women 3 to 1. An exception was the Philippines which sent more women than men to U.S. schools.

Among the American institutions, the University of California had the largest foreign student population (1,662), the largest number of foreign faculty members on its staff (129), and the largest number of its own faculty abroad (173).

OWN FUNDS

The IIE report also shows that most of the foreign students last year studied in the United States on their own funds, not on scholarships.

When they were asked for the first time if they would be interested in employment after graduation with an overseas branch of a U.S. corporation, more than 35 percent of the foreign students said they would. Almost half of these were engineering majors and approximately a third were from the Far East.

Boys Work To Improve Themselves and Their Community in Red Cross Patrol

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. YARBOROUGH. Mr. President, young people traditionally form clubs—usually centered around a packing box clubhouse and often lasting for only a week or two, with no particular purpose.

There are, however, some young peoples organizations which constructively

channel the energy and enthusiasm of youngsters into activities which benefit both the participants and the community. To name a few, there are the Boy and Girl Scouts, YMCA and YWCA, Campfire Girls, Junior Achievement, 4-H clubs, groups sponsored by various churches and civic organizations, and several others.

The activities of seven young men, ranging in age from 7 to 11, in Corpus Christi, Tex., illustrate how a great many of our Nation's young people are seriously working at ways to improve both themselves and their community.

They formed a club, but it had a definite purpose—work with first aid and safety. Under the guidance of wise and understanding parents such as Dr. Charles D. Dixon and Mrs. A. S. Jones, and with the help of other interested adult leaders such as Mrs. Martina Florey of the American Red Cross, the boys began last summer to seriously study first aid and to work in behalf of safety. They have been at it ever since.

Their activities recently came to the attention of a Corpus Christi newspaper reporter, Miss Margaret Ramage, who is noted for her interest in and support of young people's activities.

Mr. President, as a mark of respect and esteem for these fine young men, their parents and leaders, and for all such young people's organizations who labor to improve our Nation's youth, I request unanimous consent to have printed in the Appendix of the RECORD, Miss Ramage's article on Red Cross Patrol 1, which appeared in the Corpus Christi Caller-Times for Sunday, January 11, 1959, under the heading: "Seven Boys Make Serious Business of Rescue Work."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED CROSS PATROL 1—SEVEN BOYS MAKE SERIOUS BUSINESS OF RESCUE WORK

(By Margaret Ramage)

One of the busiest first-aid stations in town is located at 6050 Rio Vista.

There seven members of Red Cross Patrol 1 study and demonstrate first-aid procedures during after-school hours on week ends and vacations.

When near disaster struck in the form of a late December rainstorm, Patrol 1 was on hand to direct traffic on South Alameda.

Commanding this station are seven boys who are active members of the Junior Red Cross at Montclair School. They range in age from 7 to 11.

Headquarters is located at the home of the president, Bobby Dixon, 11, an his brothers, Tommy, 8, and Chalmers (Chuckie), 7.

Vice president is Armnod (Doc) Jones, and secretary is Mike Lee, 10. Other members are Scotty Thompson and Joe McComb, both 11.

FATHER IS DOCTOR

Fortunately, the Dixon boys' father is Dr. Charles D. Dixon, medical director at Reynolds Metals Corp. This gives the headquarters a larger than usual amount of first-aid supplies.

The boys have a supply table stocked with bandages, tongue-depressers, cotton and other items, plus a stethoscope and other larger pieces of apparatus.

Later Dr. Dixon added an oxygen tank and showed the boys how it works.

Most of their other equipment came from Mrs. Martina Florey, director of the Junior Red Cross, at the Red Cross office, 1116 Laredo.

The youngsters actually started "on a shoestring," or on one bandage, as a Dixon boy explained.

It was after Little League season ended. Midsummer days were long. Then one of the Dixons cut a finger.

The doctor-father bound up the finger, to the intent interest of the patient's brothers and the neighborhood ex-little leaguers.

ASKED FOR SUPPLIES

Within a few days the boys composed a long letter to the Junior Red Cross, expressing their interest in first aid and asking for Red Cross supplies.

"It was only natural," casually explains Doc Jones, pointing out that all patrol 1 members gained initial experience in school.

Doc is Montclair representative to the elementary chapterwide council. Mike is vice president of the Montclair Junior Red Cross chapter.

The downtown office immediately dispatched first-aid books, badges, posters, and some equipment.

Next came purchase of war surplus Red Cross helmets.

Mrs. A. S. Jones, Doc's mother, made the boys a large flag. ("The red satin came from my sister's sash," confided Doc.)

All of the equipment and supplies were arranged in a small aluminum house in the backyard, formerly used as a playroom.

Sometimes the sessions are moved into the small apartment which the three Dixon members and their older brother, Jimmy, 15, share at one end of the main house, which is in a wooded area at the end of Rio Vista.

When Dr. Dixon saw that Red Cross Patrol 1 appeared to be a stable organization, he started contributing medical supplies.

STRICT ORDER OF BUSINESS

The order of business is strict. One patrol member reads aloud a lesson from the first-aid book, such as treatment for shock.

After a period for study, they put the lesson into practical demonstration, by role playing.

One member is the victim, while another finds his pulse and ascertains if his forehead, nose and chin are pale. He is stretched out and pillows placed beneath him, so that his head may be lowered.

If it is cold weather, a blanket is placed over the patient, in warmer weather, under him.

Red Cross Patrol 1 hopes to continue its work indefinitely. During the holidays members distributed safety posters to nearby stores and plan to help out where necessary and possible throughout 1959.

Effect of Recent Court Decisions

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Saturday, January 17, 1959

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Washington Daily News of Wednesday, December 17, 1958. In this editorial some very timely comments are made upon the effect of recent court decisions.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AND THEY ALL GET OFF

Abram Flaxer, once head of a Government employees' union booted out of the CIO for being pro-Communist and one of a series of witnesses who took the fifth amendment rather than deny or affirm questions as to his Communist activity, has been acquitted by the Supreme Court.

Mr. Flaxer had been convicted of contempt of a House committee for refusing to produce records under subpena. The High Court once sent his case back for a second look, but the lower courts again upheld the conviction.

And Monday the U.S. Court of Appeals ruled out fingerprints as evidence in a robbery case because the man who was tried and convicted by a jury had been arrested and fingerprinted without just cause.

In another case, the High Court, with only Justice Tom Clark dissenting, held that it is only one crime if a man shoots once and wounds two persons. Suppose he killed them both. With two dead bodies, would there be only one homicide?

We are not disposed to nit-pick these or numerous other related cases of recent months. Although, these judgments offer ample opportunity for criticism.

What is disturbing is the trend of court decrees in criminal and subversive cases. A rapist was freed, after conviction by a jury, because the court thought he had been detained too long before arraignment. Leftists in several contempt of Congress cases have been excused on the theory they didn't understand the purpose of congressional investigations.

It seems to us that in cases of this type the chief question is the question of guilt. In most of these decisions guilt has been an incidental issue. Technical questions of procedure have prevailed.

Convictions have been upset because smart and persistent lawyers have been able to pick flaws in the process, not necessarily in the evidence. Which makes us think something is amiss somewhere—and it ought to be corrected.

Defendants are entitled to every protection against rigged or unfounded prosecution. But the public is entitled to protection from the guilty, too.

Item Veto Power Is Desirable

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Saturday, January 17, 1959

Mr. THURMOND. Mr. President, for many years the Presidents of the United States have been seeking the item veto power from Congress. President Eisenhower again asked for such power in his recent message before both Houses of Congress, but, in view of more newsworthy statements by the President, this request received little mention in the newspapers.

In South Carolina, the Governor does have the authority to veto separate items in bills. During my term as Governor, I found it most helpful to veto certain items in bills which otherwise were considered sound pieces of legislation. As a result of this experience, I feel that we

should take some action to carry out President Eisenhower's recommendation for the item veto.

An outstanding summation of my sentiments is presented by the editor of the Greenville News in an editorial published in the January 15 edition of that publication. I ask unanimous consent that this editorial, entitled "Item Veto Power Is Desirable," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ITEM-VETO POWER IS MOST DESIRABLE

In his annual state of the Union message, President Eisenhoer again asked Congress to give the Chief Executive the power to veto individual and separate items in bills presented to him for signing into law or rejection acording to the constitutional procedure.

It attracted far less attention than it deserves.

Especially with respect to the matter of balancing the budget and keeping Federal spending in line with actual needs, this could easily be the most important suggestion the President made to Congress. It would work this way:

Under the present law, the President must either accept or reject in their entirety bills passed by Congress. He cannot by the exercise of the veto, correct mistakes or eliminate appropriations which even Congress itself, on second thought, may recognize or find unnecessary or undesirable.

If he finds a single item completely obnoxious or unacceptable, he must veto the whole bill. Congress can either override the veto by a two-thirds vote, or start over and draft and enact a new bill.

Unfortunately, the bills most often laden with improper appropriations and provisions are enacted too late in the sessions for this kind of action to be taken.

Granting of the so-called item-veto power would make it possible for the President to reject undesirable portions of certain bills without jeopardizing matter that both he and the majority of Congress consider sound and desirable.

Again we note that the Governor of South Carolina has the item-veto power, and every Governor holding office in our time has used it with good effect and, more often than not, to the liking of both the public and a majority of the members of the general assembly. It has happened many times that members of the general assembly actually have asked the Governor to veto certain items which, on reflection, they themselves had decided were unwise.

The item veto power in the hands of the President would be especially valuable in dealing with appropriations bills. Take the annual rivers and harbors bill, for instance. This is the traditional and often rather smelly "pork barrel bill" in which logrolling Senators and Representatives make their grabs for "projects" for their people back home at the public expense. These bills, of course, provide for necessary functions and for creating essential projects. But they also contain much matter that should be eliminated in the public interest.

With the item veto power, the President could cull out the unnecessary and foolish from the necessary and wise. In most instances it would meet with congressional approval, for members of Congress often vote for things for political reasons that they know are not proper. In many such instances they would be glad to see a veto of such items upheld.

Mr. Eisenhower has suggested before that Congr ss grant the item veto power. Mr. Truman did so before him, and so did the late Mr. Roosevelt. As a matter of fact, if the President in his day had been able to exercise the item veto, the famous split between Mr. Roosevelt and the late Senator and Vice President Alben Barkley probably could have been avoided.

During the war years, Mr. Roosevelt rejected in its entirety an appropriations bill because he could not approve certain portions of it. He sent it back with a blistering veto message. Mr. Barkley became very angry, and the process of orderly Government suffered in a time of crisis.

Congress can grant the item veto power. It should do so without delay—although it is most unlikely that a Democratic Congress will place such a tool in the hands of a Republican President.

Light in the Darkness

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. JAVITS. Mr. President, while the blind do not possess sight they do possess vision. The Sunday New York Times of January 4, 1959, carried a touching interview with a 12-year-old blind child. As the boy cannot see color, he cannot comprehend the barriers men erect on account of color. Being sightless, he appreciates the worth of seeing; however, he places one attribute even higher—understanding. I commend the article to my colleagues, and ask that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIGHT IN DARKNESS—12-YEAR-OLD BOY BLIND SINCE HIS BIRTH, WISHES MOST FOR WORLD UNDERSTANDING

(By Howard A. Rusk, M.D.)

On occasion profound lessons come from unusual sources.

The following is a verbatim transcription of a therapeutic interview with a blind child. The child was not allowed to continue in school because he was said to be out of touch with reality.

This is a record the patient did not know was being taken—the pure, stark expression of a brilliant soul struggling to find itself.

Here is what the therapist says of the patient:

"Bob is 12 years old. He has been blind since birth. He is a bright boy, eagerly interested in the wonders of the world around him—a world that he has experienced in his own way, but has never seen. He is interested in science—especially electronics. He reads evertyhing he can get under his curious fingertips. Bob has great potential. He is sensitive, intellectually gifted far beyond his years—and he desperately wants to find his place in the world."

In Bob's own words, here are some of the things he wonders about and believes in:

"There are so many things in this world that people could all reach out and touch and keep a part of them for their very own and spread it around for everyone. Not money—because money is only good for what it can do—only good if it is used to help. But people could reach out for kindness and fair play—and could spread it around for others.

"I've heard on the radio all this talk about integration in the schools. To give all children a chance to go to school together. And there seems to be such a fuss about it because some of the children are different. And I can't understand at all what this great difference is.

"They say it's their color. And what is color? I guess I am lucky that I cannot see differences in color because it seems to me that the kind of hate these people put in their minds must chase out all chance to grow in understanding."

SENSE OF DIRECTION

Another time he had this to say: "I noticed the other day when I had an earache and had cotton in one of my ears, that I was always veering to one side and bumping into the wall. I had not realized before how much I depend on my hearing—the sound of my step, the bounceback of the sound, to keep me in time with my sense of direction.

"Then, another time, I was walking down the hall and I passed a door and inside that other room was a lot of noise. So much noise that I lost all my cues—and I lost completely my sense of direction.

"It was an awful bottomless feeling. Afraid I'd bump into something. You never know whether you are going toward good things or toward trouble. Because you never know right off if it is something you like and need and want. Or something that is just in the way.

"That is why I would not kick it or blame it, or shove it aside. I would not make up my mind ahead of time, because if I did I could be so very wrong. I could destroy something that might be one of the most important and valuable aids to me. Destroy it in ignorance. Without giving either it or me a chance. That's like prejudice."

Another time he talked about the problems of keeping a sense of direction:

"I walked down the path toward the woods by the school. And all of a sudden a dog and another boy rushed by. They threw a branch of a tree in front of me. I was startled and I jumped back and fell into some bushes. When I untangled myself and got up on my feet I couldn't find the path. I couldn't tell which direction was which. I couldn't hear any telltale sounds as a guide.

"I called. Nobody answered. I was surrounded by silence and confusion. Then after a lot of trying and a lot of falls and scratches and bumps into the bushes, I heard the chimes on the old church, that is north of the school. I knew then where I was. And I got back all right. But—that awful feeling of not knowing where I was, which way to turn, which way to go. It was a terrible feeling.

REMEMBERS CAMPANELLA

"And suddenly I thought of Campy (Roy Campanella, former Brooklyn Dodger catcher). All of a sudden he finds himself paralyzed. All his life suddenly has to change. He can't turn around any more. He can't even walk.

"I asked myself would I rather be blind like I am or would I rather be flat on my back and paralyzed like Campy. I thought about it for a long, long time. I thought of how I felt when I fell in the bushes and couldn't tell where I was. I thought of the panicky fear when I didn't know which way to turn. I was asking myself which was worse. I always said there wasn't anything worse than being blind. Then I thought of Campy again.

"He had been a great ballplayer, one of the greatest. Now all of a sudden that was over. What was he thinking about now? Probably wondering what he would do now. Probably wondering which way he would turn. And I decided the worst thing that

can happen to a person isn't being blind or being paralyzed. The worst thing is to lose all sense of direction in your life. And feel that you haven't got anyplace to go."

Bob talked about his blindness one day. "I have often wondered what it must be like to see. I have never seen light. But if I have darkness around me all the time, I must learn to know that darkness. I think I do know it very well. Sometimes as a friend. Sometimes as an enemy.

"But then it isn't the darkness that I should blame. Because darkness can be either friend or enemy. If wishes could come true, I'd wish I could see. But if I only had one wish, I wouldn't waste it on wishing I could see. I'd wish instead that everybody could understand one another and how a person feels inside."

While endless debates go on in high places and political jockeying for position is the order of the day, here is the simple solution to the basic problem this confused strife-worn world faces in this new year.

Resolution Adopted by Council of the Polish Societies and Clubs in the State of Delaware

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Council of the Polish Societies and Clubs in the State of Delaware at a meeting on Pulaski Day, October 12, 1958.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

We, Americans of Polish descent, are assembled at Pulaski Park, this 12th day of October A.D. 1958, under the auspices of the Council of the Polish Societies and Clubs in the State of Delaware, and of the Delaware division of the Polish American Congress, to commemorate on this 179th anniversary the memory of Brig. Gen. Casimir Pulaski, who gave his valor, courage, and his life to the American cause for liberty and independence.

Gen. Casimir Pulaski did not sacrifice his life in vain. Our founders had given a new order to the world based upon the principle that all rights came from God and were vested in the individual; that governments among men derived just powers from the consent of the governed, and that the importance of each person was over and above the importance of the state.

Whereas the great tragedy of today is that Poland and other nations enslaved behind the Iron Curtain in Central Eastern Europe were traditionally the most persistent enemies of communism and the most faithful friends of the United States; and

Whereas the record of our betrayal at Yalta, Teheran, and Geneva for hiding the facts on the Katyn Forest massacre, for permitting ourselves to be part of the betrayal of Korea, for neglecting our own troops and citizens in the dark prisons of Red China, Soviet Russia, and their captive nations, for our many sinful compromises with godless Russia, the darkest pages in our Nation's history is written; and

Whereas more than 100 years ago, the British historian, Lord Macauley, predicted that the United States would collapse because of weaknesses and evils allowed to develop within it. His dire propheay: "Your republic will be as fearfully plundered and laid to waste by barbarians in the 20th century as the Roman Empire was in the 5th: with this difference, that the enemies that ravaged the Roman Empire came from without, and that your enemies will have been engendered within your own country by your own institutions"; and

Whereas the apathy, indifference, and inner decoy, fostered by self-interest, a passion for soft living and neglect of the individual responsibility has opened the way to well-financed selfish minorities, pressure groups, and unscrupulous political machines dominating our Government's systems. These groups are responsible for the present situation of confusion, tension, discontent, and discord throughout our country, endangering our unity, creating differences among the American people, who are being exploited by the advocates of socialism, internationalism, and world government, and by the Communists and their followers, to lose faith in our Constitution, Bill of Rights, and in the essential wisdom of freemen; and

Whereas we who are assembled this day are greatly concerned with:

1. Recent decisions by the U.S. Supreme Court. These decisions have more than once made it harder and harder to cope with the underground activities of the Communist Party in the United States. Avowed Communists have been freed, the powers of Congress to investigate communism have been limited, the Federal Bureau of Investigation has been forced to abandon prosecution of many cases, the law passed to deal with the communistic conspiracy has been rendered harmless. We have a right to ask whether these interpretations and decisions are in accord with the traditional American constitutional principle, that our Government is one of law and not of men.

2. Reverence for truth is giving way to compromise and expediency, even among those who should be guardians of the truth.

3. Our Government's concern is directed to communism abroad. It is time for our Government to concern itself about the communism here at home.

4. The American people's minds are being molded to believe that patriotism and national independence are bad words that should be systematically discredited.

5. Our Nation is presently confronted by the deadliest, most powerful, and ruthless enemy in its history, an enemy whom we have purposely made strong at a time when the leadership of our Nation was at its weakest.

6. Our Nation has lost its way because we have failed to fulfill our sacred duties as custodians of a great Christian heritage. We have tolerated crime and wrong doing. We have ignored numerous acts of treason. We have let ourselves rot and fall apart on the basic eternal truths.

Therefore, we, Americans of Polish descent assembled this day to honor and to pay respect to the memory of Gen. Casimir Pulaski, on this 179th anniversary of his death, pledge to become more vigilant in guarding our priceless heritage left to us by the first Poles that came to this country 350 years ago, by General Pulaski, Kosciuszko. Krzyzanowski and by thousands of others of our ancestry, to uphold the Government under the Constitution of the United States, the Bill of Rights, and our American way of life: Therefore be it further

Resolved, That to remain silent in the face of present dangers is to enhance communism and to lose our liberty. If we are to survive as a free people, we must reaffirm our loyalty to American traditions, institutions, fundamental principles, and upon a great profession of faith in God. We must reject the ideology of collectivism, the welfare state, and all forms of world government. Our sacred responsibility is to fight against communism in our country. Therein lies our salvation in any and every emergency: Therefore be it further

Resolved, That copies of the resolution be sent to the President of the United States, Secretary of State, Delaware's Representatives in the United States Congress, Governor of the State of Delaware, president of the Wilmington City Council.

CASIMIR CHETKOWSKI,
Chairman.

Attest:

VINCENT J. KOWALEWSKI,
Secretary.

Appointment of Roger W. Jones as Chairman of the Civil Service Commission

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. THURMOND. Mr. President, I should like to go on record as saying that the appointment of Roger W. Jones as the new Chairman of the Civil Service Commission is a tremendous step in the direction of a strengthened Federal service and Government.

I have had the pleasure of working with Mr. Jones on occasions in the past and can say that his ability to cope with problems is exceptional.

I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the January 16 edition of the Washington Evening Star, entitled "Appointment of Jones To Head CSC Hailed."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

APPOINTMENT OF JONES TO HEAD CSC HAILED

(By Joseph Young)

Federal employee leaders and key Members of Congress alike are hailing the appointment of Careerman Roger W. Jones as the new Chairman of the Civil Service Commission.

They feel it will bring new strength and prestige of the Commission, the entire Federal service and Government employees generally.

The formal nomination of Mr. Jones, whose selection was first disclosed in this column, is expected to be sent to the Senate early next week by President Eisenhower. Mr. Jones' confirmation is regarded as a certainty. He presently is Deputy Budget Director.

Mr. Jones, 50, will succeed Harris Ellsworth, who leaves March 1 to return to his business interests in Oregon. Mr. Ellsworth did a god job as Chairman under difficult circumstances.

However, Mr. Jones' appointment is expected to bring a new era to the CSC and Government personnel administration generally. As a long-time Federal career official who has devoted considerable time to personnel matters, Mr. Jones has definite ideas

for revising Government personnel policies and operations.

Perhaps the best indications of Mr. Jones' ability is that he has served with distinction in important jobs under three Presidents—Roosevelt, Truman and Eisenhower—and has won the coveted National Civil Service League award as one of the top civil service careerists in Government and the President's award last year for distinguished civilian service.

A registered Republican, Mr. Jones, of course, as a career employee, has never taken an active part in politics.

The Revolutionary Farm Upsurge

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. JAVITS. Mr. President, it can be said that "America's business is business"; it can also be added that America's business is also agriculture. The past year has been one of record crop production while there has been a diminution of farm acreage thus making for an unprecedented high yield per acre. In addition, per capita farm income is at an alltime high of $1,020. The article from the January 12 New York Times surveys the 20th century revolution in farming, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARMING UPSURGE IS REVOLUTIONARY—11 PERCENT RISE IN OUTPUT LAID TO MORE EFFICIENCY AND RAIN IN DRY AREAS

(By William M. Blair)

WASHINGTON.—"Crop Production, 1958 Annual Summary, Acreage, Yield, Production by States by American Farmers. Compiled by the Department of Agriculture, Agricultural Marketing Services, Crop Reporting Board. Free."

This 107-page document is filled with statistics. Except for six pages of summary it consists of long, detailed tables. The index starts with apples and ends with wheat. It covers every State. It is not impressively printed, being mimeographed without an illustration.

Yet it tells one of the great stories of this or any age. As the Crop Board said, in what seems to be an understatement, farm production registered a surprising surge in a single year, a gain of 11 percent above the record highs of 1948 and 1957.

THREE HUNDRED AND TWENTY-ONE MILLION ACRES HARVESTED

The index of yield an acre for 59 crops reported in the annual summary reached 143.1 on the basis of 1947–49 as 100. This was surprisingly higher than the record of 127 set in 1957, the Department said.

It was the fifth successive year in which the index had moved to a new high. The 1958 index also compared with 124 in 1956, 118.6 in 1955, and 109.2 in 1954. In 1929 the index was 84.

This surge came on the smallest acreage planted since 1918, an unusually high percentage of which was harvested. The total area harvested, 321 million acres, was slightly larger than that of 1957 and 1956 and, except for those 2 years, was the smallest since 1936.

The last year brought other important developments. The cattle cycle was cut to 2 years. Traditionally, it had been 3 years. The rebuilding of cattle herds began with the end of the drought, which gripped western cattle States for more than 5 years. Grazing land came back strong under some of the best growing conditions in years.

Historically, it has taken 3 years to reverse the downward trend in cattle, after a drought or other disaster reduces breeding stock. But this time pastures and grazing lands came back fast and the decline was reversed in 2 years. A part of this was attributed to increased efficiency in handling, breeding, and growing of livestock.

Agriculture demonstrated in 1958 that it was in one of the great revolutions of our time, as many politicians told farmers during the congressional campaign.

To some observers, 1958 forecast a new breed of farmers, as yields increased under the impetus of better seeds and expanding knowledge of cultivation methods. The family farm is not likely to disappear, but the families on farms will be experts in production and management.

In 1958, farm profits climbed about 20 percent, a healthy gain after the drop in 1957, but the prospect for 1959 is a slide of 5 to 10 percent as new surpluses mount. The indicated net income for 1958 is about $13 billion for the farm community, compared with $10,800 million in 1957. Cash receipts from marketing last year were $33 billion, a gain of about 12 percent.

For the first time, the average per capita income appeared to be above $1,000, probably about $1,020. Economists reported this was an important gain in the sense that it came from marketings, rather than from a decrease in the farm population, which rose slightly last year after drastic losses in the last decade.

However, the cost-price squeeze on farmers continued, and they stepped up their use of credit, as they should in 1959. This resulted from higher costs of production and increased investments in machinery.

Large yields were reported by the crop board. Corn, the major raw material for meat, milk and other dairy products, climbed even more last year than it did in 1957, when yields soared. The national corn average rose to about 52 bushels an acre, more than 4½ bushels above 1957's adjusted figure of about 47 bushels.

Wheat shot up to 27.3 bushels an acre, 5.6 bushels more than 1957 and nearly 10 bushels more to the acre than in the decade from 1947 to 1956.

The country's most serious surplus problem is in wheat. With this year's harvest, the Nation has sufficient wheat on hand to fill all domestic and export needs for the next 2 years without any further production.

The administration and Secretary of Agriculture Ezra Taft Benson attributed the glut to outmoded, unrealistic Federal price support and control programs in which the Government has $2,240,389,619 invested. And this year's bumper output will add to the problem.

Mr. Benson's view has gained wide support but the annual crop summary also tells the story of a farm-productivity revolution, resulting from better seeds, better ways of making the seeds produce and better machinery.

A measure of the surplus problem may be seen in the percentage of production to which Federal price supports were extended in the last fiscal year through the Commodity Credit Corporation, the price support agency.

For example, price supports in the fiscal year ended last June 30, were extended to 52 percent of grain sorghum production; 32 percent of the cotton output; 27 percent of the wheat production, 33 percent of rye grown, 19 percent of soybeans, and 10 percent of corn.

The administration hopes to hold the line on farm spending, which last year pushed the agriculture budget to a record total of $6,400 million, but budget revisions in January are expected to push it higher.

Dick Meskill on Satellites and Science

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. YARBOROUGH. Mr. President, these days of satellites and science can sometimes seem to offer a confusing picture of the future. To a person who confines his view to only one facet, the outlook can be frightening.

However, I feel many people fail to consider the other side of the picture. The scientific advances of our day have many more peaceful uses than otherwise.

I request unanimous consent to have printed in the Appendix of the RECORD an excellent article by Dick Meskill which appeared in the January 8, 1959, edition of the Alamo Messenger, the oldest and largest Catholic weekly in the Southwest, under the heading, "In the Shadow of San Fernando."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE SHADOW OF SAN FERNANDO

(By Dick Meskill)

When lunik hit the headlines, many people gnashed their teeth that Russia had again outstripped the United States in what had once been a near monopoly on technological advance. A few days before, we had heartily pounded ourselves on the back because of Atlas soaring around the heavens, and rightly so.

Even though the 350-pound payload in the Atlas was considerably less than the 1½-ton payload in Sputnik III, the fact that the entire Atlas missile, weighing nearly 8,000 pounds was guided into orbit, demonstrated our undoubted ability eventually to duplicate the astonishing feats of Russian technology.

Lunik, without the insertion of the "at", is a phenomenal feat, and we certainly would not wish to underestimate its importance. It is almost incomprehensible that man, with all his genius could place an artificial planet into the solar system. A Georgetown University physicist estimates that lunik will go on spinning in its planetary orbit for more than 90 million years. In doing so, there is a possibility it will outlive the species that fathered it.

But not one of these satellites, not one of these new planets goes into orbit without overtones of doom for the species siring it. The launching pads from which they flew are the same launching pads from which intercontinental ballistics missiles fly. The rockets which launched sputnik and lunik are fully capable of firing hydrogen warheads into any part of the earth. Atlas, more familiarly known as Big Annie, in its very inception, is an intercontinental ballistics missile, fully developed to carry a hydrogen payload to distances ranging up to 8,500 miles. Big Annie was guided into her orbit merely to demonstrate her effectiveness as a vehicle for transporting a lethal payload.

Cowed trepidation must certainly be the initial reaction to the success of Big Annie and Lunik. That innate conservatism of man—a longing for the good old days—flinches from the grim reality of scientific achievement, which may eventually mean the annihilation of the species. But breaking through the fear, there may be a vague ray of possible hope. If nations channel their major efforts into scientific achievement—the exploration of space—perhaps they will step away from the development of earth-shattering devices designed for almost unfathomable destruction. Perhaps the fundamental purpose for which the missiles were perfected, can be diverted into this exploration of outer space.

The earth is grievously wearied and sick. We read, and hear, and see, with a sickening sensation of the communes in Red China, which reduces man to the status of inhabitants of the animal farm. We remember that this same species, man, sent a planet around the sun. We read and authenticate murder and torture, rape and hatred against men by tyrants in almost half of the earth, and we hear occasionally a voice crying in the wilderness for peace.

It may be that we have entered a period of world brinkmanship wherein our whole mortal fate may hinge on the pressing of a single button somewhere. Certainly this developmental age of man's scientific genius leaves most of us gasping and grasping to understand what is happening to us, why, and to what end. To emphasize the obvious: Almost nobody understands fully what is going on in the great sphere of man's genius. Equally obvious is the fact that the attainment of such vast successes as those achieved by Russia involves tremendous efficiency in planning. But what horrible price this efficiency?

And that is the point I am driving at. There is a distinct tendency in highly efficient nations to regiment people with free wills into automatons, whose sole purpose is the welfare of the state. A "free" society is hard-pressed when it is forced to compete with this highly efficient but highly immoral abuse of the genius of man. There will be, therefore—or there may already be—a trend on the part of free nations to regiment themselves toward the same end. This was the sickening picture produced in a little book I read several years ago called "Mr. Blue." This may have been the vision of Orwell in his novel "1984."

The communes in China, the "legal" deprivation of rights in Russia, the conformism in our own United States, the apathy of many people including some of our own, the haggard stopgap measures on which we must exert pressure interminably across the world, are all manifestations of the growing trend to regimentation, not only of the body of man, but of his soul, the source of his genius.

It is a sobering thought that most of the people born these days will see 2000 A.D., unless they are annihilated meanwhile by fissionable incineration. To know that in 2000 A.D. there may well be weekend trips to the moon or that tourist bureaus will feature a 2-week tour on a ferry-go-round of the sun is not fantastic speculation. It is distinctly, imminently probable. But here, today, I am wondering whether a great majority of the people in the world are not searching the far reaches of their own individual mentality for some answers about where it will all lead.

I don't know, but I do know that there is a way through the morass. We can be certain of two things: That we are here and that we are designed for eventual union with God. Therefore, using the sacraments as signposts, we should grope our way, hand over hand, toward that one end of which we are absolutely certain, the immensity of God.

Bell Gives Pro Football the Leader Baseball Lacks

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, I have the honor to represent in Congress the city of Green Bay, Wis., the home of the Green Bay Packers, one of the pioneer National Football League teams.

Professional football has made tremendous strides in the last decade, becoming one of our truly national sports. We in Green Bay are proud of our representation in this splendid league. Much credit for the success of the league goes to its commissioner, Bert Bell, who has provided the leadership which has given professional football such a national reputation for clean and exciting entertainment.

As part of my remarks, I include a news story which appeared recently in the Washington Daily News paying tribute to the league, its teams and Commissioner Bell:

BELL GIVES PRO FOOTBALL THE LEADER BASEBALL LACKS

(By Harry Grayson)

Next to the playoff itself, there is one thing we will remember about the 1958 football season. It is the picture of Larry MacPhail sitting in a Yankee Stadium box seat at the Colts-Giants championship game and comparing the situation to baseball.

"I never believed that pro football would catch on like this," said MacPhail, bundled in a great coat, a floppy hat covering his head. One of the great showmen of our time was looking at the third successive sell-out crowd enthusiastically responding to organized college-type cheerleaders. "I couldn't conceive the pros taking the play away from the colleges. They play so late I thought the weather would be against anything like this. But the pro owners who were around at the start deserve everything they get. They stuck with it through some lean days.

"Bert Bell, from out of its ranks, put the National Football League across. A real commissioner with unlimited authority and respect, he ignored every stupid restriction crackpots try to place on professional sports. He did what was best for the league and in his own way. He stuck to unlimited substitution, opening the door to specialists and permitting no letdown in the tempo of play. He put the goal posts back on the goal line, setting up the spectacular field goal.

"He put in the sudden-death extra period to assure the finality of the championship game."

The National Football League is paid-for television, but television where Bell wants it to be. No TV in a city where a game is being played.

Could baseball do the same?

"Of course it could," said MacPhail. "But they're so busy being silly in baseball that they don't have time to think like Bell, who acts while baseball officials talk."

Ford Frick, the baseball commissioner, contends the major leagues can do nothing about curbing the televising of their games into minor league territory because that might be in violation of antitrust laws. Bell obviously refused to listen to legal advice of that nature; ordered the ban on TV where it would hurt.

"I told Dan Topping that if the National League was ridiculous enough to leave New York the American League should put another club in Yankee Stadium," added MacPhail. "That practically would turn the National League into a western league, which is about all it amounts to now anyway."

MacPhail, currently breeding cattle and running horses, has never had a flop, except when he was one of a group which tried to kidnap the Kaiser, and then it was close. He revived the Cincinnati and Brooklyn franchises, refurbished Yankee Stadium. He introduced night baseball to the majors, campaigned against it being overdone.

So when MacPhail puts the job turned in by Bert Bell in pro football over anything baseball has done in more recent years, it is worth reporting.

Bell perhaps is the most capable administrator in sports today.

Consider the champion Colts. Five years ago, when the Dallas Texans were moved to Baltimore, Bell went to Carroll Rosenbloom, the textile, plastics and electronics magnate, and asked him to buy the defunct franchise. Bell had coached Rosenbloom as a halfback at Pennsylvania.

"He did not ask me to buy the franchise," recalls Rosenbloom. "He beat me over the head until I came up with the money."

Bell practically shoved Don Kellett into the Colts' general managership.

Rosenbloom gave the franchise financial security. Kellett got the coach, Weeb Ewbank, and the players, Johnny Unitas and Alan Ameche, for two. Baltimore got a winner and now is one of the superior professional football properties.

As Larry MacPhail stresses, baseball could use a little leadership of this type.

The Senate Filibuster

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the December 27, 1958, issue of the Saturday Evening Post entitled "Someday Freedom May Depend on a Senate Filibuster."

In my opinion this editorial presents a very keen interpretation of the situation regarding the proposed change in rule XXII, and I commend it to the reading of my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOMEDAY FREEDOM MAY DEPEND ON A SENATE FILIBUSTER

(By Draper Phillips)

The Democratic liberals are swooping down upon the Senate's rule XXII, which protects free debate in the Senate. If they are successful, they will have knocked down a bulwark of the States against complete national control of local affairs. They will have destroyed a fortress which has prevented many efforts of the majority to tyrannize over the minority.

Those who would limit debate to the wishes of the Senate's majority profess to speak in the sacred name of civil rights. Actually, the

filibuster has been used scores of times by minorities of all parties and from every section of the country to defeat bills which were repugnant to localities, or were regarded as in violation of a State's constitutional rights. Even majorities have used free debate to prevent minorities from defeating legislation. A majority filibuster in 1917 was at least partly responsible for the establishment of the cloture rule under which two-thirds of the Senators may limit debate.

Senators Elihu Root and Henry Cabot Lodge looked upon the filibuster as a defense weapon against repressive majorities. Their threatened use of it was sufficient to force reconsideration of an appropriation for new post-office construction. Senator George F. Hoar, of Massachusetts, recalled that the prolonged debate against the force bill in 1890, which would have authorized Federal supervision of elections, actually altered the opinion of the majority which had proposed the bill. Progressive Senator La Follette, who held the alltime record for an individual filibuster until Senator WAYNE MORSE broke it in a filibuster which he refused to describe as a filibuster, offered to fight any cloture that would limit free and unlimited debate. Walter Lippmann, in opposing cloture in 1949, said the real issue is whether any majority, even of two-thirds, shall assume power to override the opposition of a large minority of the States.

We need have no real fear that vital national legislation will be defeated by the filibuster. If the whole people want a law badly enough, it will be passed in spite of delaying tactics. Thus, when Senator Herbert Lehman led a small group in 1952 to filibuster against the important national-origins quota system for admission of immigrants, the filibusterers were quickly routed. The vast majority in early every section of the country wanted the law and they got it.

The "liberals," in their zeal to secure the vote of, or to protect, the Negro in his civil rights, ignore history. Our Federal system was founded on the principle that the Senate represents the States, not a majority of the people of the Nation. Conditions vary among the States and among groups of States. The advantage of a federal system over a national system of government is that we can accommodate ourselves to these variations. That was the reason for allowing equal representation in the Senate and unlimited debate.

We ought to count 10 before changing the Senate rules to limit debate substantially. Such a change would rival F.D.R.'s Court-packing bill as a challenge to established concepts of government. It required hard work by leaders in both parties and "unlimited debate" to dispel that threat. It is to be hoped that there are enough Senators left with sufficient courage to resist this politically tempting assault on an important bulwark of the Federal structure.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Imagination in Government Urged

EXTENSION OF REMARKS
OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks, I include the inaugural address of Oklahoma's new Governor, the Honorable J. Howard Edmondson.

The text of the address is as follows:

IMAGINATION IN GOVERNMENT URGED

We meet here today, on this 15th day of January in 1959, in a time of great trouble and great challenge for free men and free women all over the world.

I would like to talk to you today, with a gravity and seriousness straight from the heart, not only as friends and not only as Oklahomans, but also as American citizens—all of us with a deep and most important obligation at this hour in history to the greatest republic in all the world—the United States of America.

During the past year, we have enjoyed once again in this State of ours a great privilege of American citizenship—the privilege of a free election, by secret ballot, after a fair and free campaign to illuminate the issues.

The campaign of 1958, like most Oklahoma campaigns, was hard fought and hotly contested, and most of our citizens became keenly interested in some candidates and took an active role in some part of the campaign.

We enjoy our politics in Oklahoma, and we are proud of the privilege of taking sides and fighting for the side in which we believe.

And we find it difficult to understand, and completely impossible to appreciate, that more than one-half of the men and women who live today on the face of the earth do not enjoy this Oklahoma privilege—the right to take sides and to campaign for one candidate against another.

More than one-half of the world's people today live under forms of government which are not democratic, in totalitarian countries which teach little children that men and women alike exist and live to serve the state, in countries where human life is cheap and human liberty is an unknown commodity.

In Communist China alone a population more than three times as large as our own has been enlisted under the banner of this kind of government.

In Soviet Russia, and in the satellite countries under Russian domination, a population more than double the American total is today enslaved by the same totalitarian system.

The existence of these other systems of government, and of these other nations, is of concern to American citizens for one reason, above all others:

We are aware of our open and declared objective to win the entire world for their way of life and government—and we know that they pursue this objective, constantly and relentlessly, by subversion, conspiracy, and revolution, in every corner of the free world.

A BIG CHALLENGE

We know that they prepare constantly for aggression, that more than 40 percent of their national energy and production go into the machines and the weapons and the manpower for war—and we know that they not only possess the terrible secrets of destruction, but also have made alarming progress in the field of long-range missiles.

We know these things, and we live each day in the shadow of this knowledge, and from this knowledge there must come to each of us a new and sharp awareness of our responsibility as Oklahomans and Americans today.

The challenge to American ideals and principles and institutions—and to the freedom and the liberty which all Oklahomans treasure—is far more serious than it was in the dark days of Pearl Harbor and the Battle of the Atlantic.

In 1959, the challenge exists not only along lines of military battle, but also in the laboratories of science, in the schools and universities, in the wheat fields and in the factories, and even in outer space—thousands of miles beyond the surface of the earth.

The challenge exists here today, in Oklahoma City and across this great and beloved State of ours, as we meet for this inauguration—and as the legislature meets in the halls of our capitol.

It is a challenge demanding the very best of all of us, not only those of us in government, but also those of us in the classroom and the pulpit, in the offices and the factories and the farms of Oklahoma—and most of all, in the homes.

In meeting that challenge, we can no longer afford to be complacent about waste, or inefficiency, or corruption, in the vital organs of our society—and this is equally true in our essential industry, in our educational system, and in our government.

The people of Oklahoma are aware of this fact.

Deep within our people, not only in our State but all over the Nation, there is an awareness today of the challenge from behind the Iron Curtain—and there is a growing impatience with political groups—and politicians—who do not move and act vigorously to eliminate waste and inefficiency, and corruption, in the machinery of government.

I firmly believe it was the awareness on the part of our people, and the desire for new leadership which went along with it, which accounted more than anything else for the record-breaking majorities of last summer and last fall.

With those majorities, and the mandate for action which they represent, the people of Oklahoma have handed a tremendous and a grave responsibility to this administration.

RECALLS WILSON

In the light of that responsibility, I can appreciate fully the feeling expressed by Woodrow Wilson 48 years ago, when the people of New Jersey inaugurated him as Governor.

At that time, Governor Wilson told the people of his State:

"No one dare be sure that he is qualified to play the part expected of him by the people—in the execution of this high trust."

And Wilson went on to say:

"It is best for him, as he sets out, to look away from himself and to concentrate his thought upon the people whom he serves and the sacred interests which are entrusted to his care."

What about these two things which Woodrow Wilson said should be of primary concern to a governor—the people whom he serves, and the sacred interests entrusted to his care?

How do they stand in Oklahoma, in this year of 1959?

In their pioneering brand of democracy, in their generosity and their simple honesty, in their courage and determination in the face of adversity, in their capacity to learn and their willingness to work hard and to build for the future, we can all be proud of the people of Oklahoma.

In every kind of competition between the young people of the Nation, our young people reflect credit upon the State.

In every time of war and crisis, our fighting men have served with bravery and with honor and distinction.

We are proud of our good neighbors, and of the neighborly spirit that is part of the Oklahoma tradition.

And yet, there is need to face squarely today the problems that exist among our people.

MANY NEED JOBS

Many Oklahomans today are in need of jobs or vocational training, or of more adequate incomes to support themselves and their families.

Many Oklahomans today are in need of better homes in which to bring up their children.

Many Oklahomans today are receiving medical care, or treatment for disease or mental illness, in institutions that urgently need improvement and enlargement of staff.

Many Oklahomans have lost confidence in some branch of our Government, or in the process of justice, because of our failure to keep pace with the needs and requirements of a modern Oklahoma.

Many Oklahomans, who have great skill and ability in the field of education, are leaving our State or leaving their profession because other fields or other States offer better opportunity, and many Oklahoma students in our schools and colleges are being short-changed in the process.

These are a few of the many problems besetting the people of Oklahoma today, and for which we hope to find, in cooperation with the Legislature and all people within the State, some substantial betterment during the next 4 years.

During the campaign of last summer, I was impressed by the appeal of one candidate for governor, who advocated a program of "government with a heart" to meet the problems of the people.

We do need "government with a heart" today, and I hope and pray that the government of Oklahoma will always be that kind of an instrument to relieve suffering wherever possible, to protect the children and assist all the victims of poverty and need. I hope our policy will not only be one of assistance, but also one of encouragement, rehabilitation, and oportunity.

IMAGINATION NEEDED

In short, I believe we not only need "government with a heart," but also "government with imagination, government with foresight, and government with commonsense."

And what about the sacred interests of Oklahoma?

In addition to the people, we need also give attention to the conservation and de-

velopment of our natural resources, to the modernization of transportation facilities, to the encouragement of new industry and new construction.

We shall do all in our power to create a climate of government that is attractive to enterprise and initiative among our citizens—and we hope the foundation for that climate will begin with respect for and confidence in our State government.

In the office of governor during the next 4 years, every possible effort will be made to work constructively with other elected State officials, and with the officers and people of our 77 counties and all communities—without special favor to any region or any person.

Every effort will be made to carry out both the letter and the spirit of the program which was presented to the people of Oklahoma in the campaign for Governor last summer and last fall, and I have been assured by the duly elected leaders of the legislature, both in the senate and the house of representatives, that they are prepared to fight for the cardinal features of that program.

They have also assured me that every effort will be made in the legislature to pave the way for a special election, within the next 90 days, on the issue of repeal of prohibition. For both of these assurances, I am deeply grateful.

In line with other campaign commitments in this same field, the new appointed commissioner of public safety has already been instructed to begin a statewide effort at uniform and effective enforcement of the State's prohibition laws, and the legislature already has before it recommendations for new laws to close the loopholes in the present enforcement statutes.

We are going to do our very best to do the job which you endorsed, with a majority of more than 200,000 last July, and which you endorsed once again, with a majority of almost 300,000, on November 1. I hope and I pray that the job can be done. It needs to be done, if Oklahoma is to resume the splendid growth and expansion with which we led the Nation in the early part of this century. It needs to be done, if this great State of ours is ever to be as strong and dynamic in its development, as our people richly deserve, and our Nation requires it to be.

NEW INDUSTRY URGENT

Let me tell you about the dream which is in my heart for Oklahoma, as I take this sacred oath of office today.

It is my prayer and my hope that we can turn the tide of economic and population trends in Oklahoma during the next 4 years.

It is my prayer and my hope that we can put into operation a program that will attract new industry into Oklahoma and inspire industrial growth as never before—providing at least 75,000 new industrial jobs for our people by 1963.

It is my prayer and my hope that we can establish educational and teaching standards which are a model for all States in this part of our country—making Oklahoma just as famous for its great schools, as institutions of learning, as we are justly famous for football, basketball, wrestling and other school activities.

It is my prayer and my hope that by these means, and others, we can once again see a population that is growing by leaps and bounds, as it did from 1900 to 1920—and I believe it is entirely possible, with a dynamic program of progress, to see the population of our State increase by at least a quarter of a million in the next 4 years.

Seventy-five thousand new industrial jobs.

A school system second to none in the Southwest.

And a population increase—by reason of new jobs and new hope—of better than 250,000.

These are 3 dreams, my fellow-Oklahomans, of a young fellow citizen you honored with election to the governorship less than 3 months ago.

They are dreams which I hope will become your dreams—and dreams that can only come true if you determine, with me, to make them come true.

When our Nation was in the middle of its first great fight for freedom and independence, more than 180 years ago, a fiery young writer and soldier named Tom Paine made an appeal to his fellow Americans for their help in a great cause.

Today, in 1959, I use the words of Tom Paine to ask for your help in making this dream of a greater Oklahoma come true. As Tom Paine said, 180 years ago: "I turn with the warm ardor of a friend to those who have nobly stood, and are yet determined to stand the matter out. I call not upon a few, but upon all, not on this one, or that one, but on everyone—lay your shoulders to the wheel. Better have too much force than too little when so great an object is at stake."

Democracy in the Space Age

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. BECKER. Mr. Speaker, I should like to have the privilege of inserting in the CONGRESSIONAL RECORD three essays by students of the Lynbrook High School in my district on the subject of "Democracy in the Spage Age." These make, I believe, very worthwhile reading. The first essay, by Donna Rosen, appears hereunder:

DEMOCRACY IN THE SPACE AGE

(By Donna Rosen)

"That government of the people, by the people, and for the people shall not perish from the earth." It is doubtful that democracy has ever been defined more completely or more meaningfully in so few words.

Delving into our country's colorful past, we find that government was as much a part of the average man's daily life as was attending church on Sunday. These men had fought to keep our Nation alive and they felt it their duty to support the legislature, that America's civilization might gain a strong foundation. They had placed their faith in our Nation's leaders, yet they knew that no one man could lead an ever-expanding country singlehandedly. Therefore, each man, in his way, strove to help our leaders guide a weak nation to glory and prosperity. It was, too, a sense of loyalty which bound these men to their country. They were determined that their land, the land for which thousands before them had given their lives, might gain security. Only through proper legislation might all these things come about.

Understand this, we find that solely through faith, pride, loyalty, and fine government, may we really conceive the true meaning of democracy.

Many will claim that politics had a more direct effect on the lives of our ancestors, and, therefore, government was of vital interest to them. These same people will say that it is no longer necessary for each citizen to take an intense interest in his government, for we are not, as a nation, undergoing crises of the same nature as those which affected our country years ago. Yet, how can the affairs of our country fail to arouse the interest of her citizens? Our Government and leaders are deriving their "just powers from the consent of the governed." If we fail to give them our support we lose the entire meaning of the word "democracy" and disregard the principle on which our Government is based.

In this, the space age, many of us have a tendency to let the importance of democracy fade into the background when compared with the issue of conquering space. Yet, can missiles and rockets even come close in comparison with ideals which have been the roots of civilization for hundreds of years?

However, it is not too late for the flame of patriotism to be rekindled in the hearts of America's citizens. Once again faith, pride, and loyalty for one's country can become synonymous with democracy. This is a task which we must undertake armed with sincerity, concern, and dedication. Let us once again vow as our forefathers did, "We mutually pledge to each other our lives, our fortunes, and our sacred honor."

Democracy in the Space Age

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. BECKER. Mr. Speaker, the second in this series of three essays entitled "Democracy in the Space Age" by Sandra Brainum, a student of the Lynbrook High School, is indicative of thoughtful concern with our world of today. I commend it to the notice of my colleagues in the House:

DEMOCRACY IN THE SPACE AGE

(By Sandra Brainum)

As time goes on, and science advances, it distributes its uses both to those who destroy and those who preserve. The path of the unknown world of science has no end, yet in a democracy it is the path that public opinion wishes to pursue, while in a dictatorship it is one that is dictated.

Dictatorships, and the struggle of men for freedom, existed long before science became widely applied. The modern use of science for warfare has only given them concrete forms.

Communists wish to conquer the world or die in the final struggle, and that is how it will be. A world of slaves under a single or a small group of dictators will never live. For democracy is not only a form of government, it is a want for freedom born into every man's soul. If we lose our liberties it will be because we abandoned them. A world split in two cannot live either.

What the people believe in determines the type of government they will have. Upon the government depends their progress in science. Also upon the government depends their progress in securing justice and opportunity. Upon this depends the outcome of whether life is worth living.

Another great war would be terrible. It would destroy and kill millions of people. But, it could not destroy democracy. Organizations of free men tend to become refined under stress. Free men, and democracies meet their greatest hazards in times of peace and good will.

"The best answer to communism is a living, vibrant, fearless democracy—economic, social, and political. All we need to do is to stand up and perform according to our professed ideals. Then those ideals will be safe."

A democracy which is truly responsive to the will of the people, in which freedom and individuality are preserved, shall be triumphant in the long run, for it is not only the best system, the most worthy of support, it is the strongest system in a very harsh contest.

Time will change the world down through the ages. New discoveries of science will come and go and soon lose their importance. Democracy shall never lose its importance and will live forever.

Democracy in the Space Age

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. BECKER. Mr. Speaker, the third in the group of three essays by students of the Lynbrook High School in my district appears hereunder. This is the work of Margaret Kaiser. Here we have some vital observations from a young mind:

DEMOCRACY IN THE SPACE AGE
(By Margaret Kaiser)

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their creator with certain inalienable rights, that among these are: life, liberty, and the pursuit of happiness."

These words, taken from the Declaration of Independence actually are a definition of democracy.

In the past, democracy was purely political, and referred to government by the people. However, in more recent years democracy has come to mean more than that. It has broadened to include social, economic, and industrial democracy.

Today the Government aids foreign countries by means of financial assistance and the spread of knowledge. It helps the industries of this country by building dams, and alotting contracts for work. It helps the people by instituting such programs as social security and civil rights.

The democracy reviewed above would not be possible unless three basic conditions existed.

1. Every citizen must be able to express his will, without the fear of being punished for what he believes or the way he votes. True democracy must reflect the will of the majority and protect the right of the minority.

2. Those who make the laws must be subject to the will of the citizens. There must be means by which the people may replace the lawmakers if the lawmakers pass laws, that the majority of people do not like.

3. The people who enforce the law must also be responsible to the voters, because democracy could not exist if the people who enforce the law could do as they please.

Even these conditions do not guarantee true democracy. The people must be informed, must have social and political independence, must be interested, and must have an active faith in democracy.

Although it would appear that democracy today is far from being what it was originally, a close study would reveal that basically it is the same; the people still have the right to life, liberty, and the pursuit of happiness. It has merely been changed to cover the world and conditions as they now exist.

Insofar as democracy in the space age is concerned, I cannot see that there would be any drastic change in the basic concepts of true democracy. The people will have and must continue to have their rights to life, liberty, and the pursuit of happiness. Changes, of course, will occur in the space age as countries and people are brought closer together, through swifter means of transportation and communication. It is hoped that by closer contact with other people in other countries we will be helped to understand one another's problems and beliefs. Perhaps we will even be able to instill in them the wish for democracy, as we know it, and the means by which it may be accomplished.

This would bring about a better, more peaceful, and happy world.

The Du Bois (Pa.) Courier-Express Reaches Its 80th Milestone in the Field of Journalism

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. VAN ZANDT. Mr. Speaker, one of the leading daily newspapers of central Pennsylvania had a birthday, January 2, when the Du Bois Courier-Express celebrated 80 years of publishing news for its many readers in the Keystone State.

The observance of the fourscore anniversary provided the means for President Harold T. Gray, of the Courier-Express Publishing Co., to do a little reminiscing in an editorial titled "We Are 80," which appeared in the January 10, 1959, issue.

In addition to the editorial by Harold T. Gray, there appeared another editorial in the same issue titled "All Join Hands," which urges community cooperation in meeting the challenge of this scientific age. It is a timely appeal to the present generation to meet the future with the courage and inspiration of those who founded and developed the thriving third-class city of Du Bois.

It is a pleasure on this occasion to pay a deserved tribute to the Gray family for their fine contribution in the field of journalism in Pennsylvania through 80 years of editing and publishing a typical family newspaper that has been a daily visitor to thousands of homes in the Du Bois area. Members of the Gray family still active in publishing the Du-Bois Courier-Express include Harold T. Gray as president; Jason S. Gray, vice president; and Mrs. Rosanna Gray Shields, treasurer.

Mr. Speaker, during the past 80 years the Du Bois Courier-Express has been fortunate in having in its employ many outstanding citizens whose devotion to the ideals of journalism, as expounded by its founders, enabled this popular daily newspaper to enjoy success in the newspaper field. In this connection, the late William B. Ross and Frank I. Gillung successively filled the editorial chair in a highly acceptable manner for many fruitful years until death wrote the proverbial "30" to their journalistic careers. Until his recent retirement after many years of loyal service, the business and administrative ability of Lloyd F. Mohney as treasurer and general manager of the Courier-Express played a large part in the success achieved.

In addition to the three members of the Gray family previously mentioned as present officers of the Du Bois Courier-Express Publishing Co., the popular daily newspaper has a talented and gifted managing editor in the person of George Waylonis, a hometown boy, who has won his laurels through his initiative, perseverance, and ability to measure up to the exacting standards of modern journalism.

Over a span of 80 years, the Courier-Express had many other loyal and faithful employees who share to a marked degree the credit due for the success of this popular daily newspaper. At the present time they include Marvin L. Bloom, general manager; Athol V. Shields, secretary; Spencer L. Cross, production manager; William H. Reay, advertising manager; Samuel Kauffman, circulation manager; Shelly Moyer, Herb Martin, and one of the finest groups of faithful newsboys to be found in any newspaper office.

In offering my sincere congratulations to the officers and staff of the DuBois Courier-Express on the occasion of its 80th anniversary, I extend best wishes for continued success in the determination to serve the DuBois area with a first-class daily newspaper.

Under leave to extend my remarks, I wish to include the two editorials referred to previously:

WE ARE 80

It was just 80 years ago, on January 2, 1879, that the Du Bois Weekly Courier first appeared on the streets of the little new lumbering town of Du Bois. This was followed 4 years later by a competitor, the Express, and was followed in 1888 by the first daily edition of the Courier, following the big fire of that year, which wiped out most of the town.

The baby born during that first year, is now an old man. Fourscore years have brought many changes, not only to the newspaper and the individual, but to the town and the Nation. In those days the population of the country was a hundred million less than it is today. The West was being developed, but there were none of the superhighways which stretched from coast to coast, the transcontinental trains, and certainly the jet planes which encompass the 3,000 miles of the country were not even a dream in the minds of man. Electric power and the telephone were still in their infancy, and it would be years before the first automobile would chug down the dirt streets of the little community. Men still shaved with the straight-edged razor, and women had to provide their own means of making themselves beautiful, since such a thing as a beauty parlor did not exist.

But somehow, people got along in those days, and found entertainment and recreation, even though there was no golf course, nor movies, nor radio, nor television. Street railway transportation has come and gone, passenger rail service rose to its peak in the twenties, and disappeared. Sixteen Presidents have lived in the White House, and names of our leaders in the town, State, and Nation have flamed across the sky and disappeared.

The Courier started 2 years before the borough of Du Bois was incorporated. The population of the town was little more than a thousand persons, and it was not until 6 years after the first edition that telegraph

and telephone service came to the community. It would still be 4 years, too, before the first rail service would be provided by the B.R. & P., and 7 years after the Allegheny Valley Railroad had opened a way into the wilderness. Just 7 years before, too, the population of the town consisted of but three families. Not until a year later did the Du Bois Deposit Bank open its doors for business, to bring the first banking service to the community.

Just as the town has grown through the years, so has the Courier-Express. While old age may add stature to a man, an institution, or a town, the youthful zest for life should never be lost. So, although the paper is old in years, it is still youthful in spirit. In the same way it hopes that as Du Bois approaches its centenary, it will retain the vigor of growth which characterized it during the early days. There are indications of a revival of this spirit, which for a time seemed to lie dormant.

Like the old 99th Reserve Division of the Army, let's adopt the slogan, "Ours the Future," and look forward to the next 80 years.

HAROLD T. GRAY.

ALL JOIN HANDS

The fact that DuBois is reaching its maturity came to us recently with the realization that the Courier has passed its 80th birthday.

On attaining this advanced age, we thought back over the years, not nostalgically, but to seek some of the inspiration and stamina which enabled our fathers to create a town here on the wilderness, atop the continued divide in the Alleghenies.

It is a town literally hewn out of the forest, for between 1832 when George Shaffer and his wife and six children cleared out a couple of acres on Sandy Creek until 1865 when John Rumbarger first came into the area the family had as neighbors only the deer, muskrat, and 'coon. The coming of the Allegheny Valley Railroad in 1872 jarred Mr. Rumbarger out of his complacency, and it was then that he laid out the town of Rumbarger. He was helped in his efforts by John DuBois, who came here from Williamsport about the same time to build his lumber mills.

The material advancement of the town dates from the arrival of Mr. DuBois, who from 1873 to 1876 established an industry which attracted hundreds and later thousands of people. From 3 families in 1872 the population grew rapidly; and in 1877, 1 year after completion of the large sawmill, the town boasted a population of 1,307.

Rumbarger post office was established in 1874, and in the same year passenger service was inaugurated on the Low Grade of the Pensylvania Railroad. In 1876 the post office was moved to the "East Side," and the name changed to DuBois. A year later "Rumbarger," as such, passed out of existence.

DuBois became a borough in 1881, with Louis Brady as first burgess. The town had three wards until 1892, when the fourth ward was added. After the turn of the century the fifth ward was established.

Up to this time DuBois was a typical frontier town, lacking all of those things we now consider as essential. With the creation of Sandy Township and the subsequent erection of a jail, much of the lawlessness of the early days was brought under control.

In June of 1885 the town got telegraph service, and in August of that year came the telephone. In August 1883 the B. R. & P. Railway was extended from Buffalo, through DuBois to Punxsutawney, and in 1899 was extended on to Butler, with connections with Pittsburgh. In 1870 the town got its first newspaper, and in 1880 its first bank.

The confidence of those early pioneers in the future of the city was evidenced by the almost complete rebuilding of the town after the disastrous fire of 1888. The town grew rapidly until 1900, with the addition of 180 acres of land. New industries came to town, glass, tanneries and coal, a sewage system was built, and the town acquired a municipal water system. A 50th anniversary book, published in 1922, says that DuBois, at the time, "had railroad shops employing 1,500 people, and in addition, coal mines, and factories turning out glassware, overalls, silk, soft drinks, clay products, machinery, iron and steel products, lumber and millwork, and soot cleaners for boilers."

DuBois became a third class city on January 1, 1915.

The early history of DuBois is one of hard unremitting toil against tremendous odds. For carving a city out of the wilderness our homage is due those sturdy pioneers, to whom no task was too difficult and no barrier insurmountable. If we are to prove worth the heritage handed down to us from those sturdy pioneers, we must in this generation, accomplish many things, so that our children's children may see a city of which our grandsires might well be proud.

This editorial is intended as but a channel buoy in the living stream of the town, as we note the passage of time from the ancient past to the distant future.

We who participate for a brief time together to create the DuBois of the moment, lend our hands to a project with deep traditions builded slowly by the lifelong devotion of many men and women; the teachers in our schools, our mayors and councilmen, our businessmen and professional men, and laboring men, who have dreamed and planned and toiled for an even better town. They have left the imprint of their lives in the churches, streets, public and private buildings, and marks which are ours.

We stand today, among this galaxy of builders of our town, living and dead, mindful of our responsibility, not only to them, but to the generations that lie ahead. For if we fail in our custodianship, we shall have obliterated something of these founders, and builders, shall have shattered their dreams, and destroyed something that can never be recovered.

On some future day another channel buoy in the timeless stream of life will mark another point where we take stock of ourselves. When we have reached that point, may our descendants look back on our great generation of the fifties as having maintained and advanced the deep traditions of our past, a time in which we have made our contribution to a better town and community.

In this endeavor all must participate—labor, business, professions, city council, planning commission, public and semipublic boards and commissions, social and cultural organizations, juniors and seniors, every man, woman and child of our community.

May we not fail in our endeavors.

We'll Miss You, Joe Martin

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mrs. ROGERS of Massachusetts. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from Life magazine, January 15, 1959:

WE'LL MISS YOU, JOE MARTIN

"I love this House," said JOE MARTIN to it once. "In this forum is worked the will of the people." That House, and everyone else who knows him well, has reciprocated JOE MARTIN'S feelings for more than 30 years. For 20 years until last week he has been its undisputed Republican leader, because he is loved, because he is a superb political tactician, and because he has never broken his word. "When you make an agreement with JOE MARTIN," said his steelier but kindred opposite number, SAM RAYBURN, "you don't have to remember it. He will."

JOE first earned his leadership by running a successful congressional campaign when the Republican membership was even smaller than it is now (89 seats, which he nearly doubled in the 1938 election). Ever since those New Deal days he has been his party's most consistent nationwide campaigner, and has chaired five (a record) Republican national conventions. He was the Republicans' thread of continuity during their painful transition from the party of Coolidge (which first sent JOE to Congress) to the party of NIXON (which has now dumped him). As Speaker of the 80th and 83d Congresses, JOE did more than any single man to prove that long and bitter exile from power had not unfitted the Republicans to govern. His legislative strategy underlay the major accomplishments of Ike's first term; he kept his Republicans in orderly rapport with the White House while BILL KNOWLAND'S Senators went off on ideological or fractional rampages. A practical mechanic of statecraft, JOE MARTIN has never been either ideologue or factionalist; he has no use for what he calls political dipsy-doo. Though F.D.R. tried to make him a symbol of reaction ("Martin, Barton, and Fish"), he has never symbolized anything but personal honesty, plus fidelity to the party line—when he could find it.

The party line got blurred somewhere between 1953 and the 1958 election. It was not for JOE MARTIN, that friendly engine of harmony, to manufacture what the White House would not. As the play-by-play makes clear JOE himself was not the real target of the revolt that overthrew him last week. Not the House leader, but the party leadership bred the dissatisfaction.

Twice did Ike, in appreciation of JOE'S great services, protect him from the assault of CHARLIE HALLECK'S ambition. Yet HALLECK somehow made more and more trips between Hill and White House, and JOE fewer. Last week Ike stood aside, and the contest was like a painted scene of a snowy antlered kingdom, when the old buck is challenged and overthrown for no clearer reason that that he can be. No policy issue, no divergence of aims; just comparative age (HALLECK, 58; MARTIN, 74). Will the White House now have a livelier band of supporters and informants in the House? Let us hope so. But CHARLIE HALLECK'S Republicanism will need at least as much guidance and backing as JOE MARTIN'S got; and that wasn't enough to crown JOE MARTIN'S long and able service to the Nation with the rewards he deserved. But he does have deep and universal affection.

The Birthday of Robert E. Lee

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. JENSEN. Mr. Speaker, on the 19th of January 1807, at Stratford on the Potomac, Westmoreland County, Va., a baby was born. His name was Robert E. Lee.

There were about 6 million people in the United States at that time—some 900,000 in Virginia at that time. That year people would be talking about Napoleon's threat to the peace of Europe. They would take sides about Aaron Burr's acquittal on a Federal charge of treason at Richmond. They would wonder at the success of Robert Fulton's steamboat *Clermont*, on its run from New York City to Albany. What was this world coming to?

The world was in turmoil when Robert E. Lee entered it. It was still in turmoil when he left. His character left an indelible imprint upon millions, during his lifetime; and upon many millions more since his death.

He has been known as an outstanding engineer. He has been known as a brilliant military tactician. He has been known as a wise educator. He has been known as a Christian gentleman.

I know him as a troubled man who searched his soul to find which of his divided loyalties he must follow to the end.

I see him the more clearly as he wrote to his son, Custis, shortly before the outbreak of the Civil War:

> The framers of our Constitution (would) never have exhausted so much labor, wisdom, and forebearance in its formation * * * if it was intended to be broken. * * * Still a Union that can only be maintained by swords and bayonets, and in which strife and civil war are to take the place of brotherly love and kindness, has no charm for me. I shall mourn for my country and for the welfare and progress of mankind.

I see him just as clearly as when, during that same period of crisis, he wrote to his friend, Markie Williams:

> If a disruption takes place, I shall go back in sorrow to my people and share the misery of my native State, and save in her defense there will be one soldier less in the world than now. I wish for no other flag than the "Star-Spangled Banner" and no other air than "Hail Columbia."

It must be said that Robert E. Lee was a stanch believer in States rights, as so many Americans are to this day. There are no geographical nor philosophical limits to this creed which guards so well the sovereignty of our several States, even to this day.

The Crimes of the Armenian Quisling Mikoyan

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. BENTLEY. Mr. Speaker, many views have been raised against the visit of Mr. Mikoyan to this country. One of these is Dr. Lev E. Dobriansky, who is the chairman of the Ukranian Congress Committee of America and also a professor in Soviet economics at Georgetown University. Americans who continually study the Soviet Union know Mr. Mikoyan very well; they know his crimes as well as his purported foreign trade shrewdness.

Contrary to some reports in the press, the demonstrators and protestors against Mikoyan are not by any means just recent Hungarian immigrants and refugees to this country. This is a false notion. It should be obvious why some desire to propagate this notion. A good portion of the demonstrators is made up of Americans who have long been naturalized or were born here. Because of their intimate knowledge of the situation, these Americans have exercised their right to protest what they consider to have been a blunder in allowing Mr. Mikoyan to visit this country in the first place.

The statement and also the telegram sent by Dr. Dobriansky to President Eisenhower disclose some of the reasons why the American organization he represents has supported these demonstrations. Countless Americans, following their basic convictions, could hardly disagree with the stand taken against Mikoyan. Under leave, I request that the statement and telegram be printed in the RECORD:

THE CRIMES OF THE ARMENIAN QUISLING MIKOYAN

The telegram sent to the President by the Ukrainian Congress Committee of America on the subject of Mr. Mikoyan's visit to this country has produced a most favorable response. The press and other media that published it gave the American people an opportunity to learn about the real Mikoyan, not the blown-up image of a harmless foreign trade expert.

On the basis of innumerable cards and letters received from fellow Americans throughout the country we are certain that the vast majority of the American people is possessed with a sense of disgust and revulsion toward the few who are fawning over the Kremlin visitor, Mr. Mikoyan. The foremost aims of Mikoyan are clear: (1) Lull the Nation into a sense of false security; (2) prepare the way for a summit meeting where the West is expected to acquiesce to the permanent captivity of the enslaved nations in Eastern Europe and Asia; and (3) ultimately, in relation to us, divide and conquer.

These tactics are not new in Russian imperialist history. The tactics are not the creation of so-called ideologic communism. They have been in use for over 500 years by the Russians and their quislings, and have succeeded in creating an unprecedented empire. The tragedy of the current Mikoyan spectacle is that all the foolery and loss of self respect shown by the few in their entertainment of a political criminal indicate an appalling ignorance on the part of these hosts to a criminal as to how Russia ultimately conquers nations and peoples.

We are most fortunate in this country to have our Congressmen JUDDS, our George Meanys, our Cardinal Cushings. Their protests against Mikoyan and all his macabre achievements are not just in defense of basic moral and political principles. They are a defense also of our political sanity and maturity.

Some sections of the press have almost deliberately refused to disclose the crimes of the Armenian quisling. This situation indicates how easily some could be fooled by the smiles and humorous duplicity of our dedicated enemy. About 20 years ago, when the Nazi economic wizard, Dr. Hjalmar Schacht, visited this country, our industrial and economic groups offered him only the social deep freeze; this despite no criminal acts on his part. Today, the very personification of extreme cruelty, mass murder, and treason to his own nation (Armenia) is not only received but widely feted and shamelessly honored. The background of Mikoyan spells the very negation of the spiritual qualities of America and its traditions; yet some Americans who apparently lost all sight of the difference between right and wrong, courteously shower the honors of their attention upon him.

There is no doubt in our minds that this entire spectacle was well planned and indirectly financed by the Cyrus Eatons in this country. The businessmen and financiers who flocked to the circus almost seem to confirm the predictions of Marx, Veblen, and others that the weakest spiritual sinew of modern society is the pecuniary-minded business community. Following World War I the business interests of Western Europe were prepared to accommodate the Red wave from Eastern Europe. Are our business groups ready to do the same? By and large we think not.

The Mikoyan spectacle is only the opening and driving wedge of a broad plan. After his departure from these shores more and more voices should and must be raised in sober evaluation and protest against this first act of a continuous campaign. We urge that the points of the following telegram sent to the President be raised time and time again in order to offset the foolishness displayed by some of our people who think they see in Mikoyan, Menshikov, and Khrushchev any possibility for the end of the cold war:

"DEAR MR. PRESIDENT: Your recent statement on good manners to be shown toward Mr. Mikoyan is somewhat mystifying. Surely this statement does not imply a desired cessation of peaceful demonstrations against Mikoyan and all that he symbolizes. We cannot believe that this was your intent in releasing your statement.

"The prime reason for our demonstrations is to make known to our fellow Americans precisely who Mikoyan is and what he has done. His genteel antics here deserve a realistic answer. In the light of his notorious record it is by no means an extreme characterization that Mikoyan is actually a political murderer on the loose—and of all places in our own America, the ultimate bastion of world freedom. If our people were to depend on the naive and dangerously misleading statements of such uninformed persons like Cyrus Eaton, Adlai Stevenson, Eric Johnston and other inadvertent tools of current Moscow propaganda, public opinion in this country would itself rapidly become a captive of Moscow.

"Among the many barbarities indulged in by this Armenian quisling, let us be mindful today of (1) his brutal annihilation of thousands of patriotic Armenians, Azerbaijani, Don and Kuban Cossacks in the period of 1917–21; (2) his callous involvement in the Russian manmade famine in Ukraine in the early thirties, shipping grains abroad while millions of Ukrainians starved to death; and (3) his bloody role in the liquidation of Hungarian patriots in this decade. It is, indeed, a travesty on our traditions to have even permitted the Armenian quisling to blemish our good earth.

"What amazes us further is that the so-called Russian desk in the State Department has informed columnists that this 'oldtime Communist never has made a violent anti-American speech' (Ted Lewis, Daily News, January 1, 1959). Yet only 2 months ago, before the Moscow City Soviet, the Armenian quisling railed against 'the stupidity and adventurism of the aggressive circles of the United States.' Quoting Lenin, he also said of the United States: 'She robs all, and she robs quite originally.'

"A code of good manners implies moral principles which in this case can best be reflected through our expressed indignation in these demonstrations. Conscience bids us

to conduct more of them. And we feel confident that most Americans share this conscience.

"Sincerely yours,

"LEV. E. DOBRIANSKY,

"Chairman, Ukrainian Congress Committee of America, and Professor of Soviet Economics, Georgetown University."

Speech Delivered by Senator Gil J. Puyat Before the Rotary Club of Manila on Thursday, January 8, 1959, at the Winter Garden, Manila Hotel, Manila, Philippines

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following address delivered at the Rotary Club luncheon in Manila, Philippines, on January 8, 1959, by Senator Gil J. Puyat. The speech deals with conditions in the Philippines and in other countries recently visited by Senator Puyat. I am sure the facts pointed out will be of interest to every Member of the House of Representatives and the Senate.

Senator Puyat is now serving his second term as a member of the Philippine Senate. He is chairman of the senate committee on finance. When he was elected to the Philippine Senate in 1951 he received the next to highest number of votes cast in the 1951 election for any candidate. In 1957, when he was reelected, he was the top-notcher—that is, he received the highest number of votes cast for any candidate.

Senator Puyat is one of the outstanding citizens of the Philippines as well as one of the leading and most successful businessmen in the islands:

I know that almost everybody here today faces the new year with this question: What is in store for us in 1959?

I have been asked to discuss what the economic trends for 1959 may be. In giving you my views, I must start by saying that I claim no prescience. I will not give you my views as a party man but as an official of the Government who fervently desires the best for the people. I will give you the picture as I see it without any furbishing and without any undertones.

Last September, on the invitation of the British Government, I spent 2 weeks in England during which I had the opportunity to talk with officials in the Government and to have a fairly comprehensive picture of the conditions of agriculture and industry as they are today in the British Isles. I was in England in 1947. I remember those days of austere rationing, of living on what I would call bare essentials. The Government and the people were beset with the problems that confronted a country that had just come out of a global war, its industrial equipment damaged and crippled, its economy threatened by the burdens of financing the most expensive war that mankind has yet seen. The people had gone through 4 years of hardships. With the strain occasioned by the war, the question was how much more could the people take and how long would the people be willing to suffer more. I saw the answer to those questions in my last trip to England. In England today, there is almost full employment. Her exchange reserves are healthy, her foreign trade has improved considerably, her industrial equipment is turning out goods running beyond prewar levels of production. The British pound is a stable currency. Cities that were almost bombed out of the map had been rebuilt and are now models of modern and planned community development. Many businessmen in England have expressed the desire to have expanded trade relations with the Philippines and to do this are agreeable to sell capital goods to the Philippines on deferred payment plans. The announcement that the sterling pound has been made freely convertible for external purposes would certainly aid in increasing the volume of trade between the so-called hard currency areas and the sterling bloc countries. England is not a rich country. Its density of population is among the highest in the world. She imports a great deal of the raw materils that she needs for her industries. In spite of these basic weaknesses, England has been able to stage a recovery that is indeed remarkable.

I visited Western Germany. I was invited by Krupp of Essen while I was in New York and the representative of this firm flew from Bonn to Paris to extend to me the official invitation. If I was impressed with what I saw in England, I will say that what I saw in Western Germany was almost unbelievable. Here is a country split into two. Western Germany represents just about 50 percent of the land area of Germany before the last World War. The population of Western Germany is about 60 percent of the population of the entire country before World War II started. That portion of Germany that is now under Soviet domination used to be the source of food for the German people. To compound the problems, there is Berlin surrounded by a Communist dominated area, a day to day problem for the free world and a potential source of threat to world peace. The industrial machinery of Germany was damaged and destroyed to the extent of 80 percent. Many of her cities were beyond recognition. Her means of transportation were almost completely wrecked. Her currency had depreciated to the extent that in 1949 the country had to effect radical monetary reforms.

In Germany today, nobody talks of unemployment. The problem of the country is what to do with the dollar reserves that are piling up every month. The levels of production have exceeded the prewar levels. She is threatening to become both the industrial and financial leader in Europe. I had a conference with the Ministry of Economic Affairs and was praising the Ministry for its economic program to which I attributed this almost unbelievable progress. The Ministry, while accepting that it undertook the initiative of preparing the program told me not in a tone of false modesty but with a ring of sincerity that if the economic program clicked the credit must be given to the sacrifice made by the German people and the capacity of the people for hard, sustained, and dedicated work. I remember the words used and I will repeat them: "This recovery has been due to the brains and brawn of the German people." Although in saying this, they also readily admitted that the help of the allies specially in furnishing food supplies was a big factor in enabling Germany to devote her genius and her energies in rebuilding her industrial machinery. And finally, these officials added: "Senator, we were able to challenge the German people to work hard and to make sacrifices because the people in the government set the example. We were working 10, 12, 14 hours a day." And one of the officials added: "I was a mayor in a small town and I remember that for almost a year my only food for lunch was a piece of bread and a piece of meat." This official further added that, "No government can ask the people to make sacrifices unless that government can by example and by actual accomplishments show that it is possessed of the integrity, the efficiency, and the vision to lead the people."

I was born in Switzerland and I saw the industrial machinery of this country working unceasingly, producing more than the country had ever produced, a country with no natural or mineral resources to speak of. Here is a country that imports practically all of the raw materials that she needs for her industries. Employment is at a peak to the extent that she has started importing technicians from other countries. I had the opportunity to talk with the officials of the Federal Reserve bank and I inquired into the mechanism and the operation of the reserves of the country. The answer was short and concise. "We keep two reserves—a dollar reserve for our dollar accounts and a gold reserve for our other currency requirements."

When I was in New York, I received an official invitation from the Government of Israel to visit that country. It meant making a change in my schedule but not only do I not regret having made the change, I feel that I was privileged to see a nation in the making. Israel is a small country. A great portion of it is rocky mountains and the south is a desert. It is surrounded by countries with which unfortunately its relations are not too friendly. In the past 10 years its population has grown from 600,000 people to its present population of 2 million. The desert areas have become productive agricultural lands and in the past 3 years millions of trees have been planted on the rocky mountains as part of a tremendous reforestation program. The army has a training program that not only makes of the people capable and competent soldiers but also equips the people with the voctional proficiency so that after a training of 2½ years in the army, a man is adequately prepared to earn a living. I was impressed by the dedication of the government officials. I could discern earnestness, a sense of mission. Get into the government service and you either suffer from ulcer or die of heart attack, is a saying amongst government officials in Israel today. Perhaps this is an exaggeration, but is indicative of the serious and dedicated attitude that government officials have when they join the government service.

A few days ago, the National Economic Council finished an updated 3-year economic program. It is the same program presented to the late President Magsaysay with certain revisions and updatings, with some change in emphasis. Broadly, it has the same basic characteristics as the previous program. It recognizes that there must be a change from a purely agricultural economy to a balanced industrial-agricultural economy. It recognizes the basic weakness of the present order, high unemployment, prevalent underemployment, low levels of production, low per capita income, as a result of which the masses by and large enjoy low standards of living. Targets of production have been set up—calculated to gradually reduce the present unemployment and absorb the annual addition to our labor force. In drawing up these targets, the investment budget was considered and the sources of investment both private and public were analyzed. I hope this program is not treated in the same way that previous programs were intentionally or unintentionally overlooked. I remember what one of the economic planners in India told me when I was chairman of the National Economic Council—that in India no economic decisions are made unless they synchronize with the economic program adopted by the

country. I do hope that the executive and Congress will examine the program and come to policy decisions so that once and for all, there may not be the lingering doubt that there is no program to follow and that the present administration is characterized by ambiguity of policies, inaction, and inertia. Of the many economic problems that await solution, time allows me to discuss with you today only a few. I adopt this approach in the conviction that clear-cut decisions on these basic problems will determine the pattern of the economic trends for 1959.

Although the President has made repeated pronouncements that he is not in favor of devaluation, the discussion goes on unabated as to whether we should devalue or not. The discussion while and so long as it lingers has been and will be a deterrent to sound investment. Of late, investments have been channeled mostly into speculative enterprises where large gains may be reaped in a matter of weeks and in real estate. The reason is understandable. You would not want to invest in long-term projects if there is the danger that your investment may shrink considerably if devaluation should come. While the discussion lingers, we can expect little, if not nothing, in the form of foreign investment. You would not want to send capital over 10,000 miles to find that investment decrease in value within a few months. Personally, I am against devaluation. I have stated my position from the very start and I have stated my position repeatedly. Devaluation is not the solution to our present economic problems. We are not a highly industrialized country. What are our most important export items that devaluation proposes to increase? Our export of sugar to the United States and other markets is limited by our quotas in these markets. For sugar, therefore, there is the so-called inelastic market. The price for copra has never been as good as in the past few years. We do not even cover our quotas for hemp and cordage not because the prices are not attractive but because through a maladjustment in the machinery of distribution, the producers do not find it profitable to increase their production because the gains of the industry accrue principally and mainly to the middlemen. I know the lumber industry and I know that the industry by and large has been reaping handsome profits. We are agreed that we should proceed with the shift in the pattern of our economy and this will require an investment which will become more expensive if we should devalue. Price increases outstrip increases in wages and salaries and God forbid if a ganta of rice in this country should come to cost ₱10 to ₱15 should we devalue. If such a situation should develop, we can expect social repercussions.

It has been pointed out that the present ratio of the peso to the dollar is no longer its real value. It has been repeatedly pointed out that the dollar is quoted at between ₱3.50 to ₱3.80 in the black market. I ask this question: Has not even as stable a currency as the American dollar depreciated since the last World War? I, for one, refuse to believe that the black market quotation for the peso as its real value. This black market quotation is established through illicit operations and by flight of capital. The problem is compounded by the fact that our economy is not in the hands of nationals, but in the hands of foreigners some of whom have been indulging in extensive flight of capital operations. I have a hunch that if these dollars that have been stashed away could be channeled into our official reserves, our reserves would increase by easily $100 million. What has happened is that instead of our dollar earnings going into the official reserves, they now are held by persons and corporations who have little faith nor care much about the future of this country. I will admit that certain industries have to be helped, like the base metal industry. But for this purpose, specific legislation can be enacted. This we have done with the tobacco industry and the marginal producers of gold. We must be guided by that established maxim in popular government, the greatest good for the greatest number. Devaluation may help a few industries, many businessmen would profit from it, but what would be the effect on the masses?

Another policy decision that we must arrive at is whether to effect decontrol or proceed with our present system of almost absolute controls, the intensity of which has increased with every recent decision of the central bank. My observation in my last trip points to the fact that those countries that have lifted controls have rehabilitated faster than those countries that have persisted in perpetuating controls. Controls breed an artificial situation, controls create artificial scarcity. Whenever such situations emerge, the temptation to indulge in black marketing, in profiteering becomes alluring. I am in favor of gradual decontrol. For this purpose I have already filed a bill in the Senate providing for the necessary exchange for essential and semiessential consumer goods and the requirements of essential and semiessential industries. I am not worried about the nonessentials and luxuries. Provided we can take care of the essentials and semiessentials, the people, I am sure, will be satisfied. But then the question is asked, how can we effect decontrol when our reserves are low? This brings me to what I have been arguing for during the past several years.

The immediate suspension of the barter trade. The barter trade has been the biggest leak in our dollar earnings. We will never be able to have healthy reserves so long as there is that big hole in our pocket. I daresay we easily lose between $50 to $100 million every year through the barter trade. The recent experience in Spain should be an eye opener to us. The government has discovered that many persons and corporations have been keeping dollar accounts in Switzerland and as a result, the exchange reserves of the country have fallen to about $57 million, whereas the aggregate amount hidden by these persons and corporations is estimated at $288 million. Unless the barter trade is immediately suspended, we will not be able to build up our reserves. There are other means of bolstering these reserves. We should undertake a well studied campaign of obtaining capital goods on deferred payment basis. We could make greater use of Public Law 480. I would even be willing to subsidize our gold mining industry to build up the country's gold reserves. These steps are passive in character. We should at the same time take positive measures. We should lose no further time in establishing connections in countries we do not trade with now. We should take vigorous steps to expand our trade relations with the countries we now deal with. In the short space of ten years, Israel has been able to sign up bilateral agreements with at least 21 countries and with the skillful and adept use of the swing balance of payment provided for in these bilateral agreements, Israel, in effect, has increased her exchange reserves by the aggregate of the credits provided for in these trade agreements. All of the countries in Europe are currently engaged in establishing footholds in Africa. We have not explored the possibilities of trading with the Latin American countries. A continuing survey of the markets we now have and the establishment of footholds in new markets require a thorough dissection of the market potentials, the currency problems, tariff, and many other related problems. This should be a major program of our government. It is imperative that we start now a bold and dynamic program of market exploration, development and exploitation.

Such a move is almost imposed on us. When we undertook the revision of the Bell Trade Agreement in 1954, we stated in Washington that as we lose preferment in the American market, we should undertake a program to develop other markets for both our exports and for the sources of our imports. Four years have elapsed and I find almost nothing in the way of implementing this policy decision.

I will now take up with you briefly another major problem that faces us. The royal road to inflation is deficit spending. I have always stood for a balanced budget. For several years now, when the budget would come to the Senate Finance Committee for review, I have repeatedly called the attention of our executive branch to the overestimated revenues and the danger of indiscriminate bond issues. There is something radically wrong in a fiscal policy that bases its estimates of revenues on the assumption of the approval of new tax measures without first ascertaining whether such tax measures would meet with congressional approval.

When I first ran for Senate in 1951, I limited my program of government to three fundamentals. I said I would lend my every effort toward establishing in this country an honest government, an efficient government and a progressive government. Without honesty in the government, we cannot expect of the people their continuing support. Without efficiency, we cannot expect the people to pay their taxes nor to contribute their share to the economic development. There must be palpable evidence that every centavo collected in the form of taxes is returned to the people in terms of services, improved services and expanded services. And a government can never be, must never be static in its concepts. It must look forward, it must be progressive.

We should profit from the experiences of other countries, adopt those measures which would fit into the local conditions and discard those that find no local application. I am confident that a people that performed so heroically in the last world war can be as heroic in these times of peace, if there would be patriotic, competent and dedicated leadership.

The President's Budget

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. RAY. Mr. Speaker, the Eisenhower budget is a remarkable achievement.

First. We have a balanced budget, with outgo matched to income. That makes sense to everybody.

Second. No important Government activities—particularly national defense—have been cut back below current levels.

Third. The present income tax rates will bring in the revenues we need, without increasing the rates.

Fourth. We can go ahead with the buildup of defense, space exploration, and general welfare programs.

And fifth, we can hold off inflation.

When you realize that the Government is in the hole this year by about $13 billion, you begin to see what a terrific job President Eisenhower and the Budget Bureau have done on the new budget.

I will be frank in saying that I did not think it could be done. As a Member of Congress, I see the terrific pressures for higher spending from all quarters. Defense costs have been going higher, and in a number of nondefense areas, such as farm price supports, the story is the same. But the President got his Cabinet officers together and told them they must hold expenses down and postpone everything that was not absolutely essential to the country right now.

So the President has given the Congress a budget that can be balanced.

If the Congress goes along with him, the budget will stay in balance, without increasing taxes and without hurting necessary public services.

Speaking for myself, I am going to give the President all the help I can on his budget. It is good business for all of us, and it will hasten the day when a prosperous economy will produce the income to finance the Government and to make possible a reduction in tax rates.

We owe the President a standing vote of confidence and thanks.

We Remember—We Hope

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of the following editorial which appeared in the January 8 issue of the Detroit News. I believe this candid message of greeting to Mr. Mikoyan upon his visit to Detroit will prove of interest to all Members of the House:

WE REMEMBER—WE HOPE

To ANASTAS IVANOVICH MIKOYAN, FIRST DEPUTY PREMIER OF THE SOVIET UNION, *Greetings:*

Because you are a stranger, and because it is the long, proud tradition of this free Nation to offer hospitality to all strangers, we welcome you to Detroit, as other Americans have welcomed you to their cities. But because you come ostensibly to know us better, you should know first of all that the handshake of courtesy does not in the least dim our memory of your government's brutalities and particularly of your own visit to Budapest during the Hungarian uprising to support Kadar in the bloody business of crushing patriots.

We don't overlook the past, or your own responsibility for it during an extraordinary career of total devotion to self-interest at any cost. Every man, however, and every nation in a just world must be conceded to have a future as well as a past, a chance, not to be forgiven, for that is not man's business, but to go forward. While condemning unreservedly what you have done to those who wanted only to live their own lives, we resist the temptation to condemn in advance what you may do better hereafter.

You come on a mission of peace, prepared, it is said, to discuss increased trade and perhaps also diminished hostility between our countries. Most of us have long believed in maximum trade among nations, provided only that the exchange of goods for mutual profit is the mutually accepted goal.

We note with misgiving that the Soviet Union has not always bought and sold in that spirit, that rather it regards trade as one of the more effective weapons for its obstinate war against the Western democracies. For instance, we remind you of the recent dumping on the London market of Soviet metals, which were not even surplus, in order to break international prices and so try out Soviet economic power.

The fact, of which you of course are aware, is that Soviet trade is carried on only by the Soviet state with the full power of the state behind each transaction. Our free businessmen are naturally reluctant to beard such a political colossus, and cultivate markets or sources of supply so at the mercy of a dictator's whim—especially when the dictator is openly sworn to destroy them as capitalist enemies.

On the other hand we are at least as anxious as you to promote peaceable contacts between our nations. We, too, are convinced that the more we can both do to advance our mutual prosperity, the more we promote our mutual security. A high standard of living is even more potent than understanding in turning people's thoughts from war.

"Budyet mir: There will be peace," you have said over and over since you have been here. These are appealing words, as you surely know. You may also know that our own refrain has been similar for years and yet somehow the world during those years has not enjoyed peace.

We suspect both from what you do and what you say that your peace is not ours, that what you want for other men is the repose of death or the harmony of prison and for yourself the ease of unchallengeable power. Peace for your government seems to consist in your having your own way; war is what happens when the other fellow objects.

We think you are profoundly mistaken in this view, not only because we personally decline to enter your servitude peacefully but because history proves that slavery is not the way to peace. You offer the world only that total surrender which even your own satellites, prodded by roving tanks of the Red army, have refused. Your already enslaved peoples provide not even you with peace but only with those splitting headaches congenital to tyranny.

Peace, in short, like so many aspirations of the human spirit is realizable only in freedom. Until your government sees that, it will go on multiplying the hates, frustrations and fears that make war inevitable.

The tragedy in this is that all your bullying is quite unnecessary to your stated main purpose: To promote the prosperity and security of the Soviet Union. "Let us compete," you say, "in having more milk and more meat and more clothing for people. And we hope you won't complain if we do catch up with you." We say, "Try us, Anastas Ivanovich; just try us."

State Versus Federal Water Rights

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks, I call to the attention of my colleagues the following speech made by Mr. Burnham Emerson:

STATE VERSUS FEDERAL WATER RIGHTS

(By Burnham Enerson, Colorado River Association, 1958 annual meeting, Las Vegas, Nev., Dec. 5, 1958)

During the past several years there has been, as all of you well know, an accelerated trend toward more and more control by the Federal Government, and less and less control by the several States, in a great many areas of governmental activity. This trend toward federalism, if I may use that term, takes many forms and manifests itself in many different ways, and I am sure you all realize that it is a very significant development of our times.

Much of this trend stems from the concept that practically all commerce is interstate commerce and thus falls within the orbit of the Federal Government. Some of the trend is based on the theory that practically every body of water on the surface of the earth is navigable and so falls within the Federal Government's jurisdiction over navigable waters. When these foundations for Federal jurisdiction fail, the federalists usually fall back on the broad, vague, and comfortable cushion of the general welfare clause in the Constitution.

I am not here, however, to analyze the basis or cause of this trend toward federalism nor to discuss its history. Rather, I want to talk about its manifestation in the field of water-resource development.

As persons interested in the conservation and use of our water resources, you are well aware of the trend in this field. You have seen the Federal Government repeatedly in recent years assert the authority to control, and even to own, waters which for a century or more had been regarded as within the exclusive jurisdiction of the States.

One example, a very dramatic one, was the famous tidelands episode of a decade ago, when the Department of Justice of the United States asserted, and the Supreme Court of the United States agreed—though later reversed by the Congress—that the Federal Government, rather than the States, had paramount rights in the 3-mile strip of water and the underlying soil along the coasts of our seaboard States (*U.S.* v. *California*, 1947, 332 U.S. 19).

Another and more recent example is the so-called Pelton Dam case (*Federal Power Commission* v. *Oregon*, 1955, 349 U.S. 435), wherein the Department of Justice asserted, and again the Supreme Court of the United States agreed, that a licensee of the Federal Power Commission could build and operate a power project on Federal lands within the State of Oregon without observing the requirements of Oregon law.

The clear implications of this important decision of the U.S. Supreme Court were of very great concern to everyone in the West who is familiar with water development problems. It appeared from this decision that the United States as a property owner was to be above the law and not required to observe the laws and regulations of the States with regard to the use of water within their borders. Furthermore, it appeared that not only the agencies of the Federal Government but also their licensees, such as the power company which obtained the license for the Pelton Dam from the Federal Power Commission, would also be exempt from State regulation. By this one decision it appeared that the Supreme Court of the United States had greatly expanded the authority of the Federal Power Commission and other Federal agencies and had greatly reduced the effectiveness and value of local regulation of water resource development by the several States.

The Pelton Dam decision is only 3 years old, having been announced in 1955, but the fears which it engendered have already been justified. In a very recent ruling by the U.S. District Court in the State of Nevada the

Pelton Dam doctrine was applied to exempt the U.S. Navy from complying with Nevada laws regulating the appropriation and use of underground waters. I refer to the well-known Hawthorne case (*State of Nevada* v. *United States*, No. 1247, U.S.D.C., District of Nevada), in which a decision was announced on August 27 of this year.

The importance of this ruling to the State of Nevada and to all other Western States cannot possibly be overemphasized. Like many of the Western States, the State of Nevada depends for its water resources to a very large extent upon the conservation and careful use of its underground water supplies. In order to utilize those underground waters to the best possible advantage the State of Nevada has established, as have many other States, laws and regulations controlling the drilling and operation of wells so that the underground water reservoirs shall be carefully managed and not improperly exploited. Yet this decision in the Hawthorne case would appear to immunize the United States as a property owner from the effect of these necessary regulations. It must be obvious to anyone that the regulations cannot possibly be effective unless all water users are subject to the same control. If the United States, for instance, is one of several property owners whose lands overlie a common underground water reservoir and all of the other property owners are subject to State regulations but the United States is not, then it is clear that the United States can, if it sees fit to do so, take all of the water from the underground basin for its own use. This, of course, would leave all of the other property owners without any water, and also without recourse.

Still another example of federalism in water law is the assertion of the Department of Justice in the Fallbrook case, now pending in the U.S. District Court for the Southern District of California, Southern Division, that the United States has a paramount interest in the waters of the Santa Margarita River above and beyond any interest which would be recognized under California law. One of the grounds given to support this contention was that most of the water of the stream originates in a U.S. forest reserve (*United States* v. *Fallbrook Public Utility District* (No. 1247–SD–C), a case which by coincidence bears the same clerk's number as the Hawthorne case). This last contention of the Department of Justice was rejected by the trial judge, Hon. James M. Carter, U.S. district judge at San Diego, last August. Doubtless the case will be appealed and if the contention of the Department of Justice should eventually become the law of the land, then I venture to say that practically all of the presently undeveloped waters of the Western States would become the property of the U.S. Government because most of those waters originate in mountain areas where the Federal Government owns most of the land. The result would be obvious—future water resource development in the Western States would be no longer regulated by the States themselves but by a collection of bureaucrats in Washington.

These and many other examples of the growth of Federal authority in the field of water resource development have recently been very well described and analyzed in an excellent address by Mr. Clarence A. Davis, former Under Secretary of the Department of the Interior, at the 1958 annual meeting of the American Bar Association in Los Angeles. Mr. Davis entitled his address "Federal Encroachment on State Water Rights." Copies of the address have been prepared by the Irrigation Districts Association of California, which publishes the Western Water News, and can be obtained from the office of that association at 945 Pacific Building, San Francisco. I commend Mr. Davis' address to you as an exceedingly interesting and informative discussion of this subject.

Recognizing the far-reaching consequences of the rule announced by the Supreme Court in the Pelton Dam case, a number of thoughtful statesmen, led by Senator BARRETT, of Wyoming, have made a determined attempt to obtain action by the Congress to reverse that decision. A bill was introduced for that purpose, S. 863. If adopted, that bill would require the United States and its agencies to comply with laws of the respective States governing the development and use of water resources.

Extensive hearings were held upon the bill by the Senate Committee on Interior and Insular Affairs in 1956. The most significant feature of the hearings was the very extreme position taken by the Department of Justice that the Federal Government owns practically all of the water rights in most of the Western States. These claims of ownership were based in large part on the theory that the Federal Government had acquired title to the water rights from Mexico under the Treaty of Guadalupe Hidalgo and had never parted with title.

Following the hearings on the Barrett bill an attempt has been made to work out with the Department of Justice a compromise which would meet the primary objective of reversing the Pelton Dam decision. One of the leaders in this effort to straighten out this situation is Mr. Elmer Bennett, formerly Solicitor and now Under Secretary of the Department of the Interior, and he is to be commended for his forthright recognition of the importance of protecting the integrity of the water rights and water laws of the respective States. Mr. Bennett has worked diligently with the representatives of the Department of Justice to arrive at an acceptable solution of the problem.

So far as I am advised, the efforts to compromise the issue with the Department of Justice have not yet progressed to the point where success is assured. A tentative draft of a substitute bill has been released, and it has received a good deal of study and criticism on the part of interested citizens. The substitute bill certainly goes a long way toward correcting the Pelton Dam decision, but it contains some qualifying language which must be clarified before everyone can be sure that the bill will achieve the desired result.

I hope that the problem will continue to receive close attention and that in the forthcoming session of Congress it will be solved. Meanwhile, the Pelton Dam doctrine is still the law, and unless corrected by Congress it will certainly accelerate the trend toward federalism in the management of our water resources.

As I have said, one result of this accelerated trend toward federalism may well be a move toward the establishment of a system of Federal water right administration superimposed upon and perhaps largely replacing the present administration of water rights by the respective States. This is a development which I, for one, would view with great alarm. I trust that it shall never come to pass and I hope that it will never even be suggested. But if it should be suggested that the Federal Government ought to establish a bureau for the administration of water rights to which the United States lays claim, then I urge all of you to resist such a proposal with all of the force and strength at your command.

Let us examine very briefly some of the results which might follow from the establishment of a system of Federal water right administration.

First. It would mean abandonment of any hope of regulating the use of water by the United States and its many agencies. No one who has observed the management by the Federal Government of its own property could imagine for a moment that the Federal Government would regulate itself while regulating others.

Second. The paramount interest of the Federal Government in our undeveloped water resources would be permanently and irrevocably established. Water right permits which might be issued by the Federal Government to private citizens or to cities or local districts would probably be made expressly subject at all times to all existing and future requirements of the Federal Government and its agencies. Such a permit system would impair the ability of local interests and local governments to finance water resource development projects through normal financing channels because the purchasers of the bonds issued to pay for the construction of the water conservation facilities would know that the water rights to be utilized by the facilities could be terminated by the Federal Government if a Federal agency should later develop a need for the use of the same water. The natural result of this condition would be that the Federal Government itself would have to finance the local agencies. Thus the Federal Government would control not only the water rights but also the purse strings. There would be little left for the local interests to do except to pay their Federal taxes.

Third. All water right administration by the Federal Government would, of course, be concentrated in Washington. This would mean that persons having need for water permits, or wishing to oppose the issuance of water permits to others, would have to travel back and forth to Washington, probably at frequent intervals, in order to present their petitions or protect their interests. Not only would this add greatly to the expense at every stage of the proceeding, but also it would add greatly to the amount of time required for the processing of water right applications. All of you who have done business with the United States know that it always moves very slowly, and sometimes not at all.

Fourth. Of necessity the Federal administration of water rights would be required to establish the same criteria and follow the same policies, rules, regulations and practices throughout the country. This necessarily means that the differences in law which have been built up over many decades by the several Western States would be suppressed. It also means that the differences in geographical characteristics, climatic patterns and water requirements of various States might be disregarded. Such an effort to establish a system which would be suitable for every place and every condition would in all probability produce a system which would suit no one except the bureaucrats who designed it.

Fifth. The establishment of a Federal system of water right administration would open the regulation of our water resources to all of the social and economic theories which so often find expression in the policies of the Federal Government. Water rights would be administered not on the basis of specific projects to meet specific needs but rather on some high-sounding combination of the philosophy of the general welfare clause, the principle of the greatest good for the greatest number, the balancing of the public interests, and, of course, the lure—the pie in the sky—of Federal financing.

These are some of the conditions which might be forced upon us if the claims of the United States Department of Justice should eventually become the law of the land. I am not relying merely upon my imagination in describing these conditions, nor am I seeing ghosts. Most of these same conditions are actually present in the administration by the Federal Government of the waters which are developed by the

United States under the reclamation laws. Even if we should assume—which I for one do not—that these policies are good and proper and wise for the particular and limited field in which the reclamation laws operate, I am sure you will agree that expanding them into the administration of water rights generally would be unfortunate.

As an example, let me direct your attention for a few moments to the effect of the acreage limitation provisions of the Federal reclamation laws, and as I do so please let your own imagination tell you what would happen if these same principles were applied in the administration of practically all future water-resource development in the entire country.

As you know, the acreage-limitation provisions of the Federal reclamation laws were incorporated in the original Reclamation Act of 1902 for the purpose of curbing monopoly and preventing speculation in the development of public lands in the Western States. The basic principle had its origin in the provisions of the homestead laws which limited the area of public land to be given to a single individual. This principle was readily adaptable to the reclamation laws which were intended to provide a means for the improvement of lands within the public domain so as to encourage and facilitate their settlement. I do not know of anyone who seriously quarrels with the application of this principle to public land development.

But when this same principle is applied, as it has been, to privately owned lands, great controversy arises.

This controversy has been the subject of numerous articles, several books, much oratory, many debates in Congress, and even some litigation. It goes without saying that the Federal Government may properly impose fair and reasonable conditions in return for its financial assistance in the development of water resources. The question in dispute is: Are the acreage limitation provisions reasonable and fair conditions to impose on the owners of privately held lands who receive such help?

The effect of the provisions is that in order to receive supplemental water a farmer must reduce his landholdings to what the demagogues graciously call the family size farm. This term is a misnomer, or at best a euphemism, for subsistence farm. By its own very words, that term "family size farm" implies that the farm should be of such size that it will barely support a family and no more. If the farm will support more than a single family it obviously contains more land than a family needs and so is too large to be a family-size farm. If the farm will provide a family with more than enough income for its own support, the farm is also by definition too big. Likewise, if the farm enables the owner to make a net profit to invest in other lands or to build up a savings account the farm is also by definition too large because it is providing the family with more than a self-sustaining income.

One common complaint about the acreage limitation is that in many areas 160 acres is not nearly enough to support a farmer—to say nothing of a family—even at a subsistence level. In answer to this complaint the advocates of the rigid 160-acre limitation have said that if the farmer who lives in such an area needs more land he should take unto himself a wife, and then he and his wife together can have 320 acres. If that is not sufficient, they say, then the farmer and his wife should have some children, each of whom could add another 160 acres to the family holdings. Thus, in reality, what these spokesmen have been advocating is not a family-size farm, but rather a farm-size family.

The result of these limitations is that as the price for receiving a supplemental water supply for his land, the farmer who owns more than the prescribed unit must reduce his holdings to a bare subsistence level and must refrain from ever enlarging his farm above a subsistence level so long as he lives in the reclamation project. This continuous hand-to-mouth existence is imposed upon the farmer despite the fact that he pays his full share of the cost of construction of the irrigation facilities and his full share of all operating expenses.

As the excuse for imposing these conditions, the defenders of the acreage limitation provisions cite the fact that under reclamation law Federal funds are made available to the farmer upon an interest-free basis for a period of 40 years or more. The waiver of interest is said to be a form of subsidizing the farmer. In return for this subsidy, however, the Federal Government makes sure that the farmer shall never make enough money from farming to acquire more than the maximum amount of land which the Federal Government arbitrarily says one family may own. In other words, the Federal Government forbids the subsidized farmer from making a success of his business by enlarging his farm.

This attitude is directly contrary to the motivating ambition and the goal of every farmer in the country. Farmers traditionally have a strong desire to acquire more land with which to enlarge their operations, so as to provide farm lands for their children and their grandchildren and have adequate security for their own old age. Yet the Federal Government tells the farmer who receives water from a reclamation project that so long as he stays in the project he must suppress his ambition, abandon his goal, and content himself with remaining on a subsistence level.

Subsidies are not unknown or unusual in the farflung activities of the Federal Government, but the subsidy represented by the interest-free financing under the reclamation laws is the only subsidy which carries with it a prohibition against successful operation of the subsidized business. In no other area of subsidized activities does the Federal Government prohibit success or penalize successful operators. All other subsidies are available to all who qualify, without discrimination on account of size, wealth, or resources, but the subsidy contained in the reclamation laws discriminates against the successful operator and guarantees that all beneficiaries of the subsidy shall never make anything more than a bare living on a family size farm.

Probably the oldest Federal subsidy is that of the Post Office Department, which operates year after year at a huge deficit made up from the general funds obtained by the Federal Treasury from the Federal taxpayers. The users of the postal service thus obtain the service at substantially less than its real cost and the Government pays the difference. This is a direct subsidy. Yet the subsidy is available to the largest mail-order house in the country on the same basis as to a one-man business or to a housewife. Everyone who purchases a postage stamp is a beneficiary of the subsidy. There is no discrimination in the distribution of the benefits of the postal subsidy.

Another early form of subsidy was the land grants to the railroads. There again the subsidy carried no conditions which discriminated between the large and the small operator. No penalty was imposed upon success. The land grants carried with them various conditions which the recipients were required to observe, but those conditions fell alike upon the short and the long railroads and there was no discrimination among them. Similar subsidies are used today in developing hte country's airlines and steamship services. But these subsidies are also free from discriminatory restrictions.

There are very large governmental subsidies of various kinds in our farm price support programs, and while these are accompanied by planting restrictions, the limits are based upon historical performance and not upon any such arbitrary maximum as the family-size farm.

While not subsidies in the strict sense of the word, vast benefits are given to the people of the country in our flood-control projects and rivers and harbors improvement works. These benefits go to the rich and the poor alike. A Federal flood-control dam affords equal protection, without discrimination, to the huge industrial plant and the small cottage. The harbors and aids to navigation provided by the Federal Government are used upon exactly the same terms by the small tramp freighter and the huge ocean liner. There is no discrimination in the dispensation of these benefits. All citizens are treated alike regardless of size, or ability to pay.

Rather than discouraging expansion by imposing artificial limits, these subsidies and other benefits are calculated to aid expansion and encourage success.

But when we look at the acreage limitation provisions of the Federal reclamation law we find that success is virtually forbidden, so that the only beneficiaries of the subsidy are those farmers who are content to live at a subsistence level. They must abandon all hope of expanding their operations within the reclamation project and they must either move out of the project or be content to struggle along on a hand-to-mouth basis for the rest of their lives.

This is the rankest kind of discrimination against the farmer. It imposes conditions upon him which are not duplicated in any other field of governmental activity. For this reason, the proper name for these provisions of the reclamation laws should be the "acreage discrimination" provisions.

An earnest effort was made in the last session of the Congress to obtain an amendment of these provisions which would lessen the discrimination and make it possible for a farmer in a reclamation project to achieve real success by enlarging his farm over the subsistence size arbitrarily dictated by the present law. This amendment was presented by Senator Barrett of Wyoming in Senate bill No. 2541. If adopted it would have incorporated into the Reclamation Law the Engle formula—so named because it was originally proposed some years ago by Mr. CLAIR ENGLE, who was then a Congressman and is now our newly elected Senator from California. Under the Engle formula the owner of excess acreage in a reclamation project would be permitted to receive project water for his excess lands, without agreeing to sell the excess acreage, by obligating himself to pay interest upon his share of the repayment obligation to the United States, thus foregoing the benefit of the interest-free financing which the reclamation laws make available to owners of nonexcess lands. This plan requires the farmer to give up the subsidy as the price for rising above the subsistence level—so the formula is still discriminatory in its effect upon successful farmers, but at least it does remove the existing prohibition against success.

This bill to adopt the Engle formula came before the Senate Subcommittee on Irrigation and Reclamation at hearings on April 30 and May 1, 1958, and it was debated extensively. However, the Senate subcommittee filed no report regarding the bill and took no action respecting it. The bill therefore died in committee upon the adjournment of the final session of the 85th Congress last August.

So the family-size farm is still with us. Even at the sacrifice of his share of the subsidy, the farmer in a reclamation project cannot escape this arbitrary limit upon his own success. He must remain at a subsistence level or get out of the project. This limitation is imposed upon him by ardent crusaders and well-meaning but poorly in-

formed do-gooders in the name of democracy and the American way of life. In my judgment, it is neither American nor democratic to hold a farmer down to subsistence farming. Rather it is paternalism and collectivism at their very worst.

Although the specific thrust of the limitation provisions is aimed at use of water, the immediate impact is upon title to land. By this means the Federal Government exerts control over land ownership patterns. To do so is to interfere directly with the State's own determination as to what land laws it shall apply to establish and stabilize its agricultural and industrial economy according to its own best judgment. Land laws are peculiarly and properly within the exclusive jurisdiction of the States. In fact, hardly any subjects of legislation are as deeply rooted in our doctrine of States rights as are the laws by which land titles are determined, land uses are regulated, land tenures are controlled, and land taxes are collected. Yet, through application of these provisions of reclamation law the Federal Government is imposing its own rules regulating land ownership patterns in many large areas of irrigated agricultural development.

This artificial control of the destiny of the individual farmer is the type of control which emanates from the Federal Government when it is given a lever and a fulcrum with which to exert its power. In this instance the lever is the Federal Treasury and the fulcrum is the farmers' need for supplemental water supplies. If the Federal Government's power should be augmented by taking over the ownership of substantially all of the remaining water resources of the Western States, the result would be an utterly unmanageable force which could compress most of our western agricultural economy into whatever mold the Washington bureaucrats might fashion.

Let us hope that none of us shall ever see the day when this shall come to pass. It can be avoided, but as for all our cherished freedoms, eternal vigilance is the price.

Thank you for your very patient attention.

One World and "The Winter Solstice"

EXTENSION OF REMARKS
OF
HON. MILTON W. GLENN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. GLENN. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I wish to include the text of an international broadcast over ABC network on the program "Message of Israel," delivered on Sunday, December 21, by my very dear friend, Rabbi Martin M. Weitz of Beth Israel Congregation in Atlantic City:

The winter solstice—December 21—is the shortest day and the longest night in the calendar of man. It is the seedbed of his deepest fears and greatest hopes, because of the shadow-long night, because the sun was at its lowest ebb. Primitive religions helped Mother Nature and Father Time along and tried to resolve this dilemma by festivals of light in one form or another. The Saturnalia of the Romans centered about the winter solstice to impart strength to growing things latent in the winter-night. Greeks as well as Romans, Persions as well as Mithraists, shared different observances in a common observation of the sun's return to strength, directly after the winter solstice. The Jewish Festival of Lights and the Christian Day of Nativity also suggest this endless search for light in a world of darkness, the solving of crises in a balance of forces. Crises have ever been central to the calendar of all faiths. Crises, as birth, maturity, marriage, death, are basic for the rites of the individual, while group crises are sources for the great days that aim for worldways—signsposts at the crossroads of space and time in the life of man.

The winter solstice suggests a balance of forces that may harvest light out of darkness and yield strength beyond weakness, even as a philosopher-poet phrases it, "Yea, though I stand on a heap of wreckage, I may touch the stars" or, "I love the stars too deeply to be fearful of the night."

What are current zones where religion at its ablest and bravest may throw a bridge of the spirit across the "no man's land" of contemporary crisis,. even as the winter solstice throws a torch of light across the year's deepest and longest night of darkness?

As darkness makes way for light in the winter solstice, so the no man's lands may become zones of safety, by a synthesis rather than antithesis of seeming opposites, by closing open gaps of conflict, as much as possible, and bridging them with cooperation, by surrendering "either or" to new priority of semantics in the landscape of language and for new values in human fellowship.

This balance may be sought and wrought first in striving for a synthesis of faith and health, of religion and psychiatry, so there be not a latent truce but a potent peace by them, a partnership to serve both better.

Judaism in general and progressive Judaism in particular may do much to undo the yoke of guilt, to reinterpret "sin" as "chet" ("miss the mark") for modern man to free us from creeping clinging infantile inferiorities and inadequacies, to create a climate for a spiritual Shmitah, a religio-therapeutic statute of limitations, a kind of sabbatical leave for sorrows, guilt, frustration, which we often try to drown only after they have learned us how to swim.

Varied are the interpretations in a bridging of religion and psychiatry. As Erich Fromm counsels us, "Man is not in danger of becoming a slave today as of a robot, for he has no joy while living in the midst of plenty. When man is bored he becomes vicious. When man counts so little, it is difficult for either religion or psychoanalysis to be effective." He specifies further, "Religion should aim to make a man fully human, to be able to unfold, to give love and devotion and in which psychoanalysis could play a role by helping man to overcome greed, folly, anger, fear and his illusions about nature, reality and himself."

The pathway across no man's land could be prepared with psychiatry as the bulldozer, to cleanse and remove the debris, while religion could be as a concrete mixer, with dependable fill-in of material for the precious traffic of life.

There is indeed worldwide need for much less anxiety and much more faith.

Luminous sentences from the Bible are equal to any modern prescription for mental health, as from book of Proverbs:

"If there be worry in the heart of man, let one talk it away; yea, a goodly word will even make it glad." The book of Psalms anticipates modern psychiatry when it intimates: "When I kept silence, my bones wore away through my groaning all the day long. Then I acknowledged my sin unto Thee, and my iniquity I have not hid. I said I will make confession concerning my transgressions unto the Lord, and Thou forgavest the iniquity of my sins." Both catharsis and transfer are implied in these outbursts, with God as Supreme Intelligence (in lieu of a human analyst).

Beyond soul probers of a generation ago, we find doctors and ministers, as well as psychoanalysts and religionists of our own days, together sharing a groping and growing awareness of a relationship between faith and medicine as they strive to serve the ill. The Journal of American Medical Association for April 13, 1957, emphasizes that "Today, medicine and religion are drawing together more closely than ever before. No longer as in the past, do the doctor and the clergymen find themselves in competitive roles. Instead the men in white and the men in black are aware of a relationship between faith and health." The confessional of the chaplain and the couch of the analyst have helped the patient more than ever before. The New National Academy of Religion and Mental Health—600 members of the American Psychiatric Association, 600 psychologists, as social workers and laymen, and 600 clergymen of all major faiths. This gigantic effort is paralleled by regional units, coordinating pastoral care and clinical experience.

As an Einstein beyond Copernicus, so a Fromm beyond a Freud has perceived new dimensions for the world within. The new interpreters concede the validity of ceremony for spiritual as well as emotional stability, the value of personal identity and integrity with rootage in the world, the life of faith in personal tragedy as synonymous with faith in life.

The great physician, Sir William Osler, once asserted, "Nothing in life is more wonderful than faith, the one great moving force we can neither weigh in the balance nor test in the crucible." The book of Proverbs synthesizes all this effort to balance faith and health in a simple prescription for life: "For as one thinketh in his heart, so is he. * * *"

Our second zone of safety—for more cooperation and less conflict is in a balance between individual and family.

Indeed we might paraphrase the prayerbook ala the Sabbath with, "Even as Israel has preserved the family, so the family has preserved Israel." In order to have the family survive and revive in the atomic age, religion in general and Judaism in particular may aid the family by stabilizing it on new terms even as on old values; by helping form institutes for marriage-counseling in our colleges, and even in our high schools; by dealing intelligently with such new phenomena as "going steady," "bird dogging," and other juvenile experiences; by advocating single standards of morality for men and women; by laboring for uniform divorce laws throughout the country, and in all other matters, so that the family be a preserving force not only for morality but for faith in itself in the atomic age. Marriage would not be merely a biologic mating, or a psychologic accommodatfon, or an economic partnership, but even more, a relationship through life as well as for life, sanctioned by the state, and sanctified by religion. Is it not strange that man could find no finer phraseology to beautify his most significant quest even for Deity than when he used family terminology, even for "fatherhood of God" and "brotherhood of man"?

A third zone where faith may bridge the gulf is in the emergent conflict of ruralism and urbanism. The vast network of suburbia (as overnight Levittowns), exurbia (as weekend estate villages), and interurbia (as blends of both along railroads or flightlines or turnpikes, a continuous settlement from, say, New York City to Washington, D.C.) is in itself a mobility of restlessness, a compulsive obsession for making money, a moving to and fro almost aimlessly for its own sake.

How may the new America have the standard of living—urbanism—balanced with a standard of life—ruralism? How may we spiritually integrate and physically

consolidate this mood for vast mobility, so that it be anchored, creative and responsive to its own needs here and overseas?

Here, too, a balance may be initiated by faith, to lessen the distance between Adam and atom, with vast slum clearance, atom-powered industry, garden-garlanded, school-ornamented, and culture-motivated communities, with a spiritual rather than secular base for our own permanent survival.

A final zone, for which faith may point a new way, is in the struggle of east and west. Religion may be as a lighthouse serving all points of the compass. We may live to see the ultimate reality in the cycle from war to peace, beyond blood-feuding by clans, wars by city-States and within States, dueling by individuals, crusades by religio-national empires, counteroffensives between world powers. * * * In the physical acceleration from atom to hydrogen to cobalt bomb, we may perceive the end of imperial unification, balance of power or similar techniques for control, and the beginning of world peace.

The more global, mechanistic, destructive, impersonal, war becomes, the less likely its final employment for victories. In the final analysis, there is naught but paralysis * * * for so-called victor or vanquished. The warless world may be ours—if we of faith, all over the world, will it, pray for it and work for it, free from military mentality from the past and for spiritual reality of the future, free from private animosity, major atrophy and general apathy—to employ military phraseology—for equations of war deeply laden within each of us.

"In quietness and in confidence shall be your strength. * * *" "If you confide not, ye abide not * * *" are echoes from the prophet of peace, Isaiah.

As an Albert Einstein at the end of days, and a Leo Baeck, upon liberation from a concentration camp, we, too, may share their unspoken meditations:

"For those that have mud on their feet, let us remove that mud * * * for those that have blood on their hands, let us cleanse that blood * * * for those that have fears in their hearts, let us remove those fears * * * for those that have tears in their eye, let us dry those tears."

Thus we blend faith and health, fuse individual with family, balance the rural and the urban, and bridge—through force of spirit rather than spirit of force—even east and west * * * even as the winter solstice, because of the length of its outer night, makes man shine with a profound inner light. Amen.

He's Purged Thousands of Armenians, Helped Wreck Armenian Freedom; He's No More Armenian Than Khrushchev

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following two articles from the January 15, 1959, issue of the Hairenik Weekly regarding our recent visitor to the United States, Soviet Deputy Premier Anastas I. Mikoyan.

This publication, Mr. Speaker, is sponsored by the American Committee for the Independence of Armenia of Boston, Mass. In view of the apparent aura of respectability and even good will with which Mr. Mikoyan has attempted to surround himself during his recent visit in this country, I think the inclusion of these two articles in the CONGRESSIONAL RECORD is of particular note. Since Mr. Mikoyan is himself an Armenian by birth, it is particularly interesting to observe the opinions that are held of him and his visit by his fellow countrymen in the United States.

HE'S PURGED THOUSANDS OF ARMENIANS, HELPED WRECK ARMENIAN FREEDOM; HE'S NO MORE ARMENIAN THAN KHRUSHCHEV

(By James H. Tashjian)

The pathological devotion to anyone or anything emanating from or smacking of the Soviet Union on the part of certain Armenian circles is being matched these days by an equally pathological fascination on the part of the American press and "intellectual strata" (to use an excellent Marxist cliche) of the abominable figure of one Anastas Mikoyan who is these days, according to Moscow, the Deputy Premier of the Union of Soviet Socialist Republics.

As a self-invited guest of our Republic, Mikoyan is coursing through our land, from the mountains, to the prairies, to the oceans white with foam, giving nickel bits of candy to American kids in supermarkets, looking intently and wisely at packaged American donuts, asking motel owners sagely why they are in business, taking 3-mile strolls on crisp Washington mornings, making studiously quotable wisecracks—and receiving billions of dollars of free publicity for it all—free propaganda for communism.

The Hungarians had the right idea.

Instead of being met and followed around dutifully by batteries of newspapermen and photographers, Mikoyan should have been met by people, as he was met by the Hungarians, aghast that our free land can admit and entertain this Moloch, this man who disgracefully enough—and only coincidently—bears the proud Armenian name of Mikoyan.

One wonders what exactly would have happened on these shores if, back in 1939 or so, Ribbentrop, or Goebbels, or Rosenberg had come here under the circumstances which have brought Mikoyan hither. And yet, as Congressman JUDD said, Mikoyan, "a man with blood on his hands" is in the United States, he is being lionized, he is being feted—he has been admitted into the society of dignified mankind.

He ought rather to be relegated to the status of a pariah. He ought to be an outcast among freemen. He ought to be shunned like the biblical plague. The Hungarians had the right idea. They harassed him at every turn, for he is a man to be harassed. He should be given no rest for his crimes against mankind. He is Anastas Mikoyan, the symbol of dictatorship.

Amazing and astonishing things have taken place from the moment Mikoyan set foot in the United States.

Some of the baldest lies compounded by the Soviet propaganda mills have been eagerly adopted by the American press.

Let's look at some of these:

1. Mikoyan was a theological student. This is a lie. Anastas Mikoyan was never a theological student. He studied for a time as a lay student at the Gevorgian Seminary, at Etchmiadzin, but never had the intention of going on to the priesthood. The idea behind this lie of course is to leave the thought in religious or Christian minds that Mikoyan, because of his theological educational background (which he never had), certainly has a kernal of goodness within him. Said a minister to us the other day: "Well, the fellow studied for the priesthood. He must have some good somewhere in him." Soviet propaganda hitting home.

2. Mikoyan is an old bolshevik, a hero of the ramparts at Baku, where he was wounded. An interesting lie which bears a bit of treatment.

In 1915, Anastas Mikoyan was a member of General Andranik's contingents fighting against the Turks. It was about that time that he first showed signs of espousing communism. Hauled before his commanding general because he had been agitating rebellion among the Armenian troops, Mikoyan was roundly beaten up physically by General Andranik. He deserted the Armenian Army and went off and joined the Communist revolutionaries. He says he went to Baku, was given important responsibilities there, was wounded in the street fighting. This is a lie, merely an attempt to weave a legend around the fellow. Here's the truth.

In 1918, the Turkish Army was advancing steadily on the city of Tiflis, Georgia, and the Armenian Army facing it was hard pressed to resist. Meanwhile, the Armenian leaders of heavily Armenian-populated Baku, the great oil city on the Caspian, were making all attempts to keep the city in a state of quiet so that the Armenian forces before Tiflis would not have to detach contingents to fight in Baku. Armenians, Georgian, and Tartar leaders in Baku had effected a sort of uneasy truce with the large Turkish population of Baku. It was profitable to the Armenians, and to the Allies, to whom Baku's oil was important, that Baku be not made a battlefield.

There was another group in Baku which felt differently about things—the Communists. It was to the advantage of the revolution for Baku to become a battleground.

One day, the people of Baku awoke to reports of gunfire. In order to provoke the battle they so wished, the Communist bands, led by an Armenian outcast named Shahumian, had crept up on the Turkish wards and had fired on the people there. The Turks, itching for a fight anyway, had fired back. By the time the Armenian, Georgian, Tartar confederation acted to stop the fighting, it was too late. Baku was thrown into a violent holocaust.

Mikoyan says he entered Baku just before the fighting started and served at the barriers. Most Armenian leaders who knew the Communist leadership cabal say they never heard of the fellow, never saw him, never knew he existed. If he fought, he fought as an insignificant guerrilla in the streets. Few remember him, no one remembers his having been wounded; he never played a significant role in Baku. He is a fake, a forgery; he is not an old Bolshevik; he is a comparative newcomer, an opportunist who has pulled himself up through the ranks by his own bootstraps, acting the perfect dutiful Communist lackey of whatever man at the moment holds the U.S.S.R. reins.

He is a great practicing Armenian. Wrote one eager columnist: "Perhaps the power and stature of the man is shown above all in his loyalty to his native Armenia. He has never deserted it. He has always, in the teeth of heavens knows what grudging opposition seen to it that the Armenians have been, by Soviet standards, well looked after * * *."

How silly can we get? Anastas Mikoyan has not been an Armenian since he deserted the Armenian Army. When a man becomes a Communist, he loses his nationality. He adopts a new nationality and a new religion. Anastas Mikoyan is as much an Armenian as is Khruschev foday, or as was Beria or Stalin yesterday; that is, he is a Communist, and a Communist cannot be an Armenian; nor can he be Hungarian, American, French, Irish, or anything other than a Communist.

Rather than being the great practicing Armenian, Mikoyan has brought terror and hardship to his people. Here are but a few

examples of the "Armenianism" of this Moloch:

Mikoyan was the right-hand man of Lavrenti Beria when, in 1936, that murderer entered Armenia to organize the Armenian phase of the great U.S.S.R. purges which took the lives of thousands of intellectuals, leaders, and innocent people. As Beria's aide, Mikoyan devotedly executed his responsibilities—liquidating thousands of the people whom he is now supposed to adore.

It is now known that Mikoyan himself was personally involved in the assassination of Aghasi Khanchian, the Secretary of the Communist Party of Soviet Armenia, whom Beria slew in Tiflis for his temerity in demanding that the Soviet Government give Armenia a fair deal in the matter of territorial distribution and the right to retain for native use more of the products of Armenia (see Hairenik Weekly, Dec. 25, 1958).

It is also known today that Mikoyan helped actively to destroy the Independent Republic of Armenia, of 1918–20, by his behind-the-scene maneuverings in Moscow during the crucial days of the Republic.

When the delegation of the democratic state was in Moscow on a formal mission to ask aid against Turkey, Mikoyan is known to have advised his Soviet comrades to reject Armenia's request. In fact, he is known to have advised the occupation of Armenia by a joint Soviet-Turkish force—which took place November 29, 1920, and resulted in the Sovietization of Armenia.

When Mikoyan visited Armenia some years ago, speaking in Russian, he advised the Armenian people too to make Russian their everyday tongue. He praised the great Russian people to the skies.

Now there is a point here that we ought to belabor a bit. Anastas Mikoyan, they are all telling us these days, is a really big man in the Soviet Union, and has been for some time. He is, we are also told, always mindful of conditions in Soviet Armenia, and is incessantly trying to aid the land and its people.

Again how silly can we get?

If Mikoyan is the man of influence he appears to be in the U.S.S.R., how is it then that Armenia has been considered by recent foreign visitors there the poorest country we have seen? Harry Schwartz, of the New York Times was aghast at the poverty of Armenia; Christian Pineau, the former Foreign Minister of France, was appalled at the destitution of the country; the American builders' commission came back and told the people of America that Armenia was a veritable slum under Soviet rule.

"Big shot" Mikoyan certainly couldn't have spent too much time trying to straighten things out down in his beloved Armenia—which he visits once every 3 or 4 years on a special propagandistic occasion—such as when he is up for reelection in one of those curious Soviet demonstrations of the persecution of the mechanics and principles of democracy in action.

Mikoyan is an admirer of the great Russian central cadre of the Soviet Communist movement, and let's make no bones about it. There are too many Mikoyan quotes on record in this respect to here adduce. He is simply a great Russian (Mikoyan disdains speaking Armenian any more, once told an American newspaperman in Moscow that he has forgotten the language, but who needs Armenian in Russia anyway?)

He wouldn't have lasted through these years of violence in the Soviet Union if he were anything but a lover of the great Russian battery of communism.

Which makes the little anecdote told by a gullible American newspaperman even more remarkable for its naivete.

Mikoyan once asked some American press representatives in Moscow why they thought that each evening invariably he visited Joseph Stalin. They didn't know. Well, he said, "Stalin and me meet and drink a toast. And do you know what toast we always drink? We lift our glasses up and shout 'To hell with these so-and-so Russians.'"

Nonsense. A perfectly amiable newspaper story, but hardly credible. One cannot imagine the Russophile, Joseph Stalin, proposing the above toast, even in private, when, on May 24, 1945, at the great Kremlin banquet for Red Army commanders, he arose and proposed a different toast:

"I should like to drink to the health of our Soviet people, and first of all, to the great Russian people. I drink first of all to the health of the Russian people because it is the most outstanding nation of all the nations forming a part of the Soviet Union * * * it has earned a general recognition in this war as a leading force of the Soviet Union among all the peoples of our country. * * * Hail the great Russian people, the saviors of the Soviet state." (See Pravda, May 25, 1945.)

Those who were present at the banquet say that Mikoyan immediately seconded this eulogic toast, as the bones of 40,000 Armenian soldiers rotted away in the death arena of the Crimea.

As Americans of Armenian parentage, we especially ought to keep our wits about us in the matter of this Mikoyan person.

We ought to come to our senses as a matter of fact. It simply is not enough for a person to be an Armenian for us to accept him into the fold, and even go easy on him.

It is awful, incredible, awesome, and frightening, for instance, when any Armenian publication breaks out with the front page news welcoming "Mr. Anastas Mikoyan, the great Armenian official, to the United States"; or when a false Soviet Armenian Foreign Minister, an MVD agent named Balabek Martyrosian, one of the Soviet secret police who loused up the lives of our people in the Lori district of Soviet Armenia, comes to the United States on a mission, rather than proposing receptions and banquets for such a man, we ought to shun him like the plague, at least shun him if we can't get up the necessary courage to expose the rascal for what he really is.

We wonder, said a columnist of one of our pro-Soviet organs, whom Mikoyan would visit if he were to visit Watertown. We have no doubt whom Mikoyan would visit.

But meanwhile, let the American and the Armenian press stop imputing in this man and his story imagined virtues. Anastas Mikoyan simply does not warrant a single kind thought. The quicker he leaves America the sooner the air will clean, and the safer we all will be.

EDITOR OF ASBAREZ NEWSPAPER RECALLS HAVING MET GUEST ANASTAS MIKOYAN

(By John M. Bernier)

If Soviet Deputy Premier Anastas I. Mikoyan includes Fresno on the itinerary of his trip to the United States it is doubtful that he will drop in on Andre Amourian to talk over old times.

Amourian, the editor of Asbarez, an Armenian language newspaper published in Fresno and Mikoyan attended a university in Etchimadzin, Armenia, in 1917.

However, since their student days when they argued politics in the coffee shops near the Armenian Academy the men have been political foes. And Amourian suspects that ending up in a Soviet prison in 1943 may have been the work of Mikoyan.

Mikoyan is scheduled to arrive in the United States tomorrow for a 2 weeks visit. It has been reported he may include California in his tour.

Most persons who knew Mikoyan at the academy, Amourian said, expected that someday he would become a Communist leader. At the academy Mikoyan was one of the leaders among the Communist students and Amourian headed the Dashnak, the Armenian Revolutionary Federation. The federation's aim is the establishment of a free Armenian Republic.

"Mikoyan arrived at the academy about February 1917," the Fresno editor recalled. "He was with a group of other Communist students who had been studying at another school in the Province of Georgia. He moved into the same dormitory where I was living.

"The thing I remember particularly about him was that he was such a good speaker. He spent more of his time in classrooms and outside arguing in favor of Marxism. Fortunately we had some good Dashnak speakers who could keep up with him.

"Mikoyan had a hot temper and he had difficulty controlling it when he discussed politics. This quick temper may have been one of the reasons he ended up in the Communist movement.

"Previously he had been a Dashnak and served as a volunteer in 1915 in the army of the Armenian national hero General Antranik. He got in an argument with the general and the general struck him. Two years later he appeared at the academy a dedicated Communist."

Amourian describes Mikoyan as full of energy and one who never tired of debating politics.

When the Russian Revolution broke out in November 1917, he recalls, Mikoyan and the other Communist students went to join the fight in the Baku oil fields.

At this time he was about 21 years old.

This was the last direct contact Amourian had with the Russian leader. The newspaperman's work for the Dashnak movement took him to Iran and in 1943 the Red Army occupied part of that country. Following on the heels of the first Russian units were the agents of the Soviet secret police.

Amourian said he was thrown into a Russian prison by the secret police. At the time, he declared, he was accused of plotting Stalin's assassination. Two years later Amourian was released through the intercession of the United States and Iranian Governments.

He says he does not know for certain, but he believes Mikoyan may have been responsible for his arrest by the secret police.

Mikoyan, like Amourian, is of Armenian descent but the Fresno newspaperman says the Soviet leader is rarely known to speak Armenian.

Amourian said that according to a story which has circulated among Armenians throughout the world, the last time Mikoyan spoke in his native tongue was years ago when he had too many vodkas at a banquet in the Rumanian Embassy in Moscow.

Mikoyan was born in Sanahin, a small town in Soviet Armenia, but according to Amourian, he has no particular feeling for the Armenian people and usually will not admit he is Armenian.

Amourian was sent to Fresno from Iran in 1953 as the editor of Asbarez and a fieldworker for the Federation.

His memoirs now are being translated into English from Armenian and will be published in about a year. The book will tell of Amourian's lifelong efforts to help to create a free Armenian republic.

Amourian and his wife now live on their ranch near Madera.

Castro's Blood Bath for Cuba

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mrs. ST. GEORGE. Mr. Speaker, with our usual inspired acumen, we seem to

have slightly misjudged Castro and his mission. He hardly seems to be the knight in shining armor, fighting for the ideals of pure freedom, depicted in our press and by many of our revered columnists.

The following article by a very fair and well informed writer on foreign affairs, Mr. Constantine Brown, raises the curtain and gives us an accurate and slightly terrifying picture of reality.

As these startling errors of judgment of ours keep recurring, one begins to believe the words of the late Senator Huey Long when he said, "You can sell any ideology to Americans by calling it Democracy."

The article follows:

[From the Evening Star, Jan. 14, 1959]

CASTRO'S BLOOD BATH FOR CUBA—MORSE CITED AS FIRST SENATOR TO PROTEST MASS EXECUTION OF BATISTA OFFICIALS

(By Constantine Brown)

Senator WAYNE MORSE, of Oregon, has the distinction of being the first Senator to raise his voice publicly against the blood bath which has been going on in the new democratic Cuba, where government officials under the regime of ousted President Batista have been murdered in batches.

It is also a strange reflection on modern political ethics that our Government not only rushed to recognize the Castro regime but has not raised its powerful voice against the recent wholesale massacres.

Modern diplomacy apparently requires that governments even formed by murderers be taken to our bosom. It is a quite different frame of mind from that at the turn of the century. When the palace guard in Belgrade murdered King Alexander Obrenovitch and his wife, Draga Machin, all the Western Governments withdrew their diplomatic representatives from the Serbian capital. And when the Okrana (the secret police of Czarist Russia) organized a pogrom in the Ukraine, also at the turn of the century, we withdrew our Minister from St. Petersburg for about 7 months.

In more recent times we refused to recognize the bloody Communist regime in Russia for 16 years and President Roosevelt recalled our Ambassador to Nazi Germany, Hugh Wilson, because of Hitler's ruthless persecution of the Jews, and left only a chargé d'affaires in Berlin until December 1941, when Germany declared war on us.

It may be that in those days when the administration were not scared of complications we were more justly called the leader of the free world than we are today. We stood for principles and did not merely talk of how nice they are.

No sooner had a Communist-inspired military junta murdered and mutilated the bodies of King Faisal of Iraq and his advisers than we rushed to recognize the regime of murderers. It was explained in Washington that it was necessary to obtain the friendship of the new regime in order to forestall its going completely to either Nasser's United Arab Republic or the Kremlin. According to the latest reports from Baghdad, our rushing did not do much good for ourselves and our remaining friends in the Middle East.

Similarly, we rushed to recognize the new Cuban regime created by Fidel Castro. Off the record explanations in Washington are that we did so because the Cuban rebels replaced the dastardly dictatorship of Batista.

Fidel Castro used to have a well-established reputation as a strong Communist sympathizer who organized the 1948 Bogota demonstrations against Gen. George C. Marshall. His brother Raoul was described as an outright Communist who had studied in Moscow the MVD techniques of guerrilla warfare against the forces of the capitalist dictators. This appeared to be the information available to the highest official quarters in Washington before Castro started his rebellion and before it seemed that he might succeed. Now all of a sudden he has been declared by the State Department to be lily white. There was nothing really tangible to go by, it was said, to show that Fidel had a hand in the anti-American uprisings in Bogota in 1948 or that Raoul had done anything more than have a good time in the Soviet Union.

The recent wholesale execution of Batista agents, of many members of the regular armed forces of the previous regime, of many other individuals whose greatest guilt was that in order to make a living they had become members of the regular police force, and others against whom the rabble which joined the rebels had scores to settle follows clearly the Russian Communist pattern.

The Communist Party which has been banned in Cuba has not only been permitted to reappear on the political scene but in the 12-man group appointed by Castro's yes man, Provisional President Urrutia, to supervise labor conditions and new legislation, five members are Communists (either Cuban or imported from Venezuela).

While the policy that we must learn to live with Communist governments which are in the eyes of our policymakers uncommitted to international communism is being argued, there is one thing that cannot be debated: That the American Government must never remain indifferent when wholesale massacres and executions without trials (except kangaroo courts) are taking place in a country whose regime we have rushed to recognize.

Richard Cardinal Cushing

EXTENSION OF REMARKS

OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks, I include a noteworthy article from the Jewish Advocate of January 8, 1959, entitled "Man of the Year," and editorials of January 10, 1959, from the Boston Herald and Boston Record-American. The Jewish Advocate has conferred its Man-of-the-Year award upon Richard Cardinal Cushing of Boston. Boston is proud that a Jewish newspaper has thus saluted a great Catholic prelate. Citizens of Boston and New England will say "well done." Richard Cardinal Cushing is a distinguished son of Boston, born and raised in that city. His long career as Archbishop of Boston was noteworthy not only for outstanding service to his church, but also for service to the community.

[From the Jewish Advocate, Jan. 8, 1959]

MAN OF THE YEAR

In appreciation of his contribution to interfaith understanding, civic progress, and human betterment, the Jewish Advocate bestows its second annual Man of the Year Award upon Richard Cardinal Cushing of Boston.

First recipient was the illustrious Bostonian, Ralph Lowell.

In making its designation this year, the board of editors of the Advocate was reminded of the magnificent tribute to noble manhood presented to the world by William Wordsworth in his famous poem, "Character of the Happy Warrior." The poet interprets life as a battle—not necessarily a military expedition to expand territory or increase the power of an aggressive nation; not as an assault against the lives or liberties of innocent people, but as an endless and decisive struggle against every type of evil from which the human family suffers. The happy warrior is the heroic soul who meets and masters intolerance, crudeness, deceit, vanity, and violence.

Although writing more than 150 years ago, Wordsworth, with prophetic vision, might [illegible] been thinking of Richard Cardinal Cushing, who is truly a superbly generous spirit. His human impulses make his mind responsive, his heart sympathetic, and his hand helpful to the appeals and sorrows of others.

Cardinal Cushing was born 63 years ago in South Boston, reared and educated in this city, and spent his entire priestly life within a few miles of his birthplace. But there is no place in the United States—and few places abroad—where his zeal, charity, and genuine love of people do not inspire a similar love for him.

In a sense, Archbishop Cushing is many men.

As a churchman, he represents the fullness of the Catholic priesthood. His social thinking has given him place among the most vigorous prelates of the world.

As an orator, he is renowned for his preaching literally everywhere in this country and in Europe.

As an administrator, he ranks with the leaders in business and the captains of industry; his jurisdiction includes a million and a half Catholics and hundreds of hospitals, schools, churches, and homes of every description, each of which receives his personal attention regularly.

In academic circles, he holds the doctor of laws, of humanities, of canon and civil law, of philosophy, of letters, of theology and divinity. Nations honor him as count, knight, commander, and honorary citizen. He is proud of titular memberships in drum and bugle corps, in the Street Railwaymen's Union and in the Boy Scouts.

But his greatest role is played as a man of God. It is from this well that he draws his energy and incredible zeal. He is the administrator of the great Boston See, but his influence and leadership have not been restricted by arbitrary boundaries. Reason, human values, and religious faith have permeated his life and led him to crusade for the rights of people, little people, many of whom have been outside his own church.

His untiring labors for humanity and its welfare have added immeasurably to our community's riches in schools, hospitals, special homes and similar institutions. His personal drive and ceaseless devotion to brotherhood and general goodwill are worthy of imitation everywhere.

His personal appearance and address at a goodwill dinner of the Brotherhood of Temple Ohabei Shalom was a milestone in community relations. He is an ardent supporter of the Massachusetts Committee, Catholics, Protestants, and Jews.

His forthright statement that there is nothing in Catholic doctrine that should adversely affect the attitude of the Christian towards Jews was an inspirational pronouncement. Speaking at the 75th anniversary convention of the Union of American Hebrew Congregations when it met in Boston, he declared:

"There are many ignorant or malicious things sometimes said about our beliefs concerning Christ and their effect on the attitudes of Christians toward Jews. I ask you not to believe those things; they are lies and they are said to divide us. No man can have my faith concerning Christ, his life

and death, without loving him and loving the people who produced him, the Jews. No man could have my faith concerning Christ, without desiring to be more like He was and therefore seeking always to serve, to help, to befriend all men without exception—white, black, gentile, Jew. Always remember that a Catholic bishop took time from a busy day to come and tell you that. I did send a representative to assure you of my official friendship. I would not send a scholar to prove that our doctrines do not make us your enemies. I come myself to pledge my personal affection and officially to declare there is nothing in my faith to make us enemies of you. It is all the other way. I can and do pledge to you the friendship of my people."

In addressing the Massachusetts branch of the Jewish Labor Committee, Cardinal Cushing offered a formula for peaceful living calling for "the harnessing of forces of the spirit, power of the holy writ, the electrons of the Golden Rule and the Ten Commandments. After reviewing the crucial social and economic problems of our times, he pointed to the Ten Commandments "which are designed to meet our most modern needs," asserting "there would be no religious problems if the rulers of nations would observe the first three commandments. The problems of economic and personal relations among individuals are cared for by commandments 5, 7, 8, and 10. The 4th, 6th, and 9th care for the home unit."

The conferring of the cardinalate on the archbishop of Boston last month was an exalted honor for the diocese of Boston and for its devoted people, but was no less an honor for its illustrious spiritual shepherd. Cardinal Cushing is not a great man because he has been elevated to the sacred college; he is a member of the sacred college because he is a great man.

By the same traits—greatness of heart, mind, and soul—by which Abraham Lincoln raised himself from log cabin to White House, so has Richard Cardinal Cushing risen from poor boy to prince of his church.

He is held in affection not only by his religious kinsmen, but by all who have a grateful acquaintance with the fruits of his work.

If the cardinal's noble thoughts against racial antipathy and creedal strife could be put into the hearts of every man and child, then verily would we arrive at the long overdue recognition that we are all children of one loving Father to enjoy the pleasantness of brethren living together in peace.

[From the Boston Herald, Jan. 10, 1959]

We are proud of our community today, very proud. We are proud because a great Jewish newspaper has saluted a great Catholic prelate as the man of the year.

The Jewish Advocate has served the cause of tolerance nobly in thus honoring that indomitable fighter of intolerance, Richard Cardinal Cushing. And seldom has this ardent champion of human love and understanding been so aptly described as in the Advocate's tribute:

"Cardinal Cushing is not a great man because he has been elevated to the Sacred College; he is a member of the Sacred College because he is a great man.

"By the same traits—greatness of heart, mind, and soul—by which Abraham Lincoln raised himself from log cabin to White House, so has Richard Cardinal Cushing risen from poor boy to Prince of his Church.

"He is held in affection not only by his religious kinsmen, but by all who have a grateful acquaintance with the fruits of his work.

"If the Cardinal's noble thoughts against racial antipahty and creedal strife could be put into the hearts of every man and child, then verily would we arrive at the long overdue recognition that we are all children of One Loving Father to enjoy the pleasantness of brethren living together in peace."

[From the Daily Record, Jan. 10, 1959]

It was a nice gesture and a richly deserved one, for the Jewish Advocate, an important Boston publication, to name Richard Cardinal Cushing as the recipient of the Advocate's Man of the Year Award.

In making this designation, the board of editors of the Advocate was reminded of the magnificent tribute to noble manhood presented to the world by William Wordsworth in his famous poem, "Character of the Happy Warrior."

The poet interpreted life as a battle—not necessarily a military expedition to expand territory or to increase the power of an aggressive nation; not as an assault against the lives and liberties of innocent people, but as an endless and decisive struggle against every type of evil from which the human family suffers.

The Happy Warrior is the heroic soul who meets and masters intolerance, crudeness, deceit, vanity, and violence.

In all the land there is no finer personification of this type of leader than Cardinal Cushing, whose zeal, charity, and genuine love of people have certainly made America a better place for persons of varying races, creeds, and faiths.

The Fourth "R"

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article by Peter B. Bart recently appeared in the Wall Street Journal. It was described by a constituent of mine, who has children in the public school system, as most disturbing.

While the article deals specifically with a situation in New York City schools, there is no doubt that the same situation prevails throughout most of the country.

We are penalizing the thrifty and the hard working, and while the children who cannot afford proper food and transportation must be given it, there seems no good reason for putting them above their fellow students who are self-supporting.

The article follows:

THE FOURTH "R": A SCHOOL ENCOURAGES PUPILS TO GET ON RELIEF EARLY AND STAY ON

(By Peter B. Bart)

NEW YORK.—"Our school has a more varied curriculum than you may imagine," says the small, graying teacher sipping coffee in the cramped little room her school provides for coffee breaks. "We teach the three 'R', all right, but our most effective training is in the fourth 'R'—relief chiseling.

This may sound like a rash statement, but the teacher advanced it in deadly earnest. Her view, which she shares with many of her colleagues: That the New York City public schools inadvertently train their pupils in the art of living off the relief rolls. "By the time they finish elementary school, many children already have gotten the idea that the city somehow owes them a living. Indeed, the schools seem to reinforce this attitude," explains the teacher.

How so? Basically, the problem lies in the ways in which the schools channel different forms of public assistance to the children. If a child asks for free lunches, for example, he automatically gets them—no questions asked; in fact, he gets a better meal served under better conditions than children of self-supporting parents.

"No one questions the overall idea of helping children whose parents cannot properly provide for them," observes another teacher. "What irks us is that, in trying to remove the stigma of relief, the schools actually have made it seem desirable and attractive—something to aspire to."

BUSES, MILK, SOUP

Visit this teacher's school on a typical schoolday and you sense what she means. First thing in the morning, for example, a special school bus picks up a large group of children living in a city low-rent housing project (many of whose families are on relief) and totes them the half mile to school. Other children who do not live in the project and whose parents are not on relief must walk to school, even though they, too, may live a good distance away.

In midmorning teachers call a break and distribute milk to the children. Pupils requesting free milk may get it without their classmates knowing—no questions asked. Others pay for their own milk.

At noontime, a majority of the children crowd into the dimly lit auditorium where they eat sandwiches brought from home—the school has no cafeteria big enough to accommodate all of them. But those children who request free lunches receive hot soup plus as many sandwiches as they desire plus ice cream or cookies for dessert. This meal is served in a comfortably furnished, sunny cafeteria at city expense.

Nor is this all. Any child asking for free medical aid, free dental care or free eyeglasses is referred by his teachers to the school nurse who in turn refers him to nearby clinics where he may get the needed services at no cost. And children requesting free clothes may choose their garments from a storeroom provided for this purpose.

In each instance, teachers are instructed to keep secret the names of children receiving these various types of public assistance. Milk money, for example, is collected in a carefully devised manner so as not to embarrass children getting free milk. "But," observes one teacher, "there's really little chance of embarrassing anyone. You never see any embarrassment when the free-lunch children go to their cafeteria. If anything, other children are a little envious."

Of course, no teacher begrudges a free meal to a needy youngster whose parents truly cannot feed him properly. But many teachers at this particular school do believe that these gratuities can be overdone.

FREE MEALS, $20,000 HOME

Moreover, they resent the stern admonitions from their supervisors not to investigate requests for free meals and the like. "School officials tell us firmly we should not question the children about any of these matters," says a teacher. "Yet no one in authority does any questioning either. I know of one boy in my class whose parents own a $20,000 house near school, but who asks for and receives free milk and free meals. If I ever talked to him or his parents my meddling would be considered with disfavor by my supervisors."

Concedes the principal of this school: "I know lots of children get free meals and free clothes who don't really need them. But I'm not supposed to check up on them. If the parents sign a note saying, for example, that they have two children and that the family weekly income is under $67, or that they have 10 children and their income is under $150 a week, we just have to take their word for it. No one even knows whether the 10 children are really theirs."

SOME ARE EXCEPTIONS

To be sure, not all schools conform precisely to the setup of the school in question. A few of the schools, for example, have cafeterias in which all the children may eat their lunches in comfort.

But most generally lean over backward to keep from bruising the sensibilities of children receiving public assistance. And, says our teacher friend: "The schools completely succeed in this mission. At the same time, however, they get children accustomed to being on the public dole—and to liking it. I wonder how many of the children leave elementary school with the idea that eventually they may try out for the really big game—adult relief checks."

New York's total public assistance grants, it's noted, already have increased by 40 percent over the last 10 years to $167.1 million despite the fact that the city's population has remained fairly stable. If these teachers are correct in their analysis, that 40-percent increase should be even greater over the next 10 years, thanks to the schools' training in the fourth "r."

Communist-Line Advances in United States, 1958

EXTENSION OF REMARKS

OF

HON. FRANCIS L. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Richard Cardinal Cushing:

[From the Tablet, Jan. 17, 1959]

COMMUNIST-LINE ADVANCES IN UNITED STATES, 1958

The year 1958 will be recorded in the annals of atheistic communism as a year of great progress within the United States.

There are many in the United States and, among them, a number of powerful voices, who contend that the Communist Party is practically dead in this country. We are told not to worry about that question anymore, but merely to prepare ourselves against military assault from outside. Those who argue in this fashion—there are some among them who even go so far as to argue that we should agree to every Soviet demand—point out that within America the Reds have suffered losses.

FALSE MEASURE OF STRENGTH

They no longer stage their huge Madison Square Garden meetings, where formerly at least 25,000 Reds and their friends and supporters assembled on various occasions. They have had a loss in membership partly because of Government prosecutions and partly because of the revisionist split in their ranks. They no longer conduct the Daily Worker, which was an important telegraph agency of the conspiracy to its members and sympathizers. They must now be content with the weekly edition of the Worker.

All of these contentions fail to note what the Communist Party really is, how it maintains itself, and what is the purpose of its operation. These judgments do not include a true measurement of Communist strength, which is well stated by Stalin (citing Lenin) that the party is strengthened by purging itself of opportunist elements.

They do not embrace the true understanding of the operations of the party, which were so well expressed again by Stalin when he said that up to the time when any particular country can be overthrown by violence the party must advance the Communist line. It must do this, mark you, by making "transmission belts" of as many non-Communist agencies as possible, using them to advance the Red line as though it were something non-Communist.

The true estimate of the strength of the Communist Party is to be gaged from its impact on American opinion—on how much it has succeeded in weakening our opposition to Soviet aggression. What we must ask ourselves constantly in this respect is: How far and in what features has the Communist line made progress in the views and judgments of our Nation? When we answer that question honestly we will see that we have no cause for satisfaction. By that yardstick the Communist Party of the United States is much stronger than is generally realized.

REDS ADMIT GROWING INFLUENCE

We have testimony to this effect from the chief organ of the Kremlin to its followers throughout the world, the December issue of the "World Marxist Review". It pays a warm tribute to the work of the party here, its struggle against revisionists, its regrouping of its ranks, and the extension of iron disciplines among its members and to its growing influence in American life.

It concludes by stating that the American Communists "are making a major contribution to the ideological struggle of the world forces of progress, democracy, and socialism, against the forces of obscurantism, reaction, and imperialism." Remember these are the words of the chief voice of the Kremlin in the international field.

Moscow views the Communist Party of the United States in this favorable light because that party has remained loyal to Moscow and has got rid of its so-called revisionist element. It has from the Communist viewpoint strengthened itself by getting rid of opportunist elements, so that it can dedicate itself fundamentally to the final aim of overthrowing this Government by violence, and, in the meantime, fully and faithfully forwarding the Communist line as Moscow initiates it.

In the meantime, the revisionists, represented by a former editor of the Daily Worker, still cling to their hope of establishing socialism in America and by indicating that the party is weak, actually help it to deceive a considerable section of the American people.

When this Communist Party of the United States looks back over the year 1958, it can record that the following important features of the current Communist line laid down by Nikita Khrushchev in 1956 at the 20th Congress of the Communist Party of the Soviet Union—and taken up by the Communists here—have been successfully advanced in the United States:

1. That under the name of "civil liberties" practically all our internal security safeguards under the law have been abolished by decisions which the Communists have hailed. That means that the campaign initiated by the Communist Party in 1950 against any curbing of its conspiratorial activities—and given new stimulus by Stalin's call of October 1952—has been almost 100 percent successful in paralyzing the United States so far as internal security goes.

2. That the fifth amendment has been used effectively to conceal the extent of the conspiracy in the United States by shielding witnesses in Government cases or before Congressional committees from testifying to the truth as to their associations in the Communist conspiracy.

SUPREME COURT DECISIONS

3. That all the laws of the States against sedition and subversion have been nullified. This was decided by the Supreme Court in the case of Pennsylvania versus a notorious Communist agent. It was then definitely indicated that all of the anti-sedition laws of the States are unenforcible.

4. That the right to travel for the Communists freely back and forth to Moscow and to other places, to lay plans for diminishing the reputation of the United States abroad and for establishing lines of communication with the capital of world communism, has now been firmly and fully established. This complete removal of the bars on the right to travel for the Communist conspirator has led Roderick L. O'Connor, Administrator of the State Department Bureau of Security and Consular Affairs, to warn the Congress and the Nation of what is taking place against the interests of the United States.

5. That this paralysis of our internal security, which leads to carelessness on the part of the American people concerning what is really transpiring to the peril of this Nation, is accompanied by a new smear attack on J. Edgar Hoover, Director of the Federal Bureau of Investigation, and against that Bureau itself. It is also supplemented by a new campaign for the emasculation of congressional committees against subversion.

The southern California committee of the American Civil Liberties Union is proudly pointed to by the Worker as succeeding in obtaining 100,000 signatures for the abolition of the House Committee on Un-American Activities. This indicates how effective has been the cry of the Communists and their sympathizers that civil liberties are violated when such committees or the FBI endeavors to protect the United States from subversion. As a matter of fact, it is only the question of the Communists and those cooperating with them which is involved in the work of these committees or of the FBI. It is a complete distortion of what is taking place to indicate that the liberties of anyone else is at stake in their work.

6. That the great campaign of the Communists for the breaking down of American vigilance by means of cultural exchanges, so emphasized by Khrushchev in his famous report of February 1956, to the 20th Congress of the Communist Part of the Soviet Union, has now reached a high point of development. This acquiescence to the Communist line demanding full cultural exchanges has gone to the extent of importing Soviet films into this country and thereby breaking down more resistance to Red propaganda from abroad.

THE MIKOYAN VISIT

7. That the concomitant campaign by Soviet Russia and its agents for East-West trade has now reached the point where many of the trade barriers toward building up Soviet strength have been broken down for the free world. This whole development has been crowned by the coming to this country of Anastas I. Mikoyan, Deputy Soviet Premier, for the purpose of persuading the United States to build up Soviet defense, thus making it more imperative that we, in turn, build up a higher wall and higher taxes for our own defense.

What is particularly ironic about the Mikoyan visit is that he has been touted as the originator of the fraudulent down-grading of Stalin, whereas in reality he was the chief creator of the Stalin cult. In 1939 he published a tribute to Stalin, calling that tyrant infallible and applauding his crimes.

In denouncing Stalin as a bloody tyrant before the 20th Congress of the Communist Party of the Soviet Union in 1956, Mikoyan preceded Khrushchev. This is the same Mikoyan who wrote the article "Stalin: The Lenin of Our Day," glorifying "Stalin: The Infallible" on his 60th birthday in December 1939. Here are a few quotes from that article:

"Our country and toiling humanity all over the world honor their leader, father and friend—Comrade Stalin."

"He is the leader of oppressed humanity the world over."

"He created the Marxist-Leninist doctrine of the role and significance of the state in socialist society and under communism."

"He eradicated the remnants of capitalism. He is the personification of profound love for mankind. He is a man of iron logic. He is ready to smash every obstacle for the sake of emancipating mankind. He is the personification of fearlessness, of indomitable will for struggle and conviction that communism will triumph."

The foregoing in a dozen pages of sickening flattery was written in December 1939, 4 months after the signing of the Hitler-Stalin Pact and the beginning of World War II and 3 months after the rape of Poland by Stalin and Hitler.

Mikoyan, who survived under Lenin, Stalin and Khrushchev, had his share in the bloody crimes of each. These included the massacre of his own free Armenian Republic, the Ukrainian massacres of 1932–33, and the Hungarian massacre of 1956.

Mikoyan's visit is unofficial. He has been free from a lot of protocol, and it is doubtful if he could have received more attention from the press were the call an affair of state.

HIS PROPAGANDA LINE

His excuse for coming here was that he wanted to confer with the Soviet Ambassador to the United States, Mikhail Menshikov. But he has talked with many Americans, almost all of them highly placed and some of them top officials.

His itinerary has taken him across the country. The press has reported that he has told influential Americans that there should be more contacts at all levels between the Russian Communists and Americans; that Moscow and Washington should not wait to agree on an agenda but should get together and talk; that it was not the Soviet regime but his fellow intellectuals that browbeat Boris Pasternak for writing "Dr. Zhivago," which won the Nobel prize; that the West should not use such words as "liberation" and "satellites" in referring to Soviet Russia's neighbors; that the Russian people would not think of overthrowing their present regime; that Stalin did centralize power too much but that the present Red leaders have developed a decentralized dictatorship of the proletariat; that there are not political prisoners in Soviet Russia; that Moscow wants Berlin to be a free city with its own police, and so forth.

All of this is the Communist propaganda line. It is all aimed at getting us to forget the true nature of communism, the Russian crimes and to deal realistically with the Reds, to accept the status quo and start from there.

Could one of our very top officials go to Russia on the pretext that he wanted to confer with our Ambassador in Moscow, then wangle talks with the top Red leaders and get his views leaked into the Communist press; make propaganda appearances from one end of the Soviet Union to the other; appear on television; hold press conferences; be the guest at dinners and lunches; mingle freely with people at all levels; get his best political arguments into Red publications and on the air? He could not.

8: That a number of American business leaders and certain American business circles are now singing the praises of Soviet Russia, thereby drowning out the cries for help and sypmpathy of the Hungarian people. In effect, we turned away from the Hungarian revolt and permitted it to be crushed by the Red army.

9. That funds from the United States are still going to bolster the Communist regimes of Gomulka in Poland and Tito in Yugoslavia, thus keeping alive the hopes of the Communist Party here that the United States will subsidize "all the Socialist countries," as the Communists here urged as early as 1946.

RECOGNITION OF RED CHINA

10. That, while the determination of the American people has so far halted the recognition of Red China, there is a trend—reported by such an important business paper as the Wall Street Journal—toward such a step. This trend is evident among happenings, especially by letting down restrictions on a number of items involved in trade of our alleged allies with the Mao Tse-tung regime.

This progress of the Communist line in our country now advanced by Mikoyan's visit (and the items I mentioned are only the most outstanding of that line) should immediately cause us to pause and appreciate the havoc that friends of the Communist Party and non-Communist "transmission belts" have wrought on our views and attitudes during the past year. The result is all the more astounding, when we consider that experience has constantly taught us that when we take a firm stand, one that is strong and unambiguous, against the aggressions of the Soviet powers, we are victorious.

Tributes to the extent of Communist activity on behalf of its own line are found in the many voices within America, represented by editorials in the press and by letters to our newspapers, echoing the Communist "warnings" about the sad fate of the United States if we do not surrender in the Far East.

No wonder that the Red organ, the Worker, for January 4, 1959, rejoiced in what has happened in 1958 for the Communist cause. Since the Communists always pretend to speak for "the people," this is represented by the leading editorial entitled "A Year of the People."

The Red organ applauds, with almost lyrical tone, the continued existence of the Soviet dictatorship in Soviet Russia and in Red China, and in general declares: "People—the people of the Socialist countries of Europe, working together—were busy advancing their economic goal."

Then, expressing its delight at the successes of the Communist line, the Worker gives this distorted view of specific world affairs:

"People—the hundreds of millions still in the rapidly shrinking capitalist world—joined with the hundreds of millions in the expanding Socialist world and the hundreds of millions in the new nations in 1958 to hold back the enemies of the people, our own Wall Street imperialists, from unleashing the dogs of war against the newly independent nations of the Middle East, over wrongfully held Matsu and Quemoy, through adventurous maneuverings over the West Berlin situation."

You will observe how arrogant the Communists are in their assessment of what happened in Hungary, how the revolt of the people is represented as "the bloody plot of the western imperialist-inspired Nagys." You will also note the contempt for the United States expressed in the calm assurance that Red Hungary, crushed by Soviet bombs and bullets, is now moving "once more along the Socialist path to the future."

You will also note how the Communists twist history for their own purposes, misrepresenting the bombing of Quemoy and Matsu and the Soviet demands on West Berlin as "our own Wall Street imperialists • • • unleashing the dogs of war."

I think that Pope Pius XI in his classical encyclical letter on communism asked the question: How is it possible that communism, long since rejected scientifically, proved erroneous by experience, and demonstrated as atheistic, merciless, a curse upon mankind, how is it that such a system could spread so rapidly in all parts of the world? The explanation lies in the fact that too few have been able to grasp the nature of communism.

FEW UNDERSTAND COMMUNISM

Within 40 years about one-third of the population of this earth have been swept behind the Iron Curtain. It is unfortunately still true that few people, especially in our own country, understand what communism is, what are its techniques, its methods, its line.

The greatest asset the Communists have at the present time is not the hydrogen bomb, certainly not Soviet satellites, but ignorance of their tactics, strategy, and objectives.

We have lost much to the Communist line in the past year. I pray that we shall be a little more vigilant, a little more pro-American and pro-God throughout the New Year.

Does Uncle Sam Always Defend the Status Quo?

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. DENTON. Mr. Speaker, under unanimous consent, I insert in the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Louisville Courier-Journal of January 13, 1959, entitled "Does Uncle Sam Always Defend the Status Quo?" which I think clearly illustrates a great weakness in our foreign policy:

It would be wise for Congress to look a good deal deeper into the relations of our Government with the fallen Cuban dictator, Fulgencio Batista. The New York Times has called them affectionate. Earl E. T. Smith has now resigned as our Ambassador in Havana, amid charges that his Embassy did not keep Washington fully informed of Castro's rise, that it showed a distinct partiality for Batista, and that it was inefficient in the evacuation of American citizens from Cuban trouble spots.

This paper is not prepared to judge the merit of these charges. We can only note that our own reporter on the spot, Alan Levy, felt that the handling of American nationals by our Embassy staff was entirely adequate. We also recall that in August 1957, Ambassador Smith was in trouble for actions that were considered pro-Castro. These included a visit to Santiago, then the center of rebel strength, and a protest over brutal treatment of some women demonstrators by Batista police. He was rapped over the knuckles then by some Members of Congress, though Secretary Dulles defended him as a person of flesh and blood and heart.

A FAMILIAR SITUATION

The subject would bear further investigation. Cuba during the uprising is akin to situations American diplomats must face in many parts of the world. Smith went to Habana as a political apponitee, a party contributor with no diplomatic experience. Any American is likely to find it difficult to live in a country where political passions are running at white heat, without showing the slightest warmth himself to either side in the argument.

Of course, the envoy of a foreign power is not supposed to take sides. This is especially true of envoys of the United States, which has lent or given money to so many other nations, and which is always suspected of having a selfish interest in their internal affairs.

The fact is that American representatives have tended most often to take the side of the government in power. The United States was born of a revolution, but many American officials now adopt the attitude of the Daughters of the American Revolution toward political revolts anywhere—that they are troublesome, untidy, and dangerous to our business interests.

This might easily be the bias of a business tycoon appointed to an ambassadorship because of a handsome party gift. But it is also likely to occur among the career-service men in the State Department, whose conservatism often runs far deeper than the striped pants people think they wear.

THE PROBLEM IS SERIOUS

It has been charged that American aid since World War II has sustained in office many corrupt and reactionary regimes, and has frustrated the hopes of many reform groups. It is necessary for our representatives abroad to deal with the officials of the country to which they are accredited and to direct our financial aid through Government channels. Any other method would produce pure chaos. But this necessity has increased the image of America throughout the world as the defender of the status quo, rather than the friend of healthy change and aggressive freedom. This is a problem for the Foreign Affairs Committees of Congress to ponder with deep seriousness.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my newsletter for January 17, 1959:

WASHINGTON REPORT
(By Congressman BRUCE ALGER, Fifth District, Texas)

Organization of the House membership topped the week's proceedings. All Members are assigned to permanent committees which by subject consider pending legislation. The majority party (Democrat, 283 Members) and minority party (Republican, 153 Members) membership ratios are decided by the House leaders so that the majority party clearly controls each committee numerically. The committees (alphabetically) are: Agriculture, Appropriations, Armed Services, Banking and Currency, District of Columbia, Education and Labor, Foreign Affairs, Government Operations, House Administration, Interior and Insular Affairs, Interstate and Foreign Commerce, Judiciary, Merchant Marine and Fisheries, Post Office and Civil Service, Public Works, Rules, Space, Un-American Activities, Veterans' Affairs, and Ways and Means.

The Ways and Means Committee (15 Democrat, 10 Republican limit) has jurisdiction over the fields of taxation, trade and tariffs, and social security, and is considered a choice committee. On the Democrat side this committee also names the Democrats to the other committees. I am honored indeed to be nominated to this important committee, although I shall miss the Interstate and Foreign Commerce Committee with its interesting transportation problems, and where I had progressed to the eighth seat.

The Chance Vought Regulus II contract termination prompted by pre-Christmas inquiry of the Secretary of Defense whether a void was created in our defense posture. The answer from Vice Admiral Pirie gave two general explanations: (1) "Regulus II missions will be reassigned to carrier heavy attack aircraft" (isn't this a backward step?); and (2) "the accelerated Polaris is scheduled to become operational in quantities at approximately the same time Regulus II was originally scheduled." Suspicion that there may indeed be a gap or void of many months up to several years not having been answered, I have asked other questions of Admiral Pirie and the Secretary of Defense. Surprisingly enough, no mention was made of economizing in the defense budget as a reason for contract termination.

As I see the Congressman's it is twofold (now that contract termination has focused attention to defense efforts within the Fifth District of Texas). First, as a Federal representative, it is important that I take by part (representing my constituents) in helping to provide the best defense for the money spent. Second, it is my duty, as I see it, to help inform my constituents so they may better understand the defense problems, and this requires Defense Department explanation, particularly in view of worker layoffs and the spending of taxpayers' money on weapons. A temperate but conscientious effort to understand is necessary, not complacency or blind acceptance of the military's decisions, no matter how able the military men making the decisions. As an economy-minded Member of Congress with voting record to match (assuming that economizing played a part in Regulus II termination) I do not intend that we sacrifice our defense needs unnecessarily while we blandly spend more on social programs. I shall not fail to accept my responsibility to the Defense Department and to my constituents. In that spirit I intend to press this inquiry.

An additional judgeship for the northern judicial district is sorely needed and I presented a bill to accomplish this, as an emergency and exceptional case. The three judges of the northern district, Judge Whitfield Davidson, Judge Joe Estes, and Judge Joe Dooley, averaged 612 new civil cases docketed in fiscal 1958 as compared to the nationwide average of 273. Further, Judge Dooley's recent accident, a broken hip, will remove him 5 or 6 months. Truly, a desperate situation. It is my hope that Congress will consider this nonpolitically, as an exceptional case, rather than get into a wrangle and delaying action over who will appoint the 45 judges needed across the land—a Republican or Democrat President.

Operation abolition of the Un-American Activities Committee spearheaded by JAMES ROOSEVELT and other avowed liberals may have been stalled by the valiant and factual work of Chairman WALTERS and Committee Members SCHERER, JACKSON, and DOYLE. It seems that a gigantic effort has been planned to discredit this committee of Congress and J. Edgar Hoover. You would think the Communist conspiracy a patriotic American movement rather than a dedicated effort to overthrow our Government and enslave our people. This also bring to mind the gala reception for Mikoyan, a leader in this worldwide conspiracy whose chief target is the United States. Why should anything beyond the barest diplomatic protocol arrangements be accorded him?

A balanced budget, the spending of no more by the Federal Government than we take in, shall be my continued interest as it has for the last 4 years. For the sake of everyone, the dollar must not be cheapened. The President promises to point the way in his budget message. Let's all get behind this effort.

JANUARY 17, 1959.

Is United States Still Aroused?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Detroit Free Press of Tuesday, October 14, 1958, which I regard as a grave warning to the people of the United States:

IS UNITED STATES STILL AROUSED?—RED SCIENCE SCARE SEEMS TO HAVE COOLED
(By Victor Cohn)

(Victor Cohn has returned from 5 weeks in Russia as the first American reporter to make an extensive tour of Russian centers of physical science, followed by 2 weeks at last month's Geneva Atomic Energy Conference. This is the third in his series of articles on Russian science.)

Americans were happily broiling hamburgers on the grill when I left for the Soviet Union, and the discjockeys were giving the old great big twirl to "The One-Eyed, One-Horned Flying Purple People Eater."

When I returned from a vast nation of dull television programs and laboratories, Americans had steaks on the grill. Americans, after 2 months, were ignoring politicians, getting ready for the world series, looking over the old clunk and the new-model fins.

I suppose I was no different. I had dinner at Charlie's, went to a football game, and tried out a hula hoop.

We Americans were aroused, aroused more than our leaders, a year ago, when the first sputnik went up.

Are we aroused today?

A scientist said: "We have not done enough—not to meet the Soviet kind of challenge."

"How have we done? I'd say medium," responded another highly placed American scientific leader a few weeks ago.

These are common opinions today among American scientists, though many are harsher. Only a few are kinder.

One year ago—when the first sputnik went up—we all said, "We must meet the challenge of Soviet science." Washington after sputnik promised a new crusade for science and education. We have done less.

"We have made a beginning on education, but still not enough," believed Dr. Edward Teller, H-bomb theorist. "I'm still dissatisfied."

"Unless we step up the pace, the race will be lost," pronounced the National Science Foundation August 29. Sighed a biologist: "The sputnik effect is dying out."

Remember the reaction to sputnik? A year ago we had to wake up.

The President November 13, 1957, proposed a program to aid output of students and teachers. Within the administration the major goal was set: $750-a-year Federal scholarship help for one-tenth of the 200,000 young people each year who should go to college but do not.

ALL BRIGHT KIDS SHOULD GO TO COLLEGE

The program would start helping about 20,000 a year, and increase until 80,000 were being aided.

There also were to be:

1. Tests for all eighth and ninth graders;
2. Grants to States to hire more science and math teachers and improve facilities;
3. Grants to colleges to improve their outdated plants.

The measure, as passed late this August, became a 4-year, $223-million-a-year program, eliminating scholarships and substituting loans.

State testing programs will be strengthened, though not as much as planned. There will be funds to help buy equipment for public school science-math-language teaching. Little was provided to help train and nothing to expand teaching staffs. Nothing is done for college plants.

The bill already has had some praise as a good start, though not so much from scientists. Many colleges still don't know where they'll get enough money to expand for new students.

BASIC SCIENCE NEEDS SUPPORT

Basic research is the stockpiling of facts. Development is applying facts to H-bombs or hair oil. Total U.S. spending on all kinds of research and development now runs between 5.4 and 10 billion dollars a year.

Between 240 and 450 million goes to basic science; may one-tenth of 1 percent of our national income.

Govenment research and development spending at last count was 3.1 billion; mostly for weapons.

Basic research—including agriculture, medicine, everything—got 279 million. Of this, physical sciences in 1957–58 got 143 million.

Our national expenditure on chewing gum every year is 280 million.

The National Science Foundation is American scientists' real hope for the agency to support basic research. It was established in 1950 (after scientists pleaded for it starting in 1945).

Vannevar Bush, wartime science chief, thought its budget should reach 125 million a year in 5 years. Its 1957–58 budget (for all purposes, training, labs, research) was 40 million.

It is getting a big boost, to 138 million (it asked for 160). Forty of this will go to basic research, a drop in the Washington bucket still, but enough to support about half of what very conservative Director Alan Waterman calls the worthwhile proposals.

Defense Department research and development barely recovered in 1958 from the severe summer 1957 economy cut (when some 80 percent of Air Force projects alone were canceled or held).

Many projects never were helped again—new, post-sputnik money went to missiles. As of mid-1958, actual defense basic research sponsorship was down 25 percent from 1952, because of inflation's effect on the dollar.

"If America is to maintain scientific preeminence and economic stability, research funds must grow 5 or 10 times in the next few years," say scientist Lloyd Berkner.

"We need about 500 million a year"—said an NSF official in Washington—"and then we could really sponsor research reactors, atom-particle accelerators, electronic computers, the big things that cost dollars."

And these the Russians are building.

LET'S LISTEN TO THE SCIENTISTS

We have taken steps to have science listened to sometimes. James R. Killian has become the President's personal science adviser.

Killian also heads the President's Science Advisory Committee, and it has become an active body. Before sputnik, it met with the President twice a year.

No step was taken, however, to give science more than this personal Presidential advisory role.

So we can still expect proposals for a Cabinet department for science and technology, or at least some permanent office or commission at Cabinet level—just as agriculture, commerce, and labor have voices at Cabinet level.

Congress did give a stronger voice in the Pentagon as part of the President's reorganization, with a director of defense research and engineering, with some authority.

We established an Advanced Research Projects Agency in the Pentagon, to push missile work, and—nearly a year after sputnik—a National Aeronautics and Space Administration.

We increased missile spending, but we did not begin to take the really radical steps here and elsewhere—requiring billions—that the Gaither and Rockefeller reports said we must take "to survive."

Defense Secretary Neil McElroy said September 2, the United States is ahead of the Soviet Union in overall military power "in being, in the here and now."

But we know the Russians have more jet aircraft, more submarines, more troops and a head start on missiles.

Retired Lt. Gen. James Gavin, who was the Army's talented research and development chief, believes: "We are in second place militarily and in second place in the exploration of space."

We have moved ahead on some other things. But a survey shows at least a half-billion dollars needed, perhaps over 5 years, to bring United States research facilities to where they should be. There are no such plans yet in the works.

In 5 weeks in Russia, I wish I could say I had seen some evidence of serious miscalculation.

When I returned from the Soviet Union, the deejays, as one, were spinning "Tears on My Pillow." On TV, "Maverick" was outpulling Steve Allen or Ed Sullivan.

The kids were back at school, and a mild national debate was still on: "Should they have to take hard courses?"

The political campaigns were in high gear all over the country, but science and education were not among the issues.

Installation of Rt. Rev. Bishop Lichtenberger

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. BARR. Mr. Speaker, on Wednesday last the Protestant Episcopal Church of the United States installed its 21st presiding bishop. The first presiding bishop was installed 1 year after the beginning of our National Government in 1789. The church, which is now the fifth largest Protestant denomination in the United States, has grown up with this country.

It was my privilege to attend these installation ceremonies as the lay representative of our diocese. I attended at the invitation of the Right Reverend Richard A. Kirchhoffer, who has served our diocese with patience, intelligence and good humor for 20 years. On February 28 Bishop Kirchhoffer will retire, and I was especially pleased to be able to assist him in a ceremony that surely comes as a fitting climax to a wonderful career of spiritual leadership. Bishop Kirchhoffer married us, confirmed our children and helped bury our dead. His retirement will come with a measure of personal sadness to every member of his diocese. But the continuing life of the church will go ahead in our diocese under the leadership of a vigorous, intelligent new bishop, the Right Reverend John P. Craine.

In the person of the Right Reverend Arthur Litchenberger, the Protestant Episcopal Church will grow with this great Nation and continue its record of spiritual service. Because of its history and potential, I think it only fitting that Bishop Lichtenberger's first sermon in his new office be inserted in the CONGRESSIONAL RECORD. It is a message of hope, optimism and dedication to the religious ideals which have helped make this Nation great. Bishop Lichtenberger said:

An occasion like this in the life of the church is a moment of thanksgiving and hope. It is a time for remembrance and expectation. This double response to God's mercy and demand is always centered for us in the present moment, in the opportunities and tasks that immediately confront us, in our situation as it is now. This is what we say repeatedly in the general thanksgiving, "Almighty God, Father of all mercies, we, Thine unworthy servants, do give Thee most humble and hearty thanks for all Thy goodness and loving kindness to us, and to all men * * * And, we beseech Thee, give us that due sense of all Thy mercies * * * that we show forth Thy praise, not only with our lips, but in our lives, by giving up ourselves to Thy service." A due sense of God's mercies; the offering of our selves to His service, this is the pattern and the substance of the Christian life.

So first of all we give thanks to God that He has brought us here today. We think of God's goodness to us in our own lives, of His gift of the church and what it has meant to us to be members of Christ's body. We give thanks for our own church, for all who have served and loved her and who have made this day possible for us. In particular now we give thanks to God for the ministry of Henry Knox Sherrill as our presiding bishop these past 12 years, for his vision, his courage, his utter devotion to the work he was given to do.

This time of transition, of the induction of a new presiding bishop into his office, is not of great significance in itself. Or to put it more precisely, the focus of attention now is not the person of the presiding bishop, whoever he may happen to be, but the continuing life of the church. I do want to say, however, now that I have been given this responsibility, how grateful I am for the encouragement and support of so many friends. This encouragement and support and the strength that comes from your prayers will sustain me.

But, as I have said, it is the continuing life of the church that gives this service of installation its significance and its meaning. And we see clearly, particularly at a time of transition such as this, that whatever God calls His church to do, however impossible of accomplishment the tasks before us may seem to be, we are to face this call neither with confidence in our own strength or with fear because of our own weakness, but rather remembering what great things God has done for us already, we believe that He has better things for us in store.

In St. John's Gospel, in the 15th chapter there are some words of our Lord which say this concisely. "You did not choose me, but I chose you and appointed you that you should go and bear fruit and that your fruit should abide." These words are spoken to each one of us, and to us all together in the church. We have been chosen, we have been appointed, we are to bear fruit, and our fruit is to last.

But do you see the point, the whole point here and everywhere in the New Testament? That the initiative rests with God and not with us? Whatever we do is all response. "Herein is love, not that we loved God, but

that He loved us." It is true that responsibility is laid upon us in the church. We have been chosen, and appointed, and we are to bear fruit. But it is God who has chosen us, it is God who has appointed us, it is the fruit of God's Spirit that will be produced in us. And this is the deepest root of our thankfulness. For where would we be and how would we feel, if having been chosen and appointed, we were left to our own devices?

So our hope and expectation as we look at what we must do now and in the days ahead, come out of the very nature of our gratitude to God. St. Augustine has expressed it. "It is not that we keep His commandments and that then He loves us, but that He loves us and then we keep His commandments." Without His love God's commandments are impossible; with His love they are still beyond us, but our striving is no longer losing. In the assurance and confidence of God's love there is, as T. S. Eliot has said, for us "only the trying. The rest is not our business." This is to live in faith and leave the issue to God's wisdom.

Well what then of the trying, what of the effort required of us that we may bear fruit? I speak now of the responsibilities that are before us as a Church at work in this country and in lands overseas. The opportunities are so great and all that we have now to meet these opportunities seems so inadequate. How can we do what needs to be done? This is the question we usually ask, but surely it is the wrong question. A bishop in an overseas missionary diocese tells how he visited a village for the baptism of the first group of converts. The new Christians were ragged, illiterate, slow to respond. "One of those waves of unbelief comes over me," he said. "What shall we ever make of them? Then at once I am ashamed. Who are those keen eager young men moving quietly among them? They are from the same village. A year ago they were as unpromising as these. The question what can we make of them is the question of an unbeliever; the proper question is what can the Holy Spirit make of them." And that is the proper question for us as we face our responsibilities. Not, how can we possibly do what needs to be done? But what can the Holy Spirit do through us when we are open and humble enough for his action? The answer is: He can make us witnesses to Christ, he can bring forth fruit in us, fruit that will abide.

This is our deepest need, to believe this and to live by this. All our programs, all our plans without this are what Carlyle called quaint galvanic sprawlings, and many people quickly see them for what they are: mere schemes and devices. I do not want to be misunderstood. Plans and programs and united effort are good and necessary. In our parishes and dioceses, in National Council and General Convention we must be familiar with both our resources and the opportunities before the Church and then work to develop our resources and make them available. This is not the time or the place to speak of this in any detail, but this is a necessary part of our effort; this is to clear the way so that we do not through ignorance and unreadiness hinder the work of the Holy Spirit. Yet whatever we do, we know that the fruit which we are to bear is primarily God's work, it is ours only as he works through us. So if we let the invigorating wind of the Spirit refresh and empower us, then we will think, we will decide, we will act. It is for this that we have been chosen, appointed.

There are two words which have been in my mind constantly these past few months as I have been thinking about the task of the church in our day. All that we were concerned with at the Lambeth Conference centered also I think in these two words; they are essential to the very nature of the church.

The first word is mission. The church has a mission, it is the mission, it is sent to serve God in the world. This is the only work it has: To be the channel through which God makes himself known, to be the obedient servant of God. But what does it mean for the church to obey God now in this present world, this angry world, this world so afraid, heading apparently toward self-destruction? The answer can be found only in the midst of the actual circumstances in which we live. The answer can be found only by a repentant church, a church always aware that it stands under God's judgment, that it is a means not an end, a church always living in expectation of a renewed life. But we must know how to read the signs of renewal. For example, all over the church we are building many new churches and parish houses and establishing new missions. Is this a sign that we are bearing fruit that abides? It may be. But this kind of activity in itself is not renewal. We cannot be content with this and say, here is sufficient proof of our obedience. A good many years ago during an earlier building boom one of the great denominations of our country was building a new church a day. Then when Robert Ingersoll said in a public lecture that "the churches were dying out all over the land," a telegram was sent to him by a leader of that church saying, "We'll make it two a day." If a serious critic of the church says that the church has little relevance to the daily life of its members the answer cannot be: Then double the number of communicants. How true it is that there is only one place at which a genuine renewal of the life of the church can take place, namely, at the point at which its mission of transforming the world is being fulfilled. The only real renewal is a healing and saving manifestation of the power of love in open and courageous encounter with the world.

This is the mission on which the church is sent and it carries us into every part of the world and into the whole of life. This means that the church comes to man not in his extremity at the point where all else fails. The church stands not on the outskirts but in the center of the town. We do not live in a world of worship and piety apart from the world we encounter in office or factory, at home or on the street. The gospel speaks to the totality of life; all what we do individually or together, stands under the judgment of God and all our ways are to be conformed to his will. We can establish many new missions, we can baptize and confirm large numbers of people, we can have standing room only at our services, but unless we know that we are in the church in order that we may praise and serve God in the world and that it is this effort which constitutes obedience, then what we are doing is woefully inadequate. This is to lock ourselves in, this is to make the church irrelevant. The encounter of the church with the whole man and with the whole of life brings perplexities and uncertainty and suffering, but this is also the way of joy for to obey God is to enter into an exciting adventure. So we work for the transformation of the world knowing quite well we can never accomplish it. But we make our decisions—that is live our faith—in the conviction that the world into which God has entered with His redeeming power will in His own time be transformed, and the kingdom of this world will become the kingdom of our Lord and of His Christ.

The mission of the church: The other word is unity. Whatever may be our convictions about the right approaches to unity, all of us surely pray that the church may be visibly one. There is one body and one spirit, one Lord, one faith, one baptism, one God and Father of all. The church is one in Christ Jesus. Over 20 years ago in Edinburgh at the second conference on faith and order this essential unity was affirmed. "We are one," those Christians said, "in faith in our Lord Jesus Christ, the incarnate word of God. This unity does not consist in the agreement of our minds or in the consent of our wills, it is founded in Jesus Christ Himself." This is the unity God has given us. But we have broken that unity and how greatly our witness is weakened because we are divided. How hard it is for a divided church to bear witness of the one Lord to a divided world.

Here again our part is to clear the way so that God may lead us into that unity which belongs to the church of Christ. I believe we are finding our way, by God's grace, into a deeper unity within our own communion. We are coming to understand more clearly what it means to belong to a church which is both catholic and reformed. This is not an uneasy compromise which will have to be resolved eventually one way or another. It may appear so with those who call themselves Catholics or Evangelicals, each contending for his own tradition and often contending against each other. There is a far better way. It is not necessary that some be Catholics and some Evangelicals; each of us can know and manifest in his own life that comprehensiveness which we so greatly cherish. The two parts of our heritage are not incompatible and opposed elements, but are essential aspects of God's truth. They are, as F. D. Maurice said, "signs of the Kingdom of Christ." This is a rich inheritance we have. Can we not accept it all and grow in our understanding of it? Pray, then, that God may lead us into a renewed and deepened unity among ourselves and be a worker for unity among your own brethren.

And then beyond our own church, beyond the Anglican communion, we long for the unity of all who believe in the Lord Jesus Christ. The unity we desire is the fulfillment of the unity we have. This is the unity given to us by Christ in His act of self-giving: "And I if I be lifted up will draw all men unto Me." Unity is not something which is to be fashioned and put together by us. The Church of Christ in its essential nature is one, as Christ Himself is one. Yet here as in our own lives the requirement is laid upon us to become what we are. We are one body in Christ, but we must constantly pray to be delivered from fear and inertia and despair; and work that we may so enter into that unity that it becomes visible and operative in this world. Surely this is not a concern and activity for those who happen to be interested in church unity; this is inseparable from the mission of the church.

So as God's thankful people we dedicate ourselves anew to the mission of the church and to the search for unity. We have before us an opportunity unique in the history of the church. If God is the Lord of history, as we believe, then we cannot think that this time is some terrible mistake. This day, as every day, is the Day of the Lord. And so we rejoice that God has brought us to this time, for it is His time and therefore a good time and we pray that we may be penitent and humble and open so that God may use us for His purpose. When we are fearful then, or hesitant or dismayed, when the tasks seem far beyond our strength; or when we are confident and assured, let us take heart and remember that it is God who has chosen us, God who has appointed us, God who will bring forth fruit in us. And to Him be the glory and the praise for ever and ever.

The President's State of the Union Message

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mrs. KEE. Mr. Speaker, I ask unanimous consent to extend my remarks in the Appendix of the RECORD and include copy of my weekly newsletter "Keenotes" which was released today:

KEENOTES

(By Representative ELIZABETH KEE)

One of the highlights of the opening days of a new session of Congress is the President's state of the Union message. There has grown up in recent years a tradition that the President deliver this address in person before a joint session of the Senate and the House. Millions of people throughout the Nation share this experience through the magic of television.

For the most part, the state of the Union message is couched in general terms. The President tries, at the beginning of a new period in his administration, to sum up just where he thinks the country is going, how we are doing as a Nation in meeting the problems which beset us at home and abroad. He indicates, in general terms, what he wants Congress to do during the months ahead.

It is always a thrilling experience to be a part of this annual ceremony. It is history in the making. This year was no exception. The President appeared before the assembled legislators, Supreme Court Justices, Cabinet members, and foreign diplomats in the House Chamber. I was pleased to note that he appeared to be in the best of health. He delivered the 45-minute speech in a vigorous manner. To the eyes of a layman, he appeared to have bounced back from illnesses that plagued him earlier in his administration.

Because so much of the address was couched in general terms, it is difficult to arrive at any definite conclusions about the Presidential message. As everyone knows by now, the President centered his emphasis on a balanced budget. He spoke of the need to tailor all of our programs, including defense, to the objective of a balanced budget. I got the impression that his insistence that budgetary requirements transcend even defense needs received a distinctly cool reception, even from some of the Republicans. This battle between the budget and defense is shaping up as one of the major fights of the session. Democratic leaders in both Houses will insist that our defenses not be neglected to achieve a bookkeeping balance between revenue and expenditures.

The battle will be joined when the President presents his budget. He already has announced it will be in the neighborhood of $77 billion and will be in balance. However, many people are skeptically awaiting full details. For instance, can we balance a $77 billion budget without an increase of about one-third in tax revenues? And will business increase that much? Or can the President count on additional revenue from a further increase in postal rates and the gasoline tax?

Many Members will insist that urgently needed programs not be delayed or abanboned as a sacrifice to a balanced budget. For example, the West Virginia delegation is united in the belief that a depressed areas bill should be passed. How economical is it to stave off this program and allow thousands of men to continue on the unemployed rolls? Wouldn't it make better sense to invest money to creat jobs to restore these men to the tax rolls and give them an income that would create additional jobs?

The President indicated he would ask additional money for foreign aid and credits to finance economic development abroad. Many Members will balk at expanding this foreign activity while cutting back on identical programs at home.

The state of the Union message is a valuable part of our system of government. The President, as head of the executive department, has the responsibility for initiating a program of action. The old saying, "The President proposes and Congress disposes," is certainly true. But Congress has a responsibility, too. It must examine the President's proposals, abandon them and change them to fit existing conditions.

Details of the President's program will unfold in a series of special messages during the coming weeks. No doubt there will be many differences of opinion between the President and Congress. But these differences will be worked out or compromised. Emphasis may be shifted from one program to another and Congress may decide to go further than the President wants. It is the genius of the American system that these differences are never allowed to paralyze Government.

Mikoyan Did Not Answer Any Important Questions

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. David Lawrence which appeared several days ago in the Washington Star. Mr. Mikoyan has given the expected exhibition of nimble sidestepping of specific questions like those asked by Mr. Lawrence, while oozing general assurances of trade, trust, and truce, if only we will forget the past and ignore the present. Americans must not sell out for worthless words our position of steadfast support for the captive peoples who, without our support, are helpless.

SOME QUESTIONS FOR MIKOYAN—QUERIES ON MOSCOW REPRESSIONS AND BRUTALITY URGED FOR RED

(By David Lawrence)

As the Deputy Premier of the Soviet Government, Anastas Mikoyan is entitled to a courteous reception by the officials of the U.S. Government. The American people, however, are under no obligation to embrace a man whose hands are dripping with the blood, not only of his fellow countrymen but of the people of Hungary and the other captive nations in Eastern Europe.

Indeed, this is the opportunity of a lifetime to do something for the millions of persons imprisoned even now in slave-labor camps in Russia and for the millions who are denied freedom behind the Iron Curtain. For, as Mr. Mikoyan travels around America, questions can be asked him publicly concerning the conditions inside the Soviet Union for which he, as a part of the Kremlin apparatus, is responsible.

When, for instance, will censorship be removed so that the Iron Curtain can be lifted for the more than 300 million people who today are being forbidden to learn the truth of what's going on in the world around them or outside their countries?

When will the millions of innocent men and women under Kremlin control who have been thrust into jail, without a hearing or a trial, be given a chance to regain their liberty?

When will the elderly persons in the Soviet Union who have children in the United States and other countries be permitted to leave their native land so they may visit their families abroad?

When will the people of the Soviet Union be given a chance to vote in a free election—an election in which more than the Government's own party is allowed to put up candidates?

When will the right of self-government be given once more to Lithuania, Latvia, Estonia, Poland, Romania, Bulgaria, Czechoslovakia, Hungary, and East Germany?

When will freedom of expression be permitted for the writers of the Soviet Union, and when will an author like Boris Pasternak be allowed to accept an award given him by a nonpolitical organization abroad such as the Nobel prize for literature?

When will the Kremlin withdraw its troops from the smaller countries contiguous to it and let their peoples enjoy complete sovereignty?

Above all, when will the Soviet Government begin to honor its pledges and its promises as written in treaties, agreements, and documents of an international nature in the 13 years since the close of World War II?

For there can be no assurance of peace if one of the powerful governments, with a vast military machine at its disposal, can at any time violate its written word and plunge the world into war.

There can be no trust, moreover, as long as the basic principles of freedom and a free society are ignored by the tyrants and autocrats in the Kremlin.

Anastas Mikoyan is a symbol of dictatorship. This very week Americans generally—especially those on the "liberal" side—have been enthusiastically acclaiming Fidel Castro and expressing satisfaction that Batista, the dictator, has been overthrown in Cuba. Americans ought not to adopt one rule for dictators in this hemisphere and another for the dictators in Europe. Only a few days ago Dr. Milton Eisenhower, the President's brother, said in a report to the White House on Latin American affairs:

"I believe the suggestion of Vice President NIXON is sound and would be applauded by Latin America itself—that we have an 'abrazo' (embrace) for democratic leaders, and a formal handshake for dictators."

This expresses accurately the manner in which the United States should react to the visit of Anatas Mikoyan. He is not deserving of the social embraces which some shortsighted Americans are giving him. He could mistake this for approval of Communist methods and customs. In fact, the main reason the Deputy Premier has come here, and the main reason Premier Khruschchev sent him to urge a summit conference, is that this is one way to set in motion a dramatic distortion of America's position. It is a way of gaining prestige at home for the dictatorship.

More than anything else in the world, American approval of Communist behavior is important to the Kremlin in squelching any possible uprising inside the Soviet Union. To welcome Mr. Mikoyan in America with open arms, and without voicing any protest, is to furnish headlines in the Soviet-controlled press telling the Soviet people that the people of this country no longer disapprove of or at least are unwilling to combat the Communist philosophy.

America's moral force is the most powerful weapon in the world—it can move mil-

lions of people behind the Iron Curtain. So, on the kind of reception given the Deputy Premier of the Soviet Union as he tours this country depends the hope of the oppressed and the enslaved in whose hearts and minds the craving for freedom and liberty will never die.

Statements Before the Fourth Committee on Non-Self-Governing Territories

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. POWELL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statements:

INTERVENTION OF DELEGATE GEORGE W. WESTERMAN BEFORE THE FOURTH COMMITTEE ON NON-SELF-GOVERNING TERRITORIES, NOVEMBER 29, 1958

Mr. Chairman, the numerous historic debates conducted in the chamber of the fourth committee have furnished ample proof that since the establishment of the United Nations, chapter XI of the charter undoubtedly has brought many extraordinary benefits to the progressive development of the political, social, and economic institutions of territories whose people have not yet attained a full measure of self-government.

The population of the non-self-governing territories vary widely in race, tradition, and culture. They have, however, one thing in common; most inhabitants of many territories are of an ethnic origin and have a cultural heritage different from those of the metropolitan countries.

In the economic affairs of these territories a notable trend toward diversification is to be noted. There is also marked concern for the planning and execution of development schemes, as well as for the employment of technical advice and assistance not only in economics, but also in the social and educational fields.

Generally, improvement in the overall picture should be considered against the background of increased population pressure. In this evolutionary process we observe that increased capital investment is being made and that large-scale projects for industrialization are being undertaken. At the same time steps are being taken to stimulate agricultural production. All these measures are being adopted towards developing a balanced economy and providing a better living for these peoples.

On the other hand mention must be made of how steady is the progress in town and country planning as an effective means of solving housing problems. With this view in mind Government banks are being established to provide long-term, low interest loans for persons wishing to construct their homes.

We also observed that most public housing is undertaken directly by territorial governments or central agencies, rather than by municipal bodies. Also that some schemes had to be devised on an emergency basis to relieve urgent needs. However, broad programs aimed at creating integrated neighbors with all necessary amenities were noted to be receiving increasing attention.

Other significant advances have occurred in the development of all forms of mass media, and we all welcome the policy of encouraging a free and responsible press. It is recognized, of course, that the full utilization of mass media is still impeded by a number of problems in the non-self-governing territories, particularly in areas of high illiteracy.

In general, health conditions are said to be steadily improving, and recent advances in medicine and public health have contributed substantially to the reduction in morbidity and mortality rates.

We fully subscribe to the view that a spirit of mutual respect and cooperation is required to combat racial bias and to promote common advancement in territories where different ethnic groups live side by side. Also that advancement of any society depends on the contribution of all its members. When groups of people in a given society are not regarded as equal, progress is difficult. We applaud the recommendation that the abolition of discrimination on racial grounds should form an integral part of social policy and public administration.

My delegation notes with satisfaction that, with the expansion of community development and programs, the extension of training facilities and the provision of new administrative arrangements, a further spread and intensification of the community development movement had been recorded in many areas.

Mr. Chairman, there is sufficient proof now available from a perusal of the report of the committee on information from non-self-governing territories that the economic, social, and educational conditions are constantly improving. This is made manifest from the fact that in the case of a number of territories information on them is no longer submitted. Others have moved directly into full membership with the United Nations. These countries are well known to the members of this august body. The nearer territories reach the state of self-government the more concerned should be the United Nations about them.

Furthermore, one of the fundamental aims of chapter XI, in addition to that provided in article 73(b), is that contained in article 73(d), which is, I quote: "to promote constructive measures of development, to encourage research, and to cooperate with one another and, when and where appropriate, with specialized international bodies with a view to the practical achievement of the social, economic, and scientific purposes set forth."

A few weeks ago this committee discussed the future of French Togoland. On that occasion we were happy to join the many distinguished delegates who were pleased to commend the administering power for the advancement of the Trust Territory of Togoland. We listened with a spirit of solidarity to the words of the delegate of Ghana when he urged upon France: "That no stone should be left unturned, in these last days of their final control over the external relations of Togoland, to enable the territory to get all the assistance possible to make a vigorous and successful start on its new course of statehood." Several of our distinguished representatives expressed the hope that technical assistance would be forthcoming not only from the administering power itself, but also from the United Nations expanded program of technical assistance.

Mr. Chairman, in the course of my remarks before this committee at its session of October 17, 1957, reference was made to the non-self-governing territories in the neighboring Caribbean area—the proposed West Indian Federation. On that occasion my delegation congratulated the United Kingdom for having assisted both financially and materially in bringing the territories to that stage of constitutional advance. Since then, this Federation has become a fact. In March of the current year the West Indies, comprising 10 island territories, elected their Federal representatives, and a Federal government was inaugurated by Princess Margaret in April at Trinidad, the capital site.

We understand that provision is made in the West Indies constitution for its review within 5 years, leading to Dominion status, or independence within the British Commonwealth.

The delegation of Panama draws attention to this situation, Mr. Chairman, because it seems to us that here is a case somewhat like the present position of French Togoland or the Gold Coast before it became Ghana. Thus, as in the cast of the Gold Coast and French Togoland the West Indies are on their way toward independence, hence our interest in their relation to the United Nations. We are sure other delegates here would join us in urging the United Kingdom to do all in its power during these closing stages of its control to bring the West Indies into closer relations with international bodies. It is only in such a manner that it might be possible to facilitate the provision of technical assistance, and to give the West Indies increasing opportunity to prepare themselves so that they will be ready to participate fully in the work of the United Nations as an independent member when the time comes.

Speaking on the occasion of the inauguration of the West Indies Federation, the Prime Minister, Sir Grantley Adams, said; I quote:

"The attainment of Federation is, I think, a remarkable constructive achievement in which many have played their part. We now look to the future rather than the past. We believe that through federation the people of the West Indies can most speedily and effectively fulfill their national aspirations; and that they can look for a standing and an authority in the Commonwealth and in the world that would be denied to them as isolated units. We believe, too, that federation provides the means by which the economy of the region can be strengthened and the standard of living of its people be raised. We shall need, at every stage of the road, the help and encouragement of the British Government, and we know that our progress will be watched with close interest and practical sympathy throughout the Commonwealth and outside and in particular by the people of the Dominion of Canada and the United States."

A month or so ago it was our pleasure to listen to Prime Minister, Sir Grantley Adams here in New York when he spoke of the goals of the new nation. This West Indian scholar and statesman emphasized the need for technical assistance. "Give us the tools," he urged, "and we will do the job," he assured. It was pleasing to note from his statement the measure of assistance Canada had already made available to the West Indies, and of the invitation from the United States to his Government to come to Washington later this year for discussions on possible means of assistance.

Agreements already are in effect between the International Cooperation Administration of the United States and the individual members of the Federation. These agreements include health, housing, technical administration, communication, public administration, as well as agriculture and natural resources. Accordingly, it is now in the hands of the United Kingdom to offer the opportunity to the Federation for extending such agreements on a wider level. This can be done most effectively by encouraging the Federation to seek technical assistance so necessary for this underdeveloped area where the problems include an explosive population situation.

We are not unaware that in this changing constitutional relationship between the West Indies and the United Kingdom, the latter has already assumed an appreciable part of the financial obligations involved in the West Indies Federation. Since the problems of emerging territories have become a special concern of the United Nations, my delegation feels that in all propriety the provisions

of the Charter can equally extend to the West Indies.

While it is true that there is a difference of approach in our dealings with trust territories and the non-self-governing territories, it does seem, however, that the spirit of the Charter implies that in either type of territories the interest of the inhabitants are paramount. Therefore when approaching political independence they should be given every assistance so that they may be prepared to assume their rightful part in the community of nations.

The demonstrations of helpfulness on the part of Canada and the United States in coming to the aid of this emerging Caribbean nation, as mentioned earlier, augurs well for good neighbor relations as envisaged in article 74 of chapter XI, and to which we referred in our statement before this committee last year. In this spirit of manifest goodwill we are sure that the United Kingdom will not view with disfavor a more direct approach to the United Nations and its specialized agencies in this matter of technical assistance for the West Indies.

In invoking the principle of good neighborliness we are equally certain that the people of Latin America whose representatives on the fourth committee have championed so intently the cause of self-determination, will welcome whatever reasonable proposal is put forward that will guarantee the most effective contribution to West Indies regional development. As remarked by my esteemed colleague from Guatemala in his intervention of November 17, 1958, "a typical feature of the present era is international cooperation and the interdependence of countries * * * to which the United Nations has been attaching increasing importance."

Mr. Chairman, might we not aim at recapturing for this territory which has become a poor and deficit area, much of the substance that made it as historically productive as it once was? Furthermore, the West Indies is destined ultimately to have a full share in the affairs of the Western Hemisphere. By fostering the socio-economic advancement of these 3 million inhabitants of the Federation, we are by that fact itself promoting the solidarity of this hemisphere and envigorating the bonds of world peace and international security which the United Nations is committed to maintain.

During the course of our debates the members of this committee have never failed to demonstrate a deep concern in respect of the welfare of the inhabitants of the non-self-governing territories. This laudable attitude then has prompted the foregoing observations. Our motivation in this regard has been only that of presenting before this committee a few ideas that might contribute to improving as far as possible the efforts of this Caribbean territory toward its full independence, in harmony with the aims and objectives of the United Nations Charter.

My delegation, which shares the wide esteem in which Sir Andrew Cohen is held in this committee, has been observing the profound interest with which the Government of the United Kingdom, through its distinguished representative, has followed our deliberations. These factors represent a happy augury that formulas of positive benefits will be found to favor the West Indies Federation in its final relations with the United Kingdom.

EXCERPTS FROM SPEECH BY SIR ANDREW COHEN TO THE FOURTH COMMITTEE, DECEMBER 2, 1958

Although I have spoken at great length already in this debate, I feel that in fairness to a number of members who have raised matters relating to territories under United Kingdom administration, I should take up a little more of the time of the committee in order to make a brief statement on one or two points.

First of all, Sir, I would like to refer to the remarks—the most helpful and constructive remarks—made by the distinguished representative of Panama with regard to technical assistance for the territories comprising the West Indian federation and other territories in the Caribbean area under United Kingdom administration. I very much appreciated the spirit in which the distinguished representative of Panama put forward his remarks.

My delegation and indeed my Government is well aware of the great interest, the great sympathetic interest taken by the present Government of Panama in the well-being and future progress of the territories in the West Indian federation. We are much encouraged by this and also by the general interest, friendly interest, taken by all the countries of the Western Hemisphere in the progress of this new federation.

My delegation, sir, fully sympathizes with the views expressed by my distinguished friend from Panama. We realize the great importance of outside aid in economic and social development to this new federation. We welcome the assistance which has already been received from various organs of the United Nations and we have been delighted to see these countries receiving this assistance.

I would like very briefly to mention that there have been a large number of schemes valued at nearly £140,000 of technical assistance of a whole variety of sorts for the countries in the Caribbean. I will not weary the committee at this stage with details of these schemes, but they cover a wide range, and I would like to emphasize their great importance.

I would also like to remind the committee that very large scale assistance had during this whole period been received by the countries in the Caribbean from the United Kingdom Government itself. For example, in the period from April 1946 to 1958 the total grants and loans approved under the Colonial Development and Welfare Act for the territories now in the federation was approximately £28 million, and during the year ended March 31, 1958, schemes of development and research costing about £4 million were approved under the Colonial Development and Welfare Act.

I think it would be agreed by everyone round this table, or, at any rate, by most people, that in considering applications for technical assistance from the United Nations obviously the extent to which United Kingdom assistance is available in the fields concerned, this clearly should be taken into account. But I would like to say this. We can, in my view, expect a steady increase in the technical assistance schemes from this whole area come before the United Nations. The United Kingdom Government will welcome this.

We are extremely grateful to my distinguished friend from Panama for having raised this matter here and to the other speakers who have spoken with sympathy on this subject. We are encouraged by the sympathy and interest, and I will say here that I will bring the views which have been expressed by the representative of Panama and others to the attention of the United Kingdom Government, and I am sure that my Government will take the views into very serious consideration.

STATEMENT MADE BY DELEGATE GEORGE W. WESTERMAN TO THE FOURTH COMMITTEE, DECEMBER 3, 1958

I regret that yesterday when the distinguished delegate of the United Kingdom intervened in the debate I was absent from this chamber. However, he has graciously presented me with a copy of his speech for which I am most grateful.

It is with much pleasure we note that in his intervention he made reference to both my delegation and the Government of Panama in complimentary terms for having taken the interest shown on behalf of the Caribbean territories.

My delegation feels greatly honored that the modest recommendations which we made last Friday, will be duly forwarded to the Government of the United Kingdom for its very serious consideration.

In view of his declarations, we express the hope that positive results soon will ensue in favor of these territories and their inhabitants.

Thank you, Mr. Chairman.

EXCERPT FROM SPEECH MADE BY MR. H. N. MCQUARRIE, DECEMBER 5, 1958

Mr. Chairman, at the outset of our debate on the report of the committee on information from non-self-governing territories, the distinguished representative of Panama made some very kind references to my country's offers of assistance to the West Indies, the new federation of islands in the Caribbean. My country shares the affection for the people of the West Indies expressed by my distinguished colleague from Panama. Canada has strong ties of trade and history with the islands of what have been known as the British West Indies. Canada has recently entered into a special aid program for the new federation and study is under way of how young people of the West Indies may be best assisted to acquire advanced training which may contribute to the prosperity and cultural growth of their islands. Of the more than 1,600 students from non-self-governing territories now studying in Canada, some 1,000 are from the English speaking islands of the Caribbean. Many of these students, I am happy to say, are being assisted by private Canadian sources. Canade looks forward to playing a still larger role in providing educational facilities for West Indian students.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of this body the following entry to the I Speak for Democracy Contest prepared by Miss Anita Lanphier, a junior in the Dodge City Senior High School, in Dodge City, Kans. Anita is a well-known debater and has beeen a trophy winner on a number of occasions:

I am a student. My mind is a product of the greatest industry this Nation has ever conceived. Within my mind are the ideas which founded this country and the same ideas which have made it rise, an indestructible phoenix, from the ashes of war and depression.

I, and my companions, are the infinite, though unperfected, results of 300 years of living. We seek to improve—but, above all, to continue those principles which have made us free to walk in the sight of God as equal by right of our being.

We have grown old in the struggle to give life to this great new dream. Yet, even now, we discover that the future is forever chained to the past. The winter remembers much of what the spring should have done. Yet, if the spring should guard herself well, the winter would never be. So we must review the events which led us to this pinnacle

with as little reckoning as mourning for the barrenness of autumn.

This young country was nurtured into being and opened her wondering eyes on the great dark winter of revolution. She rose up, and slew the mighty goliath of British control. It was a battle for her very being. She stood far above the great dark clouds of oblivion and chose her pebbles well. Even as Goliath's laughter spread like a roll of thunder, she rose up and slew him with an idea and cut off his head with a dream.

She stood tall on the mountains of freedom, and she bore the child called democracy.

Then, suddenly, the warm protective cloak of peace was taken from her shoulders and she was torn with the biting cold of civil war.

The aging, defiant South reared her head above the Union, supported by proud gentlemen who cherished her and her way of life above all else. She was a lady and they donned their toy-soldier uniforms and marched away to defend her honor. To them, war was this, nothing more, an affair of honor. They did not fear or doubt, until they, as Thomas, felt the gaping ugly wounds.

The South fell, crushed and burning. Suddenly, as age comes upon an old woman, she lay broken and about to die. And the ages to come echoed in unison, "They have not died in vain."

Once again, she rose with a new name, "The Union," a new greatness within herself. She had grown in stature and in wisdom. She has much to remember and much more to learn. She stands proud and holds her head high among the stars for she, too, guides the lives of those who chart their paths by her unerring light in the skies. As long as men think and see—she is there. As long as men yearn to know—she is with them. As long as men cherish freedom above all else—she lives. For, like the spring, she is eternally reborn. She is as inevitable and unchanging as the seasons. She is your godmother and your playmate, she is the mammy who nurtured you in her honey-blossomed bosom. She is a lump in your throat and a flag flying high. She is the words of a song. She is a spirit—infinite, eternal, and unchangeable. She is democracy.

Anita won second place in the State contest and we in the Fifth District of Kansas are very proud of her.

Where Do We Stand on Missiles?

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by WDSU Broadcasting Corp., New Orleans, La.:

WHERE DO WE STAND ON MISSILES?

Where does the United States stand in relation to Russia in the development of military missiles?

Three statements have come out of Washington on this subject in the past 2 days. They all come from people who should know what they are talking about. But they are hardly in agreement with each other.

First, the House Space Committee made a report that Russia is 12 to 18 months ahead of us in its space program, and it will take us 5 years to close the gap. This committee, incidentally, includes both Democrats and Republicans.

Second, Vice President NIXON made a statement, apparently intended as an answer to the committee. He pictured the United States as ahead of Russia in some aspects of the space race, and catching up in others. In regard to purely military missiles, NIXON said, we're ahead, although he admitted the Russians have more powerful rocket engines.

Now, a third statement has come from Senator STUART SYMINGTON, a former Secretary of the Air Force under President Truman. SYMINGTON says he does not know a single impartial expert who agrees with NIXON. He challenges NIXON to give a percentage comparison between the number of intercontinental missiles this country expects to have at the end of this year and the estimated number the Russians will have.

We don't know what the truth of the matter is. It would be comfortable to believe that Vice President NIXON is right. But we're inclined to believe that NIXON is engaging in the kind of soothing coverup that has been practiced in the field of national defense for several years.

Joseph Alsop has said, referring to U.S. intelligence estimates, that we will not have a single operational intercontinental missile even at the end of 1959; the Russians are expected to have 100. We know who fired the first satellite to orbit the earth, plus the first one to orbit the sun. NIXON himself admits the Russians are ahead in rocket power.

Where do we stand on missiles compared with Russia?

It's not a question anyone should play politics with.

It's a question that involves national survival, and the known facts do not furnish grounds for complacency. They suggest the urgency of providing the American people with a straight, clear answer.

Let's Throw Away the Crutch

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. ROGERS of Texas. Mr. Speaker, a great many words have been voiced and written concerning the President's state of the Union address last week. My own views were expressed in my weekly newsletter. The Moore County News is published biweekly in Dumas, Tex., and contributes greatly to this flourishing, progressive, civic-minded community. The News, whose editor is my good friend, D. E. Alford, expresses editorially an approach to the state of the Union message which I heretofore have not seen, and which is most provocative. Under unanimous consent I insert herein the editorial from the January 11 edition of the Moore County News, as follows:

LET'S THROW AWAY THE CRUTCH

In his State of the Nation address Friday, President Eisenhower leveled a point-blank blast of cold, hard facts at the American people and its Government.

He talked of dollars, missiles, and war.

The words of our President reflected the frenzied era in which we live * * * a time of excitement through scientific advancement, yet overshadowed by a cloud of fears, anxieties and frustrations coming from people of a disturbed Nation.

A threat as old as man himself, that of violence and conflict with that which would challenge his survival, was ever present in the calm words of our President.

Sixty percent of our national budget is being poured into our national security program.

Moore County got a glimpse of this huge dollar theory with the establishment of two large Nike missile launching sites in our area. As we rest in Dumas and Moore County, snug within the supposed protective circle of that small, almost minute segment of air protection, we well can ask what does our freedom cost?

The President told us in dollars what price we pay for keeping the pace of our times.

New jet fighters of today, replacing the old aircraft of World War II, are costing nearly 50 times what those old war heaps cost; atomic submarines are costing as much as $150 million apiece; a bare minimum of $35 million is spent every time a mighty Atlas blasts into the sky.

And, we were told in honest reflection by our President, we have new bombers which actually cost their weight in gold, tons and tons of it, for a single weapon of defense, which, tomorrow, may be as outdated as the old prop fighters of World War II.

Freedom costs money, more money than many of us can even start to imagine, yet we are the only source of support for this age which we have helped to create for ourselves.

During the same speech, President Eisenhower said progress is security, defense and in scientific research must be our first objective, and that we must keep abreast of the world whatever the costs.

The key factor in this unknown formula of survival, we were told, is a strong, healthy economy to feed the giant brainchild that is our Government and our defense network with reduced waste in the process.

At times such as these, when Federal controls continue to reach out and spoon feed the American people, it would appear to us that the waste of which our President speaks is not in terms of dollars but in terms of wasted human energies, softened by having our jobs done for us.

The waste in dollars, no matter how high the billions pile up, is little indeed to that lying dormant within our people. Yet our selfish demands for unneeded help from Government aids and handouts will continue until a government of people, and not dollars, crumbles through its complete inability to nourish a nation of parasites instead of people.

Moore County can do its share in standing firm against the menace of our times, despite dollars. We can unleash our own abilities for the jobs to be done, without help.

We can start by using the Government as a cane instead of a crutch.

Democratic Party Advisory Council Speaks

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofor granted me so to do, I am pleased to present the text of statement on policy issued by the Democratic Party Advisory Council as it appeared in the print of the New York Times for Tuesday, December 9, 1958:

TEXT OF STATEMENT ON POLICY ISSUED BY THE DEMOCRATIC PARTY'S ADVISORY COUNCIL—THE DEMOCRATIC TASK DURING THE NEXT 2 DAYS

The Democratic victory in the Congressional elections this autumn provided our party with great opportunities and responsibilities.

All Democrats are concerned about the tasks which face our party in the next 2 years. We think and talk about them across the Nation, consistent with our duties as America's only national political party. We know, moreover, that the measures required of Government acquire their true effectiveness only as they rest upon the kind of public understanding and support that comes from full and free discussion.

In accordance with its practice of stating, from time to time, its view, on important issues, the Democratic Advisory Council here enumerates the elements of a program it hopes will be adopted during the next 2 years.

We do not have full prosperity at home, and desperate want still stalks most of mankind. Peace is the goal of all peoples, and yet that goal is still receding rather than drawing near. We in the United States have the technology and the institutions to make the greatest single contribution toward plenty and peace. We lack only the decisions to call forth our full power. The purpose of this statement is to help evoke these decisions, and to rally further to their support the full powers of the American people.

A wide range of actions and measures is urgently needed. The world moves rapidly in the last half of the 20th century and the need for bold and comprehensive action is urgent. Republican reaction lethargy and indecision of the past 6 years have allowed this Nation to fall woefully behind in meeting the demands of the times. Thus, we are called upon not only to keep up with the many demands of growth and change, but also to overcome the backlog of unmet needs that the Republican Administration has allowed to pile up. Our list of what is needed must perforce be an extensive one.

Under our Constitution, we will have a Republican administration for 2 more years. The Congress must of necessity cooperate with this administration. The effort must be to lead the administration into doing the best of which it is capable.

CALLED UNPRECEDENTED

The election for the third successive time of a congressional majority which is of the opposite political party from the President is without precedent in our history. It imposes an unprecedented responsibility upon the Democratic majority. It is in the nature of things difficult for congressional majorities to provide the leadership which is supposed to come from the Executive. But the Democratic leadership in the House of Representatives and the Senate has performed this difficult task with great ability and effectiveness during these past 4 years. We are confident that the Democratic majority will fully meet this responsibility during the next 2 years. To this end, we will support and help it in every way we can.

While we may expect the administration to continue to try to block some needed measures, the increased Democratic majorities in both Houses of Congress provide better means to overcome such opposition. While it will undoubtedly be impossible for the Congress to overcome administration objections to do all that should be done, it should now be possible to enact desirable legislation that the administration has previously defeated and to put through a larger portion of a clear and comprehensive Democratic program.

We are glad that Sepaker SAM RAYBURN and Senate Majority Leader LYNDON JOHNSON have indicated their intention to take the initiative in formulating and obtaining consideration of such a comprehensive Democratic program. We recognize their preeminent qualifications in the legisaltive field. The Democratic party and the Nation are fortunate to have such extraordinarily able legislative leaders at a time when so much is required of the Congress.

THE ROAD TO PEACE

It must be a primary aim of our foreign policy to work at all places and in all ways to create world conditions and climates of opinion which will make it possible to prevent the destruction of our country and all civilization in a hydrogen war.

The Republican administration is on dead center on this, the most vital of the problems which confront us. The administration seems to have lost the determination to succeed in the prevention of war—and this in the day of hydrogen bombs and intercontinental missiles. The Democratic Party must and always will be committed to the conviction that peace is possible, and to the actions that are necessary to its achievement.

During these 2 remaining years of the Eisenhower administration, the Democratic opposition should insist that the Republican administration act to have a foreign policy which will make it clear to the world that the United States and its allies and friends want peace and are willing to do what is necessary to get; to develop policies which will establish a common understanding with the peoples of Asia and Africa to work with us to prevent war; to work from positions of strength at home and with our allies of Europe and of South and Central America and the rest of the world to try to persuade the Russians and Chinese Communists to agree to the peaceful settlement of disputes between them and us; to use the United Nations wherever practicable for the development of our policies; and to move with determination to seek world agreement on the regulation and control of the weapons of modern war. Mankind must get control of the weapons of modern war. The most immediate step in this direction should be for the United States to propose to the United Nations a reliable stage-by-stage plan, to be enforced by the United Nations, for substantially total disarmament down to the levels needed for local policing.

COOPERATION ON FOREIGN POLICY

Never was confidence and cooperation between this country and the free world more essential to the security of the United States than now. Never have crises broken around us so fast and so violently and caught our Government so unprepared as in the Middle East during July, in Quemoy during September, over Berlin in November.

No one questions the constitutional authority of the President to command the Armed Forces of the United States and to conduct negotiations with foreign nations. No one doubts his right to choose his own advisers. But there is much more to formulating and carrying out foreign policy than ordering troop movements and negotiating with foreign nations. There is the vast responsibility of determining our national purposes and of providing the capacity and means for attaining them. Here the legislative branch has its own constitutional task both in devising policy and in wisely exercising the power to grant legal authority for its execution, along with the necessary manpower, material resources, and funds.

If there were proper relations between the parties and within the Government, the legislative branch—and, indeed, the country—should confidently depend upon the President, acting through the State Department and its missions abroad, for information, analysis, and appraisal and leadership in foreign matters. Unfortunately, the confidence of the country, the Congress, and of our allies in the present conduct of our foreign policy has been lost.

This lack of trust has consequences which must be faced frankly and, in the national interest, stated frankly. As for the day-to-day conduct of the unforeseen crises with their threats of war, into which the administration so blindly stumbles, there is not much that our party can do. But we can and should make clear four points which might have some salutary effects:

First, that we are wholly determined that our country shall carry out solemn commitments to which it is a party. But we disapprove the tendency of the present administration to expand these commitments beyond their original intent by administrative interpretation.

Second, that we are wholly determined that so far as we can do so, we shall see that our country is prepared and able to carry out its commitments.

Third, we intend to criticize men and their actions responsible for the blunders, drift, and neglect which permit the recurrence of these crises; and we do not intend to be intimidated by the charge that to do so is to give aid to the enemy.

Fourth, the Constitution gives the President broad discretionary power to use the Armed Forces. We view with misgivings the requests by this administration for vague and imprecise extensions of this authority.

NATIONAL DEFENSE

The hour is now too late to tolerate the equivocations, the suppressions of truth, the positive misrepresentations of those who tell us that what we have been doing, what we are asking of ourselves, what we are devoting to our defenses is even keeping us abreast of the tide. It is not. The time given us is very short. The security of the country can no longer afford the inaction of officials, however highly placed, who stubbornly refuse to obey the law which gives them direction of funds to be used in defense. It is the duty of our party to continue even more vigorously to legislate the expansion of our defensive capabilities and see that the law is obeyed.

More than this: We need a new attitude in our military planning and in our military budget. We need the decision and determination that this country shall have a level of deterrent military power, now and in the future, such as to leave no doubts in the minds of the Russians and the Communist Chinese that they must not start a war or allow one to start.

We must build, too, our air transport facilities for a minimum of three or four modernized divisions, to be quickly transported to where they may be needed.

Our need for these forces is more compelling than the question of their costs. Our decision should be based on national security rather than arbitrary budget figures. But at the same time we must stop vacillating about service rivalries and the organization of the Department of Defense. We must reorganize our military establishment into a single department, thereby eliminating the waste in money, manpower, and results which are inevitable under the present obsolete organization.

ECONOMIC STRENGTHENING OF THE FREE WORLD

The ultimate objective of the free world is not military strength but human well-being. The advance of this well-being, under the shelter of this military strength, offers the best single hope that the costs and dangers of the shelter itself may gradually and safely be removed. The contest of competing systems to uplift peoples can be the long-range salvation of the world; the contest merely to excel in arms is the current tragedy of the world.

The Marshall plan and point 4 won the support of the American people because we

are dedicated to human advance. The economic and political benefits of these efforts came just because the recipients saw in them a reflection of their own aspirations and of the true face of America.

In more recent years, we have neither reshaped these efforts to changing circumstances, nor maintained them at levels consistent with needs overseas and our resources at home.

This process of reshaping should now be undertaken with redoubled vigor. It involves a complex of technical assistance, private credits facilitated by public action, and public programs. These related efforts should be coordinated at home and with friendly nations, showing that our power and determination to diffuse the security of plenty is no less bold and realistic than our efforts to diffuse the security of arms. The cost of plenty is less than the cost of arms; the benefits incalculably greater. The appalling world spectacle of vast unused productive powers in the United States while others cannot make their human ends meet, needs to be succeeded by the inspiration of an America willing to use a just proportion of our marvelous technology to reinforce political freedom by reducing freedom from want.

BACKS MORE TECHNICAL AID

Specifically, we believe that the Democratic Party should give strong support first, to expansion of technical assistance under the point 4 program; second, to the authorization of at least $1 billion for each of the next 5 years for the development loan fund; and third, to the expansion and extension of the program under Public Law 480 for using our agricultural surpluses to help needy people overseas.

Our party, as in the case of the Marshall plan and point 4, can and should draw up—what the administration has not provided—a definitive program, stating concretely the objectives for a specific phase of development in undeveloped areas and the extent, duration, and cost of our country's participation, which program should be carried out to the greatest extent practicable with our allies and through the United Nations. Only in this way can a practicable program and continuity of action be achieved.

ECONOMIC GROWTH AT HOME

We must have a rapidly growing economy to support the inevitably mounting costs of an adequate national defense, to supply the economic sinews of an effective foreign policy, to meet the domestic needs of a growing population, and to make reasonable progress in the living standards of our people. During the last 6 years of the Truman administration our gross national product, measured in constant dollars, increased at an average annual rate of more than 4½ percent. During the 6 years of this Republican administration, the average annual increase has been only 1.3 percent. This is intolerable.

The population of these United States has increased by 15 million people since Mr. Eisenhower became President. The annual increase in our population is 3 million persons. The growth in output of goods and services must match this for us even to stand still. But standing still is not progress; in fact, it is failure. The Russians are not standing still. The increase in their national product during the most recent years has been estimated at an annual rate of 7 to 10 percent. They are catching up with us and have plans to pass us by. No one should fail to take their plans seriously. Their implications for our peace and security are ominous indeed. A 5 percent annual growth rate, barely above what we averaged some years ago, is moderate in terms of our new technology. We could do even better.

Government expenditures, keyed to our vital needs and resource capabilities, are in themselves a key factor in maximum economic growth. Conversely, maximum economic growth is essential to support the necessary level of vital Government expenditures. The amount and purpose of Government spending must be determined by wisely balancing needs and capability. It is elementary that a growing nation needs larger public as well as larger private expenditures, just as it costs more to support a family of five than it does a family of three. It is equally obvious, even more for a nation than for a family, that it is better to increase production and income so that needs can be met, rather than to sacrifice essentials because production, employment, and national income are far too low.

CONTROL OF INFLATION

The Republicans have given us unemployment and recurrent stagnation with persistent inflation. This, in fact, is their unique contribution.

The main key to effective inflation control is sustained full employment and full production, combined with truly competitive pricing. Actions to insure an expanding economy, in which full private and public consumption calls forth the high rate of productivity of which we are technologically capable, would facilitate the fight against inflation. Artificially restrained production has inflationary effects.

The Congress should give serious consideration to the following matters: First, the impact of the monetary and high interest rate policies of the administration which repress production and cramp economic growth; second, the lack of public machinery to air the facts of pending inflationary steps in the private economy and of debt policies that have raised the cost of financing the increasing public debt to an alltime high; and third, the more vigorous enforcement of antimonopoly laws, with a continued stress on investigations into the administered private policies of American industry. There should be constant review of tariff policies which unduly protect noncompetitive domestic industry.

A thorough going review is urgently required of the fiscal and monetary policies of the administration and the Federal Reserve Board that have contributed to a gross imbalance of the national budget; to a serious recession with continuing rising prices, and to serious problems now arising in the refinancing of a sizable portion of the Federal debt at unreasonably high interest costs to the taxpayer. It should be the object of such an investigation to determine who the beneficiaries of these policies have been, and what harm has been done to the future of the Nation's economic strength.

The problem of continuing and rising consumer costs demands congressional inquiry into such pricing policies as the farmer-consumer price spread that has resulted in rising retail food costs with a decreasing portion going to the farmers of the food dollar.

The following portions of this statement outline the specific crucial areas in which we should bring our performance into line with our needs and capabilities. The question will at once be raised as to how we can meet the costs of these economic and human advances. The answer is that we cannot meet them with an economy growing at the rate of 1.3 percent a year. But if we restore and maintain a satisfactory rate of economic growth, the increases in production which are the ultimate sources of all wealth will more than cover the costs of the programs detailed below. In fact, public budgets designed to service these needed programs would in a fully expanding economy represent no larger, and most likely a smaller, part of our total national production than the inadequate public programs of recent years have represented in a retarded economy.

EDUCATION

The administration's attempts to stop the Federal Government from assisting States by vocational education programs should be opposed. These programs are particularly important in the rural areas in which there are dramatic changes in emphasis and ways of life and where, as a consequence, the young people must be provided with help and training to meet the challenge of these transitions in our rural economy.

A Federal scholarship program to meet the truly great challenge facing the United States during the next 10 years, as the number of students eligible for colleges and universities more than doubles, should be promptly established.

We favor a program of Federal assistance to the States for school construction.

There must be a continuation of the Federal impacted areas program which has been opposed by this administration.

CIVIL RIGHTS

The Democratic Party reaffirms its traditional belief in the dignity of each individual human being and that every citizen must be guaranteed his full rights and opportunities under the Constitution.

Appropriate congressional action appears to be necessary to make the deliberations and investigations of the Civil Rights Commission meaningful.

There should be a thorough review of the enforcement by the Attorney General of rights of Americans under existing civil rights laws, including the newly enacted Federal laws to protect voting rights.

The Attorney General of the United States should be authorized to start civil injunctions suits against those who deprive persons of their rights to equal protection of the laws, on account of race, color, religion, or natural origin.

There is an obligation to meet the challenge of closed schools and potentially uneducated children as a result of the defiance of the law of the land by a few State and local officials. The present crisis over the refusals of local officials to comply with the orders and decrees of Federal courts has not been met by firm and constructive leadership from the President or his subordinates. It is to be hoped that such legislative action will be taken as will aid, assist, and encourage, the earliest possible reopening of schools now closed, and will prevent the closing of other schools.

Federal legislation is needed to outlaw the use of the mails for the distribution of literature designed to inflame racial and religious prejudices for the purpose of inciting violence such as that which has led to the recent wave of bombings and violence.

CONGRESSIONAL PROCEDURES

The Senate will face a challenge that can only be met in its opening days.

The challenge is to change Senate rule XXII which now requires a two-thirds vote of the total Members to shut off debate and which provides for no limitation whatsoever of debate on proposals for changes in any rule of the Senate including rule XXII.

The Democratic Advisory Council, as it did on January 4, 1957, once again takes its stand on the relevant 1956 Democratic platform plank. The language of that plank—the Republican platform is altogether silent—unequivocally calls for improved congressional procedures so that majority rule prevails, and decisions can be made after reasonable debate without being blocked by a minority in either House.

We reaffirm this position and state these propositions:

First: We believe that every new Senate, like every new House, has the constitutional and democratic right to make its own rules of procedure.

Second: In any new rule for the limitation of debate, the need for full and searching

discussion in which all Senators may speak and in which public opinion can make its own influence felt, must be duly respected. But the new rule must also be such that after a respectable interval of time, the Senate shall be able to give relevance to the debate by bringing the matters under discussion to a terminal vote where the decision of the majority of the total membership shall close the debate. There can be no compromise with this ultimate, democratic right of the majority to say "Yes" or "No" on legislative issues.

We also favor a liberalization and democratization of the rules of the House of Representatives. The present House rules have operated to delay or block the consideration and passage of important and desirable legislative measures. We believe that in the House as well as in the Senate, the majority of the membership should have an adeqaute opportunity to vote on legislation.

IMMIGRATION

A general revision of existing immigration and citizenship laws is long overdue. Such revision, for the purpose of humanizing and liberalizing these laws, is of vital importance.

In addition, prompt consideration should be given to the problem of resettling groups of refugees and escapees which are now scattered throughout the world. The United States should give a home to its fair share of these persons.

HEALTH

The need is urgent for an enlarged program of hospital construction, and for loans to local comprehensive health insurance cooperatives. This will provide the basis for the development and enactment of a comprehensive and integrated program for the insurance, protection and improvement of the health of all of our people.

There must be a steady effort to increase the funds and resources available for a broad program of medical research and rehabilitation.

SOCIAL SECURITY

The following incresed benefits and hospital care program should be adopted as the next several steps in insuring a secure life for our people:

Increase social security tax payments by one-half of 1 percent, split 50–50 by employers and employees, to finance hospital and nursing insurance for aged persons and other social security beneficiaries, including:

Hospitals care for 50 to 60 days per year.

A limited amount of nursing service.

Increase monthly social security benefits 10 percent, as a next step, and another 10 percent in the next 3 or 4 years, to bring benefits up to an average of $100 per month.

Improve widow's benefits.

Extend the age for children to receive benefits from 18 to 21 to enable children to stay in school.

Remove the requirement that disability benefits begin only at age 50. A disabled person is disabled whether he is 25, 40 or 50 years old.

Increase the maximum earnings to which the social security tax applies from its present level of $4,800 to $6,000 within the next 2 years, and to $7,200 by 1962 or 1963, to keep the wage base in line with changing economic conditions.

Maximum benefits to families with several children should be raised.

Study should also be directed to the appropriate retirement age in view of general economic as well as personal considerations.

PUBLIC ASSISTANCE—CHILD WELFARE

The Congress should now enact at least the increased public assistance payments to the States which were blocked by the administration in the last session of Congress, and broaden and improve the program to take care of anyone in actual need.

We must strive for an improved program for maternal child health and welfare.

LABOR

We favor:

An increase in the minimum wage to $1.25 an hour.

Broadening the coverage of the minimum wage program to include at least 10 million additional workers.

The enactment of minimum Federal standards for the unemployment compensation program with respect to the amount and duration of benefits and the provision of continuing Federal assistance to increase and extend benefits until such standards become effective.

The enactment of the Kennedy-Ives Labor Management and Reporting Act.

The repeal of the provision of the Taft-Hartley Act authorizing State so-called right-to-work legislation.

Neither right-to-wark laws nor differing standards of unemployment compensation should be allowed to react to the disadvantage of those States with more advanced labor laws or higher levels of unemployment compensation.

SMALL BUSINESS

Effective action should be taken to ease the credit squeeze on small business.

Continuing work is needed to insure that a fair share of the Nation's defense contracts is allotted to the smaller business firms in all parts of the Nation.

New sources of long-term credit and equity capital should be opened up for small businesses, and Congress should focus its attention on the manner in which the Small Business Administration, through its regulations and rulings, has served to weaken the implementation of the Small Business Investment Act and to subvert its purpose.

AGRICULTURE

We must have an effective, consistent, and broadgaged program for the protection and development of rural America. Farmers and their families, businessmen, and dwellers in the smaller towns, inhabitants of rural communities, all have an urgent stake in such a program. So do all our people, because the long farm depression has hurt us all. The administration through the action of Secretary Benson is now at the end of a long effort to undercut the corn program through the abandonment of acreage controls. The next step, as the result of the predictable increase in production, will be to ask for the total abandonment of corn price supports. Programs of long standing for cotton, tobacco, peanuts, and other crops are now in serious danger. This impairment of the farm programs must be arrested and reversed and measures must be adopted to assure fair farm income, to develop human and natural resources, and to protect rural communities.

These measures should include:

An expansion of domestic consumption of agricultural commodities through programs to assure an adequate diet to the undernourished portion of the population.

The increased export and foreign consumption of agricultural surpluses through the establishment of an international food agency.

The development of a program to preserve family-type agriculture from overwhelming encroachment by corporate-type farming.

An improved and workable program to use such combination of price guarantees on basic agricultural commodities and other measures as will move farm families toward parity of income with other groups.

CONSERVATION

The broadly gaged Democratic programs for the conservation and utilization of our soil, timber, mineral, and water resources have proven themselves over the years as meaningful programs for today.

The Congress must constantly be vigilant to see that the full utilization of existing laws and programs is pursued by the administration, so that these natural treasures are nurtured and expanded for the benefit and pleasure of future generations.

HYDROELECTRIC AND ATOMIC RESOURCE DEVELOPMENT

Goals for the Democratic-controlled 86th Congress in the greatly neglected area of full utilization of our tremendous power resources should include:

Enactment of a TVA self-financing bill.

Clarification of the "public purpose" of the atomic energy program of the Federal Government with particular attention to the broadened application of atomic power to serve mankind.

Rapid development of large-scale atomic power reactor demonstration by the AEC and increased emphasis on the use of atomic power for transportation and propulsion.

A sizable increase in funds for new power project starts in the many projects already authorized, including funds directing research be instituted for unauthorized and potentially feasible projects.

A Columbia River development program that would be self-financing.

RURAL ELECTRIFICATION COOPERATIVES

The Rural Electrification Administration should be reorganized along the lines of the Humphrey-Price bill, so that the Secretary of Agriculture will be unable to subvert the REA programs. In this way, rural America will continue to benefit from expanding REA services. The administration's efforts to bring its high interest rate policies to bear on the REA program must be vigorously opposed.

COMMUNITY FACILITIES—PUBLIC WORKS

The problems of adequate metropolitan transportation, public recreation facilities, schools, and local public services of all kinds are as meaningful an area for Federal Government activity as are the great reclamation and power projects of the West.

The deficits in the public works programs in all parts of the Nation are mounting all too rapidly for a Nation of our growing and expanding population.

It is vital that the 86th Congress look at public works development as a whole. To assist our citizens in the cities and towns, it should enact a community facilities program along the lines of the one that was defeated in the last Congress. It should also enact a new and broad program for reclaiming of the land and wasted resources in all regions of our Nation.

AREA REDEVELOPMENT

This bill, vetoed by the President, at a heavy loss to his party, is urgently needed. We are unwilling to see our fellow citizens forced to idleness in communities that have been hit hard by economic misfortunes not of their own making. Under the terms of this legislation, a minimum of $500 million should be made available to finance new industries in the distressed communities and to provide needed public services, and to retrain workers.

HOUSING—URBAN RENEWAL

Republican obstruction kept the last Congress from passing a housing bill. Accordingly, housing legislation is immediately necessary. Apart from extending mortgage guarantees and renewing other needed legislation, it should provide for a much-expanded public housing program and a significantly larger and vigorously administered program of urban renewal. Programs for middle income and cooperative housing should be liberalized. Explicit provision should be made to insure moderate interest rates.

AIRPORT PROGRAM

There is a pressing need for Federal aid to modernize and expand existing airport facili-

ties across the Nation, and meet the demands of the air transportation age.

TAXATION

The Congress should constantly review the total revenue-producing laws of the Federal Government. This review should not be limited to consideration of how much revenues given tax rates can yield in an economy which is not fully productive nor fully expanding. It should include consideration of taxation as a means toward full production and economic growth.

It is not conducive to a healthy growing economy to have the tax burden for the Government's programs inequitably distributed.

The Republican inspired tax programs of 1954 placed undue burdens on certain income groups of our society when viewed against the tax advantages given other groups. These inequities, together with an increasing complex of loopholes for special interests, must be readjusted. Much of the added income needed to bring our national budget into balance can be found by such adjustments of the tax burden, and by closing these loopholes.

CLEAN ELECTION LAWS

Federal election laws should be modernized along the lines proposed by the Hennings-Green bill, in order to assure more meaningful reporting of campaign expenditures, a tightening of the corrupt practices laws, and an extension of Federal regulation of elections for Federal office to include primary elections for any Federal office.

STATEHOOD FOR HAWAII

Now that Alaska has been given statehood, the claims of Hawaii to come into the Union as a State can no longer be set aside.

The representatives of Hawaii agreed to wait until the Alaska problem was resolved, and are entitled to get final action promptly.

ALASKA

We are gratified that statehood for Alaska was initiated by and largely accomplished through the efforts of the Democratic Party. We hope that the Democratic Party will give continuing attention to the special problems and pressing needs of our new State and its people.

HOME RULE FOR THE DISTRICT OF COLUMBIA

The people of the District of Columbia are entitled to local home rule, and to elect the officials to administer their local affairs. They are also entitled to vote in Presidential elections and to have voting representation in the Congress of the United States. Legislation to achieve these objectives should be passed promptly.

OUTER SPACE

The United States should rapidly extend its exploration of outer space. We should press our efforts to place this new dimension under the international control of the United Nations.

MEMBERS OF COUNCIL

WASHINGTON, December 8.—Following are the members of the Democratic advisory council:

Jacob M. Arvey, national committeeman from Illinois.

Paul M. Butler, of Indiana, national chairman.

Mrs. Katherine M. Cullinan, national committeewoman from Rhode Island.

Mrs. Benjamin Bryan Everett, national committeewoman from North Carolina.

Camille F. Gravel, Jr., national committeeman from Louisiana.

Lee C. Graybill, national committeeman from Montana.

Governor Harriman, of New York.

Senator HUBERT H. HUMPHREY, of Minnesota.

Mrs. Ione Hunt, national committeewoman from Minnesota.

Senator ESTES KEFAUVER, of Tennessee.

Arthur B. Koontz, national committeeman from West Virginia.

Governor-elect David L. Lawrence, of Pennsylvania.

Former Senator Herbert H. Lehman, of New York.

Gov. Stephen L. R. McNichols, of Colorado.

Mrs. Margaret Price, national committeewoman from Michigan.

Calvin W. Rawlings, national committeeman from Utah.

Mrs. Thelma Parkinson Sharp, national committeewoman from New Jersey.

Adlai E. Stevenson, of Illinois.

Mrs. Leonard Thomas, national committeewoman from Alabama.

Mrs. Marguerite Peyton Thompson, national committeewoman from Colorado.

Former President Harry S. Truman, of Missouri.

Mayor Raymond R. Tucker, of St. Louis, Mo.

Gov. G. Mennen Williams, of Michigan.

Paul Ziffren, national committeeman from California.

Mrs. Franklin D. Roosevelt, of New York, is listed as consultant to the group, and it has an administrative committee composed of Thomas K. Finletter, of New York; Philip B. Periman, of Maryland; and Mr. Butler. Charles S. Murphy is counsel, and Charles Tyroler 2d is executive director.

The FBI or the Nation—Facts To Combat Communism and Those Who Aid Its Cause

EXTENSION OF REMARKS

OF

HON. H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. SMITH of California. Mr. Speaker, in view of the pending House resolution to abolish the Un-American Activities Committee, and certain other activities of a small militant group which continues to attack the FBI, I am placing in the RECORD the October 31, 1958, issue of Counterattack. It sets forth accurately and concisely facts to combat communism and those who aid its cause. I think it would be well for every loyal American to read this particular publication:

THE FBI OR THE NATION

In September 1957 the Emergency Civil Liberties Committee (ECLC)[1] headed by Harvey O'Connor and Corliss Lamont, two stanch supporters of the Soviets, began its campaign against the House Committee on Un-American Activities (HUAC). Almost immediately this campaign was broadened to include the Federal Bureau of Investigation (FBI). Pamphlets were sent out warning "friends" they didn't need to aid the FBI and they should tell the ECLC of any attempts by the FBI to intimidate or threaten them.

In the light of the past record, a careful student could have estimated just how long it would take before the anti-FBI campaign of the ECLC erupted into "The Nation," a magazine that once upon a time was influential as a fairminded liberal organ but in recent years has become a steady follower of assorted pro-Soviet and pro-Communist causes.

For some years the name of Harvey O'Connor has been on The Nation's list of editors as a staff contributor. Mr. O'Conner, it will be remembered, is the man identified in 1939 as a Communist Party member employed by the Communist-controlled labor press service, Federated Press. Before the McCarthy Senate Investigating Committee in 1953, O'Connor refused to answer if he was a party member. Recently he refused to obey an HUAC subpena. (See Counterattack, October 3, 1958, p. 156.)

The present owners of The Nation are George G. Kerstein, publisher, and Carey McWilliams, editor.

McWilliams record in support of Communist activities goes back over 20 years and is cited on the last page.[2]

Mr. Kerstein is the moneyman whose ex-wife, Elinor Perry Kerstein, is secretary of the ECLC.

The Nation itself has been a subject of interest to the Government. R. Lawrence Siegel, general counsel of the magazine, and another lawyer from his office, Miss Hadassah R. Shapiro, were both convicted in Federal court on January 18, 1956, of conspiring to obstruct justice and of perjury. They were involved with the case of Harvey Matusow, the recanting perjurious ex-Communist who went to the Nation with his story. Attorney Siegel was convicted of having destroyed records of his conversations with Matusow and of having lied to the grand jury investigating the case. Both are appealing. Martin Solow, former assistant to the publisher, is still under indictment.

Former U.S. Attorney Thomas Bolan, in testimony in the Siegel-Shapiro case, said: "Carey McWilliams * * * had arranged certain meetings with Matusow, with members of the Communist Party * * *."

The issue dated October 18, 1958, was a special issue, sold for 50 cents, twice the regular price, and was devoted exclusively, except for a few advertisements (as you shall see later), to a blast at the FBI.

Who was assigned by the Nation to do the FBI? A man who attacked the FBI in the Nation on other occasions, one Fred J. Cook, a rewriteman for Roy W. Howard's New York World-Telegram and Sun, a Scripps-Howard newspaper.

WHO IS COOK?

Cook came to the World-Telegram from the Asbury Park (N.J.) Press and was known

---

[1] Emergency Civil Liberties Committee: To defend the cases of Communist lawbreakers, fronts have been devised making special appeals in behalf of civil liberties and reaching out far beyond the confines of the Communist Party itself. Among these organizations are the * * * Emergency Civil Liberties Committee. When the Communist Party itself is under fire these fronts offer a bulwark of protection.

[2] Carey McWilliams, chairman, American Committee for Protection of Foreign Born; sponsor, Civil Rights Congress; endorser, Schneiderman-Darcy Defense Committee; member of council, American Peace Crusade; member, national council, American Peace Mobilization; signer of Call, American Writers Congress; speaker, Conference on Constitutional Liberties in America; sponsor, American Slav Congress; signer of statement, National Council of American-Soviet Friendship; subscriber, People's World, west coast Communist organ; sent greetings, International Labor Defense; sponsor, Committee for a Democratic Far-Eastern Policy; contributor, New Masses; speaker, National Lawyers Guild; endorser, public rally, International Workers Order; associate editor, Lawyers Guild Review; vice chairman, National Federation for Constitutional Liberties; speaker, Washington Book Shop; sponsor, Veterans of the Abraham Lincoln Brigade; signer, open letter to American Liberals, Soviet Russia Today.

on his job as a nonpolitical newspaperman. His main forte was crime. A police reporter calling in the details of a story of an important murder could be expected to give these details to Fred Cook. Cook was often seen in the evenings at the World-Telegram office writing stories of murders and robberies for the various crime magazines, his desk stacked with folders of clippings from the Telegram's morgue (library). His first contact with the Nation was on March 10, 1956, when he sold them an article, "Capital Punishment: Does It Prevent Crime?" His view was that it didn't. His next contact with the Nation was an article on September 29, 1956, on the case of the acid-blinded labor columnist, Victor Riesel, and Cook concluded there seemed to be no motive for the crime.

In April 1957 Cook had an article on the case of William W. Remington in the magazine Saga: True Adventures for Men. The subtitle of this piece was "An Overdose of Curiosity." It stated that Remington was led to "experiment" with communism and it finally cost him his life. (Remington was killed in prison by another inmate, after being convicted of perjury.)

Cook's article on Remington is supposed to have inspired the Nation to choose him to write a new version of the Alger Hiss case. This appeared in September 21, 1957, and took up 38 of the 45 pages in that issue. Later it was sold as a book. Like the Remington article, the Hiss piece presumed to be a dispassionate appraisal, but in both the net result was to leave the reader with the idea that an injustice was done to the convicted perjurers.

It was in the Hiss article that Cook made no attempt to prevent his readers from thinking the worst of the FBI. At one point, he wrote that Whittaker Chambers came up with some testimony only after the FBI had produced certain evidence, indicating that the agency had aided in distorting the facts in the pending trial. Later Cook quotes a "* * * pungent paragraph * * *" by Hiss' attorney Chester T. Lane, a part of which read "We search for records—the FBI has them. We ask questions—the FBI will not let people talk to us * * *." Cook then comments approvingly:

"This is probably as close as any attorney has ever come in court to accusing the FBI of Gestapo-like methods, of creating the atmosphere of a police state which is the very antithesis of democracy."

The final gist of the Cook judgment on Alger Hiss is that only if seven points are believed that were raised by Hiss' lawyers and rejected by the jury and the appeals courts, can one believe Hiss guilty. If Hiss is really innocent, says Cook:

"Could Whittaker Chambers alone and unaided have deceived the FBI and the U.S. Attorney General's Office? Or must he have had, perhaps on several levels, official collaborators in the perfection of his story and the completion of his deeds?"

Is this an implication that the FBI and/or the Department of Justice conspired with Chambers?

This is the background of the one assigned to do an objective survey of the FBI in the Nation.

THE NATION AT WORK

The Cook version of Hiss case called Hiss: New Perspectives on the Strangest Case of Our Time appealed to the Nation's editors. They couldn't wait for him to do something new. So with almost no changes, the Nation proceeded to run the warmed-over Remington story from Saga magazine. It was not rewritten except for a phrase here and there. Nor were the intellectual readers of the Nation told that they were getting a rerun of a true adventure story from Saga.

The changes are worth noting. Cook wrote in Saga:

"By 1948, however, the double-crosses of international diplomacy had created new tensions at home and abroad. Russia had made it evident that she had not relaxed her goal of a Communist-dominated world and had betrayed us in Korea."

In the Nation article the sentence about Russia (underlined) was cut out. The Saga story told about Elizabeth Bentley, the Soviet courier who testified about her contact who was still in government and it read:

"That contact, unnamed at first, was William W. Remington." The Nation changed this to read: "That alleged contact."

Cook in Saga told of Remington's claim to have paid $30 in dues through Miss Bentley to the Joint Antifascist Refugee Committee. He added:

"This was later exposed as a Communist front but he said he did not know that then."

In the Nation, this sentence became:

"This was before the organization had been labeled a Communist front."

Quite a difference in meaning.

The Saga version said that in 1948 Bentley and Remington testified before "the Senate Internal Securities Subcommittee." The Nation corrected this to read "Internal Security Subcommittee." But both versions were incorrect. The testimony was before the Subcommittee on Investigations of the Committee on Expenditures in the Executive Department. The Internal Security Subcommittee was not constituted until 1951.

Both editions end with an implication that the FBI had tapped the phone of Remington's attorney and thus was able to prevent two witnesses from testifying.

Cook next wrote for the Nation about Boris Morros calling his article "Hero of a Myth." Morros was identified as a longtime undercover agent for the FBI when he appeared to give testimony in the case of Jack and Myra Soble, who pleaded guilty to espionage. They were members of the same Soviet spy apparatus, only Morros was working for the FBI. Cook claimed he found many contradictions in the stories Morros told the press.

Before the Nation ran the Cook attack on the FBI it made some changes. Its issue of September 6, 1958, had the list of staff contributors that had run for some years. Included in this list was Harvey O'Connor, Andrew Roth (indicted but never tried in the Amerasia case), and H. H. Wilson (professor at Princeton University, also an ECLC member), among others.

The following issue of the magazine dropped these names without any explanation to its readers.

The October 4 issue carried an article attacking the monetary policy of the Eisenhower administration. The author of this piece is Wilfred Lumer, described by the Nation as the author of "Small Business at the Crossroads," and the "Hard Money Crusade" wtih Bertram Cross, as coauthor, published by the Public Affairs Institute.

The 1958 report "Investigation of Soviet Espionage" issued by the HUAC lists the testimony of Wilfred Lumer, who was then employed by the Public Affairs Institute which he said was supported by the Brotherhood of Railroad Trainmen. The committee noted that Lumer had been identified under oath as a Communist Party member and invoked the fifth amendment when asked whether he was a member of the Communist Party at the time of his appearance before the committee, and whether he had discussed his work on legislative reports with any person known to him to be a Communist.

The Nation of October 18 devoted exclusively to the FBI, ran to 56 pages and an introduction by the editors stated that, "The last objective study (of the FBI) was undertaken in 1950." This was a book called the Federal Bureau of Investigation by Max Lowenthal, said the editors.

Just how objective Max Lowenthal's book was, is indicated by a news story in the New York Times the day it was published, November 30, 1950. The story was headed "Lowenthal Book Assails the FBI." The writer then devoted more than a column to detailing the Lowenthal assault on the FBI and its director, J. Edgar Hoover. Book reviewers recognized that the Lowenthal book was just the opposite of objective. It was a violent attack.

To get its own objective appraisal of the FBI the Nation stated it "decided to call in Fred J. Cook, one of the country's top reporters and investigators in the field of crime."

THE BUILDUP

By writing for the Nation, Cook has been steadily promoted. The capital punishment article listed Cook as an author and crime reporter on the World-Telegram and Sun. His Riesel story mentioned him as a "police reporter on a New York metropolitan newspaper." For the Hiss piece he became "one of the Nation's top crime reporters." For the Remington rerun in the Nation he was cited as "the veteran New York crime reporter." For the Boris Morros story, he was only a crime reporter again.

Actually Cook is a good rewrite man who can write a lively article from a few old clippings. He is not a veteran since he came to New York in 1945, nor is he a nationally known reporter. Two others on the World-Telegram won Pulitzer prizes while Cook was doing his daily grind. Fred Woltman won his prize for exposing the Communists. We wonder if the present Fred Cook—in the Nation at least—would approve. The other, Edward J. Mowery, won a Pulitzer prize for legitimate crime investigating and reporting. Two men were released from prison on the basis of investigation done by Mowery and stories published in the World-Telegram and Sun.

BIRDS OF A FEATHER?

It may be worth noting that there are just two columns of advertising in the FBI issue of the Nation. One is a full column ad paid for out of the tax-free funds of the Ford Foundation's Fund for the Republic. The other column consists of eight 1- and 2-inch ads, one of which is from the Communist Party's publishing house, New Century Publishers, advertising the latest issue of the party's theoretical organ, Political Affairs.

What has Mr. Cook, the crime writer, to say about the FBI? Appearing in "The Nation" as he does, one may be sure there will be little that is good. Whole sections are lifted in essance from Lowenthal's 559 page book of 1950. At least four columns are lifted directly, in quotes from a snide series that appeared in the New Yorker magazine in 1937. Wherever anyone has written about the FBI and has had unpleasant comment to make, Mr. Cook has seemingly found them.

If "The Nation" looked for a nonpolitical person like Mr. Cook to do its "job" on the FBI, naturally Mr. Cook looked around too. By and large he has lifted from wherever he could, and the result is that what "The Nation" has published is a slightly updated version of the Max Lowenthal book, plus the nastiest phrases by anyone else available to Mr. Cook.

In gathering together every criticism of the FBI, Cook tries to create the impression that little, if anything, in the history of the FBI or of Mr. Hoover was of the high level that Americans have found them to be. He even manages to doubt the efficiency of the FBI's huge fingerprint file because the Scotland Yard method is different and therefore better. In the end however, he admits that the FBI file is one of its few good points.

After many pages of blasting the FBI, Cook manages to find room to concede that its record during World War II was "very good indeed." Having made one concession,

he then tries to break down the record and claim it failed in point after point. He accuses the FBI of failing to cooperate with local police and ignores other parts of his story which note the ties of many local police to crooks and mobsters.

His attack on his home publication, the World-Telegram without mentioning it by name is interesting too. He writes about the Amerasia (stolen documents) case and states that it "established (the) eagerness of some of the great media that form public opinion to make the Truman administration and the Democrats the scapegoats for any failure of security. It was an attitude that was to be capitalized upon eventually" as in the Bentley case.

No papers more completely covered these two cases than the Scripps-Howard papers. It is more than likely that Cook himself may have written some of the headline-making features for the World-Telegram.

And if J. Edgar Hoover should be attacked by "The Nation's" reporter, then why not Dwight Eisenhower too? Cook obliges. He quotes a minor statement by Mr. Hoover speaking well of the late Senator Joseph McCarthy and then adds "Eisenhower tripped on his halo by embracing McCarthy in Wisconsin."

After 54 pages of slurs, and innuendoes, Cook is still not satisfied? What he has written against the FBI isn't enough. He says:

"If America is ever again to see issues clearly and to react with the powers of the mind instead of emotionally, Hoover's role and the role of the FBI, at some day and some hour, will have to be assessed."

Then Cook adds a bit later: "Little wonder that we have reached a stage where no issue—not Lebanon, not Quemoy—can be debated vigorously or reasoned on its merits."

Apparently Mr. Cook the top reporter in the field of crime, is now an expert on the subject of international politics as well.

Counterattack considers this lastest job by Fred J. Cook a fine example of the old adage about getting someone else to pull your chestnuts out of the fire. The Emergency Civil Liberties Committee and its stalwarts are out to get the FBI and Mr. Cook is their current catspaw. There will be others. But as an American President said of another debunking attempt: "The monument is still there."

A FINAL WORD

The ECLC is still carrying on its drive against the FBI. As the outstanding governmental opponent of subversion and espionage, the FBI stands in the way of all who would subvert the American way of life. Promising that the October issue of its publication Rights, will be a special issue, the current number of Rights has the following notation.

"The October issue of Rights will be devoted to the subject of 'The FBI and Your Freedom.' Contributors will include Aubrey Williams, president of the Southern Conference Education Fund; attorneys Benjamin Ginzburg, Joseph Forer, Charles C. Lockwood, and Ben Margolis; and Sam Pollock, president of Local 427, Amalgamated Meat Cutters and Butcher Workmen, AFL–CIO, Mr. Ginzburg was formerly on the staff of the Senate Subcommittee on Constitutional Rights."

The New York Post which has probably published more editorial attacks on J. Edgar Hoover and the FBI than any other paper in the country (except possibly the Daily Worker) has a whole staff assigned to gathering material for a series on J. Edgar Hoover according to Preston J. Moore, national commander of the American Legion. In a word of warning to patriotic citizens, Commander Moore noted that "there are some individuals in this country and certain publications determined to discredit the FBI and its Director * * *." He adds:

"It is difficult to attribute any purpose to these attacks other than a desire to destroy this Federal law enforcement agency and its leaders as an effective deterrent to undetected, unopposed Communist subversion in this country."

To this, New York Post Editor James Wechsler writes, his paper is preparing a factual study of Mr. Hoover. He objects to this warning against the Post's independent study and believes Mr. Hoover should not be immune to objective reporting.

This is the first time in 10 years that Wechsler has considered it important to be objective about J. Edgar Hoover. Counterattack believes that on the basis of the past record of the New York Post, Wechsler's idea of objective will be the same as that of the Nation.

The Nation has since published commendations of its FBI article from David L. Weissman, Roger N. Baldwin, and Rev. Stephen A. Fritchman. Weissman is a vice president of the New York chapter of the National Lawyers Guild listed by the HUAC as legal arm of the Communist Party. Reverend Fritchman is so well known as a backer of Communist fronts that nothing more need be said. Roger N. Baldwin, former head of the American Civil Liberties Union can boast that he was attacking the FBI back in 1920 when it was just the Bureau of Investigation.

Faithfully yours,

COUNTERATTACK.

Fortieth Anniversary of the Republic of Latvia—Resolution

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. DINGELL. Mr. Speaker, a group of Latvian-American citizens met on November 16, 1958, to commemorate the 40th anniversary of the Republic of Latvia.

Although Latvia has lost her independence and the people have become inmates of the vast prison that is Soviet Russia, they still yearn as do all other captive peoples for return to the days of freedom, self-government and dignity that the Latvian people once knew.

The resolution adopted by these patriotic Americans of Latvian descent is as follows:

Resolution adopted by Latvians of Detroit, Mich., assembled at the Veterans Memorial Building on 16th day of November, 1958, to commemorate the 40th anniversary of independence of the Republic of Latvia

Whereas, in June 1940, the Soviet Union destroyed once free Latvia and other Baltic States, enslaved their defenseless populations, condemned hundreds of thousands of them to death in Siberia; and

Whereas the Government of the United States of America has repeatedly denounced the subjugation of Latvia, Estonia, and Lithuania and continues to recognize these states and their diplomatic representatives; and

Whereas the Latvian people have their only source of true, objective information radio broadcasts from the Voice of America and other programs from the free world; and

Whereas the continued existence of these broadcasts in the Latvian language provides the Latvians with proof the United States is still aware of the intense feelings the Latvian people have toward their freedom from Soviet chains; and

Whereas any reduction in the Voice of America Latvian language programs will be doing a disservice to the persecuted and long suffering Latvian people, who look to America as their only hope, and to the United States as well, which needs as many friends in all parts of the world as it can muster; and

Whereas, since the United States has made commitments to all anti-Communist countries throughout the world, it is essential that the present policies in Asia especially not be changed with regard to Red China as an example of America's good faith toward the peoples of the world who are struggling against communism; and

Whereas the United States as the last hope of oppressed mankind—the nearly 1 billion people of the world now ruled by Communists—has been able to maintain superiority in the field of nuclear weapons, despite the exaggerated claims made by the Russians and their apologists and other dupes: Now, therefore, be it

Resolved, That we respectfully request the Government of the United States to continue to safeguard the legal existence of Latvia and to take appropriate and timely action in order to enable the Latvian people to resume the exercise of their free and independent statehood under the government of the people's own choice; and be it further

Resolved, That the U.S. Information Agency broadcasts in Latvian be increased to a number of programs to a level commensurate with the importance of the Latvian people located as they are on the sensitive Baltic coast; and be it further

Resolved, That the United States continue to withhold diplomatic recognition of Red China and prevent its admission to the United Nations; and be it further

Resolved, That the United States enter into no agreements with the Soviet Union that would have the effect of reducing its power in the atomic- and hydrogen-weapons field or otherwise restricting its freedom of action in this vital defense area; and be it finally

Resolved, That this resolution be forwarded to the President of the United States, Secretary of State, the U.S. delegation to the United Nations, Senators and Congressmen from Michigan, Governor of the State of Michigan, and Director of the U.S. Information Agency.

Done in Detroit, Mich., this 16th day of November A.D. 1958.

Space Development Race

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to call attention to the fine and carefully worded editorial, entitled "Space Development Race Has But One Objective," which appeared in the Shreveport Times, Shreveport, La., on January 14, 1959:

SPACE DEVELOPMENT RACE HAS BUT ONE OBJECTIVE

As each new success or failure comes in the launching of satellites by the United States and Russia, neither the American people nor those who guide the Nation's military courses

in Washington should ever forget that the first objective in all this must be the development of weapons of war.

Idealistically this Nation and its people look forward to the days of new peacetime wonders through progress in science that now is going on. Perhaps some portion of the people in Russia look forward in the same way. But right now the one objective of Russia in all space development is to create Russian military supremacy over all of the rest of the world. The one objective of the United States must be to reach science success that will prevent the Russians from achieving their objective.

It is nice enough to talk of peace and treaties and agreements and disarmament and limiting or ending atomic tests. But this fact must never be lost sight of: The The existence of this Nation and of the rest of the free world as peaceful peoples rests on the ability of the United States to be able to meet and offset any attack by the Soviet and to conquer and subdue that nation completely in quick retaliation. "Shooting the moon" and accidentally getting to the sun is wonderful from the standpoint of prestige and as indicative of certain progress in certain fields of science. But the Soviet views its own accomplishments only in whatever value they may have toward creating worldwide military superiority and the United States must have the same objective.

In trying to evaluate American space progress alongside of Russian space progress, it must be kept in mind that the two nations move along different paths, even though the paths may be somewhat parellel. The United States seems to be far more deeply concerned—or at least more successful—in development of highly delicate electronic instruments for use in satellites and in other ways than Russia.

So far as public knowledge is concerned, considerable of Russia's satellite and rocket achievement has been on the side of the spectacular and of a type to bring worldwide, prestige, where the United States seems to have more definite scientific objectives in its launchings. For example, it is noticeable that in almost every instance each of the recent launchings by the United States had some particular scientific objective—sought through new electronic instruments—that was not a part of any of the other launchings.

A comparison, though not too applicable, might be found in some American agricultural procedures as compared with agricultural procedures in the Soviet. For example, sweetpotato farmers in the United States use one machine which simultaneously plows a furrow, inserts tiny sweetpotato plants into it, covers their roots with dirt, and waters them—all at one shot. The Russians, in such an activity, would first plow the furrow and then come back and put in the seedlings and then come back and go along the furrow again to cover the seedlings and finally make a fourth trip for watering—four steps taken separately where American farmers would take them simultaneously. It is somewhat the same way in space development—the United States is proceeding along several paths simultaneously where the Soviet proceeds separately.

No one can question the world prestige which the Russians have gained—and earned—by sending a rocket into orbit around the sun, even though they intended to send it into orbit around the moon. The sun achievement is far gretter than what they attempted and fate was with them in that respect. But neither should what the United States is doing and what it has succeeded in doing be sold short because it has not yet shot the moon. While the United States has not yet matched this latest Russian achievement, neither has Russia matched several scientific achievements by American satellites and rockets.

So far as any race between the two nations is concerned, it will not be won by the achievements of the American Atlas or the Soviet sun-orbiter. It will be won by the nation which can first use space experiments in the most deadly and destructive way. Russia, if it wins that race, will destroy much of the world. The United States, if it wins that race, will prevent destruction by the Soviet and certainly will not seek to use its advantage in any way of aggression.

Battler for School Aid: Frank Thompson, Jr.

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I enclose a splendid article appearing in the New York Times of January 12, 1959, relating to our distinguished colleague, the gentleman from New Jersey [Mr. THOMPSON], entitled "Battler for School Aid." A sound progressive, FRANK THOMPSON performs his legislative duties with great ability, vision, and courage. He is a true progressive in every sense of the word, looking forward and not backward in supporting progressive legislation that is for the best interest of our people; and in the field of foreign affairs and national defense, for the best interest of our country.

The article follows:

BATTLER FOR SCHOOL AID: FRANK THOMPSON, JR.

Representative FRANK JOHNSON, JR., of New Jersey's Fourth District, had a reputation as a fighter long before he entered Congress. His 4 years at Washington have only enhanced that reputation. Ever ready to espouse a good cause, he has battled for measures as diverse as Federal aid to education and a National Culture Center, assistance for small business and more democratic congressional procedure. Not every encounter has been crowned with success but the 40-year-old legislator—"THOMPY" to his friends—has lasting qualities that match his fighting spirit. This combination of traits make him much in demand as an advocate, on and off the floor of Congress.

So it is that the National Education Association, again striving to have a multibillion-dollar aid-to-education bill passed, has entrusted its fate in the House of Representatives to Mr. THOMPSON.

HE PREDICTS PASSAGE

He steered the bill to a floor test last year, only to lose by five votes. He says he will win its passage this time "with a more sympathetic Congress."

"Whether the President will sign it or not is something else" said Mr. THOMPSON, a free-swinging Democrat who does not always treat people in high places with the usual deference.

The Congressman has all the attributes of a fighter. He is a 6-foot-3-inch 185 pounder. He has a certain brashness that complements his fighting, sticking qualities.

During World War II, he thrice was awarded combat decorations while in the Navy during action in the Pacific. When fighting in Korea broke out, he reentered service for 17 months.

MAKES EASY TRANSITION

After leaving service the first time, Mr. THOMPSON practiced law for a while in Trenton—then made what was for him the easy transition into politics. One uncle, Crawford Jamieson, had been Democratic leader and State senator in Mercer County. Another, Frank, is the special consultant and behind-the-scenes adviser to Governor Rockefeller in New York.

Mr. THOMPSON easily won election to the assembly in 1949. In his first term he was named assistant minority leader. He served only two terms before making a bid for Congress, winning the Democratic nomination in a three-way contest.

In Congress, he has taken a lot of kidding about some of the legislation he espoused. He was the author of many bills to advance national interest in the arts. Colleagues named him the "culture vulture." He surprised them last year when he was able to have passed and signed a bill setting up a National Cultural Center.

FAVORED ARTS PLANK

His interest in art centers in music where his tastes go from jazz to opera. He caused a stir in 1956 when he sought to get the Democrats to include an arts plank in their national platform.

The Congressman has a keen sense of public relations. His nose for news may be inherited. His late father and his uncle Frank were newspapermen and his brother still is.

Married in 1942 to Evelina Van Metre of Washington, D.C., he has two daughters, Ann, 14, and Evelina, 7. The family maintains a home at Parkfairfax, Va., not too far from the capital, as well as their year-round home at Trenton.

"Family life is too important to let politics give it the go-by," the Congressman insists.

U.S. Judge Thomas W. Slick: A Distinguished American

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. BRADEMAS. Mr. Speaker, I wish to pay tribute to one of the finest men I have ever known, the Honorable Thomas W. Slick, retired Federal judge for northern Indiana, who died this month in South Bend.

I knew Judge Slick for over 15 years. He was a Republican and I a Democrat and we used to joke about our party differences in a way that left me with deep respect for him and great pride in our friendship.

Judge Slick was one of Indiana's finest citizens.

I should like to insert in the RECORD the following editorial from the Hammond Times of January 7, 1959, paying tribute to him:

U.S. JUDGE THOMAS W. SLICK

The death last weekend of retired U.S. Judge Thomas W. Slick, the first judge to sit in the Northern District of Indiana, removes from the scene a jurist particularly noted for

his conciliatory efforts in labor disputes that entered the courts during the thirties.

Judge Slick, 69, died at his home in South Bend. He had been seriously ill for 3 years and ill health had forced him to retire from the Federal bench in 1943 after 18 years of service. His successor was U.S. Judge Luther M. Swygert of Hammond, now the senior of two judges on the northern district bench.

Born in South Bend, Judge Slick taught school for 2 years to accumulate enough money to enter the University of Michigan law school. After he began practice in South Bend, he became active in Republican politics. He had been St. Joseph County prosecutor and South Bend city attorney, in addition to his private practice, before being named a Federal judge.

President Calvin Coolidge nominated Slick to be the northern district judge when the former single Federal court in Indiana was split into northern and southern districts in 1925.

During the thirties, nearly two dozen cases were filed against organized labor as the industrial union organizing movement sprang up. Judge Slick made it a matter of personal interest to try and settle these cases without prolonged litigation. In this he was successful. All of the cases were settled before final court decision was necessary.

Conferences in Judge Slick's chambers between the contending parties played a big part in these peaceful settlements. Judge Slick was always a champion of the idea that management and labor could settle their main differences around a conference table once all facts were properly marshaled, presented and discussed.

Cuba's Wholesale Executions

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. THOMPSON of Louisiana. Mr. Speaker, the following editorial comment by WDSU Broadcasting Station, New Orleans, La., is most timely and excellently stated. I commend it to the attention of Members of this body:

CUBA'S WHOLESALE EXECUTIONS

The firing squad executions of Batista officials in Cuba are now above the 200 mark.

The number and swiftness of these executions have provoked an eruption of criticism in this country and a backfire of blustering comment from rebel leader Fidel Castro.

Part of the shock expressed in this country may result from a basic failure to understand what the Cuban revolution was all about. We customarily pay little attention to what is going on in Latin American countries until some violent events break in on our consciousness. Then we're surprised at developments that seem to have blown up out of nowhere.

Whether it's the fault of American reporters, American diplomats, or a matter of indifference on the part of the American public, most of us were not aware until now of the bitterness and hatred underlying the Cuban revolution, or the extent of the brutality and corruption practiced by the Batista regime.

The success of the revolution itself caught us by surprise. Perhaps if we had understood the revolution a little better we would not have been totally unprepared for the violence of its aftermath.

This is not to condone the wholesale killings in Cuba. Executions on this scale must necessarily be a product more of vengeance than of justice. They are an ugly scar on the face of a revolutionary achievement that invoked the name of freedom.

We can only hope that tonight's postponement of prisoner's trials in Havana means that this unchecked outpouring of hatred has now run its course, and that more orderly processes will be adopted.

In the meantime, this country has to consider its future relationship with Cuba.

We might begin by resolving to do two things that go neatly together:

First, be more attentive to the day-to-day problems of this and other Latin neighbors.

Second, assure Cuba once again that, despite some Congressmen to the contrary, we intend to avoid interference in her internal affairs.

Despite the present agony, there is still hope that a tradition of stability and democracy may emerge in Cuba.

Drive To Destroy House Anti-Reds

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Brooklyn Tablet of January 17, 1959:

DRIVE TO DESTROY HOUSE ANTI-REDS—LIBERALS, LEFTISTS CALL FOR HUAC ABOLITION IN WASHINGTON POST

(By James E. Greene)

The Soviet-inspired operation abolition, which seeks to cripple the antisubversive programs of Congress, discredit J. Edgar Hoover and the Federal Bureau of Investigation and abolish or shackle the work of the House Un-American Activities Committee, has been given new impetus with publication in the Washington Post of an advertisement directed at the latter which "hits a new low with respect to deceit practiced in the attempt to divide our people," charged Representative FRANCIS E. WALTER, Un-American Activities Committee chairman.

The advertisement, placed in the Post by people who are "for the most part well-known fellow travelers or members of Communist fronts," asks the 86th Congress to eliminate the House committee as a standing or continuing body.

LIBERALS DISPUTE ON METHODS

It follows on the heels of announcements by the southern California branch and national office of the American Civil Liberties Union that they would seek to curb HUAC when the new Congress opens. These two "liberal" groups, however, disagree over their methods.

The national ACLU is fearful that an open drive to eliminate the Red hunters "might not only fail conspicuously but also close the door to other approaches." It would rather that "liberals" work to place the committee under the House Judiciary unit, headed by "liberal" Representative EMANUEL CELLER, of Brooklyn.

But the southern California ACLU wants to do the Communists' work another way, though the above method would be effective in smothering attempts by the committee to uncover the spies which it is acknowledged are responsible for the Soviet gain in the missile and outer space field. In their calling for abolition of HUAC, the western ACLU and the Post ad signers closely follow the directive issued by the Communist front Emergency Civil Liberties Committee which in September 1957 in New York City held what it called an "historical" meeting "because it opens the abolition campaign" against the House committee.

ASKS PROOF OF CHARGES

The Post advertisement states the Un-American Activities Committee has "harrassed Americans who work for racial equality and justice" and that it has "increased the bitterness between racial and religious groups of our citizens." Representative WALTER called upon "any of the people whose names are attached to that advertisement to state wherein this committee has ever done anything that even resembles remotely the things that have been charged in this advertisement."

The signers, who included Mrs. Eleanor Roosevelt, Judge Justine Wise Polier, Dr. Reinhold Niebuhr, Leo Pfeffer and Dr. Eugene Carson Blake, asked that the anti-Communist group be destroyed because it has "weakened America.

"At no time in history have we needed to be stronger. At no time have we needed to be wiser. Let us rid ourselves of this agent of weakness and of folly."

They charged the House unit "has become an agency for repression. * * *

"For two decades the committee has condemned individual Americans, has wrecked the lives of some, and has denied them the due process of law. . . . It has imperiled our good relations with the people of Asia, Africa, and Latin America. . . . It has discouraged social and cultural contacts with our neighbors on this shrinking planet. . . . It has discouraged U.S. students and scholars from studying in countries which we Americans desperately need to understand."

Representative WALTER, noting that the operation abolition committee is seeking funds, said "it is indeed unfortunate that some people have been unwilling dupes of this group. . . . The potential contributors had better realize what movement they would be financing."

AD SIGNERS AND RECORDS

Following are the signers of the Washington Post ad: Rev. Benjamin J. Anderson, Dr. Stringfellow Barr, Dean John C. Bennett, Judge John O. Bigelow, Dr. Eugene Carson Blake, Bernarda Bryson, John M. Coe, Rev. Ray Gibbons, Jesse W. Gitt, John Hammond, Prof. Fowler Harper, James Imbrie, Prof. Erich Kahler, Robert W. Kenny, Bishop Edgar L. Love, Dr. John A. Mackay, Daniel G. Marshall, Mrs. Dorothy Marshall, Stewart Meacham, Prof. Alex Meiklejohn, Rev. A. J. Muste, Rev. Claude D. Nelson, Dr. Reinhold Niebuhr, Leo Pfeffer, Judge Justine W. Polier, Clarence E. Pickett, Prof. Arnold W. Rogow, Mrs. Eleanor Roosevelt, Prof. Donald H. Riddle, Ben Shahn, Otto L. Spaeth, Prof. George F. Thomas, W. Q. Tilenius, Prof. Paul Tillett, Aubrey Williams.

The records of some of the signers of the advertisement, according to Representative WALTER, follow:

Stringfellow Barr, a sponsor of Communist fronts who opposed the Internal Security Act but condemned the Supreme Court conviction of the first string Communist leaders.

John M. Coe, in 1950, attorney for the Communist Party of Alabama. Has sponsored Communist fronts over a number of years.

Ray Gibbons, supported the Communist opposition to our aid to England and France during Hitler-Stalin pact in 1941.

Fowler Harper, member of national committee, Emergency Civil Liberties Committee, which is leading the drive against the committee and which was cited by the Senate Internal Security Subcommittee. In 1941

Harper defended the Communist Party in a statement to the President of the United States.

James Imbrie, supporter of Communist fronts over many years including the National Committee to Secure Justice for the Rosenbergs. Member of national committee of Emergency Civil Liberties Committee.

Erich Kahler, supporter of Communist program of American Committee for Protection of Foreign Born. Member of national committee of Emergency Civil Liberties Committee.

Robert W. Kenny, former president of Communist-controlled National Lawyers Guild. Sponsor of numerous Communist fronts, including National Committee To Secure Justice for the Rosenbergs, member of national committee of Emergency Civil Liberties Committee.

John A. Mackay, sponsor of Communist fronts such as the National Council of American-Soviet Friendship.

Daniel G. Marshall, former president of Los Angeles National Lawyers Guild. Sponsor of Communist fronts such as National Committee To Secure Justice for the Rosenbergs.

Dorothy M. Marshall, supporter of many Communist fronts, including the west coast Communist newspaper, the People's World. Defender of the Rosenbergs, she is a member of the national committee of Emergency Civil Liberties Committee.

Prof. Alex Meiklejohn. Not only has he affiliated himself with Communist-front organizations, he has denounced the Supreme Court for its conviction of the top Communist leadership. He has been one of the most vocal leaders of the campaign of the Emergency Civil Liberties Committee to abolish the committee.

Rev. A. J. Muste, a pacifist, he has lent his name to certain Communist organizations over the last 25 years. As chairman of the recently formed American Forum for Socialist Education, he refused to answer questions about the part Communists or the Communist Party played in its formation.

Justine Wise Polier, a onetime member of the Communist-controlled National Lawyers Guild.

Clarence C. Pickett has affiliated with Communist-front organizations over a number of years.

Ben Shahn has sponsored organizations such as the American Continental Congress for World Peace which was held in Mexico City in 1949. This congress was designed to support the Soviet foreign policy and condemn America's. An artist, he has contributed his works for use by the Communist Party in its publications.

Paul Tillett, a supporter of the Emergency Civil Liberties Committee which has led the Communist campaign to abolish the committee.

Aubrew Williams, a supporter of Communist fronts who refused to answer questions when questioned by a Senate committee.

H.R. 1232: A Bill To Create a U.S. Foreign Service Academy

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. BOSCH. Mr. Speaker, on January 7, 1959, I introduced H.R. 1232 to create a U.S. Foreign Service Academy which was referred to the Committee on Foreign Affairs.

This measure is, you might say, a "pet subject" of mine. Bills identical to H.R. 1232 were introduced by me in the 83d, 84th, and 85th Congresses, but no action was taken on them. It is my fervent hope that the 86th Congress will see fit to enact this legislation into law.

We have academies for every branch of our armed services so that we may have officers with the best military training available. No one will argue that this is not as it should be. However, I think we will all agree that the cold war of today is no less important to our security than the military. Upon the shoulders of our diplomatic corps rests the job of preventing a hot war. Does it not logically follow that those charged with the duty of carrying on our relations with foreign countries should be given the very best training in this field that we can provide?

In 1958 I sent a questionnaire to my constituents which included this question: "Do you favor the establishment of a Foreign Service Academy to train our Ambassadors, consular and diplomatic representatives for foreign service?" The response was 86 percent in the affirmative. In addition, many newspapers throughout the country have indicated, through editorials, their support for this legislation. The Long Island Daily Press, the leading newspaper in my area of New York, has on several occasions come out in strong support for this idea.

It is my honest belief that a Foreign Service Academy is a "must," and I am confident that the people of the United States agree. I take this opportunity to call upon the Committee on Foreign Affairs to act on this legislation and to give the members of this body an opportunity to vote on same.

The Emancipation in Retrospect Prospect

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered for the Emancipation Proclamation Day celebration of the Nashville, Tenn., Baptist Ministers' Union at the Mount Zion Baptist Church, Monday, January 5, 1959, by Maynard P. Turner, Jr., Th. D., president of American Baptist Theological Seminary:

THE EMANCIPATION IN RETROSPECT PROSPECT

There is no virtue in looking back merely for the sake of looking back. In fact to "live in the past" is a symptom of emotional deficiency. On the other hand, to examine the past in order to secure sounder footing for positive action in the present, and to plan wisely for the future, is an obligation upon the leadership of any given time or place. It is hoped that this presentation shall be of some assistance to my fellow ministers of Nashville in accomplishing this purpose.

Through the years American Negro leadership has fondly regarded Emancipation Proclamation Day in a sense somewhat comparable to the Jewish regard for the first Passover. Each of these events did mark a turning point in the status of involuntary servitude of the two peoples, but other factors in the two situations prevent the analogy from being carried much further. In each instance, however, a man plays a dominant role. Abraham Lincoln, of course, is the keyman in the Emancipation Proclamation. The text of the proclamation and the date of its issuance are of immense significance, but limited when taken alone as grounds for action today. Mr. Lincoln's attitudes and motives as well as the political and social atmosphere of his day must also be examined.

Even a cursory study of Abraham Lincoln's speeches and writings reveal an astoundingly contemporary attitude, and motives which were at times more pragmatic than altruistic. Due consideration must be given to Lincoln's temperament and personality. Scholars of all opinions seem to agree that Lincoln was decidedly conservative in every respect. He was persistent but not impetuous. He was a man of deep sympathies and broad understanding but it could hardly be said that he allowed himself to be carried away at any time. For example when Lincoln campaigned against Stephen A. Douglas for Senator, (1858) Douglas rode about the State of Illinois in a private car with his political retinue. In contrast to this, Lincoln rode in crowded coaches or in freight cabooses to deliver his speeches. Now, of course, some would argue that this reflected Lincoln's superior showmanship and that he identified himself with the people, while Douglas did not. But such cannot be said of his continued disregard for his clothing and personal appearance. It was the usual thing to find him clad in an ill-fitting suit, unpolished boots, and battered stove-pipe hat in which he carried piles of papers. Clothes and social niceties simply did not interest Lincoln. Yet in his work as a lawyer he paid attention to every detail to the point of meticulousness.

When we consider Abhaham Lincoln as a man, it is quite in character for him—even at the age of 25—while a member of the Illinois State Legislature to studiously avoid association with abolitionists. The national controversy of abolitionists versus slaveholders frequently caused emotions to reach fever heat. However in 1837 when the legislature passed resolutions condemning abolition societies, Lincoln together with Dan Stone, a colleague, entered a protest in which they said slavery was "founded on both injustice and bad policy, but that the promulgation of abolition doctrines tends rather to increase than abate its evils." This statement should be considered side by side with the fact that he never allowed himself to become identified with any religious denomination, but was a constant Bible reader and his life was lived on an exceptionally high moral plain. This morality was true even during his youth on a wild frontier with ruffians as neighbors and companions. Lincoln was an anomoly. He tried to occupy a position on the burning issue of the day which became incerasingly difficult to do.

In the years 1847–49 Lincoln served in Congress from Illinois. In January 1849 he offered Congress a proposal to abolish slavery in Washington, D. C., on three conditions. They were that (1) emancipation was to be gradual, (2) compensation was to be made to slaveholders for the loss of their slaves, (3) the act would not go into force unless approved by vote of the citizens of Washington, D.C., in special election. This measure failed and his influence as a Whig

waned. His temporary setback in politics could well be attributed to his willingness to try to see both sides of an issue, and his subsequent denunciation of President Polk for the Mexican War.

Roughly 10 years later Lincoln joined the newly formed Republican Party and campaigned for Senator from Illinois. During the course of this campaign against Douglas he exhibited great skill as a politician. He tried to capitalize on the growing split in Democratic ranks, while at the same time he labored with an eye for vote-getting to unite the incompatible elements of the newly formed Republican Party. Therefore he did not advocate unconditional repeal of fugitive-slave laws. He did not oppose the admission of States in which slavery might be established. He did not endorse Negro citizenship. He did not endorse nor urge political or social equality for the races. He continued his proposal of gradualism, and compensation to masters for freed slaves in Washington, D.C. This was good politics. He welded the Republicans together and became their leader in Illinois, even though Douglas won the seat in the Senate. Lincoln was maneuvered into position to be regarded as presidential timber. It must be remembered that there was no significant Negro vote to lose.

Democrats were hard at work to identify the Republican Party with the spirit of John Brown. This was interpreted as an attempt to discredit the party, so in his Cooper Institute speech in New York in February 1860, Lincoln urged understanding and friendliness toward the people of the South. Thus he advised "yield to them if * * * we possibly can," do "nothing through passion and ill temper." After his election to the presidency, Lincoln wrote to Samuel Haycraft (a southerner) that the "good people of the South" would find in him "no cause to complain."

Upon taking office as President, Abraham Lincoln was hard pressed with numerous duties and burdens. He was inexperienced in handling an organization as large as the Federal Government with the great affairs involved and the vigorous decisions required. Crowds of job seekers and political hangers-on beset him on every hand. The social life and its demands embarrassed him. More aggressive subordinates challenged his leadership by their actions if not by their words. The rumbling of civil war was upon the horizon. Things seemed to be exploding and falling apart. There were about 5 months between his inauguration and the convening of Congress during which positive action in regard to the insurrection had to be taken. Both Congress and the Supreme Court supported his bold action, but this did not offset a sector of the population from calling him a dictator.

As the war progressed his problems naturally increased. At its best, the machinery of government as Lincoln found it was not well suited to meeting the crisis. In the area of military action there was much confusion between Federal and State handling of troops. States were either ahead of the Federal Government, or dragging their feet. Further complications set in when in 1862 an unfavorable Congress took its seat.

In September 1862 we do not see a placid humanitarian who by a flourish of his pen cut loose the shackles of an enslaved people. Instead we see a harassed man with an inflamed nation on his hands. We see a President who has been pummelled by too much of the press. We see an administrator with a self-appointed committee, the congressional Committee on the Conduct of the War, breathing down his neck and making an already hard job impossible. We see an observant man lose soldiers by the thousands. We see a wise and practical man note the contribution of refugee slaves to the Union war effort. Slavery was now only one among many burning issues. When Horace Greely wrote, "All attempts to put down the rebellion, and at the same time uphold its exciting cause, are preposterous and futile," a distressed but still conservative Abraham Lincoln countered with, "My paramount object is to save the Union, and not either to save or destroy slavery. If I could save it by freeing all the slaves, I would do it; and if I could save it by freeing some and leaving others alone, I would also do that." Thus Lincoln wrote his proclamation statement which was to become effective on January 1, 1863, with certain political and military expediences in mind. First, he realized that all northerners were not abolitionists. Secondly, he was mindful that the border States, although having Union sympathies and ties, also held slaves. This support could not be cast to the winds. Third and finally, the Union army needed 500,000 troops to replace their losses.

The Emancipation Proclamation read in part:

"All persons held as slaves within any State or designated part of a State the people whereof shall be in rebellion against the United States shall be then, thenceforward, and forever free."

"And I further declare and make known, that such persons of suitable condition, will be received into the armed service of the United States to garrison forts, positions, stations, and other places, and to man vessels of all sorts in said service."

This document cannot be properly evaluated apart from the times out of which it grew and the personality and temperament of the man who wrote it. Abraham Lincoln was not a moral weakling, nor was he a political neophyte. It fell his lot to attempt the always thankless task of seeing all issues within their perspective as part of a whole. He stood steadfast at a post from which lesser men (from whose ranks come most of his bitterest critics) would have run quite early in the conflict. Therefore in all the earnestness which he possessed and with all the pragmatism which the times demanded, Lincoln issued a wartime executive decree as Commander in Chief of the United States Armed Forces. Such measures, by their very nature, fail to provide a permanent and thoroughgoing solution to social problems of the magnitude of human slavery. In fact it must be remembered that Lincoln's stated purpose of the Proclamation was not to solve the social problem of slavery, but to solve the political problem of a divided Nation. Thus only those slaves in the still rebellious States were declared free. Slaves in Tennessee, parts of Virginia, all of West Virginia, and parts of Louisiana were not affected. Neither were slaves in such border States as Missouri and Kentucky affected. Freed slaves were invited into the Army and Navy but citizenship was not bestowed upon any freed men. Hence on January 1, 1863, the practical effects of the Emancipation Proclamation echo Lincoln's letter to Greeley when he said "If I could save it by freeing some and leaving others alone, I would also do that."

Positively speaking the Emancipation Proclamation heralded the sunrise of a new day for Negro slaves in the United States. These benefits could not help but spill over to the advantage of free born Negroes in the North. The technical question of Lincoln's authority in the Confederate States presented an initial difficulty to the slaves involved, but military emancipation advanced through the South as the Union armies advanced. The paramount contribution of the Emancipation Proclamation is the fact that it paved the way for more durable final measures. Some of these measures were State action against slavery in the border States, and the 13th amendment to the Constitution which abolished slavery throughout the Nation for all time. In due time came the 14th amendment, which granted citizenship to the native born Negro, and the 15th amendment which gave the Negro the ballot. This was all part of the chain reaction which was set off by the Emancipation Proclamation. It is patently evident that the Emancipation Proclamation was not an end in itself, but a means to an end. It is conceivable that some other measure might have been devised to save the Nation.

If the Emancipation Proclamation served as a means to an end, it now falls the responsibility of enlightened Negro leadership to know that end and to examine it, and to do so in the light of today's situation. To unite our great Nation and to keep it strong is a worthy end. Such an end is no less worthy today than it was 96 years ago. The American Negro is an integral part of the citizenry of these United States. As such he has a contribution to make to the continued life and strength of this Nation. It is a disservice to the Nation and a failure to pursue the best interest of the Nation when any person or group of people, be they white or black, hinders the making of this contribution.

As of January 1, 1863, the freedman was at liberty to join the Army or Navy if he chose to do so, but his political status was the same as any other alien or immigrant. He was not a citizen. Emancipation from slavery and the right to vote is yet to come, 89 years later. The fact that the right to vote was so long coming shows remarkable lack of political acumen upon the part of the leaders of Mr. Lincoln's party. In the light of this the Negro vote belongs in nobody's vest pocket. On the other hand, keeping our great ideal of a strong nation in mind, neither should the Negro voter selfishly indulge in shopping around for a mess of pottage. Ultimately, as the Negro is benefited so is the Nation, and vice versa, as the Nation advances so should the Negro.

Today the American system of government is still one whose power to govern is derived from the people. That government is strong or weak as it represents all or only part of the people. Two insidious factors work to weaken our governmental system. The first is the organized effort of some people to deny the citizenship right to vote to those to whom that right belongs. The second is the lethargic spirit exhibited by the failure to register and to vote on the part of far too many who are not otherwise hindered in doing so. Therefore, if an Emancipation Proclamation Day Celebration is to make any sort of positive contribution to Negro life in particular and national life in general, it should mark a time of rededication to the universal realization of full citizenship. Negroes are only half emancipated and no further advanced than they were in 1863 if they are not citizens. They are only half citizens if they do not vote.

Nashville ministers, you need not be apologetic, neither in word nor deed, in identifying yourself in the struggle for full citizenship.

In fact you should be taking the initiative in such fights. You have a mandate from God to cry out, "Let judgment run down as waters, and righteousness as a mighty stream." And no apologies are due. You have a mandate from God to cry out, "Woe to them that devise iniquity, and work evil upon their beds. When the morning is light, they practice it, because it is the power of their hand." And no apologies are due. You have a precedent from Christ Jesus to declare, "The spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; He hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord." And no apologies are due. A gospel which closes its eyes to prejudice, hatred, malice, vengeance, and in-

justice, all those things which fill the air today, is not from God. For these are the things which enslave men even more effectively than chains and shackles. And a gospel which is not concerned with these things is not the gospel which Christ Jesus preached.

Finally, too much of Negro American are only freedmen and not citizens. You not only have to fight such satanic schemes as the attempted abolishing of Macon County, Ala., but black freedmen must be urged to register and to vote. Emancipation might well have never been if full citizenship does not follow.

Text of Address by Hon. L. H. Fountain, of North Carolina, Before the 35th Annual American Municipal Congress, at the Statler-Hilton Hotel, Boston, Mass., December 1, 1958

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mrs. DWYER. Mr. Speaker, it is a well-known fact that one of the increasingly critical situations we face today involves the need of growing metropolitan areas for more efficient means of servicing their huge populations.

One of the principal handicaps in the way of developing such improved means is the lack of coordination between the large number of Federal, State, regional, county, and local governmental units that exercise at least partial legal authority within metropolitan areas—despite the fact that their individual problems are often areawide in scope.

The challenge that this situation represents to the people and the governing bodies of such areas has been strikingly set forth in an address delivered before the 35th Annual American Municipal Congress in Boston on December 1, 1958, by our distinguished and esteemed colleague, Congressman L. H. FOUNTAIN, of North Carolina.

His address, which I include as a part of my remarks in the RECORD, is the kind of clear-minded and thoughtful analysis of a complex problem which we have come to expect from the gentleman.

His awareness of the problem, his understanding of the factors delaying progress, and his insight into the need for integrating and coordinating the activities of the various levels of government impressed me greatly.

This is a problem that concerns metropolitan areas generally, but none more than the greatest metropolitan area in the world, the tri-State region surrounding New York City, part of which I am honored to represent.

As ranking minority member of the Subcommittee on Intergovernmental Relations, I have found it most pleasant and instructive working with our chairman, Mr. FOUNTAIN. I look forward to a continuation of this constructive association, especially in regard to the matter at hand.

Meanwhile, I commend Congressman FOUNTAIN's address to all our colleagues, particularly those Members who represent the three-fifths of our total population presently living within the 174 metropolitan areas in the United States:

CITY-FEDERAL RELATIONS

I am grateful for the privilege of being with you today. I am honored to be able to speak to so imposing an assemblage of outstanding Americans as are gathered here on the occasion of the 35th annual congress of the American Municipal Association.

I feel at home in seeing the familiar faces of so many mayors who testified last year at the hearings of the Intergovernmental Relations Subcommittee, which I have the good fortune of chairing. It is an interesting coincidence that we are meeting today in the very city where the subcommittee commenced its regional hearings in September 1957. The city of Boston is also the home of our great and universally admired majority leader in the House of Representatives—JOHN W. MCCORMACK.

We are concerned at this meeting with a fundamental problem of American government; namely, the relationship of the Federal Government to the cities. In constitutional terms, of course, the cities have no independent status in our Federal system. Although the Constitution is silent on the role of the cities, realism as well as our democratic values make it imperative that municipal problems be given appropriate attention when dealing with intergovernmental affairs.

In the context of modern-day society, it is meaningless for many purposes to speak exclusively of Federal-State relations without due recognition of the municipal level of government. By the same token, realism prompts us not to delude ourselves into believing the State government, because of its shortcomings, is an outmoded political institution that will disappear in the framework of a new federalism. What is sorely needed in these times is a candid appraisal of the facts of present-day American federalism.

Woodrow Wilson said in 1908: "The question of the relation of the States to the Federal Government is the cardinal question of our constitutional system." That observation is equally valid today. However, in ascertaining the proper Federal-State relationship, we must not lose sight of some dramatic changes that have taken place in the half century since President Wilson's time. Let us briefly review some of these developments and assess their significance for the Federal-State relationship of today.

First, the growth of urban communities, and particularly of metropolitan areas in recent years, has been nothing short of phenomenal. Although this distinguished audience certainly needs no introduction to this development, it might be useful for the purpose of perspective to indicate the magnitude of this trend.

At the beginning of the 20th century less than 40 percent of the American people were urban residents. Today, with an urban population totaling more than 104 million, nearly 2 out of every 3 Americans live in an urban community.

In 1910 only 44 population centers, with a total of 25 million people, were found to meet the census classification of a metropolitan district, although the number of such districts would have been somewhat larger under the present definition of a metropolitan area. Today there are 174 metropolitan areas containing close to 100 million people. Almost three-fifths of our total population live in these areas, and this percentage is constantly increasing. In this connection, it is estimated that roughly nine-tenths of the Nation's population growth since the 1950 census has occurred in the metropolitan areas.

With the continuing growth of new and the expansion of existing metropolitan areas, we are witnessing a development which has been described by some observers as the urban region. The largest of these regions now extends for more than 600 miles along the eastern seaboard from north of Boston through the urbanized area south of Washington, D.C. It is not difficult to envisage the extension of this continuous urban band from Maine to Florida, as well as westward, in the years to come. Needless to say, the increase in the density of our population and the formation of contiguous urban communities increases the cost of Government services and the need for intergovernmental cooperation.

While we have become largely a nation of urban dwellers, this development has not been adequately reflected in the composition of State legislative bodies, which continue, all too frequently, to retain the representative character and outlook of our earlier rural society. Despite this political lag, municipal problems continue to increase in complexity as our growing and mobile population overflows local political boundaries to form newer satellite communities. The result is an imbalance between political institutions and social and economic patterns, an imbalance which usually means financial difficulties for the core city and the inefficient or even conflicting use of governmental facilities in the metropolitan area.

What is the remedy for these problems? As a first order of business, State legislatures should enlarge the taxing and other "home rule" powers of the cities to an extent commensurate with their administrative capabilities and their fiscal needs and capacities. At the local level there is need for bold experimentation with new organizational forms and methods to relate our large cities to metropolitan area needs and resources. These are not easy tasks. In a few minutes I want to discuss the outlook for their accomplishment and the Federal Government's responsibility in this connection.

It is my firm conviction that we must have strong local self-government in this country if we are to preserve our Federal system. Monopoly is no more desirable in Government than it is in industry or science. The free competition of ideas and a broad base of participation in the political affairs of the Nation are indispensable ingredients of democracy.

Whenever the States and the municipalities are able and willing to perform a particular public function, I believe it important that the Federal Government avoid exercising monopolistic control in that field, unless it can be clearly and convincingly demonstrated that the national interest requires a highly centralized program. State and local governments, like individuals, should and must be permitted to develop their full potentialities.

On the other hand, if the States and localities neglect their responsibilities, whether we like it or not the consequences will surely be a further concentration of power in the Federal Government. I was impressed by an eloquent expression of this thought made during the hearings of our intergovernmental relations subcommittee earlier this year. The witness said:

"The real danger to our Federal system lies not in deliberate aggrandizement of the National Government but in the invitation to national action which lies in disuse or misuse of State powers. The first line of defense against complete centralization is not in Washington but in the State capitols, the county courthouses, the city and town halls, and the polling places where State and local issues are decided."

There is much wisdom in that statement.

The question of a proper division of responsibility between the Federal Government and the States and localities is a perennial one in a Federal system.

The proposal has been made that we distribute public functions in such a manner that each level of government will have complete and independent responsibility for particular activities. In my judgment, however, it is unrealistic to assume all governmental problems can be neatly compartmentalized and handled in this fashion. Certain functions by their nature can and should be performed exclusively by a single level of government. Others, however, require a high degree of intergovernmental cooperation for effective performance.

The proper balance of Federal, State, and local responsibilities is a changing one which should depend, among other considerations, on the competence, responsiveness, and the resourcefulness of the various levels and units of government.

People sometimes lose sight of the fact that cities must undertake large capital investment programs to construct the facilities necessary for providing public services. Unfortunately, too, it is ordinarily much more difficult for a city to embark upon a capital improvement or expansion program than it is for a private corporation. Not only is municipal action frequently circumscribed by rigid debt and taxing limitations, but the city fathers must also wage a successful sales campaign for public approval. And all too often it is a thankless task to convince the voter that he should agree to bear a heavier tax burden, especially if the project is something as remote and unappealing as a sewage treatment plant which might be of greater direct benefit to the people downstream than to the local community.

Yet, as the world's wealthiest nation, it is essential that we devote a portion of our resources to public capital improvements, not only for our own welfare but also as a legacy for the generations of tomorrow. As to our financial ability, although our national debt is many times larger than the combined debt of all of the other nations of the world put together, it is a sobering experience to compare the gross national product of the United States with that of less fortunate nations. For example, the total market value of all goods and services produced last year in India, with its nearly 400 million people, was under $30 billion, or less than one-fifteenth our current rate of output of almost $450 billion a year. India's total national product is not much larger than the amount of the decline in the American economy during the 1957–58 recession.

It is clear that as a Nation we have the financial ability to meet our public responsibilities. The problem is more basically one of stimulating our social consciousness. For some purposes, the use of Federal incentives is unquestionably a valid method and Federal leadership a necessary condition.

However, as a political ideal, the responsibility for public services should be decentralized to the maximum extent possible. The cities should be permitted and encouraged to perform all functions within their competence and the States likewise should assume greater responsibility for meeting public needs. When the cities cannot do the job alone in some necessary but costly programs, they should, as a general rule, first look to the States and fight at the State level for assistance. If the States cannot or will not help, the cities are then justified in seeking assistance from the Federal Government.

The theory of local responsibility most often breaks down in practice, as you gentlemen are well aware, because of a restrictive attitude at the State level. It is indefensible when State governments remain unresponsive to public needs and, at the same time, prevent their political subdivisions from acting in these areas. While some State officials complain very bitterly about centralization of authority in Washington, local officials in the same States complain about the centralization of State government. I believe that the States should endow their municipalities with adequate legal authority and taxing powers to govern themselves in local matters. The fear of abuse of power by locally elected officials, which undoubtedly motivated many of the State restrictions now in existence, is generally an anachronism as applied to the cities of today. Municipal government has come a long way since Lincoln Steffens reported on the shame of American cities in a series of articles published little more than half a century ago. Inflexible and minute limitations on the powers of local government also suggest a distrust of the local electorate, which is most unflattering to a democratic society.

While State government must assume a large share of the blame for obstructing local self-government, this does not absolve municipal officials and local citizens of an obligation to exert greater effort for the improvement of these conditions; nor does it automatically justify a reliance upon Federal aid. How many proposed bond issues and constitutional amendments, we might ask ourselves, have been defeated at the polls because local officials did not do an effective job of educating the voters as to their merits?

I must frankly question whether the cities are doing all that they might to solve their problems. Not infrequently cities, as well as States, neglect performing tasks of which they are capable with the expectation that the Federal Government will come to their assistance. It is my feeling that at times local people ask for help in providing services which they would be unwilling to pay for themselves. And I think it is equally true that groups interested in particular public services often take the easier course of seeking assistance at the national level rather than fight for effective and representative government at the State and local levels. For our Federal system to fulfill its greatest promise, it is essential that public officials demonstrate initiative, imagination, and responsibility at all levels of government.

Although in many States the cards are stacked against the urban communities in connection with obtaining an equitable voice in State policy determinations and adequate home rule powers, there is much that persistence and hard work can accomplish.

Existing conditions call for an organized action program directed to the State level. I believe that a great deal might be accomplished by an intensive effort to awaken citizen interest and support in this area. Your member organizations might take the lead in joining with other civic groups to conduct an all-out campaign for the fair apportionment of State legislatures and for State constitutional reform.

It is regrettable that a number of State legislatures have failed for so long to comply with their State constitutional requirements relating to the reappointment of election districts. Obviously, it is not an easy step for them to take, but it is a situation which can best be remedied by the States themselves. If these States persist in neglecting their duty to reapportion, such inaction may well be interpreted in some quarters as an invitation for Federal court intervention—a step which I believe many of us would dislike because of other fundamental principles involved. It is significant, I think, that last summer a Federal court panel for the first time accepted jurisdiction in a case involving apportionment, but it deferred a decision on the issues in order to allow the new Minnesota State legislature, which meets in January, an opportunity to take appropriate action.

Now let us examine the question of what constitutes an appropriate Federal policy toward the cities.

As a basic proposition, I would suggest the need for a Federal leadership role to help assure the maintenance of a strong, healthy Nation. National strength cannot exist without strength and vitality in our State and local governments. Our Nation has become so interrelated that disease, poverty, illiteracy, or crime in any of its parts in inevitably transmitted to the whole and weakens our national social fabric. The provision of research and technical assistance to the cities and States for combatting problems such as these is universally recognized as a proper Federal responsibility.

A related method by which the Federal Government can and should help the cities to help themselves is through the planning grant. It is imperative in these times that our social inventiveness keep pace with our scientific and technological achievements. This is especially true with respect to solving the traffic, mass transportation, education, urban blight, water, and other problems that plague the large cities and metropolitan areas. Planning assistance, such as that authorized for certain urban areas under the Housing Act, is a constructive approach for solving these problems which are nationwide in their impact.

Another constructive way to facilitate local self-reliance is to assure the availability of adequate revenue sources. The Intergovernmental Relations Subcommittee, in its recent report on Federal grants-in-aid, stressed the importance of the Federal Government's making available to the States and localities those revenue sources that are not of primary importance for Federal financing and which are well adapted for State and local use. While such Federal self-restraint would be wholesome in any event, we must recognize as a weakness of this policy the fact that it would not benefit the cities in many cases without corresponding State action.

In view of this difficulty, and also in recognition of the fact that fiscal ability does not always coincide with the need for services, the subcommittee concluded in its unanimous report that the Federal grant should be regarded as a valid method of harnessing cooperative governmental effort for the accomplishment of well-defined national objectives. The subcommittee rejected the idea that there are easy classification schemes for determining whether or not a grant program should be undertaken or continued. It concluded, instead, that each grant proposal ought to be judged completely but very carefully on its merits.

Finally, and by no means least in importance, I would suggest that the Federal Government take all reasonable steps to promote a closer and more effective cooperation and understanding between the levels of government. One move in this direction would be the establishment of a permanent Advisory Commission on Intergovernmental Relations, as was recommended by our subcommittee. Such a central body, representative of the local, State, and Federal viewpoints, would, I hope, provide needed machinery for the cooperative study and consideration of common problems. I intend to introduce an appropriate bill in the 86th Congress to implement this recommendation and invite the support of your organization for that measure.

I have no illusions that a permanent advisory body will be a panacea for all intergovernmental problems. Nevertheless, as a medium for improving communications and mutual understanding, I believe it is a step in the right direction. I sincerely believe there is an urgent and growing need for the establishment of better cooperation and closer working relations not only between the Federal Government and the States but be-

tween State and local government officials as well.

I am reminded here of Alexander Pope's couplet which says:

"For forms of government let fools contest;
Whate'er is best administer'd is best."

These lines undoubtedly overstate the case, but they contain a message worth contemplating. Organizational arrangements are useful tools for achieving objectives, but they do not guarantee the desired goals. We must still rely to a large degree on the ability and the willingness of men, and units of government, to see each others point of view and to seek better working relationships.

As a note of personal philosophy, I cannot emphasize too strongly my belief that the possession of rights entails corresponding responsibilities. States rights should not be used as an excuse for indifference to public problems. Neither should easy access to Washington be used as a means for centralizing political power, a development which could ultimately destroy our Federal System.

There are no easy solutions or automatic mechanisms for running a democratic government. Constant vigilance and hard work are the price we must pay for our democratic institutions.

I thank you.

International Salmon Conservation

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. PELLY. Mr. Speaker, I offer for printing in the Appendix of the RECORD, a communication just received from George Johansen, secretary-treasurer, Alaska Fishermen's Union, AFL–CIO. This deals with international conservation on the high seas with particular reference to Alaska's Bristol Bay area during the 1959 season and points up strongly the need for passage of my bill, H.R. 605, to conserve our salmon resources.

I trust, Mr. Speaker, that the Members interested in our new sister State of Alaska will take the time to study this statement as a matter of information on this important subject:

In view of proposed regulations which will severely restrict, if not altogether abolish, fishing by commercial fishermen during the 1959 season in the Bristol Bay area, we offer the following comments, based on our experience in this district.

The 1958 salmon take in the Bristol Bay area was disappointing, to say the least. As a matter of fact, the 270,000 cases of reds packed are probably the smallest pack in the history of Bristol Bay. The total run was approximately 5,250,000 salmon with an escapement of approximately 2,250,000, leaving about 3 million salmon for the commercial fishermen's take.

There is little doubt that the destructive results can be ascribed to heavy fishing of the Japanese north of the Aleutian Islands and their take of immature salmon in the years 1956–57, which should have returned in 1958 as matures had they not been taken on the high seas.

We know the facts. The question is: What can we do about the present high-seas fishing to protect our stocks in the future? During the Tokyo Conference, held by the North Pacific Salmon Commission last fall, we presented conclusive evidence to the Japanese, showing that they were fishing on salmon stocks of North American origin. While the meetings proceeded in a friendly atmosphere and ideas were exchanged freely by all parties to the convention, nevertheless the Japanese did not officially recognize the evidence presented by the United States, and would therefore not agree to a shift of the present line presently established at 175th meridian, west.

We had advocated a shift to the 170th meridian, east, which, based upon our research, would have offered considerable protection for our salmon stocks. The present line cannot be changed, except by unanimous agreement of all of the signatories to the treaty, and so the refusal of the Japanese constitutes a bar to any change in their fishing on the high seas during the 1959 season. This means that red salmon stocks, already severely depleted, will be subject to further strains. The Fish and Wildlife Service, recognizing this condition, is trying to maintain adequate escapement by denying and restricting American fishermen the right to fish in the Bristol Bay area through regulations.

We realize that, fundamentally, it is the duty of the Fish and Wildlife Service to provide escapement. However, we believe that the obligation of providing escapement is based upon the fact that the fruits of this escapement shall accrue to U.S. citizens, who have made considerable sacrifices during the past several years in order to maintain these salmon stocks on a sustained yield level.

We cannot agree that there is an obligation upon the U.S. Government to provide the necessary escapement when the fruits of such escapement will accrue to a foreign nation. It is reasonable to presume that there will be considerable unwillingness on the part of the Japanese to agree to any conservation measures on the high seas as long as they are assured by action of the U.S. Government that adequate escapement has been provided for. One cannot reasonably expect that American fishermen consistently shall be called upon to sacrifice without any benefits returning to them from such sacrifices.

The question in regard to the fisheries in Bristol Bay can no longer be pushed aside to be decided upon some time in the distant future. A decision must be made now, and due to the inability of the North Pacific Commisison to reach a satisfactory agreement, we look to the U.S. Congress to enact legislation which will provide compliance to conservation of this immensely important natural resource. The Congress has recognized that the salmon fisheries of Alaska are not a local matter, but a matter of national concern. Aside from the financial loss to American fishermen and canners, we cannot overestimate the serious damage to our national food supply, should we lose this important salmon resource.

We are strongly in favor of enactment of the Pelly bill, introduced in the last session of the Congress. This bill would bar imports of Japanese canned salmon, unless conservation has been complied with. It is understandable that the Japanese are reluctant to restrict themselves on the high seas. The salmon fishery conducted by them has been a profitable fishery, and the following figures will show the approximate amounts of salmon caught each year since the Japanese initiated this fishery in 1952:

1952	2,100,000
1953	7,700,000
1954	20,500,000
1955	64,040,000
1956	52,066,000
1957	56,000,000
1958	50,500,000

We are not claiming that these figures represent all salmon of North American origin, but we do claim heavy inroads are made on Bristol Bay fish. The fact that the fish are caught on the feeding grounds indicates that a tremendous amount of immature fish are caught in the high seas fisheries of this kind. It can be fairly stated that the statistics as to catches made do not reflect the true picture of fish caught or destroyed.

Using gillnets on the high seas where the water is rough, many fish will be caught in these nets and later on wriggle free eventually to die due to the damage they sustained in hitting the nets. Also, many dead fish wash out from the nets, and consequently there are probably millions of fish destroyed for no purpose whatsoever, which does not show in the figures given.

This ocean fishery is wasteful in another way also. Salmon are a fish which put on nearly half of their weight during the last 4 or 5 months before spawning. The catching of immature fish means then that if the fish had been allowed to leave the feeding grounds on the high ocean, each fish would have brought a much higher yield, both in food value and in money.

It is doubtful that we will be able to maintain adequate escapement, even though we may completely deny Americans the right to fish in the Bristol Bay area if the high seas fishing continues without some safeguards being provided for. Alaska, the newest State in the Union, is dependent upon her fisheries for a large part of her revenue and income. Until such time as Alaska has had a chance to develop her other resources, the question of the salmon fisheries is of paramount importance to the State. The results of our scientific fishery research and the conclutions that can be drawn therefrom, indicate clearly that it is only a matter of time before the valuable Bristol Bay salmon runs are reduced to a point where they no longer will be economically feasible or advisable, conservationwise, to fish them.

No amount of diplomatic doubletalk and fancy language can explain away the inevitable results that will accrue if we fail to act in the best interests of the United States at this time. We had hoped that the result of our investigations would have convinced the Japanese of the need to exercise good judgment and the recognition that it isn't only the United States who will be the loser, but the Japanese as well.

I have consistently, since 1954, warned of the danger to our salmon fisheries, and I sincerely hope that now, when the critical period is upon us, we will take constructive action to enforce conservation. We bear no ill will toward the Japanese, but we feel that by refusing to recognize our position, based upon scientific facts, the Japanese are sacrificing conservation for temporary profits, and we are not agreeable to keep silent and be a party to the destruction of our salmon resource in Alaska.

Dr. Bela Fabian, an Expert in Giving Communists Some of Their Own Medicine

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edith Kermit Roosevelt from the American Legion magazine for December 1958.

It is too bad for our own country that we do not give more heed to men like Dr. Bela Fabian who know the score on Communist maneuvering and are as good at putting them on the defensive as they generally are at keeping free world leaders off balance:

HE BAITS BOLSHEVIKS

(By Edith Kermit Roosevelt)

A few months ago Mikhail Menshikov, Russia's suave, blue-eyed Ambassador to the United States, was all smiles. The success of the Reds' Operation Butter-Up, their cover-up for worldwide subversion, reached its high point when a large group of Republican ladies from Ohio descended on the Soviet Embassy. Later they emerged gushing over the slave empire's jocular envoy.

Then suddenly Russian winter came to America. Abruptly, the Soviet Ambassador canceled all lectures, good-will tours, and television appearances, while at diplomatic receptions scowls replaced smiles. Reporters were puzzled. Why had the Red bear replaced the social lion?

Finally, Menshikov gave an explanation.

"Always there are newspapermen asking questions," he fretted. "I think I will sometime have to refuse to answer some questions."

A man who feeds reporters questions that put Russian diplomats on the hot seat is Bela Fabian, Chairman of the World Federation of Hungarian Former Political Prisoners. Broad and short, with a powerful frame, ruddy face, cropped gray hair, and the lumbering gait of a peasant, this 69-year-old refugee has been called the "conscience of the West." The peppery Hungarian has put Russian diplomats on the defense by conducting a private truth campaign to replace Red promises of the better life under socialism.

Any time the Communists launch one of their phony peace offensives, or whenever the news breaks about a new Soviet crime, this stocky man swings into action. He can be found striding along the street carrying a battered briefcase bulging with documents. Since there are millions of people all over the world who either have relatives in slave labor camps or who have been inmates themselves, it isn't long before Fabian is surrounded by throngs of cheering men and women—many of whom have proved in war and revolution that they hold their liberties dearer than life itself.

Fabian's tactics in his little Russian counter-revolution include worldwide mass anti-Soviet demonstrations staged at strategic times; and constantly publicizing news of continuing Soviet deportations, murders, and secret trials in Hungary and other Russian colonies.

His work is not sponsored by angels, governments, or tax-exempt foundations. Prior to a demonstration, local Hungarians in the advertising business contribute labor and paint for the posters; a friendly printer, a graduate of Vorkuta or Karaganda slave labor camps, may work his presses overtime to print leaflets; and in every city where Fabian and his former Hungarian political prisoners hold a meeting generous people, some of whom have been victims of communism, offer the demonstrators a meal or a bed.

A 22-year-old ex-Hungarian freedom fighter, who marches regularly in Fabian's picket lines, has his own answer to why the aging exile accomplishes so much with so little.

"Some Americans who want to fight communism think the only way to do it is to get up a big organization sprinkled with a lot of big names who do no work. Then they hire spacious offices in Rockefeller Center and spend the long lunches at '21' discussing what they're going to do next. Bela Fabian just goes ahead and does it."

And while our leaders sit down to negotiate with the Soviets at summit conferences, somehow the voice of the "conscience of the West" is heard loud and clear urging "no trade, no aid, no dealings with the Communists."

Communist and Western diplomats may toast each other in the capitals of the world, but Fabian's posters speak out: "Don't drink champagne mixed with Hungarian blood."

The urge to kill must seize the Communists when they see his pickets. They know that here is a pro who knows how to deal with them from firsthand experience. He knows how to play on Moscow's real insecurity: fear of the smoldering nationalism of the captive non-Russian nations both within and outside the Soviet Union.

Recently the Soviets angrily asked the U.S. Government to halt the picketing of Soviet missions on American soil by Fabian and his group aided by other exiles and Americans. They denounced Fabian as the notorious leading hooligan, and leader in the United States of the antipopular neofascist and underground movement, and they charged that bandits, rowdies, hooligans, abetted by Wall Street and the Pentagon are deployed to insult and scare innocent Russian guests in America. Fortunately, Washington said "Nyet" to the Soviet demand, and the Russians were reminded that our Constitution guarantees free assembly and free expression, those rights upon which our peaceful picket lines are based.

Last spring Fabian learned that Menshikov had been invited to address the Baltimore Bar Association. The exile leader boarded a train and picketed the Ambassador's hotel with large posters that read:

"The Soviet peace dove feeds on Hungarian blood.

"You go to the stratosphere and stay there.

"You keep the moon: give us Hungary.

"Rooski, go home."

From Hungarian sources behind the Iron Curtain, Fabian was able to brief Baltimore newsmen on the Communist-conducted secret trials then underway in Budapest. After this address on Soviet jurisprudence, a reporter asked Menshikov about the Hungarian trials and the red-faced Soviet diplomat could only reply "No comment." Finally, always hounded by newspapermen asking questions, and some 700 stony-faced pickets, Menshikov made an ignominious departure from Baltimore under the watchful eye of the police.

Later, when the still ebullient Soviet diplomat was invited to a gala reception at the Plaza in New York, Fabian and his group picketed the hotel with signs that read: "Relieve Mrs. Khrushchev from Potma Concentration Camp."

Through former inmates of the Potma camp, Fabian had learned that the Soviet Premier's first wife had been dumped there under the assumed name of "Mrs. Gorskaja."

To Menshikov's extreme embarrassment, Peter Kihss of the New York Times made inquiries at a press conference concerning the convenient manner in which the Soviet diplomat's boss had disposed of his marital difficulties.

"It is a lie!" screamed Menshikov. Khrushchev, however, was so upset over the query that he had Mrs. Khrushchev paraded about in Karlovy Vary. "But it was the second Mrs. Khrushchev, and everyone knew it!" Fabian tells with a laugh.

The Hungarian David's challenge to the Red Goliath is not just to relieve a patriot's personal outrage. It has a long-range political purpose:

"America will never sacrifice a single one of her soldiers to defend Hungary, I know that," explains Fabian. "The main problem is to get the U.S. and the Western countries to defend their own countries and to show them what would happen to their countries under Soviet domination."

Picketing is only one of the methods Fabian uses in attempting to influence world opinion. He conducts a mail campaign with characteristic grim humor. For instance, on November 7, 1957, the 40th anniversary of the Bolshevik seizure of power, delegates to the United Nations, Members of Congress, and key Government officials received a formal printed invitation to a celebration honoring the "world's most powerful slave labor empire, to be held at the delegation of the U.S.S.R. to the U.N., 68th Street and Park Avenue, New York City." Items on the menu included "Borscht Lubianka (made of Reds beat), meatballs Khrushchev soaked in Vodka, o-pressed duck captive nations, and Crimean champagne mixed with Hungarian blood vintage 1956." On the entertainment agenda were listed "East Side, West Side," (sung by Tito) and "Danse Macabre, executed by Ivan Serov and his cutthroats." Ostensibly, the invitations were sent by the U.S.S.R.'s chief delegate to the U.N., Arkady Sobolev, and his wife.

A Christmas card sponsored by Bela Fabian and signed "Political Prisoners of the Soviet Union," put a damper on whatever holiday spirit Communists manage to generate. The front of the card bore a picture of shrunken, staved faces staring out from behind barbed wire. Beneath the doleful photograph were the words: "We wish you a Christmas as merry as ours." Inside the greeting card was a drawing of a Christmas tree, its branches decorated with guided missiles, a globe of the world with arrows pointing to areas of Red infiltration, and a U.N. gavel labeled veto. Beside the picture was an ominous message, hinting of a day of reckoning for Red oppressors:

"Rest ye not, merry gentlemen—
Henchmen of our nation;
Get ye out ere it be too late.
For all of ye there lies in wait
A camp or power station."

Soviet diplomats have techniques for silencing this kind of refugee activity—murder, kidnaping, and blackmail. But Fabian is impervious to threats and attempts at intimidation. On New Year's Eve, a few days after he had sent out his Christmas card, he received an anonymous telephone call. A voice said:

"Stop your activities, Mr. Fabian, or you'll be a dead man in 90 days."

Three minutes later the telephone rang again. Fabian's wife answered it, and the voice said:

"Tell your husband to stop his activities, or he will be a dead man in 1958."

A half hour later the telephone rang once more, and when Fabian picked up the receiver the familiar voice started in again.

"Look here," bellowed the Hungarian, "we know each other 40 years. I will not change; you will not change. Now why not let me sleep for the night?"

The gangster the Reds call the notorious leading holligan likes to spend quiet "bourgeois" evenings in his modest apartment in New York City. After an early supper he dictates letters to his wife or works on a book or a political article. As he paces about his sitting room, as he habitually does when planning some new anti-Soviet move, he often pauses to take a few grapes out of a fruit bowl and pop them into the cage of sputnik, the Fabians' canary. The couple named the bird after the first Soviet satellite because "he likes to fly off in orbit."

The arrival of a friend or relative from Hungary calls for a party given in the generous, outgoing manner of Hungarian country people. Mrs. Fabian, red-headed and plump, bustles in, apoligizing that "it's too bad I had no time for shopping," or "I have no food to eat because my husband ate it all," and "You must not mind if it is not much." But

the guest soon finds before him platter after platter of steaming paprika chicken, yellow rice, stuffed meatballs, cucumbers with vinegar and sugar dressing, Hungarian strudel, fruit, nuts.

A typical Fabian party ends in the singing of Hungarian folk songs. Sometimes, after a glass or two of Tokay wine, Fabian will throw an arm about a fellow exile and sing in his rich bass the beautiful air:

"I started from my lovely land,
Beloved little Hungary,
But I stop and lock back
And tears flow from my eyes
And tears flow from my eyes."

Bela Fabian owes much of his sincerity and simplicity of character to his upbringing as the son of a grower of Tokay grapes who lived in the small Hungarian town of Taliya. Lajos Fabian taught his son to put God and country first. The Fabians were not wealthy, but they managed to send each of their five children to a university.

After receiving an LL.D. degree, young Fabian became a law clerk in the office of Dr. William Vazsony, an outstanding legal authority, leader of the Democratic Party of Hungary, and later Minister of Justice.

But his law work was interrupted by the First World War. He served as an officer of the Hungarian Army, and was captured by the Russians in 1915 and confined for a year in a camp at Tashkent in Middle Asia.

Captured officers were properly treated by the authorities of czarist Russia, but the rank and file prisoners of war were worked to death on a starvation diet and succumbed by the thousands to epidemics of such diseases as typhus.

When Fabian organized a protest against their inhuman treatment, he was sent to a punitive camp at Krasnaya Riechka, 500 miles north of Vladivostok.

Early in 1918, with the help of false papers, Fabian escaped and reached Leningrad. There he lived under an assumed name and witnessed the cruel fratricidal war launched by the Communists against the followers of all other political movements.

After he returned to Hungary, he wrote about his experiences in Russian captivity, about his escape, and the revolutionary turmoil he had witnessed. His books, "Russian Inferno, Petrograd," and "Russia's Decay Under Bolshevik Rule," met with cold incredulity on the part of middle-class intellectuals and made Fabian a target of venomous attacks from the extreme left. As a result, he was one of the first to be thrown into prison when Hungary's first Communist stooge, Bela Kun, seized power in 1919.

After the collapse of this short-lived dictatorship, the other extreme, the White Terror regime, temporarily won the upper hand in Hungary. It subjected thousands of innocent victims to cruel sufferings along with the guilty. Fabian believed that a rule of law, not counter-revolutionary terrorism, should prevail, and he published three additional books, including "The Russian Counter-Revolution."

"My fight against both forms of extreme reaction was not confined to public forums," Fabian recalls, "but as was the custom of that time I had to fight numerous duels with sword and pistol in defense of my principles."

His democratic record led to his election as an executive member of the Budapest Municipal Council in 1920, and in 1922 he was elected to the Hungarian Parliament on the Independent Democratic ticket. He held this office for 17 consecutive years. In 1928 he became president of the Independent Democratic Party.

When the German hordes invated Austria and Czechoslovakia in the late 1930's, a Budapest magazine, knowing Fabian's opposition of all forms of totalitarianism, published on its front page a carton in which he was represented as a dwarf battling a tornado. The caption asked: "Little man, what now?"

The Nazis answered that question by stamping serial No. B12305 on his brawny right arm—a mark he still bears—and sent him to Auschwitz with its mass-devouring gas chambers. By a near-miracle, Fabian was not one of the thousands of gas victims. The Nazis assigned him with a group of other prisoners who were given the job of dismantling and reprocessing parts of American planes which had been shot down by the Germans. Fabian and his fellow prisoners, secretly hid radio parts from these damaged aircraft, and from them made receiving sets which brought them news from the BBC and American transmitters.

"In order to keep up the spirit of the rest of the prisoners," Fabian recounts, "a grapevine news service repeated throughout the camp what was heard at the listening posts. When the Germans discovered one of these radios, they promptly hanged anyone who had anything to do with the news transmission service. But hunger for news was so persistent that even though a radio team were hanged one day, the next day a new radio would be working."

Transferred to Ohrduf, Fabian escaped in March 1945 with three comrades, hid 10 days in the forests of Thuringia, and crept through the German lines to find refuge with General Patton's 3d U.S. Army.

At the end of the war, he was joined in Paris by his wife who succeeded in getting out of Hungary after 2½ years of maneuvering. Like true Europeans, the couple felt much at home in France. But, Fabian explains, "We believed we could be more useful to our country in America, which is the biggest force against Communist imperialism."

The couple arrived in New York on October 9, 1948, and a year later Fabian launched the opening volley of his truth campaign on these shores with his book "Cardinal Mindszenty," about the religious leader whom he had known personally. The book revealed to an indignant West how the Reds had drugged and tortured the elderly Hungarian cardinal. Fabian also founded the Federation of Hungarian Former Political Prisoners. Almost 15,000 former Nazi and Soviet victims joined, 3,000 in this country alone.

As the United Nations began to play an increasing role in the direction of American foreign policy, Fabian insisted that it should be a truly representative forum where oppressed peoples under Soviet domination should have a voice.

Accompanied by other former Hungarian political prisoners, Fabian began attending U.N. meetings in the blue and white striped suit worn by Soviet slave-labor prisoners.

Mrs. Fabian will never forget the night of November 4, 1956, when the U.S.S.R. invaded Hungary.

"I was listening to television while cooking in the kitchen," she says, "When I heard a very penetrating voice shout 'murderers.' I rushed to the set and saw U.N. guards taking my husband away. I heard later that they put him in a room and wouldn't let him out until the end of the meeting."

But if Fabian's voice is angry and penetrating when he talks back to Reds, it becomes gentle and persuasive when he talks to non-Communists who are not yet committed to the free world's fight.

When 150 pacifists demonstrated against nuclear weapons in midtown Manhattan, Fabian persuaded the group to let him give a speech. He told them in restrained and measured words that they were mistaken in their stand.

"The problem is not peace or war, but freedom or slavery," he said.

A New York Times dispatch of April 6, 1958, showed that the Hungarian leader's tactful offensive had been a success:

"With handshakes and exchanges of mailing addresses among the two groups the meeting soon dispersed in an atmosphere of harmony."

Another example of tactful agitation by the exiled leader took place after Vice President NIXON's visit to Latin America. Fabian asked members of the Federation of Hungarian Former Political Prisoners in every place where the Vice President was humiliated to write demonstration leaders requesting a personal interview. Then the Hungarian former prisoner would ask this man:

"If you are on our side, against what you call colonialism, why do you then work with Communists?" Then the Hungarian would proceed to give him a few facts about how captive nations are treated under communism.

Last summer Fabian went on a 6-week tour of Europe in which he successfully challenged the Russians at two large international conferences, setting up truth meetings of his own.

The first was the Fifth World Peace Congress in Stockholm in July.

At his own meeting, Dr. Fabian challenged Ilya Ehrenburg, president of the movement, and Jean-Paul Sartre, a member, to public debate. They refused. But while their meeting drew only some 250 persons out of 1,700 delegates, Fabian's rival conference drew daily crowds of more than 1,000.

At a meeting of the World Council of Churches in Utrecht, August 8, Fabian's target was the 10-member delegation representing the Russian Orthodox Church. At a widely publicized press conference he charged that the Russian Orthodox Church had become "the subservient tool of the Soviet regime."

He also challenged the Russian church leaders to "raise their voice against religious persecution * * * to demand the release of thousands of churchmen languishing in Soviet concentration camps * * * to demand the free practice of all religions in the Soviet orbit."

Although Dr. Fabian received no answer from the churchmen, he is convinced that confrontation with the facts brings an inevitable propaganda victory for the West.

"It is not enough to talk theoretically," he says. "Knowledge is the best weapon against the Soviet because when confronted with the truth, the Soviet will not reply."

Fabian's happiest moment came last summer when, at an appearance of a Russian ballet troupe in this country, he led a poster denunciation of Communist crimes, and two of the ballet's members surreptitiously told him:

"You are right; go ahead with your good fight. Wish we Russians could join you."

And Fabian has vowed he'll keep right on protesting—in his own dramatically effective kind of way—until they too will be free.

U.S. Navy's First Nuclear-Powered Missile-Launching Submarine

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. HOLIFIELD. Mr. Speaker, on January 9, 1959, the U.S. Navy launched

its first nuclear-powered missile-launching submarine at the Mare Island Navy Yard, Vallejo, Calif.

Rear Adm. M. J. Lawrence, the commanding officer of the base, is highly commended for his able administration of this great naval yard. Admiral Lawrence and his production officer, Capt. E. H. Tilburne, have left no stone unturned to achieve this milestone in naval submarine construction.

The official and featured speaker at the launching ceremony was Rear Adm. Elton W. Grenfell, U.S. Navy, commander, Submarine Force, U.S. Pacific Fleet.

Because of the importance of this event in terms of national security, I am asking unanimous consent to have Admiral Grenfell's speech printed in the CONGRESSIONAL RECORD.

Hon. and Mrs. HOLIFIELD, Admiral Lawrence, members of the Mare Island Naval Shipyard, distinguished guests, this is one of my last official acts in my current assignment as commander of the submarine force, U.S. Pacific Fleet. It is certainly one of the most momentous and proudest occasions of my tour of almost 2½ years in command. Proud because I have been asked to speak on this occasion when a *Halibut* is reborn. This new *Halibut*, however, is not just another submarine, for she will be the greatest and most powerful individual submarine weapons system in any navy in the world at this time. For the first time in our Navy's history, we will see the combination of a powerful nuclear powerplant with an equally powerful nuclear weapons system. The military capabilities of this submarine are almost beyond comprehension. Suffice to say, however, *Halibut* will have the military power backed by millions of tons of destructive ability, if required—that is the equivalent to a small size task force of World War II type.

In the event of an all-out war she will be able to prowl undetected close off the enemy's coast, position herself accurately, surface, and in minutes fire her atomic missile with great accuracy at a vital target; submerge, and speed away to a new area many hundreds of miles away. Next day the enemy, with no knowledge of *Halibut's* new position, would receive another sudden and deadly blow in like manner. In a war of the nuclear-type *Halibut* could eliminate whole industrial areas, shipyards, submarine bases, and other military targets.

It is a chilling and sobering thought to realize that this mighty submarine could, in a matter of minutes, without prior warning, reduce this great shipyard, as well as much of the surrounding area, to a vast pile of rubble.

The submarine forces have been hard at work for many years testing the two great components of this ship. *Nautilus, Seawolf, Skate,* and *Sargo* have all provided valuable data with which to refine *Halibut's* great nuclear powerplant. *Grayback, Tunny, Cusk,* and *Carbonero* have launched and guided almost 100 Regulus missiles, demonstrating the high degree of reliability of this system.

The marriage of nuclear power and guided missiles into this submarine has not been brought about through haste, accident, or guesswork. It has been a preplanned, carefully calculated wedding of two time-tested, thoroughly proven components.

Halibut, however, is not just a missile submarine to be used in the event an all-out war is forced upon us, for she will have in addition to her greatest characteristic of stealth that second most important characteristic, versatility. *Halibut* will carry a large load of vastly improved torpedoes of the latest type. She will have the most modern sonar equipment and other new electronic devices necessary to carry out effective antisubmarine warfare. She will have the ability to detect enemy submarines at long distances and more important, with her high speed and maneuverability, she will be able to close the contact and strike home with a successful attack on any enemy submarine she can hear. *Halibut* will play a most important part on the Navy's antisubmarine warfare team. For some time early in a war an enemy, with strong defensive air superiority, would have control of the air and sea adjacent to his coastline. Thus, our friendly antisubmarine warfare vessels and planes will not be able to operate in those waters. *Halibut,* however, can operate in such waters and will seek out and destroy enemy submarines close to their home bases.

Halibut will also be able to roam the enemy's seas and cut very vital and important sea lines of communications; vital and important because in the Pacific, for instance, practically all of any potential enemies' industrial centers and areas of military operations will be supported by water shipment. *Halibut,* with her high speed and powerful torpedoes can raise havoc with enemy shipping throughout the western Pacific and thus, at will, rupture these lines of communications.

Halibut can also perform air-sea rescue of friendly aviators in distress at sea close to the enemy shorelines; aviators who have been in attack groups attacking the enemy mainland and have been shot down can be rescued by submarines such as this. She will also be able to perform many other types of missions. Missions such as periscope photographic reconnaissance, landing of saboteurs and espionage agents anywhere along the enemy's coastline, mining, and so forth.

In another sense, *Halibut* may also be considered to be a forerunner of things to come in the way of new submarine mobile offensive capabilities. Her immense hangar in which she can carry a load of missiles dictated that she be built with many, many tons of carrying capacity and many thousands of cubic feet of storage space. Indeed, the interior volume of her hangars alone approximates the entire interior volume of our famous World War II fleet type submarines. This space and great capacity may be utilized to carry many other items of large size and number. For example, *Halibut* could carry hundreds of troops and their equipment at high speeds for long distances under the sea; she might carry several helicopters of various types to be utilized for a myriad of missions in enemy waters; or she could carry large amounts of badly needed supplies to beleagued outposts of our own or friendly forces.

Halibut will indeed be a powerful fighting machine with versatility greater than ever before in submarine history.

This mighty ship, soon to become a fighting part of our wonderful navy, is the masterpiece, the work of art, of the submarine naval architects and designers who built her. Thus it is appropriate at this point to pay tribute to those responsible for this wonderful submarine. This is not the work of one man, this is not the brainchild of one individual, this represents the unified effort of thousands of men and women, military and civilian personnel of the Navy, the Atomic Energy Commission, and the powerful industries of America. This submarine was conceived in the minds of submarine naval officers in the planning sections of the office of the chief of naval operations several years ago. She was designed in the workshops and on the drawing boards of the Bureau of Ships and Mare Island Naval Shipyard. Her weapons systems are products of the design sections of the Bureau of Aeronautics and the Bureau of Ordnance. The Office of Naval Research contributed much by the way of new developments and ideas. The Atomic Energy Commission contributed to the design of the powerplant. Many other Government activities had responsibilities in her building. Finally, the Congress of the United States approved of her and authorized the funds to build her. In other words, hundreds of men and women all over the United States in Government and private enterprise alike are represented here in the work and building of *Halibut.*

Last, but not least, are the workers of this fine Mare Island Naval Shipyard. The officers, the men and women of Mare Island have a right to be proud of this fine submarine today for it has been their personal blood, sweat, and tears that have gone into building the first nuclear-powered guided-missile submarine the world has ever known. Once again Mare Island has scored another first. Once again Mare Island has turned out a product that they, the Navy and the country may well be proud of for many years to come. To Admiral Lawrence and his outstanding organization, I, speaking for the submarine force, pay you all tribute for a job well done.

And now a word to the prospective captain, Walter Dedrick, the officers and men who are going to man and take this fine ship to sea. You are fortunate men, fortunate indeed to be in the crew of this wonderful and powerful new weapons system of the Navy. You have a great responsibility to your Navy and to your country, for you are the ones who must operate *Halibut* to develop her fullest and most efficient capabilities. You are the ones who will take her through the trials and tribulations of initial exercises and maneuvers. You have arduous days of hard labor ahead of you, but at the same time most interesting days, which will prove highly rewarding. You have a wonderful new ship with all of the modern advancements possible, with a high sustained speed that would have been inconceivable several short years ago, plus an endurance second to none. It is up to you to test her and to develop new tactics which will make her an important halfback on the naval varsity team.

In addition, you will prove to the world that this submarine is another partner in the democratic nations' deterrent program, for with your missile capabilities combined with your stealth and secret operations you will indeed cause any potential enemy to stop and think carefully before he might take offensive action against the United States and its allies. *Halibut,* like the future Polaris submarines, will have a deterrent capability that will give any potential aggressor much to worry about and thus because of her presence in the ocean may continue to bring peace to the world for many, many years to come.

To you officers and men who will dedicate many hours of your life to the successes of *Halibut,* I think it is fitting to remind you briefly of the fact that the first *Halibut* was a great submarine. She had terrific successes in World War II and fought the enemy for almost 2 years in the waters of the Pacific. She sank many, many enemy ships of all types. She battled ferociously and with venom. Indeed, her last patrol was so vigorous that her battle scars were beyond repair. *Halibut,* in a tenacious battle with a heavily escorted convoy on her 10th war patrol was subjected to a terrific depth charge attack. Her commanding officer, Captain Galantin, now rear admiral, U.S. Navy, stated in his report of her final war patrol and I quote, "the beating the ship took and survived brings our admiration and respect to the men who designed her, the people who built the *Halibut,* and those who recently refitted her." The endorsement to her patrol report also stated that after first aid at Saipan and more repairs in Pearl Harbor, she was sent

back to the specialists in the navy yard who decided that her injuries were far too extensive to justify funds for the necessary overhaul. Reluctantly the first *Halibut* was relieved of further duty. Commander of Submarines, Pacific Fleet, stated:

"*Halibut* was a fine fighting ship with a captain and crew who were likewise made of high-grade steel." I am sure that you, Captain Dedrick, your officers and men will be just as tough, just as brave, just as determined as those valiant men of the first *Halibut*. Thus, Captain, to you and your fine crew, I wish you all the good luck in the world, fair sailing, long, fast, and successful undersea voyages and Godspeed.

The Ideals Set Forth in the Preamble

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. DOWDY. Mr. Speaker, under leave to extend my remarks, and in connection with the introduction of a resolution proposing a Christian amendment to the United States Constitution, I insert in the Appendix to the RECORD a radio address of Dr. R. J. G. McKnight delivered on the Christian amendment hour, entitled "The Ideals Set Forth in the Preamble":

"THE IDEALS SET FORTH IN THE PREAMBLE"

(By Rev. R. J. G. McKnight, D.D., Ph. D.)

We have been examining the preamble to the Constitution and we found many worthy ideals set forth: (1) To form a more perfect union, (2) establish justice, (3) insure domestic tranquillity, (4) provide for the common defense, (5) promote the general welfare, and (6) secure the blessings of liberty to ourselves and our posterity.

"We the people" propose to attain these worthy ideals without declaring any dependence on God to guide us in their attainment. We have already pointed out how far human efforts have come short in accomplishing what we set out to accomplish; e.g., in "forming a more perfect union."

Let us look at item (5): We propose to "promote the general welfare." That is a broad term—general welfare. It embraces the crops, the weather situation, industry, wages, employment, health, and 1,000 other accidents of existence, as we call them.

We are all dependent on crops for our sustenance. Crops depend on the weather. Will our croplands turn into dust bowls, or will the topsoil be washed away by raging floods? That depends on the regulation of the rainfall. And who regulates the rainfall? We know, of course, that we can blame the administration in power, whether it be Republican or Democratic, if there is a countrywide crop failure. But who does control the forces that contribute to the general welfare?

When we turn to the Bible we find that God "causeth grass to grow for the cattle, and herb for the service of man: that he may bring forth food out of the earth" (Psalms 104: 14).

"The eyes of all wait upon Thee; and Thou givest them their meat in due season. Thou openest thine hand, and satisfieth the desire of every living thing" (Psalms 145). O the blessedness of the people in such a case. "Yea, happy is that people whose God is the Lord" (Psalms 144). It is so obvious that the general welfare of the Nation is in the hand of God.

The sixth and last thing we ourselves propose to do is to secure the blessings of liberty to ourselves and our posterity. We cannot, apart from God, secure the blessings of liberty. "Ye shall know the truth, and the truth shall make you free" (John 8: 32). "If the Son shall make you free, ye shall be free indeed" (John 8:36.).

The ideals set forth in the preamble are high and worthy. Without God, the ability to attain to them is pitifully inadequate. Indeed, without acknowledging God or seeking His help, we the people have assumed the task of doing what only God himself can do. As a Nation we have said with Babylon of old, "I will be like the Most High" (Isaiah 14: 14). One needs no great mental ability to discern the folly of presuming to sit in the seat of God.

One thing more needs to be considered in our evaluation of the preamble to our Constitution. Ignoring, as it does, any recognition of divine authority, and assuming, as it does, the functions that belong to God alone, the preamble, as soon as the Constitution was ratified, made this Constitution the supreme law of the land. That rules out the Bible, which is the word of God, as the final source of appeal in matters of national morality. Legally it is impossible to get back of the Constitution. It is, at once, the supreme law and the ultimate source of appeal.

The noblest moral sentiments have been expressed by men who have occupied the highest positions the Nation has to offer. For example: George Washington in his "Farewell Address" said: "Of all the dispositions and habits which lead to political prosperity, religion, and morality are indispensable supports." He continues in the same "Farewell Address" as follows: "Let it simply be asked, where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths which are the instruments of investigation in courts of justice?" He says further in this address: "Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason and experience forbid us to expect that national morality can prevail in exclusion of religious principles."

But, my friends, the sense of religious obligation has deserted the oaths which are the instruments of investigation in courts of justice. The sense of religious obligation was taken out of our oaths by the amendment to article VI of our Constitution in these words: "But no religious test shall ever be required as a qualification to any office or public trust under the United States."

And as national morality, which George Washington said cannot prevail "in the exclusion of religious principles," there is not now, nor was there ever, in our Constitution any mention of a standard of morals. There is but one perfect standard of morals, both for men and nations, and that is contained in the Bible, the word of God. And no mention of the Bible or of morals is to be found in the Constitution.

Whatever "we the people" in our Constitution declare to be right is ipso facto—right, regardless of any other standard. Whatever "we the people" in our Constitution declare to be wrong is wrong. And there is no room for appeal. We do have a Supreme Court to which we may appeal to interpret the meaning of the Constitution. But when once the Supreme Court hands down a decision, that becomes the law from which there can be no appeal. Nine mortal men become a Supreme Court.

And, my friends, to leave God, who is our judge, out of our decision in matters which involve morality or immorality is the most serious mistake a man or a nation can make. Listen to the words of Paul: "And even as they did not like to retain God in their knowledge" (retain His standard of right and wrong), "God gave them over to a mind without a standard, to do those things that are not convenient; being filled with all unrighteousness, fornication, wickedness, covetousness, maliciousness; full of envy, murder, debate, deceit, malignity; whisperers, backbiters, haters of God, despiteful, proud, boasters, inventors of evil things, disobedient to parents, without understanding, covenant breakers, without natural affection, implacable, unmerciful; who knowing the judgment of God, that they which commit such things are worthy of death, not only do the same, but have pleasure in them that do them."

So the floodgates of all iniquity are opened up, and society becomes corrupt, which is what has happened in our own country and throughout the world. This is what happens when men operate without a divine standard of morals.

Sinking of the "Arizona"

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith a very interesting account by Edward Janikowski of the sinking of the *Arizona*:

ASTORIAN SERVED ON "ARIZONA"

(EDITOR'S NOTE.—The Fleet Reserve Association has launched a nationwide campaign to raise funds to build a permanent memorial over the rusted hulk of the U.S.S. *Arizona*, sunk by the Japanese at Pearl Harbor. It has obtained accounts of the event from several of the 289 living men who survived the sinking. One of them is Edward J. Janikowski, 5 McCain, Astoria. Here is his account.)

"I was one of the fortunate ones to survive that fatal day of December 7, 1941, aboard the U.S.S. *Arizona*. It is a day I shall long remember," relates Edward J. Janikowski, of 5 McCain, Astoria.

"At the time of the attack, I was a coxswain in the seventh division. I had just gone on quarterdeck watch. Suddenly, planes came out of nowhere and started bombing Hickam Field.

"The officer of the day told me to pass the word that we were being atacked. Minutes later, bombs were falling all around us. The planes came so low we could see the pilots' faces.

"General quarters had been sounded, but many men never reached their stations. The bow of the ship was hit by a bomb, exploding the forward magazine. Another went down one of the stacks, so the men below hardly had a chance.

"I'd say a good thousand were trapped below plus the 200 who were killed topside from wounds and burns.

"I was sent to a compartment with a message. When I opened the hatch, another bomb exploded inside the ship. The concussion and flareback from the bomb blew me over the side.

"Burning oil was all over the water. I was fished out by a motor launch to be taken to the hospital ship U.S.S. *Solace*. We had no idea we would ever reach her. The launch also was being machinegunned.

"Once aboard, I was treated for shock and injuries. I was burned about my hands, head, face, and legs. I also had several shrapnel wounds in my chest and legs.

"I stayed on the *Solace* for 10 days. On December 20, I was transferred to the U.S.S. *Scott*. We arrived in the United States on Christmas day.

IN HOSPITAL

"I spent the next 3 months in the hospital at Vallejo, Calif. In March 1942, I was sent back to Pearl Harbor where I stayed for 38 months.

"I have a special reason for wanting to see a memorial built over the *Arizona*. I lost a lot of my shipmates in the *Arizona*.

"Everybody should have a special reason for having this memorial built. For not only will it stand in tribute to those 1,102 men still locked in the ship's decaying hulk, it will also stand as a living memorial to all those men who died on the battlefields of the Pacific.

"And it will be a lasting reminder that what happened at Pearl Harbor must never be allowed to occur again."

Small Business Tax Adjustment—H.R. 2

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. IKARD. Mr. Speaker, a few days ago, the President revealed to congressional leaders an administration budget of over $77 billion—the greatest peacetime budget of this or any nation. I do not wish to speak on that budget, but on the source of Federal taxes which must support that budget—our free economy.

Ours is a growing Nation. During the past year, our population increased 3 million and our Nation's work force increased about a half million. To sustain a growing population and provide jobs, a growing economy is necessary if we are to maintain our high standards of living and support increased Federal expenditures.

We have had a growing economy. The gross national product of 1957 was the highest in history, and indications are that 1958 exceeded that mark. But one segment continues to lag—that commonly referred to as small and medium-sized business.

In our analysis of small business conditions, we are fortunate indeed to have the reports of the Small Business Administration. May I call to your attention that in the 10th semiannual report for the 6-month period ending June 30, 1958, the Administrator reported that business failures through June 30, 1958, had been reported as 8,071 compared to 7,089 in the similar period for 1957.

Mr. Speaker, this is an increase of 14 percent—an alarming rate for a growing nation. May I point out that many Members of this House were alarmed last year when reports indicated that business failures in 1957 were 8 percent higher than in 1956. Why, in a period of national growth, are business failures continuing at such a high level?

The same reports show that in 1956 larger manufacturing corporations returned 12.4 percent on stockholders' equity; in 1957, 11.2 percent; and in the first quarter of 1958, 7.3 percent. The smaller manufacturing corporations, however, showed a return of 10.4 percent in 1956; 7.6 percent in 1957; and dropped to four-tenths of 1 percent in the first quarter of 1958. This is a tremendous difference.

The Small Business Administration also points up a long-term trend which is of interest to every Member of this House. The Administration reports that from 1947 to 1957 the stockholders' equity in smaller manufacturing corporations increased from $5.9 billion to $9.5 billion—an increase of 62 percent. The equity in larger corporations increased from $59 billion to $132 billion—an increase of 122 percent for the same period.

Mr. Speaker, this is only one facet of the problem. The great bulk of small business is unincorporated, and the most substantial part of it is in the distribution and service trades. While there are no accurate figures on these unincorporated concerns, all the available evidence shows similar conditions exist.

Mr. Speaker, our economy has grown during the 10-year period covered by those figures, but it is evident that the rate of growth of smaller concerns has been less than half the rate of growth of the larger ones. Certainly with a growing nation it is necessary that the economic climate be sustained which will be favorable to the growth of all business enterprises. In the construction of tax laws, the Congress must not only look for revenue but seek that revenue by methods which will continue to foster and encourage further economic growth.

A review of the economic indications leads one to the firm conclusion that the tax laws, as now construed, do not grant small business concerns the same opportunity for growth as is enjoyed by their larger competitors.

Last year, your Committee on Ways and Means held extensive hearings on the general economic conditions and the influence of taxation on the health of our economy. These hearings demonstrated one fact above all concerning the sector of our economy known as small- and medium-sized business today. It demonstrated clearly that the greatest problem faced by the smaller concerns is their inability to retain sufficient after-tax funds to finance their growth. Most small- and medium-sized concerns are unable to obtain capital required for expansion in the open market as the larger concerns can do.

Over 85 percent of the Nation's business enterprises are unincorporated and hence are not in a position to raise capital by the issuance of stock. Further, experience indicates that the smaller concerns which are incorporated and do issue additional stock are unable to compete in the capital market with their larger competitors.

During the last session, the Congress authorized the Small Business Administration to license small business investment companies chiefly for the purpose of making long-term loans to smaller concerns. These loans constitute additional liability for business enterprises. There is a limit to the amounts of money which a small business should borrow. Indeed, many firms have already borrowed all they can or should from banks and other commercial lending institutions. Right now, the greatest need of the smaller concerns is increased equity capital, the chief source of which is retained earnings.

After extensive hearings last year, the Ways and Means Committee, in Report No. 2198, dated July 16, 1958, reported to the House:

> Your committee is convinced that one of the greatest problems confronting small and medium sized business is the acquisition of sufficient capital to modernize and maintain a rate of expansion experienced by their larger competitors. In this regard your committee is aware of the fact that small and medium sized businesses must rely to a very large extent upon retained earnings for modernization and expansion. Thus, there is a need to allow such businesses to retain more earnings after taxes to provide the funds necessary for growth. To aid in achieving this end your committee has investigated thoroughly various proposals to postpone, or to reduce, taxes based upon reinvestment in inventory and depreciable property, and would have liked to have included a provision along these lines in this bill. However, it has been forced to the conclusion that the budgetary limitations under which all tax relief must now be considered are such that any tax reduction which now could be granted under a reinvestment formula is so small as not to represent any meaningful tax relief to small business.

Mr. Speaker, the small business tax adjustment bill, H.R. 2, which I have introduced, is designed to assist small and medium sized businesses to maintain a rate of expansion experienced by their larger competitors by allowing such businesses to retain more earnings after taxes. The bill provides that a person engaged in a trade or business shall be allowed as a deduction for the taxable year an amount equal to the additional investment in the trade or business during that year. This deduction shall not exceed $30,000 or 20 percent of the net income of the trade or business, whichever is the lesser. Additional investment is measured in the bill by the aggregate of the increase in depreciable property used in the trade or business, inventory, and accounts receivable attributable to sales to customers in the ordinary course of the trade or business.

This adjustment will make immediately available to all businesses an opportunity to obtain capital for business expansion, thus widening employment opportunities, simulating competition, and broadening the sources of revenue needed to sustain an increased budget for a growing nation.

It is my sincere hope that every Member of the House will give earnest and sincere study to conditions now confronting small and medium sized business. The principle of a tax adjustment based on the reinvestment of earnings is the most meaningful step which the Government can take to help solve this national problem. America has long been recognized as a land in which the door of free enterprise is always open. Passage of this act would reaffirm the determination of the Congress that a free government through the proper construction of tax laws can create an economic climate in which these smaller concerns can grow and prosper.

Perpetual Calendar

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BURNS of Hawaii. Mr. Speaker, on January 15 last, I introduced H.R. 2323, a bill to make the calendar fixed and perpetual. The perpetual calendar is the product of my constituent, Mr. Willard E. Edwards, electrical engineer. The great Commonwealth of Massachusetts has endorsed the calendar, as has the Legislature of Hawaii. At least 195 cities in 65 foreign countries have been made acquainted with the perpetual calendar.

I include for printing in the RECORD a statement by the originator of the calendar, Mr. Willard E. Edwards:

February has only 24 working days in usual years, not counting holidays, but the months preceding and following it can have 27. This causes much confusion and a difference of three twenty-fourths, or 12.5 percent in the number of working days in January or March, compared with February.

When both Lincoln's and Washington's birthdays are holidays, this difference becomes even greater. It can then be five twenty-seconds, or 22.7 percent. Employees paid by the hour thus earn considerably less money in February than in January or March. However, from this reduced income they may have to pay the same monthly rent and utility bills.

Conversely, employers paying employees a monthly salary may have a reduced output in February. In either case, such a short month is unfair, expensive, confusing, and unnecessary.

History says February used to have 30 days in the old Roman Calendar. It was then the 12th month of the year. September, October, November, and December were also in their Latin-numbered places as the 7th, 8th, 9th, and 10th months.

The fifth month was a 30-day period named Quintilis. But during Julius Caesar's reign, its name was changed to July to honor Julius. However, Romans considered even-day months unlucky and odd-day months as lucky. Therefore, to pay further tribute to Caesar, a day was taken from February and added to July. This left February with 29 days in the Julian Calendar.

When Augustus Caesar became emperor, he was similarly honored. Sextilis, the sixth month, was renamed August. But since it had only 30 days, another day was taken from February. Vanity and superstition thus disrupted the previous order and left an awkward 28-day February in the Augustan Calendar.

Other faults were inequalities in its divisions, its lack of fixity, and its inaccurate leap-year rule. Pope Gregory corrected this latter fault in 1582, and the calendar then took his name. He also made January the first month of the year.

However, the month lengths are now exactly the same as in the Augustan Calendar. Consequently, the lack of fixity and the inequalities still exist. The inconvenience of using the Gregorian Calendar, and the cost in time lost in reference and in computations, are incalculably great.

This has been obvious for many years, yet correction is a relatively simple matter. It would affect nobody injuriously and everybody beneficially.

The calendar is an instrument in daily use for measuring time. It should be precise and fixed. It should have equality in all its divisions. In 1919 such an arrangement was devised, and it is now known internationally as the perpetual calendar.

This proposal has fixity through the simple means of counting one day each year as a day apart. It has equality in that each month has 26 working days, plus Sundays or Sabbaths. The quarters are also equal. It has regularity in that the months of each quarter always have 30, 30, and 31 days, as shown herein.

The day apart is counted outside the order of the week. It is called simply "New Year's Day," an international holiday, and the third day of an annual 3-day weekend. The second day of the year becomes Monday, January 1, the first business day of the new year.

The day apart is counted exactly as the extra day we now have when traveling from Japan to Hawaii. In crossing the International Date Line, ship captains call this extra day "Meridian Day." Just as a ship may be known as the USS *Thomas Jefferson* or the *APA–30*, so this day apart may be also known by a name or a number.

If called by a number, it would become January zero and would be easily accounted for in all computations. The logic of this is that we start all measurements with and from zero. Look at your speedometer, an engineer's scale, or a 24-hour clock.

Other advantages of the perpetual calendar are evident from its study, as shown in this article. Many holidays (all of them, if so legislated) fall on Monday; and all birthday and other anniversaries would always fall on the same day of the week.

Change is the result of natural growth, and no progress is ever made without change. Let's be progressive and adopt the Perpetual Calendar for our daily use. We can thus eliminate the lack of fixity in the present calendar and the inequalities of all the months, especially February.

A Discriminatory Excise Tax

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. PELLY. Mr. Speaker, I have long subscribed to the merits of the "try, try again" principle as applied to meritorious causes. Therefore, in introducing H.R. 2418, I am urging for a third time the repeal of the so-called, but misnamed, cabaret tax—the most discriminatory, ancient, and unrewarding of all the wartime emergency excises. I believe I was the first Member of Congress to initiate legislation to eliminate this discriminatory tax. This was in the 84th Congress, when on January 5, 1956, I introduced H.R. 8153, and I believe my renewed proposal to the 85th Congress was the first of some 17 such repeal bills presented at the last session.

Recent legislative history records, Mr. Speaker, that the House of Representatives, as a whole, conforms to my "try, try again" principle with respect to this sorely needed legislation. Three times has this distinguished body voted relief from this onerous excise and sent its recommendations to the Senate. Unhappily, that body has not seen fit as yet to concur. I trust that in this 86th Congress perseverance will have its reward.

I suspect, Mr. Speaker, that this so-called cabaret tax would have long since been repealed had it not suffered from an unfortunate christening some two-score years ago, at the time of World War I. That, Mr. Speaker, is the hoary vintage of this unjust and still uncorrected Federal taxing policy. Realistically, the cabaret has passed from the public scene; only our seniors in this body will remember it, and not too nostalgically; only a smattering of our more youthful colleagues would now know how to search out a lingering vestige of this unmourned symbol of the gay nineties or the roaring twenties. Yet the prohibitive 20-percent excise that was written for and named for the cabaret applies to the hotel dining room and the well-lighted, carefully operated supper club where dine-and-dance entertainment still survives this 20-percent impost. If, perchance, some of my distinguished colleagues are contemplating a social night out to celebrate the wife's birthday, they would have but meager choice in this Capital City of an appropriate venue affording opportunity to dine and dance. And if they are lucky enough to find a surviving establishment where they might enjoy an anniversary waltz with their ladies fair, they must face up to a 20-percent charge on top of the dinner check.

But the problem of this discriminatory tax is not to be considered lightly, because, in principal effect, it is a tax on employment. Over the last decade it has been an excise of declining return for the Treasury; it has become, in fact, a tax of no return. The paltry $40-odd million per annum this tax now returns to the Treasury likely does not pay for its policing and certainly does not compensate for the personal and business income-tax revenues lost because of the almost complete blackout this uneconomic tax imposes upon what once was and again would become a substantial segment of the entertainment business. I am impressed by the comprehensiveness and conservativeness of an independent economic survey made by a reputable national factfinding organization at the instance of the American Federation of Musicians.

The Research Co. of America reported that of the 83,000 playing musicians who earned their principal livelihood from music in 1954, 40,912 were employed in places subjected to the 20-percent tax and an additional 13,429 had part-time employment in this area—the dine-dance business representing more than half of the gainful employment for all instrumentalists. The average earnings for musicians thus employed was $3,042, making the musician one of the most economically distressed of all American workingmen.

The survey revealed that repeal of the 20 percent tax, which I seek in H.R. 2418, would immediately result in a gain of 63 percent in employed hours for 41,000 musicians working in dine-and-dance establishments and thus increase

their annual earnings by some $2,000 each. Up to 35 percent more musicians would be employed—a total employment gain of more than 100 percent for this sorely distressed category. Surely, in point of employment alone, this tax must be repealed without further damage to our national job potential.

In the event of repeal, the survey found, establishments now struggling under the 20 percent impost declared their intent to expand their business and employ more musicians to the extent that $36 million more in Federal income taxes would flow to the National Treasury. This factor, together with the resultant gain of 65 percent in the working hours of musicians already employed in 20 percent establishments thus adding some $16 million in income tax revenues, more than compensates the Treasury for the $40 million per annum now derived from an excise that stultifies business and denies employment.

These economic findings, Mr. Speaker, do not take into account other substantial gains to the Treasury that would flow from the repeal of the 20 percent cabaret tax. The survey from which I quote found that for every additional musician thus returned to work by reason of the repeal of this tax, there would be employed between five and six additional people such as other entertainers, waiters, cooks and other service help.

It happens that my personal interest and sympathy lies in great measure with the American musician upon whom we must depend for the propagation, even the survival, of a fundamental living art. In my home city of Seattle I served as a trustee and as president of our Symphony Orchestra Association. Thus I know intimately how severely the music art is beset by a chilling climate compounded of technological displacement and an indefensible Federal taxing policy.

I yield to no Member of this Congress, Mr. Speaker, in my desire for a balanced national budget. I trust that my colleagues in the House will join me in the unique privilege and opportunity of disposing of at least one of our many excises while at the same time making possible the flow of more sorely needed tax revenues to our National Treasury through the creation of employment and the stimulation of legitimate business.

Hawaii Statehood—50 in '59

EXTENSION OF REMARKS
OF

HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. BURNS of Hawaii. Mr. Speaker, recently Hawaii was highly privileged to welcome five very able and distinguished Members of the 85th Congress who came in their capacities as Members of the Interior and Insular Affairs Committees of the Senate and the House of Representatives pursuant to the request of the Delegate from Hawaii made of the chairmen of the respective committees.

The purpose of the visit was to scrutinize at first hand existing conditions in Hawaii and Hawaii's readiness for statehood. No one could have worked more diligently or more thoroughly than did these capable and outstanding Senators and Representatives. In accomplishment of their mission they pursued every avenue of pertinent inquiry; talked to as many people as possible; and, under the least constrained circumstances, left, in a word, no relevant stone unturned to obtain every fact.

In a New Year's message to Hawaii's people the junior Senator from Idaho, the Honorable FRANK CHURCH, has stated brilliantly and concisely the conclusions he drew from his searching inquiry. With his usual graciousness, the distinguished Senator has consented to my insertion of this message into the CONGRESSIONAL RECORD.

Mr. Speaker, the 86th Congress faces tremendous challenges. Legislation that will be considered is of grave importance to the lives and welfare of our people. It is my considered opinion, objectively, that no legislation is of greater import than Hawaii statehood. There could scarcely be a more convincing statement in support of this fact than the message of the Honorable FRANK CHURCH. I am most highly honored, therefore, to present for the consideration of the Members of the House the thoughtful, closely reasoned, and brilliantly stated report of the Honorable FRANK CHURCH on his inquiry in Hawaii:

TIME FOR STATEHOOD IS RIGHT NOW

(By Senator FRANK CHURCH, of Idaho)

We are fast approaching the time of decision on whether Hawaii is to become our 50th State. In all likelihood, the decision will rest with the coming Congress.

If its answer is "Yes," then we will have welcomed in, as an integral part of our country, the last of our incorporated Territories.

Statehood will confer upon the people of the islands, long since citizens of the United States, fundamental rights of self-government equal to our own.

They will then elect their governor, as we do ours; they will then be entitled to two U.S. Senators and a voting Representative in the Congress; and they will participate with us, every fourth year, in the election of the President.

But if the answer should be "No," let no one be deceived that Hawaii will remain indefinitely an American Territory.

To be neither in nor out, but to stay a colony, is no more acceptable to our fellow Americans in Hawaii, than it was to our own forefathers.

They were subjects of the English king; they bore arms in his defense, and paid the taxes he levied upon them.

Again and again, they petitioned him, through his appointed governors, for redress of their grievances, but he refused to grant them more than limited rights of self-government.

So, their call to reason, "no taxation without representation," became, at last, a call to arms.

Yet, despite this national birthright, we are today denying our fellow citizens in Hawaii many of the same prerogatives refused our forefathers by George III.

TAX PAYMENTS

In 1957 the Hawaiians paid over $150 million in Federal taxes, a larger total than several of the existing States, but Hawaii had no representation in Congress to vote either on how much tax should be collected or upon how the money should be spent.

In time of war, Hawaiians shoulder arms with the rest of us, yet they cannot vote for the President who shapes their foreign policy, or for representatives in Congress who together hold the purse strings over their defense.

To remedy these inequities, the people of Hawaii want statehood. They are tired of standing, hat in hand, at the door of our Union.

But what we must understand is this: if we refuse to let them further in, they will, in due course, demand to be let further out.

That we actually face a choice between these alternatives, my recent visit in Hawaii has convinced me.

There, I was privileged, as one of five members of Congress from the Interior Committees of both Houses, to conduct a joint investigation of the statehood question.

I talked with hundreds of Hawaiians from all walks of life. I listened to every argument, pro and con.

The consensus of this opinion, together with the most current information we could gather about social, economic, and political conditions in Hawaii, left me strongly persuaded the islands are ready for statehood, and we'd best admit them now.

FOR STATEHOOD

There is no doubt but what the vast majority of Hawaiians favor statehood. Even before Pearl Harbor, a plesbiscite showed the population indorsing statehood by a margin of two to one.

Since then, support for statehood has steadily grown stronger. In 1950, a proposed Hawaii State constitution was approved by the people of the Territory by a vote of more than 3 to 1.

Today, I would judge that the Hawaiians want statehood fully as much as did the Alaskans, who a short 4 months ago, proved their sentiments when five out of six voted to ratify the bill admitting Alaska as the 49th State.

DESERVING CASE

The proponents of Hawaiian statehood believe their case just as deserving as was that of Alaska. Indeed, the islands' economy is far more developed.

Sugar and pineapple are produced in abundance by the best paid field workers in the world. The export of Kona coffee is increasing.

On the big island of Hawaii itself, the 300,000-acre Parker Ranch is next to the world's largest for Herefords, while to every island the tourists comes in burgeoning numbers, beckoned by the gentle trade winds, in quest of the dazzling beaches and inviting waters.

Hawaii, for all its tropical beauty, is bustling and prosperous. No one can charge it with being a poor relation.

MELTING POT

It is true that Hawaii is the melting pot of the Pacific. The people are a polyglot mixture of native Hawaiian, Caucasian, Japanese, Filipinos, and Chinese, and the crosses between.

But it is also true that Hawaiian life and culture, though it clings naturally to many happy phrases, songs, and customs out of its colorful past, is nevertheless essentially American.

The cities, the stores, the homes, streets, and schools, all bear the unmistakable stamp of the United States.

In fact, anyone from southeastern Idaho, accustomed to a tabernacle in his neighborhood, would not feel a bit estranged in Hawaii.

One of the most striking tabernacles I have ever seen is in the center of Honolulu, and on the windward side of Oahu there is

located a Latter-day Saints temple fully as impressive as that in Idaho Falls.

Nearby, 20 newly completed buildings on a 100-acre tract mark the site of the $3½ million Latter-day Saints College of Hawaii.

MANY TALKS

These are but a few glimpses gleaned from many I gathered during the inquiry we made in Hawaii.

We met with public officials and private citizens alike, with teachers and students, with judges and housewives.

We talked with businessmen and labor leaders. I had a morning's conference, in private, with the presidents of the Big Five, interests that were once opposed to statehood but now favored.

When we were through I came away determined to work hard for Hawaiian statehood in this coming session of Congress. Already a Commonwealth Party has been activated in Hawaii.

COMMONWEALTHERS

I talked with several of its leaders, who would like to see Hawaii set loose from the United States, absolved of all Federal taxes, and granted full rights of self-government, while the people retained for themselves American citizenship and the continued protection of the American flag.

Patterned after the British system, the commonwealth idea is alien to our American tradition of building one nation, rather than a loose-knit empire.

Today, this Commonwealth Party is small, but if statehood is refused to Hawaii, it will grow rapidly.

I shall not forget the parting shot of one prominent commonwealth proponent.

"Senator," he said to me, "right now, the people of these islands want statehood.

"If you refuse it, they will turn to our solution, and the time will come when you will have to recognize the independent Commonwealth of Hawaii."

To us on the mainland, facing westward toward an Asia awakening from its slumbers, Hawaii is much too important; not to be made an inseparable part of the United States.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Hon. Spessard L. Holland, of Florida, Before the 40th Annual Meeting, American Farm Bureau Federation, Boston, Mass.

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Tuesday, January 20, 1959

Mr. EASTLAND. Mr. President, on December 10, 1958, the distinguished senior Senator from Florida [Mr. HOLLAND] delivered a thought-provoking and challenging address at the 40th annual meeting of the American Farm Bureau Federation in Boston, Mass.

In order that Senators may have an opportunity to read this address, which calls attention to some of the most vital issues of our time, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A TREND AND A CHALLENGE

(Address of SPESSARD L. HOLLAND, U.S. Senator from Florida, Democrat, before the American Farm Bureau Federation's 40th annual meeting, December 10, 1958, Boston, Mass.)

I am happy to be one of your speakers at this 40th annual meeting of the American Farm Bureau Federation, and to join such distinguished guests as Mme. Chiang Kai-shek, my able colleague, Senator BARRY GOLDWATER, of Arizona, and your former president, Allan Kline. I had the pleasure of addressing you at your 36th annual meeting in New York City and I am indeed glad to be with you again today.

May I express to you, and through you to all members of the American Farm Bureau Federation, my deep appreciation for your naming me to receive the American Farm Bureau distinguished service award in 1956 at Miami. This award brought to me very great pleasure and pride, and I am humbly grateful for all it signifies.

My association with your splendid organization has brought me many pleasant and helpful experiences. I have frequently sought and obtained valuable assistance from the members of your exceedingly capable Washington staff, and have always enjoyed the full cooperation of the officers and members of our Florida Farm Bureau.

I have found your thinking on agricultural legislation—and indeed on national affairs generally—in close accord with mine, in most instances, and when we have not been in complete agreement you have always been courteous and tolerant of my convictions. In my opinion, your State organization in Florida, and your national organization always approach constructively and patriotically the many difficult problems in the field of agriculture, and I congratulate you warmly for your sound leadership and your major contributions in this vital field.

I am glad to have this opportunity to talk to you this morning about a trend in our country which disturbs me greatly and which, if permitted to go unchecked, may well lead to the destruction of our American way of life—the finest yet conceived by man.

The trend I speak of is that which is now moving away from individual freedom and initiative toward an ever enlarged Federal Government and a labor supergovernment—at the expense of the rights and privileges of States, local governments, and individuals. Unfortunately, many of our people cannot understand that they themselves are the Federal Government, that they pay all of its bills, and that they the people get nothing free from their Government. They do not realize that by looking to that Government for handouts—each of which costs them certain rights and privileges—they lose each time a little more of their freedom, and that little by little they are giving away their heritage. Even as small children we heard with amazement the Bible story of a hungry Esau who carelessly sold his birthright for a mere bowl of pottage, but now—as mature men and women—some of us are willing to actually give away our heritage—since we not only pay for the small bowl of pottage we receive in return for certain of our freedoms but we also pay extra for handling charges.

Having worked closely with your officials throughout the years, I know that they and you are well aware of this dangerous trend. I know that the American Farm Bureau is moving in many ways to try to reverse that trend, but I hope that all of you, as individuals and as members of this powerful organization, will leave this meeting today determined to personally wage an unremitting fight against a situation which, if it is permitted to continue, will gradually—but surely—take away from us many of the precious liberties for which much blood was shed by our forefathers. Perhaps some of you will feel that I am unduly disturbed over this drift away from our constitutional form of government. I hope that my remarks will convince you that the situation is serious—almost perilous—and that it presents a personal challenge to every man and woman within the sound of my voice.

For a first point in this connection I mention the stand of the American Farm Bureau in the last Congress on legislation designed to curb the Federal courts by prohibiting the invalidation of State laws by Federal laws—under the doctrine of preemption—unless Congress has clearly so provided or unless an irreconcilable conflict exists between the Federal law in question and the State laws. I commend you strongly for this action, and I hope we will enact such legislation early in the next Congress. Certainly I will do my utmost toward that end.

Recent decisions of the Supreme Court of the United States adversely affecting States rights, have caused alarm and consternation in the minds of many of us who respect and wish to preserve both a Federal union of sovereign States and the clear separation of powers among the legislative, the judicial, and the executive branches of government.

It was heartening to note that on August 20 of this year, at a meeting of the conference of chief justices of the State courts, the alarming trend of these Supreme Court decisions was condemned by chief justices from the North, South, East, and West. The chairman of the committee that submitted the report was the chief justice of the Supreme Court of Michigan. I am happy that distinguished lawyers all over our Nation—particularly those holding positions of highest judicial responsibility—find it no longer possible to keep silent in the face of these constant invasions of the rights of the States and of our legislative branch of government. I am glad that most of the chief justices of our State courts share my belief—and your belief—that State and local governments should be sustained and strengthened.

The overall impact of U.S. Supreme Court decisions during the past two decades has been to press rapidly the extension of Federal power at the expense of our citizens' rights to govern themselves through their State and local governments in matters of primarily local concern. In my opinion, the Supreme Court has wrongly assumed the function of policymaker and has arrogated to itself the important legislative function. Under our Constitution the function of making policy is delegated to Congress, to elected representatives of the people who are directly responsible to the people. It is for this fundamental reason that all of us must feel concern that members of the Supreme Court, who hold office for life and are responsible only to themselves, have abandoned the role of judges and assumed the role of lawmakers.

The power of the Supreme Court is very great, and its decisions are not reviewable by anyone. It is, therefore, of critical importance to every American that this Court adhere strictly to the judicial role and abide by those enduring principles which are enshrined in our Constitution.

We have long boasted that in our free country we have a government of laws and not of men. Let me state here, along with most of the chief justices of our States, that a study of recent Supreme Court decisions will raise grave doubt as to the present truth of that proud boast.

No one expects a dynamic country like ours to stand still. Moreover, we expect our body of law to grow in meeting new and changing conditions. But under our Constitution it is not the duty of the men sitting on the Supreme Court to write into our law their passing notions about sociology and economics and education. Nor do they have the right to nullify and destroy the powers of our sovereign States and of our local units of self-government.

In my opinion, the recent strong pronouncement of the State chief justices is an important first step in reversing the trend which is rapidly destroying State and local governments and the fundamental principle of separation of powers. They have accepted the challenge and I am sure their courage and convictions will encourage others to face up to the serious realities of the situation. Now such organizations as this one must join in an active effort to enlighten the general public as to the seriousness of this problem. I am convinced that, when informed, the public will see to it that we return to our constitutional form of government.

A second element in the national trend away from basic freedoms—and a real challenge which must be met by organizations such as this and the rank and file of labor, is that disclosed in recent months by the McClellan committee which has pointed up

so that everyone could see—and no one could seriously deny—the appalling corruption, crime, and violence which exists in the high circles of some labor unions. Gang bosses, goon squads, bribery, and embezzlement have no more place among unions than they have among our other American institutions. Our working people themselves are the ones who are most hurt by immoral and dishonest union leadership in those unions where it exists.

Perhaps some of you saw a few weeks ago a statement by Jimmy Hoffa, the head of the giant Teamsters Union—which has been one of the main targets of the McClellan committee—predicting that he would lead a mighty Teamster Union of 4½ million members spanning virtually the entire transportation industry, and then added, with characteristic brashness, "We will not be stopped by the McClellan committee, laws, or the courts".

After listening to dozens and dozens of witnesses one of the members of the McClellan committee, Senator ERVIN, of North Carolina, stated a few days ago that "This superlaw which the teamsters attempt to interpose over the government of the United States and the arrogant implementation of their activities is something which continues to concern this committee and I believe the entire country."

This situation certainly should cause great concern to all Americans and to the agricultural producers in particular, because the trucking industry performs a vital and necessary service in getting a large part of your produce to the market place. As a matter of fact, trucking has become so highly important in the transportation of food that the Nation's total trucking bill for the shipment of food now exceeds that paid for rail shipments. An extended tieup of this industry at harvesttime could wreck entire segments of agriculture and bankrupt thousands upon thousands of farmers—as well as handlers and processors of farm products—throughout the Nation.

In the next session of Congress, I expect to join again with other like-minded Senators and Representatives in support of legislation to prevent the domination and exploitation of rank and file union members by irresponsible and greedy labor bosses. Only in this way can the workingman know that his dues will be properly spent and that he will have the traditional rights that should be accorded to American labor. Only in this way can the farmer have reasonable assurance that his products will get to market, and the millions of inhabitants of our great metropolitan areas be sure that their food needs will be supplied.

One would naturally hope that the rank and file of labor would take the lead in this fight which is of such great importance to them, but since the actual livelihood of these men can be cut off in the twinkling of an eye by the labor bosses—and human nature being what it is—the major brunt of this effort may have to fall upon shoulders such as yours and the shoulders of the general public. If this proves to be the case, I am confident that you and the millions like you in America today will meet the test. Although this is in the field of labor, it is primarily a fight for freedom—and if the fight is lost our very way of life may be lost with it. This is indeed a serious challenge which requires the attention of every American.

A third battle in which you have been engaged and in which I hope you will continue to interest yourselves, and one which illustrates possibly clearer than any other the objectives of those who continually press for an ever larger and more powerful Federal Government, is the constant effort to increase the coverage of the Federal wage-and-hour law, which already applies to approximately 24 million workers in interstate commerce.

In the last Congress bills were introduced to extend coverage of the law to activities affecting commerce which would bring under the law even the corner drugstore with one employee. Even a cursory reading of the Constitution and the debates on this act when it was first enacted will show beyond the slightest doubt that this spread of control over local mercantile and service organizations was never intended nor deemed constitutionally possible by the New Deal sponsors of the act—President Franklin Roosevelt and Senator Hugo Black—now a member of the Supreme Court.

One of these bills of the last Congress would have extended coverage to almost 10 million additional workers, including roughly 1½ million agricultural workers. The bill finally reported by the Senate Labor Committee would have added 6 million employees, and did not include the agricultural workers. Obviously those who push the measure prefer to follow a course of divide and conquer.

Fortunately, these measures were not passed, but the efforts which I have mentioned indicate so clearly the ultimate goal of their sponsors—to finally bring every employee and every business in the Nation within the scope of these laws by regulating local wages and local hours of employment.

We have defeated these efforts before, but those who keep pressing this issue are continually working to sell their phidosophy, and unless the millions of citizens who oppose this paternalistic trend join in opposition to this drive to further encroach upon our freedoms, the day will surely come when we will not be able to stem the tide.

This effort illustrates clearly the lengths to which some eager so-called ultraliberals will go, regardless of constitutional limitations, to force the Federal Government to take over the control of the everyday local activities of our people.

Of course, we are always hearing stories with reference to the relationship between agriculture and labor, and I heard one recently which may bear repeating.

A farmer in Virginia was plowing one day when his tractor turned over on him, badly injuring him. He was immediately rushed to an overcrowded hospital in the Washington area but because of the lack of a bed in the proper ward, hospital officials were forced to place his bed in the hall in the maternity wing. The farmer was in a great deal of pain and was anxiously hoping for relief. To his great delight he heard two new mothers talking about a new practice which resulted in no pain at all. This they call twilight sleep.

A few minutes later a doctor came down the hall and the suffering farmer caught him by the sleeve and said, "Doctor, I am in horrible pain. Can't I get some of that twilight sleep?" The doctor said, "Well, sir, that is used only for labor." In all his pain the farmer came back angrily, "That's the trouble with the world today—everything for labor and not a single thing for us poor suffering farmers."

I have mentioned only three of the major problems, not solely in the field of agriculture, which mark the present dangerous trend in other fields, but which are just as important to the members of this organization as are strictly agricultural problems. But I am sure that you know that the next Congress must continue to face serious problems directly in the field of agriculture, made more serious by the trend which I have mentioned, as well as by the changed makeup of the new Congress, which will contain more so-called liberals than has been the case in many years. Incidentally, the other day I heard a present-day liberal defined as one who has his feet firmly planted in the air.

Some of you may recall that several years ago in a Senate speech I brought to the attention of the Senators and the American people the seriousness of the situation then existing in some of the agricultural areas of our country where farmers were openly advocating complete dependence on the Federal Government. I said at that time that I did not want to cast any reflections on sections of our country or on organizations or individuals, but I was alarmed and felt it my duty to call attention to what I had observed.

The information upon which I based my comments was gained through my personal participation in hearings held by the Senate Agriculture Committee in many of our States, particularly in the great Northwest. I was astounded to hear witness after witness come before our committee and plead for Government support prices at 100 percent of parity on every agricultural product—across the board—on nonperishables and perishables alike—produced on a so-called "family unit farm." One witness, franker than most of the others, stated in so many words that what he wanted was to have the gravy train start running again.

I was shocked to hear numerous witnesses state that their objective was the redistribution of the land and fairer distribution of the wealth produced on the land—a philosophy which should curl the hair of all of those who have worked and fought for the preservation of the American system of free enterprise. How foreign this thinking is to that which has always characterized typical American farmers. There is no group in America today which—as a whole—has enjoyed a higher reputation than the American farmer, for being independent, conservative, and willing to stand and fight for individual opportunity, private enterprise and, in short, for our way of life. I glory in that fact and warmly commend this organization for insistently carrying forward in that noble tradition.

The Congress must take its share of the blame for the situation which I have mentioned because, almost without exception, I found that farmers in those areas which had relied heavily on high rigid price support programs—which they had used as a crutch so long that they were afraid to try to walk without it—were the ones pressing for this additional Federal assistance. It is beyond my comprehension why these people do not look around them and discover that the only major agricultural crops in real trouble today are those very ones which have been depending too long on high price support. Many other crops, not dependent on price supports, are in healthy, prosperous condition. It is so clear that the solution to their problems—and the restoration of that wonderful feeling of self-reliance and freedom—lies in the direction of less Government support and control, rather than more.

It was considered necessary during World War II that we have high rigid price supports as an incentive to achieve the necessary increase in production for our war efforts—and it was only fair to continue them briefly until agricultural producers had sufficient time to level off their production compatible with peacetime markets. But the longtime continuation of such a program in peacetime could only lead, as it has led, to a greater loss of freedom by the farmers affected and to the piling up of huge surpluses in Government warehouses which hang over market prospects like black clouds above the horizon. The complete unsoundness of price supports large enough to induce farmers to produce crops to sell to Uncle Sam for storage has been thoroughly established.

Since 1954 the Congress has been making some progress in the effort to solve this huge agricultural problem. You are familiar of course with the long-drawn-out congressional fights which produced the Agricultural Acts of 1954 and 1956, which in the main followed the American Farm Bureau recommendations. Limited flexible price supports were provided in 1954 to replace high rigid price supports, much land was taken out of production under the soil bank, set up in 1956, and other provisions of the acts of 1954 and 1956 were steps in the right direction. Great efforts to reduce surplus supplies by various export devices and by enlarged domestic grants for food and feed programs were made—with some success. Expanded research for new uses has been helpful. Cooperating with Congress several producer groups are doing helpful things for themselves, such as advertising, trade promotion, dealer service, private research and greater use of Federal marketing agreements and orders.

This year the Agricultural Act of 1958 was passed in the effort to deal on a trial basis with those three basic crops which were in worst condition—corn, cotton and rice. This act provided an opportunity for corn and cotton growers—corn producers by referendum of the whole group, and cotton producers as individual planters—to move away from some of the domination and regimentation by the Federal Government. I was greatly pleased when our corn producers accepted by overwhelming vote the challenge to do away with acreage allotments and the artificial distinction between commercial and noncommercial areas and also to accept lower and more realistic support prices. I am proud to report that our Florida corn farmers voted 97.8 percent to do away with corn acreage allotments, leading all other states in the referendum. Your organization is entitled to greatest credit for the favorable result of the corn election. I am convinced that many cotton producers who must soon make their decisions will also choose to regain much of their independence by increasing their acreage and accepting lower price supports. Only in this way can they make American cotton competitive again in world markets and also discourage the speedy growth of the synthetic industries. In the case of rice the act applied a freeze to the current acreage allotment, which otherwise faced a ruinous 50-percent cut, and also permitted reductions in price support after the first 2 years.

In the last Congress we also increased the authority of the Secretary of Agriculture under Public Law 480 of the 83d Congress, the Agricultural Trade Development and Assistance Act of 1954. With the aid of this act our exports of farm products have reached an all-time high. We extended the program from June 30, 1958, to December 31, 1959, at a rate of $1½ billion per year—or by a total of $2¼ billion. This program has proved quite helpful in reducing our surpluses and in improving our foreign markets, but I hope we will not become overly dependent upon it. It has proved to be an exceedingly fine emergency measure to handle surpluses, but it can never be regarded as a substitute for private trading.

It appears likely that in the forthcoming session, Congress will allow the temporary programs for corn, cotton, and rice sufficient time to demonstrate their value, but meantime will tackle the problems now faced by the other so-called basics—wheat, peanuts, and possibly even tobacco—and I hope the final results there will be as encouraging as the 1958 act promises to be with reference to cotton and corn.

Of this group, wheat is in the most serious trouble and will almost certainly require new legislation. With an existing surplus already on hand the wheat crop this year approaches 1½ billion bushels—53 percent larger than last year's crop and the largest in history. Without growing a single bushel of wheat next year we would be able to supply our domestic and export needs with 325 million bushels to spare on July 1, 1960.

Probably one of the first major agricultural bills to face us in the next Congress will be one to provide for direct payments to farmers out of the Federal Treasury. Several similar bills for this purpose were introduced in the last session of Congress, and I think we can anticipate their reintroduction and consideration early in the next Congress.

It was about 10 years ago that the so-called Brannan plan of direct production payments was originally proposed and the Congress has repeatedly refused to adopt it. This latest version leaves many questions unanswered and there are a multitude of reasons why it should not be favorably acted upon by the Congress. Among other things it would stimulate production and bring about a gerater surplus to depress the market prices, which in turn would increase the cost of the proposed program which is already estimated to run between $8 billion and $16 billion per year.

Because of the size of the refund payments the program would become one of the greatest political footballs of all times and because the proposed program is limited to the six basic commodities, the Congress undoubtedly would be subjected to strong political pressures to include more and more commodities.

I hope Congress will continue to disapprove such measures and will continue to enact constructive farm legislation working patiently step by step toward the new farm program which so evidently is required. But I cannot emphasize too strongly that the existence of the dangerous philosophy in other fields which we have been discussing, and some of the activities of the U.S. Supreme Court, the aggressiveness of ultraliberal Members of Congress, labor leaders and even some of our farmers, present a real challenge to every American.

We may as well realize that if Congress turns to the left generally in solving other important national problems, we must expect the leftwing philosophy to prevail in the field of agricultural legislation.

I commend the American Farm Bureau for its constant efforts to help lead us back to the highway of basic Americanism and away from the road which leads to a paternalistic welfare state.

I commend the cotton industry and corn producers for their strong desire shown in their support of the 1958 legislation and in their reactions since that time to alter their course away from more and more Government assistance and control and toward more freedom and self-reliance.

Thanks to groups such as this, we see some glimmer of hope that we will be able to reverse the trend which is leading us down the road to socialism—but let there be no mistake about it, we are still in the midst of a devastating attack in the name of so-called liberalism on individual and State rights intended to be protected by the drafters of our Constitution. These attacks must be met fearlessly and forcefully.

Unquestionably a mighty struggle is in the offing and we can win it only if those of us who feel strongly about preserving individual freedoms and private enterprise are willing to make real sacrifices. We cannot win it by sitting idly by while ultraliberals sell their unsound theories to unwitting people throughout every economically troubled area of the Nation.

As individuals I hope you will make your views known to your friends and your acquaintances and most of all to your Senators and Representatives in the Congress.

I feel particularly close to the American Farm Bureau, and I think one of the main reasons for this is that for years you have approached problems of national importance with the basic proposition always in mind that the continuance of individual freedom and responsibility, and the maintenance of strong, independent and responsible State and local governments, are all necessary to the preservation of stable, constitutional government.

I am glad that you, our strongest agricultural organization, are committed to this fundamental principle and it is fortunate for the Nation as a whole that you take an active interest in matters of general interest and importance outside of agriculture, realizing, of course, that if the political and economic structure of our Nation is unsound, agriculture will suffer along with everyone else.

As an organization you appear to have accepted the challenge to help lead the way back to our fundamental Constitution and to the way of life which has made this country great. I hope each of you as an individual will also accept that challenge. Agriculture has an opportunity—indeed a high responsibility—to return to the self-reliance which has characterized the American farmer throughout all of our history and point the way to the return of all of our people to basic Americanism. I wish for you the fullest measure of success in your dedicated efforts and I shall have a small part in working with you to bring about that success, in the best interest of agriculture and of all the American people.

Mr. EASTLAND. Mr. President, I also ask unanimous consent to have printed in the Appendix of the RECORD an exceptionally fine editorial concerning the speech entitled "A Statesman From the Deep South," published in the Oklahoma City Times of December 23, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A STATESMAN FROM THE DEEP SOUTH

A refreshing breath of true statesmanship has come from Florida in recent days, and it is all the more gratifying because it is that of a Democrat speaking courageously after the recent Democratic victory in which many observers claimed to see a mandate for more spending, more labor domination, and a greater leftward shift coming out of the election returns.

Senator SPESSARD L. HOLLAND obviously doesn't go along with those timid souls who have been panicked into the idea that the Federal Government must now spend more money than ever, provide more gimmes for the voters, kowtow more cringingly to Walter Reuther and his cohorts, and wander still farther into the welfare state concept.

Addressing the recent annual meeting of the American Farm Bureau Federation, Senator HOLLAND pulled no punches in the arena of farm policies. He said that the only major agricultural crops in real trouble today are "those very ones which have been depending too long on high price support."

He enlarged upon this theme when he said that it is clear that "the solution to the farmer's problems lies in the direction of less government support and control rather than more."

He added: "The complete unsoundness of price supports large enough to induce farmers to produce crops to sell to Uncle Sam for storage has been thoroughly established."

"Unfortunately," he said, "many of our people cannot understand that they themselves are the Federal Government, that they pay all of its bills, and that they, the people, get nothing free from their Government. They do not realize that by looking to that Government for handouts—each of which

costs them certain rights and privileges—they lose each time a little more of their freedom, and that little by little they are giving away their heritage."

Mr. HOLLAND is senior Senator from Florida and member of the strategic Senate Appropriations and Agriculture Committees. He warned his hearers that the Government "is now moving away from individual freedom and initiative toward an ever-enlarged Federal Government and a labor 'super-government' at the expense of the rights and privileges of States, local governments, and individuals."

In the field of labor-management relations, he said: "A real challenge which must be met by organizations such as this and the rank and file of labor is that disclosed by the McClellan committee, which has pointed up so that everyone could see, the appalling corruption, crime, and violence which exists in the high circles of some labor unions. Gang bosses, goon squads, bribery, and embezzlement have no more place among unions than they have among our other American institutions. This situation should cause great concern to all Americans and to the agricultural producers in particular, because the trucking industry performs a vital and necessary service in getting a large part of your produce to the market place. An extended tie-up of this industry at harvesttime could wreck entire segments of agriculture, and bankrupt thousands of farmers, as well as handlers and processors of farm products, throughout the Nation."

Undoubtedly the majority of Oklahoma voters, regardless of party, wish that equally courageous and statesmanlike utterances might come from members of the Oklahoma delegation in the House and Senate.

Inflation

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, January 20, 1959

Mr. JOHNSON of Texas. Mr. President, inflation is a vital subject that concerns us all.

It has been the subject of much study by many persons.

In this connection, there has been brought to my attention a noteworthy dollars-and-cents appraisal of what the word "inflation" really means.

It was prepared by Sylvia Porter, a discerning observer of our economic scene, who writes a column "Your Money's Worth."

I ask unanimous consent to have printed in the Appendix of the RECORD the column carried in the Monday, January 19, 1959, issue of the Washington Evening Star.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

YOUR MONEY'S WORTH
(By Sylvia Porter)

WHAT INFLATION IS AND WILL BE

This is what inflation is—this is what you have lived through if you are over 20 years old.

In 1939 a quart of milk cost under 12 cents; in 1949 a quart cost 22 cents; in 1959 the price in my neighborhood store is 29 cents. In 1939 a loaf of sliced white bread cost under 8 cents; in 1949 a loaf cost under 14 cents; a loaf now costs over 19 cents.

In 1939 a leg of lamb, per pound, cost around 28 cents; in 1949 lamb per pound was over 71 cents; it's now over 77 cents. In 1939 a pound of coffee cost a bit over 22 cents; in 1949 it was over 55 cents; the average per pound now is in the 70-cent range.

In 1939 the lowest priced, five-passenger, four-door car in the Buick line was $984; in 1949 it was $2,089; in 1959 it's $2,545.

In 1939 the wholesale price of a gallon of gas, excluding taxes, was under a nickel; in 1949 it was a dime; now it's 12 cents. And in 1939 a ton of cold rolled steel at wholesale was $62; in 1949 it was $90; in 1959 it's $146.

Meaning of inflation

This is what inflation is—a sharp rise in the prices of goods and services, an extraordinarily rapid climb in the cost of living in a relatively short period.

Only when you compare the price of milk and bread, of bus fares and meat, does the tale come through. Only as I dug through the newspapers of 1939 and 1949 did I truly understand what I'm saying when I write that the dollar which bought 100 cents of goods and services in 1939 buys less than 48 cents worth in 1959.

Because we lived through this 1939–59 inflation does it mean that we will repeat the experience between 1959 and 1979?

It does not follow. Not at all!

Just recall the background and you'll see what I mean.

In 1939 we were coming out of a decade of depression. During all those years of stagnation in the thirties we built only a picayune number of houses, plants, factories, machines. We had not only been stopped in our economic tracks by the great depression of the thirties; we had been pushed into a massive retreat.

Economy strained

On top of this stagnation came World War II. Suddenly our woefully underbuilt economy was strained to the utmost. Suddenly tens of billions of dollars were poured into the business stream as the Treasury did the equivalent of printing money to finance war production. With so much cash chasing so few goods, only wartime controls and our patriotic acceptance of them kept the price lid from blowing off.

Then came the postwar period and the removal of controls.

Under the circumstances the price levels of prewar days were utterly unrealistic. Money pent up during the war was scrambling for goods and services at almost any price. We were striving to make up for more than a decade of depression stagnation and war. The upsurge in prices and wages was simply a normal response to conditions then existing.

Now reread those little down-to-earth statistics. Notice how the pace of the price increase in most cases has slowed.

That's only logical, too. We have more than caught up with the underbuilding of the depression years and the scarcities of war.

Barring another global war, there is no basis for price rises in the next two decades to match what we've seen in the past two.

A gently rising price level is a reasonable expectation.

Steel in Perspective

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Saturday, January 17, 1959

Mr. DIRKSEN. Mr. President, it was nearly 300 years ago that Thomas Newcomen was born in England. His improvements of the steam engine were so successful that up to the time of the American Revolution it became known as the Newcomen engine.

In honor of his memory, about 30 years ago there was set up a voluntary group called the Newcomen Society. Its members meet all over the country, and it is the custom to have addresses made by persons who are experts in their line.

Mr. Roger Blough, president of the United States Steel Corp., addressed the society on the 4th of December last in New York. The title of his address was "Steel in Perspective."

Mr. President, I have been advised by the Public Printer that certain remarks on this subject which I desire to have printed will occupy about two and one-half pages of the RECORD at a cost of $202.50. I therefore ask unanimous consent, notwithstanding this cost estimate, that the remarks I send forward be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STEEL IN PERSPECTIVE

(A talk by Roger M. Blough, chairman of the board, United States Steel Corp., before the Newcomen Society in North America, Hotel Pierre, New York, N.Y., Dec. 4, 1958)

Last year the steel industry of the United States observed the hundredth anniversary of the Bessemer and Kelly processes which launched the age of quantity steel production in this country. For that reason, my associates and I are particularly pleased that the Newcomen Society honors steel tonight.

It is the custom of Newcomen on these occasions to appraise and record the progress that has occurred in some particular field of human endeavor, and, in keeping with this worthy tradition, it had been my intention this evening to review the history of these past hundred years in steel, to point out a few of the myriad ways in which the almost explosive growth of this industry has influenced the growth of America.

But the more deeply I delved into the past the more clearly I seemed to hear the portentous rumble of events taking place today all around the globe, an insistent, earth-shaking rumble with profound and perplexing implications, not only for the steel industry but for all industry, and, indeed, for our Nation's future position in the world.

So it occurred to me that the mere contemplation of our yesterdays, however gratifying that may be, can provide little more than the momentary illusion of escape from the vexing realities of today and the pressing hazards of tomorrow. For history is truly meaningful only when viewed in perspective—only as we discern how past events have shaped the present and foretell the future.

Therefore, I propose that we try for a moment tonight to lift ourselves out of the earthly clay that surrounds us and to seek some vantage point in time and space whence we can look down upon the whole tableau of world progress in steel.

And from that vantage point let us glimpse in passing this land of ours as it was a hundred years ago, when the modern age of steel began.

In those days we were not far advanced from a frontier nation. Buffalo still roamed the great plains and Indian war whoops were still heard in the West. Steel, such as it was, was scarce and expensive. Its production was measured in pounds, instead of in millions of tons as it is today. And when Andrew Carnegie was born, for example, it was selling at $500 per ton.

Then came the invention and development of the processes which brought mass production to the steel mills. From the volcano-like maw of the Bessemer converter, steel poured forth in a veritable flood, and sold in the marketplace at a tiny fraction of its former cost. Except for the iron from which it was made, it became, in fact, the most inexpensive and most plentiful metal in America; and today, of course, it still is.

That the strongest and most versatile of metals should suddenly become the most economical and most available of metals was a miracle which produced a mighty surge of progress that no other nation in the world, as yet, has equaled. There was abundant steel for everyone and every purpose.

There was steel for the plowshares that transformed the vast prairies of the West into productive fields. Steel for the blades of reapers and binders that harvested our multiplying supply of grain. Steel for barbed wire to fence in great herds of cattle on our unwooded grasslands. Steel for bridges across our rivers and for rails that soon knitted thousands of isolated communities into one great, united Nation. And, above all, there was steel for the tools of industry—for machines that multiplied the strength of men many thousands of times, and raised them from muscular pygmies to productive giants.

In less than half a century—a mere wink of Father Time's eye—the United States became the foremost producer of steel in the world. And simultaneously it became the world's leading industrial nation. Never in all the annals of history had there been an equal economic advance in so short a time.

But that was as nothing compared to the progress of the last half century. Our material well-being moved to unheard of heights, and was shared by every economic group at every economic level of our society. In two world conflicts at a time when we had about 50 percent of the world's steel capacity, we were able to furnish the counterweight which swung the balance in favor of democracy. And since World War II we have shared over $60 billion worth of our wealth with our friends in many parts of the world. That is no mean accomplishment for the youngest of major powers.

Now, I do not mean even to suggest, of course, that the revolution in steelmaking was solely responsible for the spectacular growth of America's productive power in this past century. It could not have been; for we had no corner on steel's raw materials, and the processes were available to all visitors.

Clearly there were many other factors: the climate of economic and political freedom which has been our heritage, the adventurous spirit of risk and reward that uniquely motivates private initiative, and the insatiable competitive urge that is so characteristic of the American people and their enterprises.

Yet no one can doubt that supremacy in steel has been an essential ingredient in the achievement of America's productive leadership. A nation's economic wellbeing and its standard of living may be measured in terms of money, or kilowatts, or in many other ways; but one of the most reliable guides for this purpose, perhaps, is found in its per capita use of steel.

It is not accident, then, that in 1956 United States led the world with a reported 1,232 pounds of steel per person annually, followed by West Germany with 847 pounds, and the United Kingdom with 788. Soviet Russia had moved up to fifth place 481 pounds and China trailed at the bottom with 18 pounds per capita.

So if we look only at the past we might feel pretty complacent and smug about the margin of leadership that we have established; and we might even conclude that the miracle of this past century could only happen in America.

But if—well aware of the past—we look down from our imaginary vantage point in space, and view in perspective the whole of history as it is being written now, we cannot escape the fact that the same irresistible, surging force that has swept us forward during these past 100 years, has been reborn in nations all around us. It has been sired by a new awareness among people on every continent that they do not have to be hungry, shabbily clothed, or poorly housed. They insistently seek the same improvement enjoyed by the Western World—not alone as an end in itself—but primarily, perhaps, as a means of achieving the highest purposes of human freedom and culture, through an ever-rising level of life and service.

And so it is that wherever we look, we see the world in a state of ferment.

That has happened many times in the past, and when the ferment subsided, the world was no longer the same. Yet this ferment differs from all the others. It is not only global in scale but is reaching even to the firmament. It has many new ingredients—political, social, economic, scientific and technological—and they are reacting more violently than ever before. And of one thing only, I think, can we be certain: that when this ferment, too, subsides—perhaps not in our lifetime—the world will be changed again in remarkable ways. For the great tides of history are as ripples when viewed in the light of the change that impends.

In the field of metallurgy and particularly steelmaking we are only at the beginning of a revolution that will dwarf any that has preceded it. And what is happening in steel is but a part of a fast changing science and technology, moving so rapidly that it defies prophecy.

We, at once, lift our eyes to the stars in anticipation of space travel and at the same time we are discovering a whole new universe within the tiny atom. In practical terms, this means that we will conquer space and that nuclear energy will one day be universally available at any place on the globe—from pole to pole, and at the far-reaches of every ocean.

The importance of this perspective in steel was brought home by an incident which occurred at the White Sands Missile Proving Ground in New Mexico some weeks ago. After a day devoted to missiles, faster-than-sound planes and much conversation about lunar probes and the limitless thrust of man into space, an earnest young scientist, who knew we had built launching platforms, asked this very simple and revealing question:

"How far along are your plans for building a launching platform on the moon?"

Fantastic question, but which one among us deems it as fanciful now as a mere 10 years ago?

Accompanying this atom-space revolution is the up-welling desire I have mentioned of many millions of people for more knowledge, more economic tools and for more power to improve their lives and their well-being. The teachings of our own American story of how to create more for the many by providing more and better tools of production are having far-reaching effects. Those American teachings are pointing the way and providing the motivation for the earth-wide surge of peoples seeking their own better day and their own better way. We can see it in Latin America, in Europe, in the Middle East, in Africa, in Russia, in India, in China, and Japan. As a measure of this surge, let me point out to you that since World War II 20 or more new nations have come into existence.

Here we begin to gain a little perspective. This surge of peoples for economic betterment, embracing many conflicting political creeds and many different stages of industrial development, has one thing in common—the recognition of the value of steel as the foundation of physical strength, and as a basic tool of production from which is generated the many needed tools of production.

At the turn of the century, more than a quarter of all work energy in our own Nation was supplied by animal and human muscle. Today, nearly 99 percent of all useful work is performed by machines—from the giant steel rolling mills to the tiny mechanism which activates an elctrical watch. That, too, is a part of our American teaching, clearly visible to others around us.

It is significant, therefore, that since World War II, at least 20 nations have more than trebled their production of steel, while several other countries are starting to make their own steel for the first time. In fact, the only major steel producing nations which failed even to double their output during this period were the United States and the United Kingdom.

Under the auspices of the State Department, representatives of the American steel industry gained further perspective recently when they toured the steel operations of the Soviet Union and studied the methods and plants which give Russia, today, an annual capacity of only slightly less than 60 million ingot tons which compares with our 141 million tons. Much, I think, was learned on both sides, but particularly impressive to the Americans was the determination of the Soviets to narrow the gap between us with all possible speed.

In this year alone they are constructing seven new blast furnaces having a daily capacity of 3,000 tons each. And if you have read Khrushchev's announcement of the new 7-year plan, you know that Russia intends, by 1965, to increase its steel production to 100 million ingot tons per year. That is about 15 millions tons more than the American steel industry will turn out in this present year of low demand. You may have noted also that this enormous expansion of Soviet capacity will require a capital investment which—at official rates of exchange—amounts to $25 billion.

By way of another example, a recent news dispatch reports that out of more than 600 million people in Communist China, 50 million are engaged in a feverish campaign to produce iron and steel in the crudest of makeshift furnaces. Their aim is to double, within a single year, their last year's output of about 5 million tons.

It is not well to smile at these early efforts of the Chinese to build a steel industry where manpower is so plentiful and so low cost. The Chinese in ancient times had a flourishing iron industry. It is only reasonable to foresee sizable steel production in that land.

In India three new 1-million-ton-capacity mills are being built and a fourth is contemplated.

A number of other countries, since the war, have built or are planning to build their first steel plants. Among them are Pakistan, South Korea, Portugal, the Philippines, Israel, Colombia, Venezuela, Peru, and our own Hawaii. Several Latin American countries are already producing steel and together, can now supply about 50 percent of the steel needs of that entire continent.

Now what does all this industrialization in other parts of the world mean to us? Here are some significant trends. Although we have grown from 66 million ingot tons of production in 1940 to 112 million in 1957, steel producers in other lands have moved from 89 million tons to 209 million—or twice as much. In recent years, our Nation's proportion of world steel production has dropped substantially—from 54 percent in 1946 to 46 percent in 1950; from 46 percent in 1950 to 35 percent in 1957. And in this recession year of 1958, we will have produced less than 30 percent of the world's steel.

Even for so short a time as the next 5 years, we may project an increase in capacity of our own industry of about 15 million ingot tons; but any realistic appraisal for the rest of the world must be triple that amount.

Now for additional perspective. With reasonable accuracy one can project the world's population for relatively brief preiods. It is said that the United States will have 260 million people in the short span of 22 years—by 1980. By then it is estimated that world population will have increased from 2.9 billions to 4.2 billions—a tremendous growth indeed.

Now what does all this portend for us? A few things are clearly visible and they are not years away but at hand. The great bulk of the population growth will take place outside of the United States—15 times our own. That population growth will be accompanied by an increase in steel production at an accelerated rate which we cannot hope to match—pound for pound—nor should we expect to do so. For each additional pound of steel wherever it may be produced is one more pound inevitably devoted to raising the living scale of someone among these billions of people, unless—perish the thought—that pound of steel should be destined to take part in a world holocaust?

I should make it clear in passing, perhaps, that this challenge to our industrial leadership is by no means confined to the realm of steel. It is everywhere. At the beginning of World War I, for example, the United States produced 83 percent of the world's oil and had 80 percent of the known reserves in what is now the free world. Today it produces only 47 percent of the free world's oil and has but 13 percent of the known reserves.

So we must face up to the probable fact that our Nation will no longer have the preponderance either of steel production or of total production that it has enjoyed in the past—nor, let me say parenthetically but emphatically, will any other nation fall heir to that preponderance.

It is also plain to see that, in the steel industry, we will encounter tougher and tougher competition both internally and externally. We will have to compete against products made by our industrial imitators under conditions where the operators of the machines of production in foreign lands will receive only a fraction of the compensation they are paid in this Nation. And no one should underestimate either the quality of those machines or the aptitude of their operators.

Already, in steel, there is a straw in the wind. It may be only a straw, but I give it for what it may be worth. Exports of steel from the United States in 1958 will fall off roughly 40 percent from 1957. But what is more significant, in this year when our industry operated far below its capacity, our steel imports are expected to be 10 to 15 percent above those of a year ago. And may I add that while recognizing the value of such expedients as tariffs and quotas, increased tariff protection is not the ultimate or basic answer because free nations must depend upon trade. Trade is mutually beneficial. Moreover, if experience teaches us anything, then certainly we have learned that the power to erect tariff walls is not one in which America enjoys a monopoly.

All these observations are enough to induce us to do some sober thinking.

The challenges which face us, as I see them, are of two kinds and they are interrelated. One is in research and technology, and, great as that challenge is, the second is far greater. It relates to ourselves as individuals and what we are going to do, even now, as the ferment I mentioned earlier boils up around us and changes the world in which we live.

In the whole spectrum of science and technology, there is probably no more important field than metallurgy, for what we accomplish there may well determine our survival. Metallurgy is rapidly entering upon a new era. Two others preceded it. The first was that of chemical control when man began to understand the chemistry of steel and to develop steels according to chemical composition. In the second, metallurgists with the aid of the microscope, began to see and understand changes in the properties of steel which had formerly been achieved empirically. This was called "visible microstructure." But, now we are venturing into the tiny universe of the atom, the era of atomic structure.

It has been possible in the laboratory to produce a single crystal of pure iron in the form of a filament with a tensile strength approaching 2 million pounds per square inch. That is more than seven times the strength of the strongest steels that exist today. As I understand it, the problem is to find a way to get rid of the defects ordinarily existing in iron crystals, and, by rendering them more nearly perfect, to produce the super steels of tomorrow.

Why is steel of so much greater strength needed? Well, until recently, our efforts have centered around those steels which hold their strength at the exceedingly high temperatures generated by air friction on plane or rocket surfaces at supersonic speeds. Such metals are still very important—and stainless steels figure prominently among them—but the emphasis has shifted to steels of greater strength at ordinary temperatures. Why? Because with the advent of intercontinental ballistic missiles, the supersonic plane will be relatively less important in our national defense.

But beyond the stratosphere, where there is no air friction, the problem of rockets or space ships traveling at 18,000 miles an hour is not so much one of heat as of strength. A space vehicle passes through the atmosphere in a relatively short time and is not subjected to anything like the frictional heating of the slower supersonic plane. Consequently, designers want a steel of a vastly greater strength at relatively low temperatures and one with greater resistance to corrosion—especially corrosion under stress. It now takes 1,000 pounds of rocket and fuel for every pound of "payload," in the form of a satellite or what may eventually be a space ship. Obviously, if a steel could be made twice as strong as at present, the weight of the rocket could be cut in half, or the payload could be greatly increased.

There is, moreover, a need for greater resistance to corrosion under stress which has been accentuated by use of "exotic fuels" to power vehicles for space travel. Some of these fuels, such as fuming nitric acid or materials containing fluorine, are extremely corrosive, and all the more so under conditions of stress. Even if a steel can be developed that will cut the weight of a space vehicle in half, it will be of no avail if it cannot resist corrosion of fuels within the container.

What we learn of value about steel for interplanetary travel will undoubtedly be applied to great advantage on this planet we call earth. In this dawning age of nuclear energy there are certain to be countless new requirements for steel, and structures of new steels, not yet dreamed of in our most imaginative moments. Whether it be in a racket we loft a third of the way to the moon, or in a drill pipe that dips 25,000 feet into the earth or in a submarine gliding under the North Pole, steel will be there, provided we in steel and in all industry find better ways of meeting our greater challenge.

For however successful we may be in maintaining leadership in the field of scientific research, our greatest challenge relates—as I said a moment ago—to what we are going to do as individuals, as economic groups and as a nation in the face of this fermenting world.

Can we in business and industry fully grasp the meaning and the implications of this ferment? Can we aid our fellow men to understand it so that they in turn may act in the common interest? And can we bring to our elected representatives in Government a real and dispassionate comprehension of the part they must play if they are to enhance—and not weaken—our Nation's position among other nations of the world?

In the answers to these simple questions lies the destiny of America. But how shall we answer them?

We know for example that America's ability to compete successfully with these other nations in the years ahead will rest primarily upon what is known technically as the "formation of capital"—or, in simpler language, upon our capacity to acquire and to pay for new, more efficient, tools of production.

We know that the nation which equips itself most widely and wisely with the most efficient and productive tools will be the strongest nation in the world when this present ferment subsides.

We know further that when Soviet Russia—or any other Communist society—needs $25 billion for new and better steelmaking facilities, it raises the necessary capital through taxation—direct or hidden—and the people have no voice in the matter. We in America, however, rely, and happily so, only on the voluntary action of those who have saved, and are willing to invest, such sums in these tools.

The Communist governments can be ruthless in the imposition of taxes and can thus provide themselves with vast quantities of tools. We, on the other hand, must rely upon incentives if we are to keep pace in this international race for supremacy in productive facilities. So clearly we cannot afford to discourage saving and investment if we are to keep in the running. Yet that is exactly what we have been doing for years in this country.

Let's look at this picture for a moment:

In any free capitalistic society, the only way to acquire the tools of production is through profit or the expectation of profit. But how many of our people really understand the nature and the function of profit. Not one, I suspect, in a thousand.

Even if they turn to the dictionary, they are led to believe that a profit is something that is left over in the till after all the expenses of a business have been met.

But the truth is, of course, that a corporate profit, in industry, is what is left over after all expenses—except one—have been met. And the one expense that has not been satisfied is the payment we must make for the use of all the tools, machines, and other capital facilities that are necessary to the process of production. And of all the costs of doing business, this payment for the use and improvement of tools is the most important, perhaps, to our national growth and survival.

When a corporation has paid all its other expenses, provided for depreciation, met its Federal income taxes and come down to its last-line profit on the income statement, it has not yet paid 1 penny for the use of the tools that its shareowners have provided for it. And since there is nothing left but profit out of which to pay for those tools, it is clear that the size of the profit determines the quantity and the kind of tools that an enterprise can command.

Thus the simple fact of the matter is that, over the years, a profit is not something that a corporation keeps in the till. It is something that a corporation pays out of the till for the use and improvement of tools.

Yet today there are people who would tax our profits away, control them away, or bar-

gain them away. But what thoughtful American would wish to tax our tools of production away, or to control them away or to bargain them away and thus consume the basic industrial resource from whence cometh our strength? Nobody would expect us to employ men without paying them; and certainly nobody expects us to use tools, machines, and other capital facilities without paying for them also. The trouble is that people do not understand that profits mean tools and tools mean profits. They are in a very real sense the selfsame thing. You can't have one without the other.

Now this, I think, is probably the most important lesson in what might be called the economics of production. We in business and industry understand this branch of economics because we have learned it in the school of experience, and because it is our very life. But did you ever stop to think that few of our fellow men have had the opportunity to study and understand it because the school of practical business experience is really the only school in which it is being taught?

So if our labor leaders inveigh against corporate profits—and if they force uneconomic wage increases that are "costing" American products out of markets at home and abroad and American workmen out of their jobs, whose fault is that? Can we honestly say that we have done everything in our power to share with our own employees this specialized knowledge we have in the economics of production?

And if our representatives in Government impose burdensome penalties upon thrift and investment—and if they are reluctant to revise the depreciation provisions of our tax laws as the governments of all the other leading industrial nations of the world have done, is that really their fault? It is their responsibility but is it their fault? Have we done our part as fully as we should?

Gentlemen, we are only in the first skirmishes of a worldwide battle of production that is destined, I believe, to rage for many decades to come. America's resources in this economic contest include, and must include, the use of its first team both at home and abroad. And that first team is a strong, well-equipped American industry. A moment's reflection is enough to demonstrate that whether or not America will emerge triumphant from that contest depends in large measure on the virility of American industry. And industry's strength depends directly on our ability to win the understanding of Government, of labor leaders, of investors, and of all other groups in our land, in a national effort to encourage—rather than hinder—the investment of the capital necessary to develop and acquire the finest tools of production on earth.

And if America does not survive that battle, upon whom will future historians lay the blame?

Will they say that our Government officials were too engrossed in the pursuit of politics to care about production? Will they say that our labor leaders were too selfish to consider the future of their country? Will they say that our educators were too cloistered in abstract economic theory to open their minds—and their curriculums—to the basic economic facts of life as they apply to business?

Or will they say—with greater truth, perhaps—that we of business and industry—we who know and understand the facts—were too busy, too indifferent, too impatient, or too inarticulate to teach these facts in the simple, straightforward language that our fellow men could comprehend and believe? Will they record that we, who have been so successful in winning public acceptance of the products of industry, just simply didn't bother to try to gain public understanding of the profits of industry?

You know, somewhere, in some undiscovered cave, there may be some fugitive from a television set who does not know that LS/MFT—Lucky Strike means fine tobacco. But have we ever advertised the fact that LP/MFT—less profit means fewer tools? I leave that question with you.

And in doing so, let me quickly grant that within the boundaries of these economic ideas I have expressed, there are many areas within which reasonable men may differ. But upon issues as vital as these to America's future, there is surely no area within which men of patience and understanding cannot arrive at an agreement. To promote that understanding is the greatest challenge—and the gravest responsibility—that confronts us today.

Now I have led you far from those happy achievements of the past to which I had once intended to devote this talk tonight. But as we come back to earth from our vantage point in outer space let no one suppose that we in the steel industry are dismayed by the worldwide surge of competition that I have just described.

Never before have we done so much research nor had so many developments underway to meet our technological and production challenges. Never has our industry been more aware of the manmade hurdles that stand in the way of mutual understanding, industrial growth, and the preservation of our national strength. And never have we had more determination to rise above those hurdles.

In the last analysis it is all part of doing the job we know best how to do—the job of production—the task of creating more things for more people to the advantage of all.

So as we face the challenge ahead, let us always remember that, as a nation, we still have the only abiding advantages we have ever had in world affairs—the advantage of ideas and of ideals. And, curiously enough, these ideas and ideals have been of the greatest advantage to us when they have brought advantage to others. Guided by that central and simple thought, our people—armed with understanding—will not falter in their progress.

More Funds for Great Lakes Connecting Channels

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, January 20, 1959

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared entitled "More Funds for Great Lakes Connecting Channels."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MORE FUNDS FOR GREAT LAKES CONNECTING CHANNELS

In reviewing the 1960 budget submitted to Congress yesterday, I am deeply disappointed by the inadequate funds recommended for a particular program—the deepening and development work on the Great Lakes connecting channels.

The $23 million proposed for this work is, I'm informed, absolutely inadequate—if we are to put the target date of 1962 for completion of the work on the connecting channels.

As we recognize, the Great Lakes States beyond Lake Erie will be denied the benefit of the completed seaway until the connecting channels are deepened to handle 27-foot, deep-draft shipping to and from the lakes region.

OPENING OF ST. LAWRENCE SEAWAY IN APRIL

As we know, the St. Lawrence Seaway itself is scheduled for opening in April of this year.

The event will mark a milestone of progress in this great joint United States-Canadian project that will open the door of the Great Lakes to deep-sea trade and commerce of the world. Until now, the seaway commerce into the St. Lawrence has, unhappily, been restricted because of limited depth—prohibiting the passing of deep-draft vessels through its channels.

The Great Lakes-St. Lawrence area includes many of our States of the upper Midwest, and the Provinces of Ontario and Quebec in Canada. Within this area live one-third of the people of both countries.

In this Great Lakes region, too, is concentrated the greatest industrial-agricultural complex in the world. To unwisely postpone benefits of the seaway to the major portion of this region, I believe, would be detrimental to both United States and Canadian interests.

Subsequently I shall make recommendations for additional moneys, in accordance with the amount the Corps of Engineers can effectively put to work, to try to assure completion of the connecting channels by the target date of 1962.

In the days ahead, also, the Congress will be faced with a number of additional important decisions on the seaway.

SEAWAY FILM

Incidentally, I am aware that a great many Members have not had the opportunity to benefit from an on-the-spot look as the St. Lawrence development project—one of the greatest engineering and construction feats in history.

To provide an idea of the scope, magnitude, and potential of this great project, I have arranged for a film to be shown in the Old Supreme Court this afternoon.

The film, produced by the St. Lawrence Seaway Development Corporation, is the fourth in a series of many entitled "The Fourth Seacoast," portraying the most recent development in the seaway.

The film, a 14-minute, color movie, will be shown between 2 p.m. and 3 p.m. this afternoon. As necesary, it will be rerun during that period to assure interested individuals a chance to see it.

Although I know that Senators will be extremely busy, I cordially invite you to drop in to see the film, if it is at all possible.

Stephen W. Downey, Able Lawyer, Civic Leader, and Great American

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 20, 1959

Mr. ENGLE. Mr. President, the truly great citizens of our country are distinguished by one common characteristic: they are primarily interested in people rather than just things. California lost a great citizen last week. He was Stephen W. Downey, a prominent civic leader and lawyer of Sacramento for almost 50 years. He died on January 12. Mr. Downey had a big mind and a warm

heart; he was a friend of the people. Never a holder of high public office or a seeker of political favor, he faithfully served the people by being a great citizen in his profession and in his community life.

As the accompanying press items report, Mr. Downey gained statewide, in fact national, recognition in the field of water law. He was always on the side of the people. He represented local water districts, power districts, and public utility districts. He understood California's complex water problems and he helped solve many of them, especially in the long years of legal work and legislative effort which gave rise to the authorization of the Central Valley project in 1935, and the establishment of the Sacramento Municipal Utility District in 1948.

I ask unanimous consent to have printed in the Appendix of the RECORD a news item from the Sacramento Bee of January 13, 1959, and an editorial from the Sacramento Bee of January 14, 1959.

There being no objection, the news article and editorial were ordered to be printed in the RECORD, as follows:

[From the Sacramento (Calif.) Bee, Jan. 13, 1959]

Stephen W. Downey for nearly half a century one of Sacramento's leading citizens, died in the Sutter Hospital last night. He was 72 years of age. Downey was a nationally recognized authority on water law and the senior partner in the law firm of Downey, Brand, Seymour, and Rohwer. He was active in many of the community's most ambitious endeavors and had gained the respect of two generations as an expert attorney and a guiding light in development of Sacramento and California.

After a year of illness begun by a stroke, he entered the hospital Sunday.

Funeral services will be conducted at 11:30 a.m., Thursday, in Trinity Episcopal Cathedral. Burial will be private. The family requests remembrances be sent to the Golden Empire Council of the Boy Scouts of America or to the Red Cross.

PUBLIC POWER SUPPORTER

He specialized in representing agencies engaged in the construction of public projects and long had been an advocate and friend of public power development.

Both the city of Sacramento and county of Sacramento called upon him in recent years as the key consultant in water and pollution problems involving the waterways of metropolitan Sacramento.

He spent much of his life as an attorney for the State reclamation board and was the chief water counsel for the Sacramento Municipal Utility District.

Legislative committees and scores of State and regional administrative agencies sought his expert testimony on the water problems of the State.

WORKED FOR FOLSOM DAM

He was selected to head the committee for the dedication of Folsom Dam in May 1956, a project which he long supported and helped to bring about.

He represented water districts, flood control districts, power districts, irrigation and reclamation districts, and similar agencies in the Sacramento and San Joaquin Valleys.

He also represented SMUD in the legal condemnation of the electrical distribution system of the Pacific Gas & Electric Co.

In recent years he was engaged in attempting to work out a settlement of water rights on the Sacramento River and the completion of the Sacramento-Yolo Port District project.

He appeared before many high courts on numerous occasions with major issues regarding irrigation and reclamation districts, including the Supreme Court of the United States.

BACKER OF CIVIC PROJECTS

In spite of being deeply and continuously engaged in complicated water-law problems of great moment, Downey gave generously of his time in furthering worthwhile civic endeavors.

He headed a community factfinding committee on hospitals in Sacramento. The committee's report led directly to the successful fund campaign to enlarge the Mercy Hospital.

The Boy Scout movement was one of his abiding interests. For many years he was president of the Golden Empire Council of the Scouts which serves metropolitan Sacramento and surrounding counties. He was honored with the Silver Beaver Award for distinguished service to boyhood.

Downey was named to head the Community Chest in 1933 and during World War II he was president of the United Service Organizations in Sacramento.

From 1947 to 1950 he was a member of the Sacramento County Probation Committee. In 1953 he became a member of the California Museum Association and was named chief of the trustees in charge of special bequests of the Golden Empire Council.

ACTIVE IN POLITICS

Although he never held public office, he was active in Democratic politics in Sacramento and the Nation. He was the brother of former U.S. Senator Sheridan Downey and was active in his brother's campaigns.

He often endorsed candidates for public office.

NATIVE OF WYOMING

He was born of frontier parents in Laramie, Wyo., on June 14, 1886. His father commanded a Union regiment in the Civil War and went to Wyoming shortly after the end of the conflict. His mother, whose emigrant train to Idaho was attacked by Indians, later went to Wyoming where she met the senior Downey.

Downey was graduated from the law school of the University of Michigan. He came to Sacramento in 1909 and opened a law office with the late J. F. Pullen, who later became the presiding justice of the district court of appeal.

Downey served with the 35th, 91st, and 40th Infantry Divisions during World War I and went to France in the summer of 1918 as a first lieutenant.

WIFE SURVIVES

After he left the service in 1919 he met and married Persis McIntire who survives him.

Downey was a member of the Sutter Club and for many years was an active member of the Sacramento Rotary Club. He was made an honorary member of the latter organization 6 months ago. He also was a member of the American Legion, an affiliation dating from the end of his World War I service.

Downey's other survivors include his children, John F., a partner in his father's law firm; Stephen, Jr., an Army colonel now stationed in Paris, France, with the Supreme Headquarters, Allied Powers in Europe; Mrs. Henry Teichert of Sacramento; Mrs. F. J. Boutin of Woodland, Yolo County; and sisters, Mrs. Willie Fitch of Dallas, Tex.; Mrs. Dorothy Spicer of Berkeley, and Mrs. Alice Nelson of Alexandria, Va.

He also leaves 20 grandchildren. The family home is at 1300 41st Street.

[From the Sacramento (Calif.) Bee, Jan. 14, 1959]

Sacramento has lost one of its most distinguished and useful citizens in the death of Stephen W. Downey.

A leading member of the city bar for many years, he long ago became known as a foremost authority on State water law and its many practical applications.

As such he gave invaluable personal service to many public and quasi-public agencies such as irrigation districts, the State reclamation board, the Sacramento Public Utilities District, and the city of Sacramento.

He was as well a lifetime supporter of public-power development.

Yet, busy as he was in his own profession, Stephen Downey found time to give of his talents to many other worthwhile activities. His lifetime interest in training youth in the way it should go was expressed in long and active association with the Boy Scout movement.

He was a devoted man and won enduring respect from all with whom he came in contact because of a personal integrity which was reflected in everything he said or did.

He exemplified in his life those characteristics associated with the highest type of citizenship.

Who can measure in mere words the good such a man achieves in service to his generation?

Happily the good lives on after he is gone and what Stephen W. Downey did will go on and on to make his community and his State better and happier places in which to live as long as there are a Sacramento and a California.

Address by Hon. George D. Aiken, of Vermont, at Plant-To-Prosper Meeting, Memphis, Tenn., December 18, 1958

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Tuesday, January 20, 1959

Mr. EASTLAND. Mr. President, on December 18, 1958, the distinguished Senator from Vermont [Mr. AIKEN] delivered a most interesting address at the plant-to-prosper meeting in Memphis, Tenn. It contains a concise history of farm problems and legislative action over the past two decades.

In order that Senators may have an opportunity to read the address and benefit from the experienced analysis of this great agricultural statesman concerning the many farm problems discussed, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It was 18 years ago next month that I went to Washington as a Senator from my State.

Having lived on a farm all my life up to that time, it seemed to me a bit of remarkably good luck that I was assigned to membership on the Committee on Agriculture and Forestry.

The farm I had lived on comprised some 50 acres of woodland, pasture, and cropland.

Today it would probably be called a subsistence farm.

It kept about five cows and produced some fruit and vegetables as cash crops.

We never raised any wheat or cotton or peanuts or rice.

There was usually an acres or so of corn and a half acre of cigar-leaf tobacco.

The half acre of tobacco got all the fertilizer and the buyers who came around every

fall got all the tobacco at their own price—8 cents, 9 cents, 10 cents, or whatever they were willing to pay for it.

My efforts to raise peanuts and cotton ended in frustration.

The peanut shells didn't have any peanuts inside and the cotton proved to be ornamental only as it never got past the blossoming stage.

So, you see how well prepared I was to take my place on the Agriculture Committee headed by Cotton Ed Smith and which included veterans like Bankhead, of Alabama; Reed, of Kansas; Thomas, of Oklahoma; McNary, of Oregon; and Ellender, of Louisiana.

I started to learn something about agricultural politics almost the first month, being named to a subcommittee headed by Senator John Bankhead to hold hearings on the cotton-storage program.

Of course, I knew that a good share of our cotton farmers were producing about 200 pounds to the acre and sometimes more, and that it was un-Christianlike to expect them to sell that cotton for less than 10 cents a pound.

I had never given much thought to the storage program, however.

I didn't realize that ginning and compressing and storing was quite a good-sized business by itself.

At the very outset of the hearings, I learned that cotton storage wasn't just a simple economic system of carrying cotton over from 1 year to another.

I learned right away that there were big storage fellows at the ports and little storage fellows inland—at least that's what the witnesses said—and that there was some competition between the two.

It took me a little longer to find out that some of the big fellows also had a slight financial interest in the operation of the little fellow's facilities.

However, in real orthodox fashion the subcommittee set out to protect the little fellows.

Senator Bankhead was one of the most astute and lovable southern statesmen I ever knew. That means he was one of the astutest that there was anywhere.

It may have been his intuition and it may have been just his desire to see what the Yankee farmer from Vermont would do under certain circumstances that prompted him to leave me in charge of the hearing one afternoon.

No other member of the subcommittee was present.

I sat at the head of the table—little warehousemen sat on my left—big warehousemen sat on my right.

I felt pretty good at this display of confidence in me on the part of Senator Bankhead.

The hearing got underway and warmed up as it proceeded.

Pretty soon the sparks began to fly, my doubts began to rise and the practical results of that particular hearing was zero, except that I had had my first lesson in cotton diplomacy.

Since that first hearing in the winter of 1941, I have been on hearings relating to every conceivable agricultural program here and abroad.

I have heard expounded every possible theory which its author though would promote a more prosperous agriculture for the United States—or at least provide some specific advantage for the group which he happened to represent.

I have seen candidates for public office rise and fall on the issue of national farm policies.

Farm issues have permeated every election campaign and occupied much of the time of the Congress.

Farm organizations and commodity groups have clashed with one another and frequently factions within the same commodity group have opposed each other bitterly.

The only time I have known all major farm organizations and both major political parties to work together for a single farm program was during the years 1947 and 1948.

About 6 o'clock in the morning of June 20, 1948, the Congress presented the country with a new farm program backed by President Truman and the Republican Congress and by every major farm organization.

The two main features of this program were flexible price supports running from 72 to 90 percent of parity and a new parity formula which was so constructed so that it was expected to work properly forever after.

What happened?

The flexible price supports were promptly suspended and until very recently only operated during the years 1951 and 1952, when the Korean war made price supports inoperative anyway.

The new parity formula was so completely outmoded within a few years that it became worthless as a yardstick for measuring the parity price of many commodities.

Possibly cotton is the commodity to which the new parity formula is most applicable today.

We have had some good years since 1941; we have had some lean years—but, as for developing a national farm program which will serve us successfully for an indefinite number of years ahead, we are just about as far from success as we were 18 years ago.

Of two things we may be sure:

First, that any farm program which we may devise today will not necessarily be applicable to conditions which prevail tomorrow; and, second, politics will never supplant economics as a means of promoting farm prosperity on a long-range basis.

In this year of 1958, in spite of acreage restrictions, soil-bank incentives, production controls and other devices, American agriculture is setting an alltime record for production.

Temporary surpluses of certain commodities have become greater surpluses and apparently less temporary.

Technology and biology have thwarted every effort of the Congress to control production by law.

There are basic economic laws which do not lend themselves to political maneuvering.

Personally, it makes me feel good to think that the United States is the most productive agricultural country in the world and that our troubles are caused by surpluses rather than shortages.

The other day I read a prediction that the population of the United States would increase 100 million in the next 20 years.

While this may be disputed, we do know that at the present rate of increase we will be called upon to feed and clothe this increased number in not over 30 years.

This is the reason that while we stumble over the problem of surpluses, we are also planning to not only bring more land into cultivation but also to greatly increase the productiveness of acres and animals.

Sometimes I wonder if we really have surpluses today.

Or are we, through sheer obstinacy in refusing to see the facts of life accumulating, in the name of surpluses, food and fiber which ought to be flowing freely in the markets of the world?

The United States produces exportable quantities of cotton, wheat, tobacco, and vegetable oils.

The rest of the world needs these commodities, but because we have for years refused to look at the situation realistically we have seen the tobacco capital of the world move to Africa, competitive cotton production develop in a dozen countries, and the production of wheat subsidized by people of other lands who ought to be looking to us for their requirements.

The year 1958 marks a milestone in the course of agricultural legislation.

I am not referring to the corn, rice, and cotton legislation enacted by the 85th Congress.

I refer to the fact that in 1958 we took off the blinders and recognized our farm problems for what they are.

The fact that we have surplus problems is a tribute to the American farmer.

The fact that for over 20 years we thought we could solve those problems through political action alone is no tribute to anyone.

Our political thinking simply has been unable to keep up with the technological and biological progress in the field of agriculture.

In a sense, the work of the 85th Congress was as constructive as that of any session since I have been in Washington.

It may be that the legislation we enacted will not be any panacea so far as the producer of cotton and other crops is concerned.

We did have the honesty to recognize the fact that some of the remedies we had advocated in the past had not effected cures.

We did acknowledge that medicine which might be effective in time of emergency was not always effective in maintaining the health of the patient after the emergency was past.

The 85th Congress did have the courage to break away from the orthodox political position that only high guaranteed prices and greatly restricted production can cure the ills of agriculture.

Imbued with this new found courage, the Congress enacted legislation which, with the approval of the producers, removes the restriction on corn production and will permit greater production of cotton and rice at a lower guaranteed price.

Right here, I want to pay tribute to the cotton producers and the cotton industry for taking the lead in this epic departure from a practice of 20 years' standing.

I want to pay tribute to the Memphis Commercial-Appeal and its ace farm reporter, Jerry Dearing—not only for an outstanding job of farm news coverage, but also for the fact that Jerry works constantly to improve the farming industry of the South and is frequently called upon by Members of Congress for information.

Heaven knows what a Member of Congress, with an experience with cotton as limited as mine or even a member with the experience of my chairman, Senator ELLENDER, would do if we could not call upon the Rhea Blakes, the Jerry Dearings, and other leaders of the cotton industry from California to the Atlantic coast for help and information.

Heaven knows too what we would do without the fighting leadership of men like JIM EASTLAND when it comes to cotton legislation.

No one can possibly know how many times these men have been called upon for help by Members of Congress who would otherwise be left largely in the dark in working on such legislation.

For the full 18 years I have been on the Agriculture Committee, my relationship with the southern members and the southern chairmen has been a satisfying experience.

Let me say here that much of the success in getting new legislation through the Congress last summer was due to the perseverance and the courage of Chairman ALLEN ELLENDER.

You know, we did have difficulties here and there even up to the day the conference report was finally accepted, but as members of the Senate conference committee, Senators ELLENDER and EASTLAND never wavered in the position which you folks for the most part sponsored. I stuck along with them believing their position to be sound.

As to the legislation itself, I think it is going to be beneficial.

It ought to make it possible to restore cotton to its time-honored position as an export crop, to put our domestic mills in a more favorable competitive position with the foreign industry and to ease the pressure on other farm commodities by reducing the competition which they would otherwise incur from unused cotton acreage.

I don't guarantee that the new legislation which takes effect next year will do all that we hope for it.

I do guarantee this—if, after a reasonable trial, it appears that the legislation is not in the best interest of agriculture and the national economy, I will be glad to cooperate in improving it.

There are some impatient souls who probably can't wait to find out whether this new legislation will work or not and we may expect the usual number of panacea proposals in the next Congress.

One proposal which seems to be enjoying a resurrection is the proposal for production payments on all leading farm commodities, the theory being that if production payments work for sugar and wool why aren't they good for every other farm commodity, too?

The supporters of this proposal fail to take into account the fact that in the interest of national security we are trying to increase the production of wool in this country and that we are not self-sufficient in the production of sugar.

It would be quite a different matter to apply the rule of payments to surplus commodities.

The theory is, of course, that every farmer would produce his crop, sell it for what he could get and receive a check from the Government to make up the difference between the selling price and 100 percent of parity.

This plan was formally promoted 9 years ago by the then Secretary of Agriculture, although I understand that it was originated years before that in the minds of a group of agricultural economists.

I was strongly opposed to the Brannan plan in 1949, not because of the payments themselves but because the producer in order to receive such payments would be required to operate his farm and each acre of it in a manner approved by the Secretary of Agriculture.

The present restrictions on the planting on cotton, rice, tobacco, and other basic crops are comparatively mild in comparison to the controls which would have to be exercised over the producer under the so-called Brannan plan.

The cost of an agricultural program which even now is creating widespread resentment would be multiplied several times over under the reincarnated payments program.

My allusion to the resentment against the cost of farm programs does not refer to an imaginary situation.

The public looks at the total amount of the agricultural appropriations legislation.

They say, "Oh, the greedy farmer is getting $6 billion or $7 billion a year out of us poor taxpayers."

They don't take into consideration and probably don't know about the two or more billion dollars a year that are charged to the farmer that is spent for the benefit of the nonfarm population.

They don't know that the loans of the REA, Farmers' Home Administration, and others are returned to the U.S. Treasury.

But, regardless of the motivation for the resentment, we must not ignore the fact that the political influence of the farmer is not what it used to be.

The urban Members of Congress, particularly in the House, have been increasing their strength and can now vote down the farmer Members whenever they wish to.

They have demonstrated this several times in recent years.

Far be it from me to say that the public resentment against farm programs is entirely unjustified.

We have worked ourselves into some ludicrous situations.

Take the case of wheat, for example.

Congress has stated that the minimum planting of wheat should be 55 million acres.

Yet, because millions of acres that used to produce 15 bushels to the acre are now producing 35 bushels to the acre, we have accumulated a surplus that is literally running out our ears.

Cotton land has been put into wheat. Hay land has been put into wheat. New land has been put into wheat.

The high-grade wheat-producing States have seen their production shift to low-grade wheat-producing areas, while the surplus owned by the Government has climbed to mountainous proportions.

It may be said that the tobacco grower is also finding himself being edged into a difficult situation.

I have been waiting for the producers themselves to come up with workable solutions to their problems.

They know the fix they are in and I hope they know how to get out of it.

Personally, I would not try to impose any specific plan on these commodity producers but would first await practical proposals from them.

I could not support proposals which would only result in making a bad situation worse.

Representatives of the cotton industry and the rice industry and the corn producers came before the Congress last summer with proposals of their own which were adopted.

There were only 11 votes in the Senate against their proposals.

If the wheat producers come before Congress with workable proposals to improve their position, I am sure they will get very sympathetic consideration, but any commodity group which proposes to improve its own position at the expense of others would probably not get very far.

Last summer, I worked very closely with Senator ELLENDER and other Senators of both parties on farm legislation.

I know we are going to work together during the coming session.

Farm legislation should not be partisan legislation and, so far as I am concerned, it will not be.

There is one particular aspect of the present agricultural revolution that concerns me very much.

That is the plight in which the small farmer finds himself.

You notice I don't say family farmer.

When farm work was done mostly by hand or mule power, the family farmer was indeed a small farmer.

That is not true any longer.

Many farm families are now producing a hundred thousand dollars a year or more of commodities without outside help except of a seasonal nature.

But, as the agricultural evolution has gone on, as developments have progressed in the field of technology and biology, large numbers of farmers on small farms find themselves in a position of being unable to make even a modest living for their families.

Even if supported at 200 percent of parity they still could not make a decent living according to present standards.

The Federal Government has taken recognition of this fact and, through the rural development program, has been undertaking to find ways to deal with the situation.

It is obvious that we cannot gear price support programs to the needs of the most uneconomic producer.

If we did this, we would impose a terrific penalty either on the taxpayer or on the consumers of the country, without adequately improving the position of the small farmer.

To produce food and fiber at excessive costs and hold it for excessive prices destroys both domestic and foreign markets and, hereby, reacts directly against the people it is planned to benefit.

By all means, we should continue and step up our research programs aimed at increasing production per acre, lowering costs, improving methods of handling, processing, and utilization and the development of new uses for farm commodities especially for those which are chronically in surplus.

I would also favor increasing our efforts to solve the problem of the uneconomic farmer, encouraging the production of specialty crops, shifting to crops which do not require extensive capital outlay, improving the available land on the small farm, increasing the number of productive acres where possible, and developing part time off the farm employment.

I know we can make progress in this direction, because I happen to live in a county where this transition has already taken place.

My own neighbors are living better than they used to and the value of the taxable property has greatly increased.

To make the rural development program successful and to enable people who love the land to continue to live on the land and to adequately support their families, we have to look beyond the matter of crop production alone.

Better rural highways, continuation of rural electrification programs without increased costs, better education and health facilities, and all these things which go to make a better living have to be part of the rural development program.

We have to do those things which will make industries want to come into our communities and provide work for our people.

The more people we can keep on the land, owning a bit of the soil and taking pride in that ownership, the more secure our Nation and our democratic form of government will be.

Finally, let me say that one reason I am here in Memphis today taking part in this great plant-to-prosper conference is because you folks of the Southern States reconciled your varying viewpoints on cotton legislation until you had something to come to Congress with.

I know you will give united support to other programs such as the rural development program.

It was a satisfaction to work with you on the constructive proposals you made last summer, and so long as I am a Member of the U.S. Senate you will continue to have my cooperation.

Address by Jose A. Benitez at the Democratic Victory Dinner at San Juan, P.R.

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 20, 1959

Mr. KENNEDY. Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD a speech which was made at a Democratic dinner in San Juan, P.R., by Mr. Jose A. Benitez, who is the chairman of the Democratic Party of Puerto Rico. On December 15, I had the privilege of speaking before the

victory dinner of Puerto Rico's vigorous Democratic Party. Mr. Benitez, who is one of Puerto Rico's outstanding young leaders, is the author of "Puerto Rico and the Political Destiny of America," and his speech conveys the talent and imagination which characterize public affairs in the Commonwealth of Puerto Rico.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY JOSE A. BENITEZ, CHAIRMAN, DEMOCRATIC PARTY OF PUERTO RICO, AT THE GREAT DEMOCRATIC VICTORY DINNER HONORING SENATOR JOHN KENNEDY, DECEMBER 15, 1958, AT THE SAN JUAN INTERCONTINENTAL HOTEL, SAN JUAN, P.R.

Mrs. Kennedy, Senator KENNEDY, and distinguished guests, thanks to all of you present and all of you listening on the radio, for the great cooperation to the Democratic Party and to me in the organizing of this great Democratic victory dinner. We are Democrats; the Puerto Ricans are born Democrats, because we unquestionably believe in the principle of our great organization, the party of the people, for the people, and by the people.

Senator KENNEDY, Puerto Rico welcomes you. You represent our ideals of a democratic way of life to which we as a community are devoted. Puerto Rico stands out in the world as one of the most progressive places. We do not know of racial discrimination, of religious intolerance, or of social and economic oligarchy (óligarqui). Our people recognize that this progress has been achieved to a large extent to the clear understanding of our philosophy by the leaders of our great Nation, like Franklin Delano Roosevelt, Harry Truman, and those in the U.S. Senate like Senator KENNEDY, who always have given us their effective support to the solution of our political, social, and economic problems.

The leadership of our Governor, Luis Muñoz Marín, has guided our people through the path of unprecedented achievements which have brought noticeable welfare and happiness to Puerto Rico, and prestige and respect to our great Nation throughout the world.

We have achieved only part of our goals. We are a young and struggling society ready to go beyond our geographical limits imposed by the great oceans, to work on behalf of effective democracy in our hemisphere. For example, we are not completely satisfied, because we do not have the internal threat of communism in Puerto Rico. We will be satisfied when we can say that the Communist threat is completely wiped out in all Latin America. The young and strong faces you have seen in Puerto Rico, and you see here tonight, is the best example of the decision of our new generations to actively participate in all phases of our democratic life. We do not want to lose time going back on what we have accomplished. This is past. We are anxious to devote our energies and intelligence to the job we have ahead.

In view of the forbidding political situation overshadowing the shrinking world in which we live, it is to be hoped that the great international leaders of the free world will come to recognize the necessity of strengthening and securing the life of their people, uniting them in commonwealths of maximum potentialities. The differences between nations having great territories and large populations together with powerful economic resources, and the nations possessed of small territory, small population, and scanty resources can be adjusted only by the unification of peoples with the same ideals, interests, and common ambitions, unification directed toward the end of becoming greater through such understanding.

In a world such as ours, full of driving and competitive tendencies, with some nations engaged in the barbaric domination that enslaves weaker ones, our chief problem is no other than that of assuring our survival by making ourselves the fittest, through mutual defense and cooperation with the other nations in our hemisphere.

From the early days of tribal life to the present, humanity has moved always toward greater community concentrations. This beneficial tendency has proceeded, however, at a slow pace, a gait that has dragged heavily on the potential advancement of civilization.

It is a shameful fact, and the fault of world leaders, that scientific progress has had its greatest and most rapid advancement in the forced culture of wartime. But such is a fact. Nations that could develop with more splendor and nobility in time of peace, have been very busy consuming the acid fruits of their selfishness, giving little consideration to the magnificent possibilities for their own enlargement through the fraternal growth of humanity.

The evolution toward a unique government of the human race—which is inevitable in the centuries to come—would have no civilized virtue if it were to come into being through the domination of men by man. However, the present leader in the movement toward the gathering of peoples is a piratical colossus. He is indeed swiftly forming mighty conglomerates, both in population and in geographical expanse. And that being the case, prudence dictates that we face the inevitable conclusions and not delay a moment the labor that must be committed for our progress toward the conquest and the fulfillment of our future.

Our hemisphere cannot ignore the realities of life at the crossroads where its nations stand today. The countries of the two Americas should earnestly and deeply meditate the historical implications of the moment in which they are immersed; their weakness in their present isolation in the stormy international currents; the greatness which they could achieve in a hemispheric bloc, and the energy which could be generated in social, economic, scientific, and cultural interchanges among the American nations. In a word, it is necessary to rationalize and to see the mission which a united America, pioneering and unselfish, could accomplish for the peaceful and fruitful organization of the genuinely civilized world of the future.

The incalculable natural wealth that the enormous territory of the American continents holds—still largely neglected, or unsuspected, in the soil—once developed to capacity could supply all the needs of the world.

The American nations occupy a comparatively virgin land. They are not subject to the grievous pressures for existence that bear upon communities of the Old World, where feelings of discouragement, despair and desperation have driven the people often to the road of war as a means of escape.

Our hemisphere must turn its eyes to its fitting and unexplored greatness, developing and directing it, and offering its fruits generously to the nations that now fight for a place under the sun. The contribution of America thus offered loyally for human fellowship could and should reestablish the equilibrium of those tormented nations whose constriction has induced them to make war and thus to retard the advancement of civilization.

The Americas could and should provide the rest of humanity the additional resources needed for its happiness, abandoning all reserve and hostility. Because of its youth, our hemisphere has all the conditions, qualities, riches, and strength needed for the task of fraternally reconstructing the world to a degree which up to now has been spoken of only in a theoretical way. Its healthy youth, its unselfish and graceful spirit, place the Americas in the privileged historic position to be the human bloc that will find ways of removing disputes and problems of the world through brotherly devices, doing away with the dark barbarity of violence.

The United States evidently is the most highly developed and efficient power in the American sphere. Its strength not only could establish its leadership from Alaska to Patagonia but also could extend it to the most distant corners of the world. As the chief defense against the antagonistic attitude shown by Russia to the nations of the Occident, dominated as Russia is by an imperialistic greed for expansion and world control, the United States is under an obligation to protect the right of liberty and the useful life, and to continue in this role, maintaining through various alliances the means to safeguard conservative and altruistic ideals. These alliances must be effected even with nations which are in many respects quite different in their character and interests, to the end that there will be a universal human fraternity and the development of a common civilization which will endure forever. But she should give first thought to the protection, security, and survival of the occidental nations that have a mutual area of interests. In this time of continuous threats to world freedom, the United States has no alternative; it must put all its resources at the service of the defense of all friendly nations whose fortunes are tied to its own security.

Her responsibility and concern regarding affairs more distant certainly does not mean that the United States should not give first attention to the historic mission close at hand, that of establishing a fraternal union with the Latin American nations of the hemisphere. It is to be hoped that the leaders of our great republic to the north will consider giving urgent precedence to work for an understanding with their nation's neighbors in Latin America, so as to begin the germination of hemispheric unity as a starting point toward the greater, worldwide work which destiny seems to have reserved for our hemisphere.

On the other side, I feel sure that the leaders of the Latin American countries will do no less in the vital appointments than they have with history.

All the leaders must stubbornly strive to give creative objectivity to the mission which is theirs to fulfill in their respective communities, to build the new world that is to come. The United States and Latin America could provide preponderantly the techniques and resources and, above all, the virtues of brotherly unselfishness which would be required for the achievement of the great task.

It is unnecessary, perhaps, to point out that the peoples of all the Americas are equally obligated not to shrink from the massive demands of the glorious gesture that the desperate, cornered state of humanity calls for.

The task is there. It is for its missionaries to carry it through to victory.

In the course of the historic mission that the American nations could jointly fulfill to obtain the world fellowship that I am advocating here, an immediate benefit to all the nations of the hemisphere would be a rapport established with each other, erasing the frictions and prejudices that grew up in the creation of the intercontinental society. In a great measure, these prejudices and frictions are ghosts of doubts and suspicions begotten by the distrust and lack of communication which has predisposed the various races. In a lesser way—also ghosts, because they belong to errors of the past—the prejudices of Latin America are the result of the intervention by the United States on Latin American soil, prior to the time when President Franklin D. Roosevelt established a policy of hemispheric friendship.

As the two continents were drawn to each other in a cordial and loyal approach, they would remove frontiers that today separate North, Central, and South America, not geographically and politically, but with regard to interests and abstractions that are equally formidable.

Such an approach, based on fraternity and cooperation, would relieve the United States of an outside search for that which she needs to prosper and to enlarge herself and would similarly put within each reach of Latin America all the productive resources that are lacking within its geographical limits. The two would contribute their respective potentialities—those already developed and the much more copious ones which are yet undeveloped—so that in a few years the resulting social, economic, scientific and cultural advancement would be enormous.

Puerto Rico is by origin Latin American. It entered into political relations with the United States in 1898. The island suffered from the same problems of misunderstanding and remoteness that exist today between the United States and other Latin American communities. Puerto Ricans faced incomprehension and indifference. There could be no success for us that was not based on the greatness of both the people of the mainland and the people of Puerto Rico. As soon as we began to draw together, all incomprehensions and prejudices fell apart, and our association, fortified today by the bond of citizenship, growth in the rich interchange on which our development is based.

If our Puerto Rican leaders succeeded in helping accomplish this American union, why could not the leaders who today orient the policies of other Latin American communities broaden and advance such diplomatic gains?

Communist Russia knows that its cunning expansionism cannot undermine, even in a clandestine way, the compact and powerful unity of the North American people. That is why it is maneuvering desperately to infiltrate its germs of anarchism, weakness, and demoralization in the vital organs of the Latin American countries, through seemingly advantageous economic offers that doubtless could endanger the stability and free determination of those communities. Can we be so deceived as to yield to an economic infiltration over which hovers the steel expansionism and the grasping domination that have enslaved so many satellites in Russia's barbarous orbit?

Nothing that Latin America and the United States could wish for to improve their respective communities needs to be searched for in the Old World. They have everything needful in their own territory, or if anything is lacking temporarily it can be found by exploration of hemispheric resources. The continents—under the infinite guidance of God—must hope that the leaders of the several nations may have the vision of their enormous destiny.

The North and the South must end their disagreement and each one get rid of the limitations that hinder this settlement. And instead of addressing each other in stilted diplomatic language they should start to speak the vernacular of the family.

The hemisphere may hope that the United States and Latin America will gracefully accompliah the part which is required of each one. The destiny of both is the political destiny of all America.

God will order affairs so that the lesson of Puerto Rico will guide the achievement of the task that the American nations can fulfill for the progress of human relations.

Puerto Rico broke down the barriers of misunderstanding with the United States, and has thus developed, under the cordial influence of the resulting rapprochement, its multiple and vigorous potentialities.

This privileged position enables the Puerto Rican people, intellectually, politically, and psychologically, to serve as a responsible spokesman to the United States concerning the values which the Latin American people could contribute on behalf of the general good of this great hemisphere of ours.

The world more and more is tending to lose its nationalistic barriers. It will be ripe, in the course of time, to accept the idea of a single governmental organization administered on the concept that there is only one humanity. The leaders of the great geographic communities—as the Europeans, the Asiatics, and the Arabians have begun to do—are under the obligation of grouping and strengthening their energies, to spread the greatness that dissolves selfishness, shares potentialities, ennobles life, and perfect civilization.

Puerto Rico wishes to sow its humble portion of seed in a furrow of the planting of brotherhood that will bring forth the mighty unified America that is on its way.

Senator KENNEDY. The new generations of Latin America and right here in Puerto Rico are eagerly looking forward to a new and effective foreign policy by the United States of America, based on the philosophy that we are more than good neighbors; that in our world of today we are fraternal brothers. These new generations are anxiously waiting for men like you to implement with the help of Almighty God an effective "good brother policy."

Legislation Relating to Professional Baseball

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 20, 1959

Mr. DIRKSEN. Mr. President, on behalf of the distinguished Senator from North Dakota [Mr. LANGER], I ask unanimous consent to have printed in the Appendix of the RECORD the texts of several radio broadcasts by Sportscaster Bill Stern, relating to the possibility of need for legislation in connection with professional baseball.

There being no objection, the texts were ordered to be printed in the RECORD, as follows:

BROADCASTS BY SPORTSCASTER BILL STERN

The Los Angeles Dodgers moved all the way across the country to gain 159 customers. Incredible? Maybe, but all that Walter O'Malley has gained by moving the Dodgers from Brooklyn to Los Angeles is a mere 159 additional customers. How do I figure? Listen.

To date, with 2 remaining home games, the Dodgers have drawn 1,807,000 persons to their at-home games in Los Angeles. Back in 1947 in Brooklyn the Dodgers drew that seaon for their at-home games exactly the same amount, 1,807,000 persons. And they did it in the vastly smaller Ebbetts Field in Brooklyn. In fact one of the reasons O'Malley moved west was because he thought the seating capacity of old Ebbetts Field was too small. He said that if he could move to Los Angeles and play in the huge Coliseum he would almost double his attendance. And well he might have thought so, for his old home, Ebbetts Field, seated only about 34,000 as against the Coliseum's seating capacity for baseball of 82,000. Some difference. But in actual figures so far this year, with 2 home games remaining, he has drawn 1,807,785 against the 1947 home attendance in Ebbetts Field of 1,807,526. A difference between Brooklyn and Los Angeles of exactly 159 persons.

Is this why Walter O'Malley deserted Brooklyn and moved to California. To pick up 159 persons? Is this why he fooled the public by saying one thing and doing another? Did he make himself the most disliked man in baseball for a mere handful of people?

Some will say that I shouldn't compare this year's Los Angeles figures with the 1947 Brooklyn figures. To them I say that they shouldn't use this year's Los Angeles figures, next year won't be as good, the bloom is off, the honeymoon is over. Let's see what he draws next year and compare that with last year's Brooklyn figures.

Nor can O'Malley blame it on the people of Los Angeles. Los Angeles is a wonderful sports town. Just this morning the Los Angeles Rams announced that season tickets to their games in the same Coliseum are sold out from goal line to goal line. Just think of that, every single ticket sold. In fact tickets are so hard to get for the Ram games this fall that a divorce case recently featured a battle over their season ticket. And a recent death on the Los Angeles Freeway brought calls to the Rams office requesting the driver's tickets.

Yes, sir; every single season ticket is sold in the Coliseum for the Los Angeles Rams home games. Yet Walter O'Malley's Dodgers in the same stadium have drawn, with 2 home games remaining, exactly 159 more persons than they did in little Ebbetts Field back in Brooklyn in 1947.

I wonder if O'Malley thinks it was worth moving to California for this 159 people?

WHY SHOULD BASEBALL BE AN EXCEPTION?

Yesterday in Washington there was new legislation introduced by Representatives KEATING, Republican, New York; MILLER, Republican, New York; WALTER, Democrat, Pennsylvania; and HARRIS, a Democrat of Arkansas. This new bill if passed would grant to the sport of baseball several important concessions. First of all, the so-called reserve clause in all baseball contracts would be free from any antitrust action by the Government. Secondly, the major leagues would have the right to police themselves as to how many telecasts they would allow on a national basis. Also excluded from antitrust action would be such baseball practices as, player trades, drafts, and territorial rights.

These are some exceptions. What this means in everyday language is that if this bill becomes law, that the major leagues may decide for themselves how many telecasts they will send into minor league territory, how they will draft their players, restricting a boy who signs with one club from ever selling his services to another team if they will pay him more money. It would also do something that baseball has been trying to do for years, namely, keep that reserve clause, the clause that many think is illegal, from ever being tried in a court of law.

For the life of me, I can't see the justification for such new legislation. Do other businesses get breaks like this from the Government? They sure don't. Can you imagine the average business asking the Government to say its employees could not work for anyone else? Or that if it signed an employee that employee had nothing to say about his wages. He could either accept or quit, and if he quit he couldn't work for anyone else. And why should the major leagues be permitted to make their own rules as to telecasts? They have already shown, according to the minors, that they don't care

how many minor leagues they destroy. So why let them police themselves when they have already shown tha they won't do it?

Big baseball is claiming that unless they get these concessions that they can't stay in business. First of all, I don't believe it. But even if it were true, can you imagine how far you'd get if you went to Washington and said: "I want a whole series of new laws passed favoring my particular business. It's too bad if it isn't fair to others."

Other sports aren't asking for these special laws, so why baseball? And even more to the point. Why should we have special laws for a sport when some of these proposed new laws plainly circumvent the ordinary democratic process of law.

The thing I can't get through my head is why baseball deserves special consideration. I thought we lived under one set of laws in this country that applied to everybody.

A SENATE SUBCOMMITTEE LOOKS AT BASEBALL

A Senate subcommittee in Washington has been conducting an investigation to see whether a bill, already passed by the House, should be passed by the Senate. This bill if passed would exempt baseball from Government regulation over player contracts, the highly controversial reserve clause, unlimited radio and TV broadcasts. In short this bill if passed would give baseball advantages that other businesses do not have. Naturally baseball is all for the passage of such a bill. The top brass, the owners, the commissioner, and some players have come out for it. On the surface it seems that baseball is all for this bill, but is it?

So far the subcommittee has only called those who favor it. Men such as Casey Stengel, Mickey Mantle, Eddie Yost, Stan Musial, and Robin Roberts. These men draw huge salaries and are paid by the very owners who are trying to push this bill through. Naturally these players and Stengel are going to testify for what the owners want. Don't the owners pay them, and pay them well? What's the old saying about "never biting the hand that feeds you"?

But isn't it significant that the only two ball players called to testify who are already out of baseball, namely Jackie Robinson, and Bob Feller are not so sure to testify in favor of the bill. These two are not in the pay any longer of the owners. They can both say what they really think, not what they are told they should think. They are both due to testify next week. I'll predict that neither will be for the bill.

It's all to the subcommittee's credit that they have not been stampeded by the rich men who control the game and are willing to hear the other side. But I have a suggestion to make. Not that I expect it to be accepted by the Senators, but I'm going to make it anyway, and here it is:

It would seem to me that if I were trying to find out as to whether this proposed bill should be passed to help the big brass in baseball, I would not call the Mickey Mantles, the Robin Roberts, the Stan Musials, or the Casey Stengels. They are naturally in favor of anything their bosses are. They are well paid and quite content. No, if I wanted to pass a bill helping baseball, I would not pass one to help the rich, but rather one that might help the people in baseball who need help. How about the unknowns down in class D baseball? or class C? or even B? what about these poor, underpaid, underfed ballplayers who really need some help. How about hearing from them? If we are going to hear from the best paid men in the game, how about hearing from the worst paid men too? Let the Senators hear how shabby the slums of the minor leagues are. If Congress is going to pass laws to help baseball, why help the men who are already rich, why not help the poor.

Let's see how some poor ballplayer who hasn't got enough to feed himself, let alone his family, feels about this bill with its special privileges for the rich club owners.

The Missing Science and Math Teachers

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a timely article from the Philadelphia Inquirer of Tuesday, January 13, 1959, entitled "The Missing Science and Math Teachers."

This is a subject which is of great concern to all of us, and I would exhort all the Members to read.

The article follows:

THE MISSING SCIENCE AND MATH TEACHERS

The plight of Philadelphia's public schools as the new term is about to begin shows that it isn't enough to issue an order from Harrisburg to solve a problem at the local level.

Starting in February all Philadelphia high school students are to be required to take some math and science in order to graduate. Before the change, almost half the pupils in high school did not have to study these subjects at all. Yet, even then, there weren't as many good science and math teachers as were really needed, not only in Philadelphia but in other school systems throughout the State.

This situation was as fully apparent months ago when the new State policy was formulated as it is now, yet only the vaguest of plans to deal with it have been advanced at the State level and those in the local communities for the most part are inadequate. This is especially true in Philadelphia.

The sincere efforts of Dr. Helen C. Bailey and William M. Duncan, associate superintendents, to recruit additional science and math teachers have met with little success, as it should have been known they would. The salaries they had to offer couldn't compare with those in private industry or even with what the same teachers could earn in nearby school systems, often in far more pleasant surroundings.

This, too, has been apparent from the beginning, yet the date of the pending change was permitted to arrive without any real plan on the part of the board of education to cope with it.

It seems to us that the State order, in its intent, was fully justified. We believe science and math should be taught to all students capable of absorbing the subject matter. But both the State and the city have been delinquent in failing to take the steps obviously necessary to give the order real meaning.

We think it is about time they got busy and found the needed teachers. Some of them can be lured away from less vital jobs in industry by better salary offers. The rest will have to be trained as quickly as possible, and a sound program for accomplishing this must be devised at once.

Governor Vandiver Cites Georgia Progress

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 20, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the excellent statement on the State of Georgia's growth and progress written by Georgia's distinguished young Governor, Hon. Ernest Vandiver, for the annual new South edition of the Anderson (S.C.) Daily Mail.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A MESSAGE FROM THE GOVERNOR OF GEORGIA

(By Ernest Vandiver)

It is a genuine privilege and a pleasure for me to prepare a brief outline of the steady growth and expansion we are enjoying in Georgia for publication in your annual New South industrial and agricultural edition which is of such service to the people of South Carolina as well as for a large number of Georgia citizens living in your territory.

Let me say that both Georgia and South Carolina have enjoyed amazing expansion in their industrial potential in the last few years which has been of such magnitude as to attract the attention of business interests all over our country.

Here in Georgia we are enjoying a forward movement in industry which is bringing us a substantial number of new manufacturing plants. Many of these are being established here by big companies which already are established in their fields. Many others are being built by local people using local capital for development.

Economic indexes in several areas show that Georgia is ahead of the national average in the percentage rate of growth and expansion.

In the postwar years we have added an amazing number of new workers in our industrial activities. This calls for many new payrolls, increases in existing payrolls and numerous new job opportunities for workers moving into our State as well as for workers already established here.

It has been ascertained that Georgia's rate of increase in heavy industries was exceeded in the postwar years by only three States, California, New York, and Texas.

Such industries employing 100 or more persons per plant show increases in Georgia which place this State in fourth position throughout the Nation.

Business, of course, likes to go where the markets are, and it is because of the steady increase in the buying power of the people of Georgia, South Carolina, and other Southeastern States that these new plants are being located here in such large numbers.

From what our business experts say we can expect even greater growth in the industrial field in the future.

It is our policy in Georgia to bring as many new plants as possible to some of our counties which have suffered because of migrations of workers to the urban districts.

We have found that one new plant located in one of the counties suffering from temporary loss of population means that such county can enjoy immediately a complete recovery in its economy.

Hand in hand with our industry our agriculture has marched forward with steady gains which have helped materially our entire State, as far as business expansion is concerned.

Our farmers are using more diversified crops than ever before. They have brought to their farms the most modern methods used in crop raising of all characters. They have carried our a movement to put the farms on a business basis, and in this field are enjoying pleasing and surprising results.

Georgia has enjoyed a 200-percent increase in the livestock industry in the post-World War II and is rapidly forging to the front in the Nation in this activity.

Georgia has held the leadership for some years in broiler production and continues to hold first place this year.

We have won 1st place in the South and 10th in the Nation in hog production, and continue to make steady gains each year.

Steady growth is reported in the values of the corn crop, pecans, tobacco, cotton, truck products, and in tree crops. In fact, the additional trees planted are designed to bring increases in our naval stores production, already the largest in the Nation, and to enlarge the pulp industry.

Let me say that these vast gains have established a pleasant business climate throughout our whole State, and our towns and cities are getting ready to benefit from the additional incomes coming from our increased industrial and agricultural activities.

Permit me to congratulate you on the publication of this excellent New South edition and to express the appreciation of our people for your invitation to participate.

Dr. Raymond J. Quinn

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. MONAGAN. Mr. Speaker, last week there died in Waterbury, Conn., Dr. Raymond J. Quinn, a beloved general practitioner who gave his life to the service of the people of his community and who was proud to be known as a family doctor. For over 40 years he was with the people of the Washington Hill district in their times of trouble and travail, and the memory of his cheerful presence in their days of crisis will long keep his memory green. He was an example of dedicated service for the younger members of his profession.

Under leave to extend my remarks, I insert in the RECORD the following editorial which appeared in the Waterbury Republican on January 15, 1959:

DR. RAYMOND J. QUINN

In an age when specialization is the order of the day in the world of medicine, Dr. Raymond J. Quinn took great pride in being a family doctor whose practice centered about the neighborhood in which he lived for more than 40 years. He was "the doctor" on Washington Hill.

Ever since 1916, when he first hung out his shingle in the Washington Hill section of the city, Dr. Raymond J. Quinn devoted the greater part of his time to the families in that area. As the city grew, so did his practice, and while it could hardly be said to have been confined to the "Hill" in later years, it was the people of that section to whom he gave his first loyalty. He took deep pride in his neighborhood practice. For many years his name was a household ward in Washington Hill.

Yet he found time to serve the entire city in one way or another. He served as city bacteriologist for a time and was also Welfare Department physician under the late Mayor Vincent Scully and former Mayor John S. Monagan. Three years ago he was the recipient of the Man of the Year Award of the Washington Hill AC, for his "outstanding contribution to the community."

Dr. Quinn also found time to be active in civic, community, fraternal and church affairs and as a veteran of World War I he had an unusual and deep interest in veterans affairs.

Although illness had curtailed his active practice in recent years, he nevertheless kept his interest in community affairs. His death Tuesday night, while not unexpected, leaves a void on the "Hill." His large family and his thousands of friends will miss him. But the Washington Hill community is a better place today because of his untiring devotion. It will be difficult, if not impossible, to find someone to fill his shoes.

Reappointment of Hon. Alan Bible, of Nevada, as Chairman of Senate Committee on the District of Columbia

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 20, 1959

Mr. SMATHERS. I ask unanimous consent to have printed in the Appendix of the RECORD the lead editorial which appeared in the Sunday, January 18, issue of the Washington Evening Star entitled "Washington's Good Fortune."

This editorial points out how pleased the people of Washington should be, and surely are, over the reappointment of the Senator from Nevada [Mr. BIBLE] as chairman of the Senate District Committee.

As all Senators realize, this job is very much a labor of love. It has never succeeded in reelecting a man in his home State, no matter how well it was done. However, Senator BIBLE, realizing that the job is one of great importance, even though it does not have much political significance, has been willing to take it on once again.

Surely, we all must agree with the editorial in the Evening Star that the people of Washington are fortunate in having ALAN BIBLE head their affairs once again.

He is indeed an able and conscientious public servant, who has already won, and will continue to deserve, the affection and admiration of us all.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WASHINGTON'S GOOD FORTUNE

Washington has cause to be pleased with the reappointment of Senator BIBLE, of Nevada, as chairman of the Senate District Committee. Senator BIBLE has proved to be an understanding friend of the District, who properly regards his assignment as one involving an important responsibility—that of carrying out the constitutional duty of Congress to exercise legislative jurisdiction over the Nation's Capital. The Nevadan has made it plain, rightly, that he regards this as a solemn obligation of Congress toward not only the people of Washington but of the Nation as a whole.

Moreover, it is gratifying that the committee will have the services of a new Member, Democratic Senator R. VANCE HARTKE, of Indiana, whose pleasure at being appointed contrasts sharply with the attitude expressed by some other legislators who have shunned the District group. Senator HARTKE, who, with Senators BIBLE, MORSE and FREAR, make up the Democratic majority of the committee (the Republicans have not yet been named), said he looks upon the District as a symbol of American democracy—a place of which Americans are proud because it is their city. As a former mayor of Evansville, Senator HARTKE should be well qualified to consider the problems of Washington and the metropolitan area.

The Supreme Law of the Land

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 20, 1959

Mr. ROBERTSON. Mr. President, last October the Richmond (Va.) Times-Dispatch published an article entitled "The Supreme Law of the Land," written by the Honorable Ralph T. Catterall, a member of the Virginia State Corporation Commission, and who is a former president of the Richmond Bar Association and one of the ablest lawyers in my State.

In that article, Judge Catterall not only discussed the proper role of the Supreme Court in our system of government, but he also emphasized the responsibilities of Members of Congress. He pointed out that every legislative, executive, and judicial officer takes an oath to support the Constitution and that is an oath of obedience to the Constitution itself, and not to Congress or the courts. He observed also that when the Supreme Court ceases to administer justice under law and indulges in policymaking to serve alleged sociological ends, Congress has the power to curb the Court by taking away some of its jurisdiction.

Because of the merits of this interesting and well-reasoned discussion, I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Richmond (Va.) Times-Dispatch, Oct. 10, 1958]

THE SUPREME LAW OF THE LAND

(By Ralph T. Catterall)

The Supreme Court of the United States is the keystone of the arch of our Federal form of government. If the keystone is destroyed the arch will fall. It would produce anarchy if each State were free to disobey every decision it disagreed with. But if the

keystone becomes rotten because of internal defects, that, too, will cause the arch to fall; and it is not unpatriotic to call attention to cracks in the keystone and recommend that they be repaired. The opinion of September 29 sounds like a reverberating crack in the keystone. It sounds ominously like Louis XIV announcing "I am the State." Americans must respect the Court but must not bow down and worship it.

Carved on the architrave of the marble building in which the Court sits are the words "Equal Justice Under Law." The Court ends its recent opinion with the words:

"Our constitutional ideal, of equal justice under law, is thus made a living truth."

That is our constitutional ideal and that is why the Constitution was reduced to writing. We want justice under law. If courts render justice outside the law we are in a state of anarchy. The Constitution does not say: "Everything that is unjust is unconstitutional." The Supreme Court seems to be saying: "Everything that we think is unjust is unconstitutional." If that be true, it was a waste of time to have a written Constitution. When a mob of cowboys hang a horsethief they do a horrible and wicked thing; but the evil is less farreaching than the evil done by a court that administers justice outside the law. With the backing of the Solicitor General the Court tears up the Constitution before our eyes and then reads us a lecture on our duty to obey all its decisions.

The Court boasts of its unanimity. The Court seems to be saying: "We so seldom agree among ourselves that when we do we must be right." Let us consider the relative importance of this unanimity. The Court cites *Bolling* v. *Sharpe*, the case in which it declared that the due process clause, adopted in 1791, forbids the Congress of the United States to establish segregated schools. While we are considering the importance of unanimity let us consider also the Court's admonition: "Every State legislator and executive and judicial officer is solemnly committed by oath taken pursuant to article VI, 3, 'to support this Constitution.'"

The same thing applies equally to every legislative, executive, and judicial officer of the United States. Prior to 1954, that oath was taken by many thousands of officeholders; by every President from Washington to Eisenhower, by every Supreme Court Justice, by John Marshall, by William Howard Taft, by James Madison, Thomas Jefferson, Abraham Lincoln, Ulysses S. Grant, Thaddeus Stevens, Charles Sumner. It was taken by all the lower Federal court judges, by all the State judges, by all the lawyers, and all the notaries public. These countless thousands of oathtakers have disagreed among themselves on every subject that it is humanly possible to disagree about. The disagreements became so violent that one of the bloodiest wars in history was fought over one phase in the preamble of the Constitution. On one point, however, there was complete, perfect, and absolute unanimity. All agreed that the due-process clause did not require integrated public schools in the District of Columbia. Nobody even suggested such a thing. The Court pays no attention to the unanimity of millions and bids us be impressed by the unanimity of its nine members.

What is the true intent and meaning of the oath to support the Constitution? By article VI, the Constitution, and the laws of the United States which shall be made in pursuance thereof, are declared to be the supreme law of the land. A constitutional act of Congress is part of the supreme law, but an unconstitutional act of Congress is not. Judicial decisions are not mentioned in the Constitution as part of the fabric of the supreme law. The framers of the Constitution expected the Court to administer justice under law.

An act of Congress makes it a crime to remove a cigarette from the corner of a package without first breaking the revenue stamp. This law is beyond question the supreme law of the land. Fifty million loyal citizens break this commandment every day; and the Attorney General makes no effort to stop this widespread disregard of the supreme law of the land.

The oath to support the Constitution is an oath to support the Constitution. It is not an oath of obedience to the Congress or the Court. A judge does not violate his oath of office when he exceeds the speed limit on Pennsylvania Avenue. He does violate his oath of office when he pretends to believe that the framers of the 14th amendment intended it to give the Court authority to abolish segregation in the public schools. The judicial oath of office means that the judge will administer justice under law. It means that he will not substitute his notion of what the law ought to be for what he knows the law is. The oath to support the Constitution is an oath to support our Federal Government against all enemies—foreign and domestic. He who takes the oath cannot assist in overthrowing the governmental structure erected by the Constitution. If he sees wicked men pulling down the pillars of our Government it is his duty to resist. It is his duty to speak out.

The judges themselves sometimes recognize and perform this duty. Listen to the denunciation of the Court by Mr. Justice Douglas (with whom Warern and Black concurred) in *Yates* v. *United States* (Nov. 25, 1957): "This case to me is a shocking instance of the abuse of judicial authority."

He is not suggesting that his brethren made an honest mistake. A shocking abuse of authority is an international act, a wicked and dishonest act.

The Court makes many honest mistakes. The States are not free to decide which decisions of the Court they will obey. They must obey all decisions, however erroneous, that could be thought to be honestly erroneous. When, however, the Court is guilty of shocking abuse of authority, it is the duty of every man who has sworn to support the Constitution to do what he can to curb the Court.

The Constitution contains checks and balances designed to keeep any man or group of men from destroying the framework of the Federal Union. One important check is the check that Congress is given over the Court. In every appealed case that it decides, the Court recognizes that it can decide the case only because Congress has affirmatively authorized it to do so. No case is heard by the Court until the appellant's lawyer points to a specific act of Congress giving the Court authority to decide the class of cases to which the case belongs.

Each Member of Congress has taken an oath to support the Constitution and each Member of Congress represents the people of a State. When the Court ceases to administer justice under law, the Congress has the power to curb it; and it is the duty of Congress to exercise that power. Congress can restore the balance of the Constitution by passing a statute depriving the Federal courts of jurisdiction over cases involving public schools. It is no longer possible to hope that the Court will change its mind but it is possible to hope that Congress will do its duty.

The great pity is that this most fundamental of constitutional questions is viewed by so many people as an emotional or moral problem rather than as a constitutional question. We are not talking about the totally different question of whether a colored child is happier and gets a better education at Maggie Walker than at Thomas Jefferson High School. The atmosphere of public discussion is as clouded by emotion as it was when the kindest and most benevolent New England clergymen were raising funds to buy ammunition for John Brown to shoot white southerners with. I therefore despair of making my point so clear that anybody can see it who does not already agree with it.

Start with the incontestable fact that everybody without any exception during the 163 years between 1791 and 1954 was as certain that the due process clause did not keep Congress from maintaining separate schools in the District of Columbia as he was that 2 times 2 is 4. How do the Supreme Court Justices in their own minds get around that incontestable fact? They do it by saying to themselves that the framers of the Constitution meant by the due process clause to give the Justices the power and authority to decide from time to time, from decade to decade and from year to year, what is good and what is bad, and to declare null and void any act of Congress that they think is bad.

In the first place, no framer of the Constitution ever expressed any such view as that. In the second place, the framers carefully spelled out the powers of the Central Government and the things that they thought bad enough to be forbidden by the Constitution. These things were put in writing and agreed to by the people of all the States.

With respect to the powers of Congress in the District of Columbia the Constitution says that Congress shall have power "To exercise exclusive legislation in all cases whatsoever, over such District. * * *" There was no sense in putting all those things in writing if the net result was to be that the Court is empowered to decide from time to time and from decade to decade and from year to year what is good and what is bad. If that is the net result, we have no effective written Constitution: instead, we have a clean slate for the Court to write on as it sees fit; we have no supreme law: we have only a supreme group of nine men. That is a fix that the framers did not intend us to be in.

If the Members of Congress would think about this question as a constitutional question they would see the importance of it and get us out of that fix.

Current Trends in Business and Finance

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, January 20, 1959

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Appraisal of Current Trends in Business and Finance," written by George Shea, and published in the Wall Street Journal of January 19, 1959. The article deals with the subject of inflation and the grave dangers of inflation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE OUTLOOK—APPRAISAL OF CURRENT TRENDS IN BUSINESS AND FINANCE

(By George Shea)

One of the great debates in Congress this year apparently will be on who's to blame for inflation. Some legislators will seek to prove it's all the fault of large corporations,

which they suggest are able to charge any prices they want and force the poor American public to pay them. Others blame the never-ending demands of unions for higher wages, which the monopoly power of the unions enables them to enforce.

A third group traces the whole thing to money and the Federal budget deficit. Perhaps a look at the figures related to this last factor will help determine the budget's role, and its relation to the other factors.

The Federal debt, latest figures show, is just under $283 billion, an increase of $8 billion from a year ago. If these $8 billion of additional Government securities had been bought by individuals, nonbanking businesses, insurance companies and savings banks, that wouldn't have changed the Nation's money supply in any respect. The reason for this is that these people and institutions would have paid for the bonds with bank checks, which the U.S. Treasury would have redeposited in the banks. Bank deposits, of course, are part of the money supply.

However, that isn't the way the added bonds were bought. They were, in effect, bought in large part by the banks. When a bank buys a bond, it pays for it, in effect, by crediting the seller with a new bank deposit. This process has increased the Nation's money supply by a corresponding amount. The latest figures show the holdings of Government bonds by the commercial banks up some $7 billion, and their demand deposits up close to $4 billion. The $3 billion difference between these last two totals appears to have been put by the depositors into savings-type deposits; these—with the added help of true cash savings—increased by $7 billion in the commercial banks alone.

These increases in demand deposits—and in savings-type deposits which can be quite rapidly turned into demand deposits—provide the means whereby increased economic activity could be financed. The increase, in turn, could take the form of greater physical production and sales, or higher prices, or both.

The reason for this statement is that the growth in deposits took place in a year when there was, in net terms, just about no growth in economic activity. At first a recession pulled down the total activity, then a recovery pulled it back up again, but not to the old high. And prices rose negligibly during the year.

Of course, this is all an oversimplification. An unchanged level of deposits can be used more actively by turning it over faster, and that would permit the same increases in economic activity as would an increased total of deposits with no gain in turnover. Or ample deposits can at times be accompanied by a persistent slack in economic activity—as happened in the New Deal years before World War II—because the people lack the confidence needed for enterprise.

But the point is that a steady growth in deposits through the years does provide the means whereby, under reasonably favorable conditions, economic activity will increase both physically and in terms of prices. And the current situation is undoubtedly conducive to wage rises and price rises as long as the physical volume of business done holds steady or improves.

No union leader can afford to stop demanding wage increases from time to time, unless business in his industry is flat on its back. If he does, he'll soon stop being a union leader. And with compensation of employees accounting for 70 percent of national income, and close to 60 percent of gross national output, it is obvious that pay increases must be translated into price increases.

In turn, no business can refuse to give wage increases as long as there is enough money around so customers can and will pay for the price increases. In effect, when anyone (in the Government or outside of it) asks unions and businessmen to exercise restraint on prices and wages, he is asking them to behave as if business were bad.

They can no more act in this fashion in a free system than they can turn a depression into a recovery by producing more goods than the customers will buy. That just isn't the way things happen, because it isn't the way businesses can keep out of bankruptcy. The best service successful unions and successful businesses can perform for the Nation—within the limits that are or should be set by law—is to stay in business.

The Government is almost equally helpless to prevent the growth in the supply of money which permits these things to happen. The Eisenhower administration says it's going to do its best to reduce expenditures in the fiscal year starting next July below the total spent in the current fiscal year. But the one downward step it is trying to take is as nothing in comparison with the higher spending steps which it and its predecessors have taken through the years.

If it tried to do more, the screams of protest would be deafening, not just from Democratic politicians and voters, but from the politicians and voters of the President's own party. The American people are like the proverbial spendthrift women in a department store, so intrigued by the many goodies they can see that they want them all, regardless of cost.

The writer heard this attitude well illustrated once in a line of people waiting to vote. Two items proposed by the State's governor were a veterans' bonus and a tax to pay for it. Said one man: "What's the point in getting a bonus if I'm taxed more? I'm going to vote for the bonus and against the tax." And, sure enough, the bonus passed and the tax failed.

There lies the blame for inflation.

Economic Integrity: The Hope for a Free World

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, January 20, 1959

Mr. MORTON. Mr. President, Mr. Lee P. Miller, the distinguished president of the Citizens Fidelity Bank & Trust Co., of Louisville, Ky., is the president of the American Bankers Association for this year. Mr. Miller is one of the Nation's outstanding bankers, and one of the keenest contemporary students of the economic problems which challenge our country. As president of the American Bankers Association, he is traveling to all parts of the Nation, addressing important and influential groups of community leaders.

In November of last year he spoke in Tucson, before the Arizona Bankers Association. In his able address he alerted this group to the danger of potential inflationary developments in this country. He condensed the remarks which he made in Tucson into an article, which appeared in Kentucky Business for January 1959, entitled "Economic Integrity: The Hope for a Free World." Kentucky Business is the monthly publication of the Kentucky Chamber of Commerce. I commend this excellent article to the attention of my colleagues. I point out that Mr. Miller has been a lifelong Democrat. I ask unanimous consent that the article appear along with my remarks in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ECONOMIC INTEGRITY: THE HOPE FOR A FREE WORLD

(By Lee P. Miller, president, American Bankers Association)

The world is watching us. People all over the globe—in the free world, in the uncommitted countries, and behind the Iron Curtain—are observing each scene in the drama of American democracy; and certain it is that the election of a few days ago will be the basis for much analysis and comment by our friends, as well as our enemies.

The period just after a national election is always a season for sober reflection by both the victors and the defeated. Then the excitement generated by the political campaign and the voting simmers down, and the people and their institutions knuckle down to the job ahead of them. There may be disagreements over what should be done, or how it should be done; but our democratic process does find a way of pointing our Nation's efforts toward major objectives. As the smoke of the election battle clears away, therefore, we can focus our sights once again upon our overriding objectives of peace and survival in an environment of freedom. In these objectives, we are joined by those all over the world who look to us for moral, political, and economic leadership.

The banks of this country perform functions that are essential to the preservation of that leadership. It is appropriate, therefore, that I should call to your attention the challenge to banking set forth by the resolutions committee of the American Bankers Association at the recent annual convention in Chicago.

The emphasis of the report was on the responsibility of all Americans in seeking lasting national security through military strength, economic vitality, and world leadership. The committee described three requirements which I believe should be clearly understood by every citizen and by those representing groups of citizens in government and other organizations. These requirements are:

1. A vigorous and growing economy, free from threats of serious inflation or deflation which sap economic vitality and hinder progress, and in which price stability is recognized as essential to maximum employment and prosperity.

2. A proper balance between the requirements of national security and our desire for better living standards.

3. The sacrifice of partisan interest and group pressures in favor of the broad national welfare, so that economic stability and growth can be fostered while still insuring the basic freedom of the individual to make his own decisions.

As president of the American Bankers Association this year, I believe it is my duty to see that our entire membership fully appreciates the job we have to do in carrying forward the message of our Nation's needs for lasting security against aggression. As the financial leaders in our communities, each one of us must be willing to accept the responsibility for helping the people to understand how the vitality of our Nation must be preserved to win the battle for survival.

The stakes in this battle for survival are not ours alone. The world is watching us. People abroad know that the strength of the American economy is the pivot point around which revolve the hopes for continued su-

periority over those who would destroy freedom and the dignity of man.

The American people—and especially those representing them in government and other organizations—would do well to heed the lessons we have preached to other nations since World War II. To country after country of Europe, Latin America, and elsewhere in the world, our spokesmen from political parties on both sides of the aisle have emphasized the necessity of economic integrity. They have stressed the need for sound money, fiscal sanity, and other governmental policies that encourage solid national growth rather than stagnation.

Today the shoe is on the other foot. The foreign press is taking increasing note of the recent growth of inflationary sentiment in this country, and leaders in their governments are drawing attention to the importance of our economic stability for the strength of the free world.

In recent years, this country has had a remarkable growth. Our tremendous resources have permitted us to increase our national output rapidly. We have become accustomed to prosperity and the expectation of a constantly rising standard of living. Even in relative terms, the words "austerity" and "sacrifice" seem to have been lost from the American dictionary. We have joined battle after battle in the cold and lukewarm wars since World War II; but, except in the early stages of the Korean conflict, there has been little inclination to accept the wisdom and necessity of any belt tightening whatsoever.

Just a year ago, the reality of a missiles race was thrust upon us. It is interesting to observe how suddenly and dramatically the temper of political leaders shifted. Before then there were significant pressures for economy in government. The administration was being criticized for failure to achieve a better balance in the budget and for failure to cut both expenditures and taxes. But when the battle of satellites and missiles was joined last October, the tide shifted. Many of those who previously had criticized Government military spending became even more vocal in a charge that we had not been spending enough to keep even or ahead of the Russians.

Despite the demagogery and political haranguing, our people rallied to answer the challenge posed by missiles and other developments in space science dramatized by the sputniks. Yet it is hard to believe that, in the face of this challenge, little attention was paid to the economic responsibilities it imposed. As a matter of fact, even as plans were being formulated for an intensification of our defense efforts along these lines, pressures for a reduction in taxes had to be fought off.

Our Nation finds itself in a situation where a deficit of some $12 billion in the Federal budget can be expected in the current fiscal year. No other figure in many a year has had as much effect on the thinking and attitudes of people as the size of this deficit in its dramatic contrast with the President's budget of last January. It seems to be saying that we have been unwilling to seek a balance between the requirements of national security and the desire for better living standards.

The change in the budget situation has been accompanied by an equally dramatic and pervasive change toward inflationary psychology. The deficit is being widely interpreted as a symbol of inflation. On most other grounds, however, concern over inflation is unfounded. Our economic machine has tremendous productive capacity that is not being used to the fullest extent. Production is the only answer to demand, whether military or civilian. It is the only base upon which to build a higher standard of living, and it is the only way that the physical demands of national security and strength can be met.

If production, then, is the final answer to our problem of national security, we cannot afford to tolerate interference with its effectiveness. This is the crucial point at which the threat of inflation comes into play. If the budgetary situation is interpreted as a symbol of inflation, its impact upon the ability of our productive machine to operate with increasing efficiency cannot be ignored. One might well pose the question whether the distortions already created by past inflationary pressures are not, to a significant degree, responsible for the fact that some sectors are now operating below capacity.

With a yardstick before us that says we are doing a poor job, we must redouble our efforts to return the Federal budget to a basis consistent with economic stability and the avoidance of inflation. In the words of the resolutions committee, "A continuing Federal deficit under the inflationary conditions is unconscionable."

Organized banking, speaking through the American Bankers Association and other organizations, has repeatedly voiced its support of flexible monetary and credit policies. Yet we would be shortsighted if we were to stop there. It is one thing to accept a banking environment created for us by prevailing monetary policy. It is another to interpret that environment constructively through policies and actions that contribute to its effectiveness toward attaining the goals of economic stability and growth. The policies of every banker—indeed every lender—are daily being put to the test. They involve the fundamental question whether credit is being used to foster national security in the long run, or whether it is being employed as an instrument of instability, retarding economic growth and progress and thus weakening our national security.

In the administration of our credit policies, therefore, we bankers must take the lead in combatting inflationary psychology. It should continue to be clear to us that inflation in the future is not inevitable, as some irresponsible elements would have the public believe.

On every occasion, in dealing with those who seek to use our credit resources and those with whom we have contact in so many other ways, we should express our faith in the ability to conquer the inflation fears that have had a rebirth in recent months.

In conclusion, may I emphasize that this is a time that calls for leadership—not leadership from above, but a leadership movement through which the message of our needs for survival can be carried forward by local people in every community of our Nation. We must work for good government and sensible policies in the interest of our national welfare. This requires active participation by community leaders in the formulation of laws and in the development of public understanding of our Nation's problems. We bankers are among those leaders. In these challenging times, we must not shirk our responsibility to work conscientiously, through our representatives in Federal and local legislatures, for sound legislation not only in the financial field, but in other areas close to the broad public interest.

Stable Dollar a Goal?

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 20, 1959

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid article written by financial writer Sylvia Porter entitled "Stable Dollar a Goal?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STABLE DOLLAR A GOAL?

(By Sylvia Porter)

With a single sentence in his state of the Union message, President Eisenhower last week set the stage for congressional debate on one of the great economic questions of the postwar era—whether protection of the dollar's buying power should be a prime goal of national policy.

Today, through the Employment Act of 1946, we declare that the three major economic goals are: Maximum employment, production, and purchasing power.

But, today there is no law saying dollar-stability also is an objective of policy. There is no law which declares it is the responsibility of the Federal Government to promote this stability.

Yet, today one of the greatest threats to our dollar is a spreading psychology of inflation—a growing belief that nothing can be done or will be done to keep the dollar's value from dwindling.

ACTION IS URGED

Responsible authorities have for months been urging the administration and Congress to do more about inflation than "view with alarm." The day after the November elections I reported to you that the new heavily Democratic Congress would be the first in history to tackle the problem of inflation in peacetime, and that it would debate amending the Employment Act to add reasonable price stability as a fourth national economic goal.

Now Mr. Eisenhower has put it on the line. "I shall," he said in his state of the Union message, "ask Congress to amend the Employment Act of 1946 to make it clear that Government intends to use all appropriate means to protect the buying power of the dollar."

Everything he will say about a balanced budget, tax reform, farm legislation, spending cuts, etc., will come down to this question to you: "Do you really care enough about price stability to make it a key goal?"

Of course, saying that the dollar's buying power should be protected and maintained won't protect and maintain it. But the debate about price stability will, in itself, be valuable because it will force attention to the causes of inflation.

The arguments themselves will impress upon your consciousness the fact that in this era, the tendency is for prices to rise during phases of expansion, but not to fall during cycles of recession.

The pros and cons of the legislation will compel you to realize that if we're not to cure inflation by encouraging business slumps, we had better figure out better ways to control our own economic system.

And if the goal is written into law, the warning will be clear to powers in business and in labor that if the leapfrog of prices and wages continues, Congress will take positive steps to restrain the spiral.

POSSIBILITIES OUTLINED

The background will be created against which Congress can consider new restrictions on monopolies in business and labor, the creation of watchdog commissions to report to the Nation on inflationary price-wage moves.

The country will be prepared for—will be ready for—moves that will develop and coordinate economic and monetary policies at the national level so that expansion is encouraged; inflation is discouraged.

There will be plenty of opposition to the amendment—that's already clear. Many opponents fear that once price stability is put on the books as a policy goal, some in Gov-

ernment will try to make it the goal, will try to place it ahead of maximum employment, production, income. Others fear that the amendment will be used as an excuse for reimposition of dreaded direct controls over prices and wages.

Neither fear convinces me. As a Nation, we've made it obvious that if the choice is between maximum employment-production incomes and a stable dollar, we'll take the maximum employment-production income. No one who believes in this system wants peacetime price and wage controls.

The amendment would be an invitation to find solutions to the control of inflation in a period of prosperity. We can do it. We've conquered bigger problems than this.

The Political Relevance of Moral Principle

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. BRADEMAS. Mr. Speaker, on Sunday night, January 18, 1959, I was among the 4,000 persons gathered in Constitution Hall, Washington, D.C., to hear the first annual A. Powell Davies memorial address which was delivered by the Honorable Adlai E. Stevenson, former Governor of Illinois.

I had the great privilege of serving for nearly a year on the staff of Governor Stevenson during 1956 when he was a candidate for the presidency of the United States. I came to know Governor Stevenson and to develop a profound respect for his deep dedication to the cause of human freedom and for his conviction that America is called to give great leadership in that cause.

It is my belief that the moving and eloquent words of Governor Stevenson, one of our Nation's foremost statesmen, should be considered and heeded by the membership of Congress as well as by every thoughtful citizen in our country.

I should like therefore to insert in the RECORD the text of Governor Stevenson's address:

THE POLITICAL RELEVANCE OF MORAL PRINCIPLE

I am profoundly flattered by your invitation to inaugurate these annual lectures in memory of Dr. A. Powell Davies. It is an honor to be asked to help in any way in the commemoration of a man so eminently worthy of being remembered. But it is hard indeed to pay adequate homage in words to a man whose own words were so fresh, so apt and fitting to the important issues of the day.

But I am encouraged by one fact. Dr. Davies did not feel that his office as a minister of religion debarred him from comment upon contemporary problems. On the contrary, he saw that he could make his message relevant to his people only by showing it at work in the concrete issues of their daily lives.

I think of a story my grandfather Stevenson, a devout Scotch-Presbyterian of southern descent, told about the preacher who was driving along a back road when he espied a parishioner wearily clearing up a poor, stony field. "That's a fine job you and the Lord have done cleaning up that rocky field," he shouted. "Thank you, parson," the man replied. "I wish you could have seen it when the Lord had it all to himself."

Dr. Davies believed that God is dependent on man, as man is on God. He believed that the clergy above all were responsible for making a reality of the bond between God and man, and he was fearless in letting his congregation and the world know the truth as he saw it. He had a sensitive awareness of peril to the individual in our day of bigness, of statism and conformity. Therefore he was impelled to fight for the oppressed and the persecuted; to fight for equal justice for all and the rights inherent in our citizenship. Ardently he defended freedom of the mind, free speech, the right of the dissenter to speak and the duty of the conformist to listen. And his compassion was boundless.

It was the tardiness of the American social conscience in understanding the severity of its ordeal with authoritarianism that made Dr. Davies impatient, that made him work so hard to awaken us to the perils. He literally wore himself out trying to mobilize public opinion and induce every American to hold himself personally responsible for the preservation of freedom.

From the mountain of vision, Dr. Davies constantly proclaimed the political relevance of moral principle and of religion as a judgment of righteousness. From the dusty plain of politics I would like in my turn to reaffirm this relevance. I like to believe that there may be some value in echoing testimony from a layman who has spent his middle life in the press and confusion of great events in government service, in diplomacy and in politics.

All politics is made up of many things—economic pressures, personal ambitions, the desire to exercise power, the overriding issues of national need and aspiration. But if it is nothing more, it is without roots. It is built on shifting, changing sands of emotion and interest. When challenged, it can give no account of itself. When threatened, it is in danger of collapse.

Today, when the threat and challenge to free society seem more total and powerful than ever before, it is not a political luxury or fruitless pedantry to reexamine our fundamental principles. I think it more likely to be the condition of survival.

There is a phrase of Dr. Davies' that stays in my mind. I do not know when I have heard a more terse and pregnant summing up of our predicament. "The world," he said, "is now too dangerous for anything but the truth, too small for anything but brotherhood." This I believe to be in broad measure a correct estimate of the condition of human society, which is now capable, with a few hydrogen bombs, of extinguishing itself. Today we can all be killed by the same bombs or atomic fallout. In that sense we have a desperate physical solidarity. But moral and social solidarity in the family of man is still to be found.

No so long ago I visited Dr. Albert Schweitzer in his primitive jungle hospital in French Equatorial Africa, and he told me he considered this the most dangerous period in history, not just modern history, but all human history. Why? Because, he said, heretofore nature has controlled man, but now man has learned to control elemental forces before he has learned to control himself.

Many of us seem to rely on some mythical God-given superiority of the white Western World to save us. And my concern is that there is more evidence that the Communists accept the reality of the human condition than we do.

It is impossible to spend weeks traveling around the Soviet Union as I did this summer without taking away an overwhelming impression of thrust and purpose in most aspects of Soviet life. The revolutionary ardor has cooled with time, but even the very pragmatic political leaders seems to believe profoundly in the truth of their way of life, and they are quietly confident that it will sweep the world in time. I think they sincerely believe that their methods, their aspirations, their dreams, make up the final truth about the nature of man and society; that collective man in the collective state is the ultimate unfolding of human destiny, the end of history, the far-off divine event for which mankind has been in long travail, the vision of all things made new that has haunted men's minds ever since Christianity thrust into human thought the intoxicating ideal of a perfected humanity.

From this conviction, if I have not overstated it, flow two consequences. The first is that no effort, no dedication, no sacrifice is too great that may help to realize the Communist Party's goals in Soviet society. The second is that no corner of humanity can be a matter of indifference to the Communists, because the whole human race is destined to become one in Communist brotherhood.

These are not abstract generalizations. Russia is a vast powerhouse of energy all harnessed to the communal task of building the Soviet dream. The thrust of economic growth which adds a 9- or 10-percent increase each year to industrial expansion is one aspect of this energy. The vast sums available for science and research are another. The self-discipline and long hours put in by school children to train themselves as the scientists, technicians, administrators and linguists of the new world order are perhaps the most significant measure of the resources of energy, work, and skill upon which Soviet leaders hope to draw. In Moscow, Serge Obraztsov, the brilliant director of the famous Puppet Theater, said: "I visited China 5 years ago. It was the most extraordinary experience of my life. People in China have had nothing—nothing. Now several hundred million people are dreaming of tomorrow. I cannot describe to you the feeling of excitement there—much, much more even than here in the Soviet Union."

The energy, the drive, the dedication in the U.S.S.R. spill over into international affairs. In part, of course, this is the restless concern which all imperial powers must exercise, especially when the peoples they control are as restive and unreliable as the captive peoples in Russia's European empire. But Communist activity, planning and efforts in trade and aid are not confined to areas of Communist control. They are worldwide, and there is no corner of the earth's surface which they think too insignificant for their attention. While trade missions are busy in Latin America trading Soviet machinery and oil for coffee and wool, academic representatives are touring West Africa, Arab and Asian students are being trained in Moscow, technical advisers dispatched to India and Burma and Indonesia, and the glossy flood of propaganda depicting the Soviet millennium of bumper harvests and happy workers is pumped out all round the world.

All this we know or begin to know. But I wonder how often we try to grasp the scale of dedication that lies behind it. Why should they be so busy? Why so much work and thought? Why such diversion of resources? Why such patience through every setback, such forward thrusts through every point of Western weakness? Heaven knows, we only want to stay home. Why don't they? Why do we never meet an isolationist Communist? These are the questions that haunted me while I confronted at firsthand this iron, forceful, and formidable way of life.

And I don't think there is any doubt about the answer. Part of it is simply needed foreign trade. Part is fear, the search for secu-

rity through friends. And part is the historical centrifugal forces in Russia that have been pressing outward for a 100 years—to the Pacific, the Balkans, and the Middle East. But the important thing is that the Soviet Russians believe in their truth, as the men of the Western World once believed in theirs. They, not we, are firing the shots that are heard 'round the world, and also the satellites that orbit above it. The fact that their faith is in many ways an evil perversion of the great propositions that once made the blood course in our Western veins does not alter the fact that their tempo is dynamic and ours sluggish, even, I think, to ourselves.

The reason cannot be that we Americans have lost our vision of truth and brotherhood. No country on earth owes the sense of community more explicitly to the fact that it is united not by race or nationality but by fidelity to an idea. We were born dedicated to a proposition and our greatest leaders—the Jeffersons, the Lincolns, the Woodrow Wilsons—were not great because they achieved purely American purposes, but because they were able to speak for humanity at large and extend their vision to the whole family of man.

Nor, I believe, can we find fault with the American dream. Its truths are still self-evident. The possession of liberty and the pursuit of happiness—rightly understood—have not been overthrown as the highest goods of human society. Indeed, the ferment of our freedom works inexorably and dangerously in the Communist world. No one can have visited Poland without seeing how little the Polish people accept their servitude and how they look beyond their neighbors to the free world as the reservoir of power and hope.

But, alas, on the basis of the record, one would hardly suspect that the Western World possessed so powerful a weapon. All our talk—in diplomacy, in strategy, in aid and trade, in all the intricacies of our worldwide relations—has been to a depressing degree purely defensive. We have offered aid not to help others but to shield ourselves. We have reacted to countless Soviet initiatives; acted on our own initiative barely at all. We watch the skies for other people's sputniks and listen to the telegraph wires for other people's moves. Yet we are the free men of this universe, the children of liberty, the beneficiaries of unequalled abundance, and heirs of the highest, proudest political tradition ever known to man.

Why this lack of initiative? Why this paralysis of will? What have we done to our truth and our brotherhood, the supreme truth of freedom, the Christian truth of brotherly love? Have they failed? Or have we?

There is no more urgent duty than to discover why we have failed and to get back into the arena, aspiring, striving, fighting once more for what we believe. An examination of what you might call our collective conscience is to my mind far more important than particular projects or programs. You can have a perfect assembly of pieces for your watch, but they are worthless if the mainspring is broken. I am not basically worried about our various pieces—our technology, our science, our machines, our resources. But I am concerned, desperately concerned, about our mainspring. That it has run down, we know. But is it broken beyond repair? In the last analysis, no question is worth more consideration in America today.

And I would like to suggest some of the ways in which it seems to me we have enfeebled the great central pulse of our freedom, the great truth of liberty, which, more than any other nation, we first set working in the modern world.

The great German poet, Goethe, who also lived through a crisis of freedom, said to his generation: "What you have inherited from your fathers, earn over again for yourselves or it will not be yours." We inherited freedom. We seem unaware that it has to be remade and reearned in each generation of man. One reason for this failure is, I believe, passing at last. In recent years we were stifled with complacent self-confidence. We believed ourselves dominant in every field. We talked of the American century. We forgot the ardors and efforts that had given us a measure of preeminence. Complacency made us impervious to ideas, even the obvious idea that we are in danger. So we assumed that all we needed was to sit still and enjoy the peace and prosperity that was our right.

I believe that phase is passing. Our foolish Janguor has been shaken, if not shattered. We are more ready to examine ourselves and our record. And it is a privilege of our society that every citizen should make his own inquiry. If I stress one or other aspect of our problem, this is simply my angle of vision. You have yours. The urgent thing is to feel the need for rethinking and to set to work the ultimate energies of free society, which cannot be done by the fiat of government but only by the troubled conscience of responsible men and women.

It is simply as a citizen as concerned as you are that I want to suggest what seems to me to be the obstacles to a full understanding of our great mission in this time of testing.

I believe—as I have said before—that we have confused the free with the free and easy. If freedom had been the happy, simple, relaxed state of ordinary humanity, man would have everywhere been free—whereas through most of time and space he has been in chains. Do not let us make any mistake about this. The natural government of man is servitude. Tyranny is the normal pattern of government. It is only by intense thought, by great effort, by burning idealism and unlimited sacrifice that freedom has prevailed as a system of government. And the efforts which were first necessary to create it are fully as necessary to sustain it in our own day.

He who offers this thing we call freedom as the soft option is a deceiver or himself deceived. He who sells it cheap or offers it as the byproduct of this or that economic system is knave or fool. For freedom demands infinitely more care and devotion than any other political system. It puts consent and personal initiative in the place of command and obedience. By relying upon the devotion and initiative of ordinary citizens, it gives up the harsh but effective disciplines that underpin all the tyrannies which over the millennia have stunted the full stature of men.

But of what use is escape from external restraint if, given the opportunity, men simply stunt themselves? If freedom means ease alone, if it means shirking the hard disciplines of learning, if it means evading the rigors and rewards of creative activity, if it means more expenditure on advertising than education, if it means bachelor cooking and life adjustment courses in the schools, and the steady cult of the trivial and the mediocre, if it means—worst of all—indifference or even contempt for all but athletic excellence, we may keep for a time the forms of free society, but its spirit will be dead.

I believe we have had enough of adjustment, conformity, easy options and the least common denominator in our system. We need instead to see the pursuit of happiness in terms which are historically proven and psychologically correct. The dreary failure in history of all classes committed to pleasure and profit alone, the vacuity and misery accompanying the sole pursuit of ease—the collapse of the French aristocracy, the corruption of imperial Rome, the decline and fall of the resplendent Manchus—all these facts of history do not lose their point because the pleasures of today are mass pleasures and no longer the enjoyments of an elite. If we become a nation of Bourbons, numbers won't save us. We shall go their way. Vacuity and indifference are not redeemed by the fact that everyone can share in them. They merely restrict the circle from which regeneration can come.

I say this in no puritan or pleasure-hating spirit. On the contrary, there is no boredom or misery to equal the pursuit of distraction alone. We do not slip into happiness. It is strenuously sought and earned. A nation glued to the television screen is not simply at a loss before the iron pioneers of the new collective society. It is'nt even having a good time. No society has ever spent as much as we do on drink and tranquillizers. Can one argue that this is evidence of universal fun? I ran across a quotation of LaBruyere on the court of Louis XIV that struck me as relevant: "Les joies sont visible, mais fausse, et les chagrins cachés, mais reels"—its joys are visible, but artificial, and its sorrows hidden, but real.

But perhaps this misunderstanding of the true nature, of happiness, and of the conditions of its pursuit is simply an aspect of something else—our misunderstanding of the real nature of freedom. I recall the words of the wise Judge Learned Hood, who warned us that freedom would not survive in our Constitution if it had already died in the hearts of the people. We shall not have a free society unless we have freemen.

And how often do we reflect upon what this inner freedom entails? "Give me the man," cries Hamlet, "who is not passion's slave." But this is what we are in danger of becoming, slaves to a tyranny more intimate and inescapable than any Stalin or Mao Tse-tung could impose. We can be made slaves simply by the clutter and complexity of modern living which notoriously leaves no time for serious thought and offers every means of distraction so that we can avoid such thought. Between aircraft that take us everywhere more rapidly, newspapers that grow in weight and coverage, news that flashes round the globe, ceaseless and competitive entertainment fashions—God help us—that change from sack to trapeze and back again, we can fill up every unforgiving minute with enough trash and preoccupation to still forever the deeper voices of the soul. Like Matthew Arnold, we can

> "* * * see all sights from pole to pole,
> And glance and nod and bustle by,
> And never once possess our soul
> Before we die."

How are we to defend freedom if, for the tyranny of external control we substitute the clattering, cluttering tyranny of internal aimlessness and fuss? This freedom for our souls, freedom at the profoundest level of our being, is not a gift to us by our contemporary way of life. On the contrary, much of this life is a direct conspiracy against it. And if we cannot—by a certain discipline, by readiness for reflection and quiet, by determination to do the difficult and aim at a lasting good—rediscover the real purpose and direction of our existence, we shall not be free. Our society will not be free. And between a chaotic, selfish, indifferent, commercial society and the iron discipline of the Communist world, I would not like to predict the outcome. Outer tyranny with purpose may well triumph over the inner, purposeless tyranny of a confused and aimless way of life.

I doubt if any society in history has faced so great a moral challenge as ours, or needed more desperately to draw on the deepest source of courage and responsibility. Ours is the first human community in which resources are so abundant that almost no policies lie beyond our capacity for purely physical reasons. What we decide to do, we can do. The inhibitions of poverty—lack of resources, lack of capital, lack of power—do not hold us back. We can accomplish what we aim at. Thus, perhaps for the first time in

the world, choice, not means, ends, not instruments, are decisive.

Then again we have proved—drably and dangerously—over the last decade that defensiveness is not a sufficient reason for action. All the policies we have pursued in self-defense have left us still on the defensive. But if we do not act from fear, we must find some other motivation. In free society there is no other alternative but to tap the vigor, faith, and imagination of the people themselves. We must find out once more who we are, as the psychologists say. And I would earnestly appeal especially to the women of America to organize an Operation Wisdom and to lead the way to a new self-examination and self-discipline.

But perhaps the most urgent reason why the quality of our moral response has become the decisive issue in politics is quite simply that most of the major problems of our day present themselves in moral terms, and are probably insoluble without some stirring of generosity, some measure of vision. Let me give you three instances. In the wealthiest nation in the world, at least 5 million families still live in squalid but remediable poverty. They are a minority. They don't have the votes to force the issue of their misfortune into the front rank of public issues. They depend, for remedies, upon the alert conscience of the majority. But how do we keep the conscience sensitive and alert? By concentrating on our own concerns and adding the dishwasher to the television set to the air conditioner? By griping over taxes and attacking that great bogey we call the welfare state? By closing our minds every time our shiny car takes us through a slum? No, we shall have the dedication and drive to wipe poverty out of this rich land only if the well-to-do majority of today do not repeat the selfish indifference which, in many communities, has been the epitaph of yesterday's wealthy elite.

Or take the issue of the rights and status of our colored citizens. This is our small share of a worldwide problem. The 400 years' dominance of men of white skin is ending. The vast colored majority of mankind are seeking the opportunity and the respect which white people have been lucky enough to enjoy for so long—sometimes at the colored people's expense. But, within this worldwide crisis, we in America, with our colored minority, have a major role to play—for good or evil. The unfinished work which Lincoln left us, of creating a society in which all men can hold up their heads as equals and self-respecting citizens, can never be accomplished unless there are enough white men and women who resist in the core of their being the moral evil of treating any of God's children as essentially inferior.

Nor is this simply a question of our own national community. I come back to the painful fact that the Communists show a worldwide concern which is largely lacking among the men of the West. The whole human race is their horizon. Their brotherhood is materialist, collectivist, atheist, and we dislike it, but it embraces everybody, and it is the framework of policies which take the missionaries of their new order to the ends of the earth. I say with all the emphasis I can command that we have no corresponding commitment to our fellow men. For hundreds of years, we have preached the Christian promise of brotherhood, but today, when vanishing space and scientific revolution have turned our planet into a single neighborhood, the ideal means little in terms of concern or conviction, in terms of policy or action.

Here we are in the Atlantic world, 16 percent of the world's peoples consuming 70 percent of the world's wealth. We cannot be indifferent to the moral implications of this gap. I do not know how we can gain a new perspective about the narrow world of plenty and poverty in which we live unless moral insights of justice and compassion stir us to understand the privileged position in which we live.

We are not going to be stirred to action by our own needs. We are the cushioned, protected, fortunate minority. It is not the measure of our morals or the lesson of our history to be spurred on only by fear of Russian encroachments. What we have done has largely had this motivation, and it has left us on the defensive. Our hope is to accept the implications of our own faith, make concrete the image of brotherhood which we profess, and set to work to express our dedication in whatever effort or sacrifice the world's needs may dictate. And, if we must always think in terms of contest with the Soviets, the ability to create the good life for the greatest number will be decisive.

This age has been defined in many ways—as a time of conflict in ideology, as a time of ferment in technology, as a period of revolution in science, as an era when at last the means lie at hand to free mankind from the ancient shackles of pain and hunger. It is all these things, but I believe the true crisis of our times lies at a deeper level. We have indeed conquered means and resources unknown to earlier ages. We have had thrown open to us frontiers of choice which would leave earlier ages stupefied by their scale and scope.

But all this freedom and elbow room only thrusts onto us with more force the fundamental issue of the faith that is in us. We can use our wealth and capacity for some vision of truth, some ideal of brotherhood, or we can imprison ourselves within the selfishness of our own concerns and the limitations of a narrow nationhood. This is the dimension of our crisis.

You may argue that these qualities—of dedication and selflessness—are pretty remote from the realities of politics. They are all very well for private life, but what part can they play in the rough and tumble of partisanship, of primaries, conventions, and election campaigns? Ambition, drive, material interests, political skills, the art of maneuver—all these, you say, have their part, but do not let us pretend that the democratic process is primarily a school of virtue or an arena of moral combat.

And yet, I wonder. It has been the view of great philosophers and great statesmen that our system of free government depends in the first instance upon the virtue of its citizens. Montesquieu made virtue the condition of republican government; Washington declared that it could not survive without it. We have had 175 years of it since their time and no one can deny that the system has survived a remarkable amount of skullduggery. In fact, it is probably a tougher system than its founders imagined. Yet I believe they are right. For no democratic system can survive without at least a large and active leaven of citizens in whom dedication and selflessness are not confined to private life but are the fundamental principles of their activity in the public sphere.

Naked interest and naked ambition will carry a lot of people naturally and inevitably into politics. We do not need societies for the promotion of lobbies. Interests, good and bad, will promote themselves. Nor, in any generation do we lack politicians whose only principle of action is the advancement of their own career—the starry-eyed opportunists and all the other eager men in a hurry to the top. But into what state must politics degenerate if that is all we find active in the political arena? That any sectional interests played upon by personal ambitions? There have been such periods—the roaring nineties, the time from Harding to the Wall Street crash—but our democratic system survived because such epochs were followed and cleansed by periods of disinterested reform.

But there has never been any disinterested reform without disinterested reformers. And here we come to the essential contribution made by dedication and selflessness to the public good. No one ever did any good in politics without readiness for endless hard work, for the grinding, boring, tedious work, as well as the glamorous, high sounding, headline-hitting work. The painstaking hours collecting the facts, the hours in committee and conference, the hours in persuasion and argument, the hours of defeat and disappointment, the hours of disgust and revulsion at the darker sides of human behavior—these cannot be supported without energy and devotion. No reforms come easy; even the most obvious will have its entrenched enemies. Each one is carried to us on the bent and weary backs of patient, dedicated men and women.

They are not only dedicated in their readiness to give energy and hard work to the cause; they must also have sufficiently clear sight and open minds and hearts to see the need for reform in the first place. But clear sight and an open heart for others' needs is again something that hardly comes naturally. We have so many needs of our own; our families, our jobs, our homes, and fortunes, our prospects. We are hemmed in with needs and interests, weighty, urgent, honorable, human needs and interests, even if they are exclusively our own. It takes an extra dimension of vision to see beyond our inner circle of interest. Most people, most of the time, do not possess it—which is one reason why self-regarding interests make up so much of the stuff of politics. And this, I suppose, is why the men and women of genuine, imperturbable public spirit seem so few and far between.

I sometimes think there is a danger of this element of vision vanishing almost wholly from our political life. In the main we are so comfortable; so many evils of the past have shrunk in size and almost out of sight. At the same time, people marry much younger, have larger families, and are profoundly involved in earning a living, making careers, and safeguarding the future of their children. It is more difficult, they say, to give time to public affairs when private life is so urgent and absorbing.

Yet is it, I wonder, more urgent and absorbing than a hundred years ago when young men not only married young, had large families, and built up careers, but also opened up the new frontiers, created new cities from the wilderness, and gave to new States and communities the framework of active political life?

If one reads the life of young Abe Lincoln, it is hard to believe that his struggles as a young lawyer and his difficulties as a young parent were less than those of young men today. Yet there was no time when the deepest issues of the day did not occupy his mind or the call of statecraft make itself heard above the claims and clamor of everyday life. Nor was he alone or exceptional. Stephen A Douglas' life was no different. The prairie towns were filled with earnest, active citizens deeply, profoundly concerned with the great issues of a nation "half slave, half free." When the multitudes gathered, a hundred years ago, to listen in rapt attention for hours to the Lincoln-Douglas debates, had they fewer responsibilities and duties than the citizens of today to many of whom the great issues of politics seem to be most usefully conveyed in 15-second television flashes of subliminal advertising?

Is it not possible that the pressures of personal responsibilities are not greater but that the dedication and selflessness needed to discern and influence public issues have

shrunk? In a century in which so many of the mentors of the public mind—from the psychiatrists to the admen—speak to us in terms of what we owe to ourselves, may there not indeed have been a slackening of devotion compared with those days, not so long distant, when what man owes to God and his neighbor was a common theme of public discourse?

If so, this is a dangerous hour for our politics and for government by consent of the governed. For at no time have so many of the great issues of the day demanded clear, real moral vision to bring them into focus—the vision of A. Powell Davies, who loved the truth and believed in man's capacity and right to govern himself.

Visit to the Senate by Students From Ursuline Academy, New Orleans, La.

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 20, 1959

Mr. LONG. Mr. President, one of the first groups of students to visit the Nation's Capitol during 1959 was a group from the city of New Orleans, La., representing the Ursuline Academy. This group took advantage of their presence here to further their studies on government and to learn many of the procedures which are followed by the Nation's lawmakers in handling the many complex problems that face us today.

The Ursuline Academy, which is staffed by an order of Roman Catholic nuns that was founded in 1535 for the purpose of the education of young girls, was established in New Orleans in 1727 and has enjoyed through the years the unique distinction of being the oldest educational institution for the education of girls within the present limits of the United States.

The Ursuline Academy has been accredited by the Southern Association of Colleges and Secondary Schools since 1926. At present, 822 students attend the school. This is the largest enrollment in its history. The graduating class will number 96 this year. Two of the girls who visited the Capitol, Peggy Hanemann and Linda Teijelo, are merit scholarship winners.

The Ursuline nuns are very closely connected with the history of New Orleans and hold a very important place in the development of the city. A great many of the fine young women graduates have records of splendid achievement down through the long history of the school.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the names of the students of Ursuline Academy and their chaperons who visited Washington.

There being no objection, the names of the students of Ursuline Academy and their chaperons were ordered to be printed in the RECORD, as follows:

Chaperons: Miss Irma Smart, Miss Ann Corbin, Mother Mary deLourdes Bindel, O.S.U., Mother Vera Marie Wingerter, O.S.U., and Mrs. A. Wingerter.

Students: Judy Alexander, Nancy Amato, Mary Lynn Bologna, Kathleen Brown, Kay Calongne, Kay Cambre, Carroll Campbell, Catherine Cassagne, Rose Lynn Cicero, Elise Cornay, Mary Ann Cutler, Deanne Derbes, Mary Doyle, Catherine Ferrara, Adele Gaudet, Sandra Gelis, Flora Gennaro, Barbara Gilbert, Linda Haase, Peggy Hanemann, Karen Kelly, Carol Kramer, Janet Lala, Brenda Levy, Betty Jane Murtes, Catherine Richaud, Cleo Riecke, Charlotte Sanchez, Audrey Satterlee, Madeline Simmons, Kathryn Stewart, Artemise Tallon, Linda Teijelo, Ann Van Geffen, Carol Virgillio, Diana Wick, Margaret Williams, and Leanne Willoz.

Rural Electrification Benefits City as Well as Farm

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, on Thursday, January 8, 1959, the Courier-Wedge at Durand, Wis., printed an excellent summary on what rural electrification has meant to the farmers of this country and to the American economy as a whole. In the editorial, Editor William Ender noted that the REA program has provided an extra market for $12 billion worth of city products in addition to raising the standard of living of our farmers. Under leave to extend my remarks, I would like to include Editor Ender's editorial in the RECORD:

GROWTH WITH PUBLIC POWER

As 1958 drew to a close, Dairyland Power Cooperative issued a report which showed gains in almost all categories of operation. Twenty-six electric firms that draw from Dairyland generators marketed 735 million kilowatts of power last year, an increase of 7.6 percent. The average farmer now burns 545 kilowatts of electricity a year, almost twice as much as the average city dweller.

Cooperatives, which have about a quarter century of service behind them, deserve praise for expanding electricity into sparsely settled rural regions of America. Studies show that the rural consumer spends about $4 for each dollar his company pays to build lines to his place. Over the years, this means our rural electrification program has provided an extra market for $12 billion worth of city products.

The $12-billion expansion has been a tremendous stimulant to the American economy. Workers who manufactured equipment bought cars, rugs, houses, and boats, which helped employees in other industries as well. President Eisenhower recognized the importance of rural electrification by urging systems to step up expansion when a mild recession struck the country early in 1958.

People who watch rural electrification closely point to many intangible benefits it produces. Once a rural home has power, the standard of living for a family rises sharply. Houses and barns get new coats of paint. Before long the living room has new furniture. How can a person describe the human benefits of indoor plumbing, of hot water, of refrigeration, of electric cooking, of radio, television, and just light itself?

The rural electrification program has many critics. Yet, Government loans are repaid to Federal authorities with interest. Farmers have not been griping about direct multimillion-dollar Federal grants that help only a city resident—for public housing, slum clearance, and urban renewal. Chronic critics of REA power should think of those angles, too.

In this area, the economy is being stimulated by a $12,500,000 expansion project of Dairyland Power Cooperative facilities at Alma. An 80,000 kilowatt turbogenerator is being installed, which will raise the capacity of the Alma plant to 315,000 kilowatts on 5 units. All that work will lead to new transmission lines, new substations, new customers, new appliance sales.

Dairyland sells power on a wholesale basis to the Buffalo Electric Cooperative, the Dunn County Electric Cooperative, the Pierce-Pepin Electric Cooperative, the Eau Claire Electric Cooperative, and other concerns which are linked directly to farmers. In all, 97,000 farmers are benefiting directly because Dairyland and its associates were created.

Inaugural Address of Hon. Buford Ellington, Governor of Tennessee

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. EVINS. Mr. Speaker, under unanimous consent, I ask to have reproduced in the Appendix of the RECORD the inaugural address of the Honorable Buford Ellington, the dynamic, young, new Governor of the State of Tennessee, delivered at the capitol in Nashville, Monday, January 19, 1959.

The address follows:

HUMAN BETTERMENT IS THE PRINCIPAL JUSTIFICATION FOR THE EXISTENCE OF GOVERNMENT

Governor Clement, Governor Coleman, Governor Chandler, Governor Blair, Mr. Speaker Baird, Mr. Speaker Bomar, ladies and gentlemen of the general assembly, justices of the supreme court, members of congress, distinguished guests, friends and fellow Tennesseans, this is naturally an hour of great personal happiness as I prepare, here in the presence of my family and friends, to take the oath of office as the 42d Governor of Tennessee.

But the factor that transcends all personal considerations is whether this shall also be an hour of value and happiness for all the people of Tennessee.

Long ago in our history a small band of Tennesseans on Kings Mountain gave to America the sparkling inspiration to cling tightly to freedom, independence and resourcefulness.

That spirit dominates us here today.

Great names in our history are associated with the office of Governor first held by John Sevier; and I am humble here within the shadow of the capitol as I join the ranks of chief executives of the State of Tennessee.

No other ambition possesses me except to serve the people of Tennessee in the most considerate and efficient manner of which I am capable.

Human betterment is the principal justification for the existence of government.

The welfare of all the people must dominate every thought, every plan, every action of a State administration.

The end of one administration, and the beginning of another, is an appropriate time for a look into the past and for an examination of the future. The transition from one administration to another must be accomplished with the least disruption of the normal functions of government, and with the greatest protection of our people.

Tennessee's future is normally planned and described by the actions of government on capitol hill in Nashville, but there is no planning and no action that can successfully be accomplished unless they spring from the hearts of our people in the vast and resourceful stretches of our State.

We are in a certain sense three great States in one. Each of our grand divisions possesses within itself all the human and natural resources to be a sovereign State of its own. But never from the beginning of our history has there been a division of our destiny.

We are a most unified sort of people. And that is one of the reasons we can face the long future, and that part of the future which is circumscribed by the next 4 years, with the resolute assurance that we shall make vast strides toward an economic, agricultural, industrial, civic, patriotic, and personal day of greatness far surpassing anything which we have been privileged to know in the past.

We especially want our young men and young women to put their ideas to work in the making of a greater Tennessee and thereby a greater America. We want them to roam the wide fields of their gifted imaginations. They live in a time when mankind's future seemingly is dependent upon the daring of the human mind. We must provide them with the tools and the surroundings to advance their natural gifts.

That means attention to the greatest possible advancement every hour of the future of the educational resources of Tennessee. A good State, like a good individual, is always seeking the right and opportunity of self-improvement. We shall vigorously seek new advantages for Tennessee. We shall give new industry not just an invitation—but justification for coming here. Yet in our zeal for industrial progress, we shall cling with equal fervor to the fact that our farmlands and our farm people still constitute the basic resource of our vastly expanding State.

There's no war of the scales between agriculture and industry in Tennessee. The balancing of agriculture and industry in one broad economic endeavor for the general betterment of the State is a matter of mutual desire.

Obviously we face certain financial limitations in State government in Tennessee, if we are to go into this administration without new taxation, as we are determined to do. But these limitations are not shackles. Actually, they are opportunities—opportunities for better management of your tax dollar—opportunities for wiser uses of it—opportunities for curtailing certain services of lesser critical status in favor of expanding those services of higher ranking importance to the majority of our people.

An era of readjustment in the light of our existing tax resources is upon us. Rather than fear it, I think we welcome it. A relief from new taxation is the most important contribution that the new administration can make to your welfare.

I hope that it may be said of me, 4 years from now when I stand here again as the one departing from the gubernatorial scene, that Buford Ellington kept the faith with all the people; and that of special privileges there were none.

Now, in conclusion, I have but this one simple statement to make:

The controlling ambition of my administration was embedded in me as a child when I, like so many hundreds of thousands of other farm youth in this country, came under the influence of the distinguished agricultural leader "Corn Club" Smith, the founder of the 4-H Clubs of America, whose inspiration I carry with me today in meeting my responsibilities to the people of Tennessee.

Therefore I say to you now that my sincere desire is that my heart shall always be loyally dedicated to your service; that my hands shall labor faithfully for you; that my head shall not be turned from the tasks that lie ahead; and that it shall be my good fortune to possess the good health to serve you with vigor, and that my feet shall always be planted firmly on the ground.

Mr. Chief Justice, I am now ready to take the oath of office.

Dedication of Bell Hall at Fort Leavenworth, Kans.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. AVERY. Mr. Speaker, on January 14, 1959, it was my privilege to attend the dedication ceremony at Fort Leavenworth for Bell Hall. This is a new academic building for the Army Command and General Staff College.

Not only is this new $6 million structure a valuable and necessary improvement in the training of career officers, it provides needed additional space so that the regular class can be increased from 500 to possibly 750. It is estimated that 75 percent of the senior staff officers and commanders of World War II and Korea were graduates of the College. Several Members of the House also have graduated from this school during their military service.

Mr. Speaker, the Secretary of the Army, the Honorable Wilber M. Brucker, specifically requested that I express to you the sincere appreciation of himself and the Chief of Staff of the Army for the authorization and appropriation that made this new building possible. Representing the congressional district in which Fort Leavenworth is located, I, too, want to express my appreciation to you and the House for this important new installation. It is recognition of a continuing challenge to a changing world and a symbol of our determination to maintain the highest degree of efficiency possible in our officer-training program for the U.S. Army.

INTRODUCTORY REMARKS BY MAJ. GEN. LIONEL C. MCGARR, COMMANDANT OF THE U.S. ARMY COMMAND AND GENERAL STAFF COLLEGE AND COMMANDING GENERAL, FORT LEAVENWORTH, KANS., AT THE DEDICATION CEREMONY FOR JAMES FRANKLIN BELL HALL, JANUARY 14, 1959

Secretary Brucker, honored guests, ladies and gentlemen, it is my privilege this morning to welcome you to Fort Leavenworth, home of the U.S. Army Command and General Staff College. Here today we join in dedicating this modern academic building as a fitting symbol of the spirit of improvement and progress which characterizes today's Army.

As current commandant, I feel it appropriate I say a few words on this important and symbolic occasion. Although proud of recent accomplishments, I am acutely and humbly aware of the contribution of my illustrious predecessors in making the college what it is today.

In this tension-laden era, conditioned by the deadly clash of opposing ideologies, we remain dedicated without complacency or compromise to educating and improving the minds of the Army's future leaders. This requires changing their thought processes by increasing their ability to reason objectively, decide logically and operate efficiently in the application of the all important principles of warfare. Only by so developing flexibility of mind can the inspired leadership necessary for success on future battlefields be developed. This is our mission. There is no easy way.

It has been so truly said, that war is an art based on scholastic foundation and resting on a free and creative activity. Warfare is an art, one whose very heart and soul is service and sacrifice to the ideals of our country. The overall competence and sacrifice required of the professional military leader can be even more demanding than that required of other important professions. For the combat leader's success is not measured purely in material accomplishments such as wealth, power, and prestige, but rather in terms of victory at the least possible cost in human life and the ultimate survival of the Nation. And remember, the soldier cannot actively practice his art before he must apply it for record on the battlefield.

Realizing this significant restriction, the college is convinced that in the future, as in the past, an important part of America's preparation for war must be in the classrooms of our military schools and colleges. It is equally convinced that the protracted warfare now being waged by international communism, although not fought with bombs and bullets, is all the more deadly because it is fought with ideologies, with ideas which threaten our very way of life, and its objective is the primary objective of all autocratic rules—the minds of men. We must counter this ideology which is completely opposed to ours in religious, political, and ethical concept. We must counter it with the practical application of the ideas and ideals of humanity and the dignity of man—which, after all, are based on the simple truths of service and sacrifice our Saviour taught.

The strength of any nation lies in the moral and intellectual strength of its people. This applies with equal force to the Armed Forces. Character and a sound moral code of ethical values have always been the hallmark of the dedicated professional officer. One of the principal elements of the new college curriculum is strong emphasis on the importance of the educational intangibles—the psychological and moral factors which improve combat effectiveness. The student is taught that it is normal and realistic to integrate the intangible moral and ethical aspects of command into the more tangible tactical and administrative aspects, in his decision making and problem solving. This is because we believe the only motivations which can sustain men under the stress of battle are those of a spiritual and moral nature. Here in the Army's senior tactical school we strive to build into our students the character, integrity and intelligence required by the destructiveness and reliability which the fast-moving pace of technology is building into our weapons systems. This requires the urgent development of the full human potentialities of our students, because men properly trained, motivated and led will always remain the constant factor in success on the battlefield.

We are fortunate to be living in a most exciting era in history—when the frontiers

of science and technology are advancing at a pace beyond our boldest dreams. This advance is forcing a cosmic awakening in which it is becoming more and more evident that what the mind of man can conceive, he can develop. And, as his imagination leaps out beyond the stars, we must realize that what man can invent he can control—if he so desires. It is important that our mental processes not be dulled by automation, or be dominated by the purely technical aspects of this sweep of science. They must be geared to leading and guiding technology along purposeful lines in the resolution of our many military problems and, equally as important, in constructive human progress. This chance for progress, possibly even our very hope of survival, lies in molding the minds of our leaders in the direction of progress.

The dedication of this building as Bell Hall is a tribute to a great American, a great military educator and former Commandant—General James Franklin Bell. At the turn of the century he assisted Secretary of War Elihu Root, the father of the U.S. Army General Staff and military school systems, in establishing the basis of our modern army educational structure. General Bell's concept of relating instruction to education in the broad principles of war, rather than to specific techniques, is still valid. He believed in appealing to the intelligence, reason and patriotism of the individual soldier and his progressive thinking is shown by this famous remark, "I earnestly pray that the idea of our old Army, that a soldier was not expected to think, only to obey, has had its day and will forever be left to repose upon the scrap heap of other discarded military notions."

Our Commander in Chief, President Eisenhower, aptly described the college purpose in the following words: "In Leavenworth the tradition is hard work—hard work at the most serious of all military tasks—that of preserving American interests against aggressive force. In its classrooms war is reduced to fundamentals learned so exhaustively by the student that they become second nature. So equipped in battle, the graduate is free for the fullest exercise of inspirational leadership in shaping armies of the free world that may some day stand as civilization's last, but sure, defense." This is so because warfare is not merely a pattern of mechanical energies and nuclear forces but one of human beings, their sense of values, and their reactions under varying conditions.

True, our Nation's military forces and the professional leaders trained here have one final measure of success in war—victory on the battlefield. However, it should be kept in mind that although this is a military college, it also has the broader mission of training and educating leaders to help win the peace. In this respect our Allied Officers' Program, training officers from approximately 43 countries of the free world, contributes significantly to the solidarity of the free world.

With the addition of Bell Hall, the college now combines the most modern equipment with a reoriented, modernized curriculum based on improved instructional methods and a forward-looking educational philosophy. However, like technology this fine building and its most advanced instructional aids are of limited value if not properly oriented toward one definite objective—the security of our Nation.

In accomplishing this objective the United States Army Command and General Staff College pledges itself to educating and rededicating its students in the ideals of service and sacrifice—ideals which are the very wellsprings of the greatness of our country.

And now, it is most fitting and appropriate that we are again honored by the presence of the Honorable Wilber M. Brucker, Secretary of the Army, who will make the dedicatory address. It is appropriate, not only because he is a decorated combat leader of World War I, a former Governor of the State of Michigan, and an eminent member of the legal profession, but also because he is a forward-looking, dedicated civil leader, without whose interest and support Bell Hall would not have been possible. It is my pleasure and honor to present the Secretary of the Army, the Honorable Wilber M. Brucker.

REMARKS BY THE HONORABLE WILBER M. BRUCKER, SECRETARY OF THE ARMY, DEDICATION OF ACADEMIC BUILDING, COMMAND AND GENERAL STAFF COLLEGE, FORT LEAVENWORTH, KANS., JANUARY 14, 1959

The dedication of this splendid new academic building designed to further the mission of the United States Army Command and General Staff College is an event of great significance. It marks a noteworthy forward stride in the development of military education fully measuring up to the tremendous responsibilities resting upon the United States Army as a major bulwark of our country in these critical years of peril. The entire Army and the Nation at large will be the beneficiaries of this building named in honor of Maj. Gen. J. Franklin Bell, "father of the modern Army school system."

For years it was a matter of deep concern within the Army that its senior tactical school should lack adequate college facilities, and must carry out its vital educational program in a converted riding hall and stables. Efforts to remedy the situation dated back far into World War II, but actual construction of proper facilities did not get underway until November 5, 1956, shortly after the college celebrated its 75th anniversary. For those who labored so long and so well with antiquated tools, it must be gratifying indeed to see their hopes brought to fruition in a modern structure consistent with the great traditions of Leavenworth.

Bell Hall, with its twenty-four 50-man classrooms, auditoriums, faculty briefing room, conference rooms, library, archives, and staff and faculty offices, will permit the consolidation of all resident instructional facilities under one roof. It will contribute immeasurably to the ability of Leavenworth to meet the stirring challenge of the future.

The impact of technological advances, the rapid changes in organizational and operational concepts, and the worldwide multiplication of Army commitments for joint and combined staff and operational personnel are factors which necessitate the creation of as broad as possible a base of highly trained career officers.

As our senior commanders in this country and overseas have found their tasks becoming ever more complex and exacting, they have placed increasing emphasis upon Leavenworth training as a principal prerequisite in the selection of their staff officers. It has become imperative to increase attendance at this College without in any way sacrificing quality for quantity. This can now be done. Completion of this new building, and concurrent enlargement of the staff and faculty, will make it possible in the years to come for a far greater proportion of our officers to attain the stature which the Command and General Staff College confers upon its graduates. Increases in both the regular and associate courses will become effective for classes starting in September of this year.

Through the years, the Command and General Staff College has achieved an enviable standing within the United States Army School System, and among military training establishments around the world. However, there is no thought here of resting upon the hard-won laurels of the past. Leavenworth, like the entire Army, is constantly on the march toward new heights of accomplishment. I sense the stirring of a dynamic new spirit, a new perception of urgency, of which this fine academic building is a material symbol.

The dedicated staff and faculty of the college work with unremitting zeal to adopt its program to the impact upon the Army of new weapons systems and similar developments, the reorganization of the Army in accordance with the Pentomic concept, and the necessity for constant reorientation of instruction to support, under fluid conditions, the Army's functions in any kind of war—general or limited, atomic or nonatomic—as an indispensable member of our great land, sea, and air defense team.

In line with the events of recent years and the expectations for tomorrow, the curriculum was entirely rewritten for the 1957–58 academic year. In support of this revision, a major reorganization of departments along functional lines has been completed. Significant changes have been made in educational philosophy and academic methods. The college has demonstrated a keen awareness of the necessity for establishing a proper balance between the intensive training in techniques, tactics, and procedures which characterized the short courses during World War II, and the marked subsequent trend toward major emphasis upon fundamental principles as applied in the solution of problems. Instruction is designed to prepare students for their role as military problem solvers by teaching them to think, rather than merely to memorize facts and formulas. In this fashion the college equips officers to cope with the drastic reduction in battlefield reaction and decision time resulting from the new tactics of nuclear warfare. Today's tactical doctrine imposes more responsibility upon junior commanders than was borne by many senior commanders of World War II. Decisions which in the past might have waited upon a staff conference, in any future war will have to be made within minutes, and on the spot.

In its courses of instruction, this college properly gives primacy to the philosophy that we must never allow ourselves to be so preoccupied by our array of new tools of war—missiles, vehicles, electronic marvels, and all the rest science has placed in our hands—that we forget the overriding importance of men, of human mastery over material things. It would be tragic if we allowed the pressures of technology to derogate the qualities of mind and spirit which are fundamental to our national strength.

In recognition of this, the college proceeds on the conviction that the Army, if it is to fulfill its responsibilities to the Nation, must revitalize and reemphasize time-honored moral principles and standards, particularly through the personal example of those in authority at all levels of command.

The dynamic response being made by this forward-thinking, forward-moving college to the challenge of the future is in consonance with trends throughout our Army today. Modern technology demands that we continue to raise human standards all along the line, and we have started at the foundation by developing a program designed to obtain and retain high caliber men, men with a sense of responsibility who are capable of handling complicated materiel as well as complex problems. The Army's new enlisted management program contributes to this end through appropriate financial reward, prestige, and inspiring opportunities for advancement. This program was made possible to a large degree by legislation recently passed by the Congress, notably legislation which authorized the President to modify standards of induction.

By means of preinduction screening, we have been enabled to reject individuals at the outset who do not demonstrate a suitable capability for modern military training. This has resulted in a significant saving of time which would have been fruitlessly expended in attempting to train these individuals, and

of the costs involved in their eventual elimination from the service. Last year, prior to the implementation of this authority, we discharged 72,000 ineffective men with resultant improvement in the level of training, job performance, behavior, and elementary education participation. Of these, 34,000 were separated prior to the completion of their basic training.

Concurrently, we moved to put into effect the provisions of the military pay legislation passed last May. The first proficiency payments were made in November to soldiers selected by their commanders as being most proficient in critical skills. Beginning this month, our soldiers begin competing for proficiency payments against armywide standards established by our new enlisted evaluation system, which allows us to measure the capabilities of our men by a combination of written proficiency tests and commanders' evaluation reports.

Recognition of the Army's enlisted personnel who carry heavy responsibilities has been enhanced by the addition of two new pay grades at the top of the enlisted pay structure, and promotion to these grades as well as to other enlisted grades eventually will be related to the enlisted evaluation system. The Army plans to advance at least 14,500 to the two top grades during the next 4 years.

Another aim of the Army enlisted management program is to aid in the development of promising enlisted men by further training and education. Upon entering the Army, the volunteer, beginning this month, will have the opportunity of enlisting for a particular occupation of his choosing in which he can show sufficient aptitude. In addition to the many service schools available, career-motivated soldiers may now also apply for college level training in technical, scientific, and managerial areas at Government expense.

Many similar steps have been and will be taken to insure high caliber in our officer corps.

For example, new tests have been developed to identify the best possible talent for training at the United States Military Academy.

We have a program to increase the number of officers developing foreign linguistic skill in order to prepare them more effectively for vital assignments around the world.

A special program is in operation for the temporary promotion of captains, majors, and lieutenant colonels ahead of the time they would normally be eligible for consideration.

The best-qualified method of selection has been put into effect this year for all commissioned grades above captain for both temporary and permanent promotion.

In order to increase the retention of highly qualified officers, we have also provided for greater stabilization of duty tours, and extended opportunities for specialization to include a number of new career fields.

A major review of our officer education and training program was completed this year by a board of distinguished officers. This comprehensive review was conducted to determine the adequacy of the present system to meet the needs of the Army from the present to 1970. The results of this review will be announced in the very near future. I can tell you now, however, that adjustments and refinements to make our system entirely equal to the tasks ahead are already underway. A modern pattern for officer development is emerging which fully recognizes the indispensable part played by the well-trained and dedicated Army officer in building and maintaining the defenses of our Nation, both spiritual and military, in these momentous times.

Atomic weapons, guided missiles, and air transport have revolutionized strategic and tactical concepts. Their impact upon the art of war has not even yet been fully assessed. But this we do know—that the highest professional competence and the soundest possible judgment on the part of leaders charged with responsibility for the lives of men in battle, and the success of our mission, are of even more vital importance than they have been at any time in the whole past.

The Army needs, above all, leaders possessed of great imagination, mental mobility, psychological stability, and moral stamina. The best career development policy or program which might be conceived could not produce such leaders in the absence of individual initiative and interest on the part of the officers themselves. The successful Army officer today is a well-rounded person, who keeps up to date in every aspect of his profession. He has an inquiring, imaginative mind, and a great thirst for opportunities to improve his professional ability. Attitudes are tremendously important in life, and particularly so in the military service. We need healthy, positive, forward-looking attitudes which contribute to the on-going of the Army.

One of the great virtues of the courses here at the Command and General Staff College is that they are designed to stimulate creative thought. Your curriculum inspires an enthusiasm for discovering new and better solutions to old problems, and helps to develop the habit of considering every aspect of command in the light of future requirements rather than past performance. This habit is one of the most important any officer can nurture.

Because science and technology play such an increasingly important part in shaping military doctrine and operations all along the line, it behooves every officer to dig in and acquire at least a rudimentary knowledge of scientific and technological principles and applications. For example, regardless of his immediate duties, he should learn all he can about guided missiles, ballistic missiles, rockets, and similar matters of vital concern to our modern Army. Only by the fullest interchange of informed thought at all levels can the problems in this field be successfully solved. Furthermore, a reasonably thorough grounding in basic science and technology will make an officer of greater value in any assignment, and may in the course of his career open up whole new vistas of opportunity for constructive and satisfying service.

Every officer should develop a fundamental understanding, appreciation, and acceptance of the interdependence of each of our Armed Forces, and the forces of our allies, in the attainment of success either in the deterrence of aggression or the winning of any war. No longer can an Army officer at any level afford to compartmentalize his thinking, and consider only his own branch, his own service, or even the forces of his own Nation. The effectiveness of joint and combined operations stems not so much from carefully worked out plans as from a habit of mind. It is necessary that in every case we visualize the military picture as a whole, not just our particular part of it, and with that vision act in complete harmony with all concerned to achieve a single, positive result.

Students here at the Command and General Staff College are especially fortunate because they are able to attend classes side by side with outstanding officers of 44 foreign nations. Every student ought to make the most of these contacts in order to develop to the fullest degree that mutual understanding and respect which is the only solid foundation for effective mutual security.

In addition to leadership for war, leadership for peace has become a major concern of the military officer. Within the last 20 years, the soldier has evolved into the soldier-statesman. Many officers at the top levels of the Army have contributed immensely to our national security, and the realization of our national objectives, by brilliant accomplishments not only in the strictly military sphere, but also in the field of international diplomacy. During the course of your careers, many in this audience will undoubtedly be called upon to participate in high councils by means of which the nations of the world will seek some practical resolution of differences which stand in the way of enduring peace. The well-rounded officer will conscientiously prepare himself in every possible way for this great responsibility.

The necessity for good management in the Army cannot be overemphasized. Any waste or inefficiency in the employment of money, material, or manpower is directly reflected in reduced combat power—and combat power is the root and branch of the Army's ability to carry out its historic responsibilities for national security. To have the strength needed to see us through any future emergency, we must make the best possible use of every resource entrusted to us. We must also bear it firmly in mind that the Army must have the full confidence and support of the American people. These are essential to its continued effectiveness as a military instrument. To gain and maintain public confidence and support we must conscientiously apply the best management principles all along the line to insure a maximum return in defense for every dollar expended and every American boy called to the colors. However prosaic it may seem, every officer must adjust his vision to the importance of good management in every sphere, and put its precepts into practice wherever he wields authority or influence.

The truly effective Army officer will be a vocal advocate of the Army. In all his contacts with the other segments of the American community, he will endeavor to contribute in a positive way to the enlightenment of public opinion. He will seek to enhance public understanding of the vital role of the Army as a member of our defense team, and stimulate public realization of its accomplishments. The highlights of progress the Army has made during the past year alone are indeed impressive.

All active Army divisions were reorganized as pentomic divisions to insure that they will be fully capable of successful combat operation on any battlefield—conventional or nuclear.

We deployed overseas two missile commands and several separate missile battalions.

We increased the effectiveness of Nike Ajax battalions on constant guard in the United States against air attack, and also sent Nike Ajax battalions to Europe to defend depots, air bases, and vital bridges.

We began the systematic conversion of Nike Ajax battalions in the continental United States to the longer range and more powerful Nike Hercules. Hercules battalions are now deployed and operational in Taiwan, Okinawa, and Greenland.

With the addition of the Hawk to our air defense arsenal we will be able to cover the whole span of altitudes from the treetops to the highest flown by planes, and every type of aircraft now in operational use at any known speed.

The formation of STRAC, the Army's Strategic Army Corps, added immensely to our deterrent capability.

In the field of space exploration, we are tremendously proud of having placed in orbit the free world's first earth satellite, the Explorer on January 31, 1958. Then on March 26, Explorer III went up, and on July 26, Explorer IV. The coded information about space which has poured down to earth from these man-made "moons," particularly concerning high-level radiation, has proved to be of tremendous value. The latest Army achievement in this field was the instru-

mentation of the Atlas missile which the Air Force put into orbit last December 18. Intricate electronic relay equipment developed by the Army Signal Corps at Fort Monmouth, N.J., broadcast from the orbiting missile the voice of President Eisenhower delivering a Christmas message. This was the first time a human voice had ever come to us from outer space.

We should all look upon each achievement not as a goal reached, but as a milestone on the path of progress toward maximum strength for peace and security. What has been accomplished so far is only a beginning. The brightest pages of our Army's history are still unwritten—of this I am sure. What the hand of time will eventually inscribe upon them depends in large measure upon the ingenuity, the determination, the vigor, and the devotion above and beyond the call of duty each of us brings to the tasks which lie before us.

As America marches forward with courage, conviction, and confidence to meet the future, an increasing burden of responsibility is laid upon this great college as a major source of education—and, above all, of inspiration—for our Nation's military leadership. Its influence during the long years past has redounded to the tremendous benefit of our country, yet I am certain that its greatest achievements, like those of the Army as a whole, lie ahead. It is in that faith that I now dedicate, on behalf of the U.S. Army, this new building—the J. Franklin Bell Hall.

The Talmadge Farm Plan

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 20, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD editorials entitled "The Talmadge Farm Bill," from the Atlanta (Ga.) Journal; "Talmadge Reoffers His New Look Farm Bill," from the Columbus (Ga.) Ledger; "Deserves a Second Look," from the Griffin (Ga.) Daily News; "Farm Equalization Has a Chance," from the Moultrie (Ga.) Observer; and a telegram from Lester J. Cranek, president of the Wharton County Farmers Union, of El Campo, Tex.

There being no objection, the editorials and telegram were ordered to be printed in the RECORD, as follows:

[From the Atlanta (Ga.) Journal, Jan. 15, 1959]

THE TALMADGE FARM BILL

The Nation's farmers for several years now have been caught in an impossible crossfire between the radical policies of Ezra Taft Benson and periodic piecemeal legislation by the Congress.

To say the least, it has been an unsatisfactory situation. The farmer, especially here in the Southeast, has suffered greatly. Many men of the soil have been forced to move to another field for livelihood. And as the farmer has been hurt, so has the Nation's economy.

A bill providing for a major overhaul of existing farm policies has been laid before the Congress by Georgia's Senator HERMAN TALMADGE. It deserves careful consideration.

The Talmadge proposal is relatively simple. It would allow the farmer to grow as much of any basic commodity as he wishes. The Government would pay him the difference between the market price and 100 percent of parity.

The plan has the virtue of giving the farmer a respectable measure of free enterprise, and at the same time according him safeguards similar to those extended other segments of the economy.

It is further unique in the fact that its acceptability to all sections of the country is about as great as any farm bill can be.

Agricultural experts viewed the Talmadge proposal with favor last year. The urgency accrued through another year of deteriorating farm conditions puts an even brighter glow on it now.

There has been much speculation as to what attitude this Congress would take on farm problems. But who knows, farm legislation just might be a meeting ground for the liberal and conservative wings. And the Talmadge bill could possibly be the instrument to achieve such an agreement.

[From the Columbus (Ga.) Ledger, Jan. 16, 1959]

TALMADGE REOFFERS HIS NEW LOOK FARM BILL

Senator HERMAN TALMADGE has reintroduced in Congress a farm bill which he described as designed to let the farmer farm and at the same time give him about the same degree of protection that labor enjoys through the minimum wage and industry has in the tariff.

The measure, the Agricultural Income Equalization Act of 1959, is the same which the Georgia Senator placed before the 2d session of the 85th Congress but which never was acted upon.

Senator TALMADGE's bill, if enacted, would eliminate acreage controls and Government loans. The Senator said, as he introduced the measure, that the present national program, based on controls and loans is a failure.

In place of the controls and loans, TALMADGE's farm plan would assign each grower of basic commodities—cotton, tobacco, peanuts, rice, wheat, and corn—a quota which he could produce for sale on the open domestic market.

The quota would be computed from a comparison of his production record for the past 5 years with the national consumption.

When the farmer harvested his crop, he could sell it on the open market, either domestic or foreign, at the current nonsupported price. He could then present bills for the part of his crop sold on the domestic market to which he was entitled to supports to his county agriculture committee.

The committee would notify the Government and a check would be mailed to the farmer for the difference between what he was paid on the open market and 100 percent of parity. No farmer could have more than $25,000 in sales support, however. He would get no supports for the amounts above the quotas he sold or for that sold on the foreign market.

Mr. TALMADGE told the Senate the cost of his plan would depend upon the resulting free market price levels of the basic commodities, but in any event would be considerably less than of the present program. He also advised the Senate his plan would assure that every farm-program dollar went into the pockets of the American farmers which, he said, decidedly is not the case today.

There is widespread dissatisfaction with the present costly national farm program and many, particularly farmers, will agree with the Georgia Senator that it is a failure, or very near it.

Senator TALMADGE's plan drew considerable support when he introduced it in 1958. That, he told the Senate, was why he was presenting it again for consideration.

The bill, although it is a radical departure from the present program, should receive careful consideration of Congress. If the lawmakers are convinced it will return the farmer to a free enterprise economy, protect his interests and reduce surpluses, it should be enacted without delay.

[From the Griffin (Ga.) Daily News, Jan. 15, 1959]

DESERVES A SECOND LOOK

(By Bill Knight)

Senator HERMAN TALMADGE, of Georgia, has proposed legislation that would abolish present Federal farm programs and substitute direct Government payments to farmers for part of their output.

The proposal, probably one of the most sweeping pieces of farm legislation offered in recent years, kicked off a fight that probably will last into 1960.

The Georgia Senator estimated his plan would cost between $1,500 million and $2,500 million a year. The estimated cost of the present price support in the current fiscal year is set at more than $5 billion.

Should the Talmadge proposal work itself through the congressional maze and come out looking something like it did at the start, it very likely would help cut into national deficit spending, though only slightly.

Senator TALMADGE is no stranger to the problems of farmers. He knows their needs from firsthand experience.

Any plan that will help to lighten the backbreaking taxload without cutting into merited and needed Federal aid, deserves a second look.

Some Democratic leaders have indicated that although the administration farm program should be tossed out, it will not be practical to write a new program until next year.

But by 1960 it may be too late to save the Talmadge proposal from being trampled in the stampede to woo the farm vote.

[From the Moultrie (Ga.) Observer]

FARM EQUALIZATION HAS A CHANCE

The year 1959 may witness the passage of Senator HERMAN TALMADGE's Agricultural Income Equalization Act.

Very similar to the one which was proposed by the Georgian last summer, the 1959 version appears to have a better chance for passage than that dropped in the hopper previously. The farmers, in their decision to take corn out from under controls, gave notice that they want adequate protection in their farming gamble but at the same time want less interference from the Federal Government.

The measure which Senator TALMADGE proposes would accomplish this desired freedom by degrees. Under its provisions, the excessive and burdensome controls would be eliminated, providing for a more sound, free-enterprise type of farming while retaining the supports necessary to guarantee the growers against failures.

The first farm equalization plan died for lack of final action, but a stronger Democratic Congress may look with more favor upon the proposal in 1959.

EL CAMPO, TEX., *January 16, 1959.*

Senator HERMAN E. TALMADGE,
Senate Office Building,
Washington, D.C.:

At the Wharton County Farmers Union meeting January 15, 1959, 200 members resolved to commend you on your proposed bill for direct support payment to farmers at 100 percent parity price and maintenance of parity principle.

LESTER J. CRANEK,
President.

Hawaiian Statehood Would Help United States To Win Asians

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 20, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Hawaiian Statehood Would Help United States To Win Asians," which was published in the May 1956 issue of Freedom and Union magazine.

Written by Mr. George Lehleitner, a New Orleans businessman, this article is even more pertinent now than when it was written.

It is my hope and expectation that this Congress will act favorably on S. 50, cosponsored by more than half the Members of this body, which would grant statehood to Hawaii.

I concur with Mr. Lehleitner's conclusion that "Statehood for Hawaii is most decidedly in keeping with the best interests of Hawaii, the United States, and of freemen everywhere."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAWAIIAN STATEHOOD WOULD HELP UNITED STATES TO WIN ASIANS

(By George Lehleitner)

I have long believed that the gravest danger of Soviet world conquest stems not from its military potency but rather from the efficacy of its international machinery for the pursuit of ideological warfare. Even in those instances (China and Vietnam) where we are inclined to attribute their conquests to the sword, is it not true that the primary conquest was ideological? First, the Chinese and Vietnamese who constituted their armies had to be sold communism. And did not the military collapse of the opposed Chinese—and, recently, the Vietnamese—come about largely because the virus of communism had infected and weakened them to the point where they lost the will to resist?

Is not, then, the ideological power of communism its real warhead? It has been aptly said: "You can shoot Communists—but not communism."

AGAINST COMMONWEALTH STATUS

If this is true, why, then, should we deliberately provide Communist ideology with soil in which to root itself, in Hawaii, by forcing upon the proud and competent Hawaiians a political form—commonwealth—they do not want, and, in the process deny them that form—statehood—which they have clearly shown they do want, are qualified for, and were promised?

What manner of insanity afflicts us when, with one hand, we lavishly spend billions in a frenzied effort to tie foreign nations, with doubtful loyalties, more closely to us, while we use the other hand to slap the faces of a half million of our own loyal citizens, who ask nothing except that they be permitted to tie themselves to us indissolubly, and share our common responsibilities and perils?

To those who doubt that Hawaii could ever go Communist because of its high standard of living, I point to Czechoslovakia, which enjoyed one of Europe's highest. The West pushed the Czechs into the Communist orbit. Not in 1948, when it became a final reality in fact, but 10 years earlier when, in the disgrace that was Munich, the West reneged on its moral obligations and gave the Czechs to a rapacious Hitler in an attempt to buy peace in our time.

Are we so rich in resources, and in people, that we can afford to turn our backs upon a half million Americans, and literally invite Communist ideology to make the most of our wanton failure to accord them that basic entitlement of all Americans: the right to participate in their government at both local and national levels? Is not any measure which alleviates only part of this abuse inadequate, precisely because it still leaves communism with ground to stand on? Why should we give our mortal enemy any ground, when it is completely within our power to deny it to him?

But I believe the danger—and the opportunity—represented by Hawaii extends far beyond the borders of those lovely islands.

THREE-FOURTHS NON-WESTERN

How can we best impress the uncommitted leaders of mass opinion in Asia, Africa, and Latin America that our way is the best way for them to follow, if they would give their peoples both the material things and the dignity they seek? Especially the latter benefit, for it is that which they crave with greatest intensity.

Can this be done by impressing upon Hawaii's people—three-fourths of whom are of Oriental or Polynesian descent—an inferior and debasing political form which they have clearly shown they do not want?

Or could we better sell them our way by giving the Hawaiians the equality—and hence the dignity—possible only in statehood.

Or, to put it more positively, what single act within our power of immediate commission would create such a profoundly favorable impression upon the entire world as that of admitting to full membership in the American Union an area populated principally by men bearing names like Nomura Kaleo, and Ching?

Anyone inclined to to question the deep impression such an action would have upon the leadership of other areas need only ask returning travelers of discernment about the impact of the Supreme Court decision outlawing public school segregation. Is it not in battles such as these that the ideological war will, in Lincoln's word, "be nobly won—or meanly lost"?

Nor would the benefits to America cease with Hawaii's admission. In time, men with Oriental and Polynesian names and faces would, rightfully, occupy Senate and House seats. And each time such men took the floor to debate the issues of the day, they would, by their very presence there, testify to the truth that our way was a way all men could follow with dignity—and that neither the color of one's skin, nor the country of one's ancestors, was an impenetrable barrier to full American citizenship in fact.

TO CONTINUE U.S. REVOLUTION

And whenever such men distinguished themselves in service to the Nation—as I am confident they would—we would earn yet another dividend on our investment: their accomplishments would help us mainland Americans understand that whereas God had chosen to give them names and faces dissimilar to our own, He did not differentiate when He gave them their minds and their hearts. Thus would Hawaii help us draw a step closer to the Kingdom of God on Earth.

I have been greatly impressed with yet another report brought back from the Orient by studious travelers. Two prominent men of letters, recently returned, tell me that a reservoir of good will toward America and its institutions yet remains, despite our many blunders of recent years. I was surprised to learn that the writings of Paine, Franklin, Madison, Jefferson and Lincoln are still widely read and revered by the Orient's leaders who have not yet succumbed to communism. Yes, the American political beliefs which inspired Lafayette, Bolivar and San Martin are still valid—if only we Americans would have the faith to stand by the principles which gave initial vitality to our own Nation.

May our eyes be opened to the realization that it was Americans—not Russians—who first set into motion the great political revolution the world is still undergoing. Ours preceded theirs by almost 150 years, and we have but permitted them to seize the initiative by our own default.

May we also have the vision to see that we, and our kind of civilization, will survive only if we conduct our affairs in keeping with God's laws. Is it not mockery for us to pretend to be good Christians—or Jews—and to openly defy those laws governing the brotherhood of man?

On the face of the great seal of Hawaii there is this inscription: "Ua mau ke ea o ka aina i ka pono." Translated, it reads: "The life of a land and its people is preserved by righteousness." These words were those of Hawaii's Kamehameha III, in 1843. Yet there are some Americans today who have the effrontery to call the Hawaiians primitive.

WHO IS THE DREAMER?

Because I share with Clarence Streit his conviction that neither armament, nor armies, nor treaties, nor dollars can provide us with enduring security from communism, I also hold his view that our own salvation and that of other freemen lies in Federal political and economic amalgamation with those who share our fundamental traditions and political beliefs.

Over the years friends to whom I have expressed these views sometimes smiled and said: "You are an idealist, a dreamer." Perhaps I am. But I don't think so. Rather am I persuaded that they are dreamers who continue to place their faith in such things as treaties, pacts, and armies—which all history shows have never been adequate to preserve the peace—or a nation.

Nor need we look beyond our own lifetime to realize the complete ineffectuality of anything less than union with those who subscribe to, and practice, our fundamental political and moral philosophies. The roads which lead to every major war are littered with the wreckage of treaties which were honored only so long as they appeared to serve the best interests of their several signatories. For that matter, need we look beyond the Korean war?

Have we considered the possibility—to cite but one—that Germany, once the aged Adenauer passes on, could well come under the control of irresponsible leaders who might transfer the allegiance of that new army to the Soviets, in payment for the reunification of all Germany—the prize all Germans want most passionately?

Ten years ago—and less—we believed the atomic bomb would give us security. Today the conviction is dawning that, instead, we may have created a Frankenstein. I do not mean to say that we should not have done so—for under the circumstances then prevailing we probably had no choice but to proceed with its development; I merely wish to point out our growing disillusionment in it as a vehicle which will guarantee our security.

And even the most sanguine no longer expect the United Nations to accomplish this for us. It cannot, for the reason that only we can provide for our own security—and this we can do only by keeping ourselves morally, as well as physically, strong, in addition to recognizing that necessity (wholly aside from wisdom) requires that we grow.

It is, I believe, tragically unfortunate that most Americans look upon our national growth cycle as having been completed, now that we span the continent. This cannot

be—for then the natural order of things would ordain that we have already begun to die. What a great pity that most living Americans have never stopped to consider the extent to which our national greatness is due to our forefathers' recognition of the wisdom of providing for an ever-expanding nation. For it is a fundamental natural law that all things that have attained their ultimate ripeness have, in reality, begun to die.

I do not pretend to know the date of the point of no return—when Communist expansion will have progressed to that degree after which it would be futile for us to try to effect an amalgamation with other peoples who think and live as we do. It may be 50 or 25 years hence; perhaps it only 10—or less. But of this I am sure:

When the deadline for such action does arrive it is essential that the American mind shall, in the interim, have been conditioned to see the practicability of consolidating with lands and peoples who, though separated from us by thousands of miles of ocean, do share our essential beliefs.

What better way to accomplish this indoctrination than by the example of a successfully functioning State of Hawaii?

ATLANTIC UNION HERALD

If Hawaii, though separated from its sister States by 2,000 miles of ocean and populated largely by a people descended from different racial stocks than those who people our continental States, presents at the time of decision—a record of successful integration with our mainland States, how, then, can there remain reasonable doubt about the feasibility of political union with Canadians, Australians, Britons, or, for that matter, with any freeman who believes in—and practice—the same basic freedoms we hold dear?

I have always considered the Hawaiian bill one of the most vital pieces of legislation ever to come before Congress. The real significance of little Hawaii—to the United States and to the entire free world—is out of all proportion to its actual size. Statehood will become a reality only when Hawaii's friends fight for it with an uncompromising zeal which exceeds that which its opponents have thus far expended. Statehood for Hawaii is most decidedly in keeping with the best interests of Hawaii, the United States, and of freemen everywhere.

What Will Congress Do?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my remarks to the Greater Lawrence Chamber of Commerce, at Lawrence, Mass., on January 16, 1959:

WHAT WILL CONGRESS DO?

(Preview of 1st sess., 86th Cong., for Greater Lawrence Chamber of Commerce, Friday, January 16, 1959, Yankee Doodle Restaurant)

Greetings, the 1st session of the 86th Congress went to work on January 7.

Thousands of bills will be introduced.

Within the next 6 or 7 months, about 1,000 will be enacted into law. Some will affect, directly or indirectly, every inhabitant of the United States and its Territories. A few will have some influence on the economies and the peoples of other nations.

A hundred or more private bills concerning immigration cases and claims against the Government will touch upon the lives of separate individuals.

The Congress is composed of the U.S. Senate and the U.S. House of Representatives. On some issues, their views will coincide; on others they will differ. Within each Chamber, and within each political party, there are different attitudes on social and economic problems. Out of this representative variety, the final bill that is enacted into law usually reflects adjustment and compromise.

In trying to estimate what Congress is likely to do, I shall restrict myself to the House of Representatives and the influence of its sizable Democratic majority.

In that context, I expect somewhat larger appropriations than those recommended by the President in his budget for the fiscal year of 1960 that begins on July 1, 1959.

Last year at this time, the Congress was worried by the deepening recession, and by the scientific breakthroughs achieved by Soviet Russia with their serious military, economic, and psychological challenge to the security of the free world.

The legislation passed in 1958 was shaped by our efforts to overcome these problems.

All of us are encouraged by the fact that the recession is largely over, but there is no letup in the Communist drive to master the space that surrounds the earth.

Although we have been roused from our complacency, and are making efforts to achieve leadership in the space age, there is widespread concern that the administration is not putting enough emphasis on this program.

The latest success of the Russians is a sober reminder that we are up against the most formidable competition; in education, industrial production, international trade, and in scientific progress.

We are trying to close the "missile gap"—which means that the Russians are presently ahead of us on this crucial frontier.

The plain fact is that if it comes to a choice between a balanced budget or an unbalanced budget that will not curtail our defense needs, there is no choice. We cannot afford to fall behind.

Not that the health and soundness of our domestic economy can be ignored. This is the foundation upon which all else depends. But economic activity is on the rise which means that Federal revenues will increase. If, during the fiscal year that starts on July 1, we realize a prosperity greater than we anticipate at the moment, expenditures somewhat larger than those recommended by the President can be met by the increase in Federal revenues. Even if this should not happen, we cannot gamble with national defense just for the sake of a balanced budget.

Some changes in the present tax laws are probable.

Among these are faster depreciation on capital investment to offset increasing obsolescence and inflation; revision of the rules on corporate distributions and adjustments, estates and trusts, and partnerships. There will be a move to establish a higher tax formula for life insurance companies. Other Congressmen will push legislation permitting deductions for funds put aside by the self-employed for their retirement.

Powerful lobbies will block the proposed reduction in the 27.5 oil and gas depletion allowance.

There will be proposals to raise personal income tax exemptions and to hike parcel post rates. Only the latter is apt to go through.

There is much work to be done in plugging tax loopholes and in spreading the burden in a more equitable manner, but it does not seem possible that any general revision of the Internal Revenue Code can become effective before 1961.

Some Congressmen want lower interest rates on FHA and VA housing. Others believe that an increase of interest rates on mortgages insured under Government programs is needed in order to make these mortgages more appealing to investors. The President, through his veto power, may be the determining factor on this issue.

It is likely that the administration and the Congress will both approve a higher minimum wage, and some extension of social security. Although a formula to provide hospital and medical care for those on old-age pension will be enacted into law at some future date, I doubt if a satisfactory plan can be worked out at this session.

In the area of labor legislation, the Kennedy-Ives bill to require financial accounting by unions, and the free election of union officers, is almost certain to prevail.

The problem of transportation, especially the transportation of people, is becoming more difficult every day. It is not simply the question of enabling people to travel from their homes to their places of employment in the morning, and to return in the late afternoon. In our complex society, transportation is the circulation system that sustains the life of a modern economy.

The impact of the automobile is greater than we realize, forcing crowded cities to accommodate themselves to it, and having a profound effect upon other modes of transportation.

I think all of us have been startled sooner or later by the personal observation that there are more cars on the streets than there are pedestrians on the sidewalks.

Railroads and bus lines and the merchants on our main streets have been hurt by this explosive development in the numbers and in the use of the private automobile with its resulting complications.

Responding to these pressures, a previous Congress had authorized a Federal program to relieve traffic congestion by the construction of an expanded interstate highway system.

Due to rising costs, Congress may reluctantly approve some but not all of the 1½-cent increase in the gasoline tax to be requested by the President.

Further aid to railroads, steamship subsidies, and more money for airport improvements are necessary because our economy cannot grow without a modern and efficient transportation system, public as well as private, to meet its demands. In the background but looming large is the need of facilities-in-being for emergency service to national security and civil defense.

One of the paradoxes of our national life is the farm problem or what to do with our agricultural surpluses. Various experiments over a whole generation have failed to solve it. We want to keep the farmers in business because we have to. That means we cannot dump their surpluses on the market to send the prices they receive for their products so low that they cannot earn a living by farming. At the same time, we will not jack up the price of food through extreme price supports for the farmers at the expense of the consumers. This is a very complex problem but I expect that this session of the Congress will be moderate in designing a farm aid program.

On the domestic issues that do not involve spending, the struggle over civil rights is most controversial.

This is an emotional issue on both sides. Where force will not achieve the understanding, and the cooperation, that are necessary for a solution. A law to make church and school bombings a Federal crime will be passed, for no self-respecting American, North or South, no matter what his religious faith or his racial origin, will stand for such vicious opposition to the rights of others. Steps will be taken to protect the voting rights of Negroes and other minority

groups. Congress, however, will not insist on school integration, leaving to the States the responsibility of working out the gradual adjustments under the stimulus of an enlightened public opinion.

Different sections of our country have economic interests which are of major importance to them, but not to other areas. The Middle West believes that aid to agriculture should have top priority. The Rocky Mountain States, and their representatives, work hard to assist the mining industry. Texas, Oklahoma, and California are alert in promoting legislation that will benefit the development of their oil resources.

We, in New England, are mainly concerned with the problems of our textile and fishing industries, striving to protect them from the increasing dangers of foreign competition.

Although we believe in the principle of reciprocal trade, knowing that an increase in commerce among the nations on a fairly competitive basis results in shared progress, we are aware that our textile and fishing industries are being priced out of the domestic market by low-cost imports from abroad. This is not reciprocal trade in the genuine meaning of the term. It is a form of ruthless horsetrading to open up foreign markets for selected American industries, while opening up American markets to foreign products by sacrificing a few of our basic industries.

The increasing imports of foreign textiles and foreign fish products is a threat to the New England economy, and particularly that of Massachusetts.

In the present session of the Congress, the New England delegation will have to fight persistently, against formidable odds, to win some measure of protection for these embattled industries. But we must not stop with defensive measures. A positive and affirmative program of aid to these industries, is also required to improve their competitive position.

The decline of the once dominant New England textile industry has left a gap which has been hard to fill.

The depressed areas, or labor-surplus areas, have made valiant efforts to attract new and diversified industries as replacements for the ones they have lost.

They have accomplished much, but it is apparent that they cannot do the whole job on their own.

Those of us who first proposed Federal legislation to assist in the solution of this new problem which will arise time and again in our changing economy, were opposed by those who resist any idea that is new simply because it is new.

But the public has been in a more receptive mood toward those proposals which are designed to meet problems instead of avoiding them.

At the risk of injecting a political note, I would remind you of the Senator who was defeated last year and who blamed the President's veto of the area redevelopment bill for the switch in voter sentiment.

With the influx of new Congressmen, reflecting public discontent with standpat policies, I believe that a bill that will provide Federal loans and minor grants to help redevelop labor-surplus areas will be passed this year, even if it should have to overcome another veto.

Related to this, and to slum clearance and urban renewal, and housing, is legislation to help local governments in the development of community facilities such as water systems, sewers, streets, and schools. With the dislocations resulting from industrial, military, and population shifts many communities are finding it difficult to provide or maintain adequate facilities. The President is certain to oppose this type of legislation. I would say that its prospects are no better than 50–50.

The United States is spending substantial sums in the development of atomic weapons. For reasons of security, the details are not made available to the public.

But nuclear energy, applied to peaceful purposes, holds great promise for progress in many fields. In the 13 years since the discovery of this vast potential, the Congress has repeatedly asked why greater progress in the application of atomic power to generate electricity for industrial and household use has not been realized.

This is an important issue, and a sensitive one, that will not make the headlines.

In the background, however, is the fear on the part of the private utilities that the Government may dominate development of the atom.

At last they are making a concerted effort to prove that they can do the job better than the Government. In the last 4 years they have invested more than $500 million on atomic projects.

The Congress believes that more can and should be done, either through Government assistance or through pilot plants built and operated by the Government. The former method is preferred. The Congress is determined to spur the development of atomic power for peaceful purposes and will appropriate funds for that objective.

The technical problems to be solved before atomic energy can compete with the fossil fuels are difficult, but the advantages to be reaped are even greater. Congress wants to accelerate the program.

The economic recovery of Western Europe is an encouraging fact that has helped to strengthen the free world's position. This has been accomplished, in part, by the assistance we have given to them. Now that their need is much less, economic aid to them wil be reduced. Some of our South American neighbors, however, are having difficulties, and it may be necessary to bolster their economies.

Under the Small Business Investment Act of 1958, Congress recognized the special problems which handicap small- and medium-sized firms. Under the Johnson-Patman Act it is setting up a system whereby they will be able to obtain equity and long-term debt financing, heretofore unavailable, from any governmental lending authority, or through financial institutions.

As Representative WRIGHT PATMAN, coauthor of the bill, told the House, this legislation has two goals:

"First, the individual investment decisions should not be made by a bureau in Washington, but by local businessmen who will be backing their decisions with substantial amounts of their own money.

"The second goal of the system is that it should provide for private capital to come in and take over complete ownership and operation of the system."

The Small Business Committee, and the Committee on Banking and Currency of the House will make investigations and studies of further practical aids to small business. It is possible that an expanded aid program, moderate in scale, may come up for a vote at this session.

There are indications that the administration will try to curtail the program of veterans' benefits, but I am certain that it will not succeed.

There are sincere differences of opinion within the Congress. To draw the line between that which is necessary for the Nation and that which is merely desirable is not as easy as it may sound. In making up our minds, we cannot ignore political considerations, or the necessity of being guided by an informed public opinion.

There is no official within the administration, and no Member of Congress who can accurately forsee what the situation will be, as we come up to the presidential and congressional campaigns of 1960.

The administration is shaping its policies in the belief that a balanced budget will insure prosperity and peace, and will be approved by the electorate in 1960.

The Congress, that is, a majority of its Members, is not against a balanced budget. After taking stock of conditions, both at home and abroad, most Members will agree that we cannot afford the risk of a near budget that would cramp our progress and imperil our security.

Lip service to education is not enough.

When our survival depends more and more on scientific and technological skills, what was good enough in the past is not sufficient today.

A major effort is required to expand and improve our educational system.

New classrooms, laboratories, research facilities, and scholarships must be provided. We must raise the prestige, the incentives, and the rewards for the teaching profession commensurate with our country's urgent need for the very best.

Congress means business on this compelling issue.

Dozens of bills have already been introduced dealing exclusively with aids to education. We are disturbed by the fact that many American high school students would probably flunk a Russian high school examination in mathematics, and in the sciences. We intend to stimulate and assist in the building of an improved educational system that will not only develop the mental capacities of our youth, but will teach them to appreciate as never before, the rights and responsibilities of freedom.

There are no escalators to progress and security.

In this fast changing world, individuals as well as nations need ever more knowledge and better equipment to prevail over the deadly challenge of communism.

Last year we were facing up to the economic recession and to the serious fact that we were behind the Russians in missile development

We are leaving the recession behind us as there are definite signs of economic recovery in January 1959.

But we are still behind the Soviet in rocket technology and in space exploration.

As a people we have always stressed the value of competition, but in this critical area we do not seem to realize what is at stake.

One or two or six months from now we will be thrilled by the news of a U.S. success in the pioneering of space, and we will bask in self-satisfaction until the Russians rocket a man into space far beyond the earth and bring him back.

Then we will look for someone to blame.

Not realizing that complacency is our worst enemy.

We cannot stand still, content with the familiar routines because neither life nor history will mark time.

We have only to look at the experience of our own community to learn that we must keep up with progress. For generations, textiles was the dominant industry. We had become so adjusted to it that we could not foresee the day when the economic base of greater Lawrence would be entirely different, yet within a few years the pattern has been completely altered. The old textile giants have gone; and are being replaced by young and vigorous and growing industries.

It is so with our Nation.

The population and its needs are expanding.

And our responsibilities as the leader of the free world are increasing.

To meet these the attitudes, the instruments, and the yardsticks of 1939—or 1929—are obsolete.

The great virtue of freedom is its flexibility.

We have seen this at work in American industry which is never content with things as they are.

In 1940, nuclear energy was only a mathematical equation on the blackboards of the scientists.

In 1956, Americans would laugh at the suggestion that man would soon be able to send rockets hundreds of thousands of miles into space.

In 1959 both are accomplished facts.

It is my opinion that the administration is reluctant to make the hard decisions, and to exert the leadership that is required to provide for genuine progress and security.

This is human but unrealistic.

I would like to tell you that the budget is going to be slashed by billions, and that a generous tax reduction will be approved soon, and overwhelmingly. This is the news that we would prefer to hear.

But, to quote the President himself in his recent state of the Union message, we are confronted with a question which is "as old as history," whether a government based upon liberty can endure when it is ceaselessly challenged by a dictatorship with growing economic and military power.

The Congress is not satisfied with the current rate of development in our missile and space exploration programs.

There is widespread feeling among the members that we are not doing enough.

Therefore, on this issue which will overshadow all others, the Congress will vote larger appropriations than the President deems necessary, and will insist on a major and sustained program that will regain and hold the lead for the United States.

Even though there are many new and liberal Members in the House of Representatives, I do not anticipate a runaway spending spree. Under the knowing and experienced guidance of Speaker SAM RAYBURN, and Majority Leader JOHN MCCORMACK, I believe that the first session will legislate a program that will basically suit the Nation's needs.

It will not be a timid session nor a reckless one.

But the Congress will, in the year of 1959—and to the best of its ability—do those things which must be done under the mandate calling for the up-to-date programs and the courageous leadership that it received from the people last November.

For it is aware that a big, and growing, and changing nation like ours must not fall behind the pace of history as it is being made today.

Honoring Civil Service Employees

EXTENSION OF REMARKS
OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 20, 1959

Mr. YARBOROUGH. Mr. President, the tasks and services performed by persons in the civil service of the United States are many and varied and are quite often taken for granted. They should not be.

Civil service workers, the vast majority of them with real dedication, perform vital services for this country—both at home and abroad—in fields varying from standardizing weights and measures to atomic energy programs to teaching the children of our service men and women.

Before civil service, Government employment was a jumble of jobs under the spoils system. With each change of administration, many thousands of new, inexperienced, and frequently inefficient, people went on Government payrolls by political pull and pressure, and not by performance. Many of them had no real ability or concern for doing a good job. But civil service changed that deplorable situation almost overnight. Good service and qualifications to do the job have replaced cunning political pull as the criterion for Government employment.

This year, the Federal civil service begins its 76th year. This means a history of 75 years of devoted service to our Nation. These people seldom come to public attention. They are the workers who make it possible for our Government to function, they are the voices on the radio who speak from control towers and radar trailers to guide our aircraft traffic safely to the destination, they are the people who provide weather information which all of us use.

Others develop flood control measures and research into the natural sciences. They perform a great many services which make our Nation the finest place in which to live on this globe.

Before they can even qualify for a job, civil service workers must pass a difficult examination.

As an indication of esteem and appreciation for these people who perform so many needed jobs with so little recognition, I request unanimous consent to have printed in the Appendix of the RECORD an article by Randolph J. Jouno which appeared in the Christian Science Monitor for Friday, January 2, 1959, under the heading "Civil Service Marks 75-Year Devoted Job."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIVIL SERVICE MARKS 75-YEAR DEVOTED JOB

(By Randolph J. Jouno)

The Federal civil service in 1958 celebrated its 75th year. Civic groups held luncheons, dinners, banquets, and receptions in many communities. Sixty outstanding Federal employees were named Civil Servants of the Year. Twenty-six governors and hundreds of mayors issued anniversary proclamations. Congress and many State legislatures commemorated the occasion.

Jobs in the Federal service run the occupational index from accountant to zoologist. It has the same kinds of positions that exist in private industry and the professions and a few others peculiar to government.

Federal employees carry the mail, print the mint money, control narcotics, regulate immigration, collect taxes, conserve and renew land, forecast the weather, maintain national parks and forests, insure orderly interstate commerce, prevent adulteration of food and drugs, prevent the sale of contaminated meat, maintain public health services, and protect the rights of inventors and authors.

DIVERSE DUTIES

The Federal workers operate the social security and atomic energy programs, standardize weights and measures, prevent false advertising, develop flood-control measures, engage in research in the natural sciences, and do hundreds of other services demanded by the American people.

It is an old American custom to berate Federal employees, but strangely enough the scoffer when questioned is usually unable to identify specific individuals with whom he finds fault. His friends and neighbors in the Federal service are found intelligent and capable.

Federal employees have chosen Government employment in much the same way employees in private industry have chosen their careers. The major difference is that the Federal employee has to take a stiff examination to prove his efficiency. Furthermore, he must be among the highest in the examination results. Many Federal employees have been attracted to Government service because of the objectivity in seelction—solely on merit without regard to politics, race, creed, or religion.

Many Government employees see in the public nature of their employment a genuine opportunity to serve their fellow man. Their idealism is sometimes similar to that of those in the ministry or teaching. Salary often is a secondary consideration.

SALARY FROM TAXES

The civil service employee, receives his salary from taxes. If only from a selfish point of view, the taxpayer should be vitally concerned in seeing that the Government gets its fair share of the best available workers.

The merit system does not end with appointments. To maintain an efficient, satisfied work force, the Federal Government needs to give its employees the benefits of modern personnel administration, that is fair salaries, an equitable promotion system, training for improvement, protection against unjust removals, incentive awards, and reasonable retirement benefits.

In addition to providing stability of Government and continuity of functions, Federal employees are constantly on the lookout for opportunities to save money for the taxpayer. Last year Federal employees saved the taxpayer $169,885,140. The total number of suggestions offered was 322,000, of which 86,000 were adopted.

SPOILS SYSTEM TRAGEDY

The assassination of a President jolted the Nation into establishing a merit system. The murder on July 2, 1881, of President Garfield, by Charles Guiteau, a disappointed officeseeker, focused public attention on the evils of the political spoils system, then practically the sole basis for selection to Federal jobs at all levels. Under this system appointments were given those who had contributed the most service to the victorious political party.

The spoils system had not always been the vogue. Washington insisted upon appointment by merit, although he had no formal machinery to insure appointment of the best qualified. The Four-Year Tenure of Office Act passed in 1820 limited the terms of certain officers like district attorneys and customs collectors and added impetus to the growing acceptance of the concept.

Civil service agitation after the Civil War prompted Congress and President Grant to set up in 1871 the first Civil Service Commission. Unfortunately it lapsed in 1875 due to lack of funds. Civil service reform was an issue in the fall elections of 1882, the first election after Garfield's assassination. In a number of congressional districts this issue alone decided the outcome. As soon as Congress met, civil service reform was given priority. Senator George H. Pendleton, of Ohio, wrote the law under which the Federal Civil Service now operates. President Arthur signed the bill January 16, 1883.

MERIT SYSTEM ACCENTED

Then the law covered only 10 percent of the jobs in the Federal Government. Now 86 percent of all Federal employees are in competitive civil service. Of those employees located in continental United States, 91 percent are classified.

Now practically no one seriously questions the civil service principle. The American public takes the system for granted. President Theodore Roosevelt expressed it this

way: "I am inclined more and more to feel that the observance in letter and spirit of the civil service law is the first requisite in obtaining clean, decent, efficient Government service in any branch or bureau of the Government."

President Eisenhower said, "Nowhere in the world have I met more efficiency, more dedication, more readiness to put in hours without counting them on the clock * * * than I have among the civil service."

ROLLS GEARED TO NEED

Elected and politically appointed officials are grateful too for the relief they enjoy from the lessening of patronage pressure. Top businessmen called into the high policy posts of Government, such as heads of departments, soon become impressed with the integrity, loyalty, and ability of the career civil servants who must carry the brunt of the day-to-day work of the Government while political heads come and go. Many of them have issued public statements of praise.

The number of employees varies with the amount of work the Government has to do. During World War II, Government employment rose to 3,780,000. After the war it dropped to fewer than 2 million. Korea caused another increase. Now there are 2,339,000. Big government is the product of international unrest, enormous and continuing increases in population, an increasingly complex economy, and the demand of the public for services.

It sometimes is said that it is impossible to separate a civil service employee. The number of separations last year for cause, 13,000, belies that statement. Actually, Federal employees to hold their jobs must adhere to very high standards of conduct. Like the physician with his Hippocratic oath, the Federal employee has his creed of service:

"We as members of the civil service accept our obligation and our opportunity to serve the American people well and in full measure, doing our best to further the free and democratic institutions of our country. We believe it our duty to carry out loyally the will of the people as expressed in our laws; serve the public with fairness, courtesy, integrity, and understanding; help improve the efficiency, economy, and effectiveness of our work; and thus do our part in performing the great services of the Government."

McCormack Predicts Strong Program by Democratic Congress and Democratic Sweep in 1960

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1959

Mr. LANE. Mr. Speaker, House Majority Leader JOHN W. MCCORMACK, when interviewed by John Harris, of the Boston Globe, expressed complete confidence that the big Democratic majority in the 86th Congress will legislate a sound and progressive program. With this record, the party will go before the people from a stronger position than ever before. Actually, the wealth of available talent to choose from is unprecedented. Senator JOHN F. KENNEDY, of Massachusetts, is the leading contender. In any case, the Democrats are sure to elect their standard bearer to the Presidency in 1960.

Mr. MCCORMACK, whose knowledge of major issues and keen sense of public opinion trends command respectful attention, believes that the people are with the Democrats all the way.

Summing up, the "field general" of the House Democrats said:

I look for an outstanding record, and look forward to 1960 to a complete Democratic victory, including the White House and Congress.

As the 1st session of the 86th Congress faces up to its responsibilities, I believe that we should read the views of our majority leader. Therefore, under unanimous consent, I insert in the RECORD the following article from the January 4, 1959, issue of the Boston Sunday Globe:

DEMOCRATIC HOUSE LEADER MCCORMACK'S PREDICTIONS—WHAT NEXT 2 YEARS WILL BRING: NO SPLIT IN DEMOCRATIC PARTY; MRS. ROOSEVELT'S ROADBLOCK WON'T STOP KENNEDY; NIXON TO GET NOMINATION, LOSE ELECTION

(By John Harris)

The topheavy 2-to-1 majority the Democrats have won in the new Congress will not lead to unwieldiness, said Congressman JOHN W. MCCORMACK, but will mean Speaker RAYBURN and I will have a workable majority with no worry, as in the past, about coalitions between Republican and 25 to 40 Democrats, mostly from the South.

The veteran lawmaker, majority leader in the National House of Representatives, made these other highlight observations in the course of an interview on the incoming Congress, its relations with the White House and potential effect on the 1960 election:

"Of the presidential candidates, I think Senator JOHN F. KENNEDY is in the best position at the present time. The best evidence is that Mrs. Roosevelt's recent statement was an attempt to throw a roadblock in his way, but I do not think that was accomplished.

"The Berlin situation is very disturbing because of the geographical location of Berlin, isolated from the rest of the free world. But I do not conceive of the Kremlin being willing to go to general war over Berlin.

"The new Democrats elected to Congress are practically all of them progressive-minded. So the results of the last election were a good thing for the country, which is stronger and our people best served when progressive leadership is in control of the Government."

Does Congressman MCCORMACK feel that the Democratic Party will be split in 1960's national convention by the civil rights issues which have become prominent, tangles in the new Congress, with the Senate divided over the filibuster rule change, and the House confronted with the disputed seating of a segregationist from Little Rock?

"I don't expect," said MCCORMACK, "that there will be any severe difficulty or tension in the 1960 National Democratic Convention because there is a civil rights bill on the statute books.

"It is more difficult to create a split when there is a law on the statute books than when there is not. The civil rights bill was passed by the 85th Congress, a Democratically controlled Congress, the first time any such legislation passed in about 90 years.

"Even with the division in the Democratic Party on this question, a Democratic Congress did pass this historic bill. It is interesting to note that only six years ago we had a Republican Congress and President Eisenhower, a Republican, was in the White House, and the Republicans did not even report a civil rights bill out of committee in either House.

"This makes the achievement of the 85th Democratic Congress all the more significant.

"Having been chairman of the platform committee at three of the last four National Democratic Conventions, I think by hard experience I'm in a position to form an opinion on this matter.

"I do not look for any trouble—or party split—in the 1960 convention. There'll be some talk about third party and an impending split, but it will only be interesting reading in the newspapers.

"In my opinion there is no such danger. The Democratic Party will go into the 1960 election united."

With the increased progressive membership from the northern section of the nation, and particularly from the West, what legislation does Congressman MCCORMACK foresee the new Congress will enact?

"There will be housing legislation, a depressed area bill, an increase in minimum wages anywhere up to $1.25 an hour, an acceleration of the interstate highway program, modernization of airports to make them safer for passengers in the coming jet age, further consideration of amendments to the Social Security Act such as increasing the amount that can be earned after retirement, and, if the recession grows worse, there will be legislation of an antirecession nature.

"The Democratic Party above all stands for strong national defense and a firm foreign policy. We must recognize that the Communist challenge of world revolution and domination is stronger than in the past and we must be as determined as ever. We can never permit ourselves to get in a position where we lose our retaliatory power."

Will the Democratically controlled Congress exceed the pared down $77 billion budget proposed by President Eisenhower?

"If we feel it is in the interest of national security we will do so as in the 85th Congress. Then the President wanted an Army of 870,000 and we appropriated for an Army of 900,000.

"He requested 175,000 marines; we appropriated for 200,000. The President was for reducing the Armed Forces.

"The Democratic Congress felt in the world today that was too great a risk to take. I still feel that way."

What can the Congress do about a stronger foreign policy?

"The important thing is that we do not have a shifting from day to day, week to week on foreign policy because that is a sign of weakness and uncertain leadership. The only thing the Congress can do is to mold public opinion. We've certainly done that in the past. We intend to do so in the future.

"Congress, under the Constitution, cannot make foreign policy. The President is the sole repository in the field of foreign policy as he is also Commander in Chief of the Armed Forces. But Congress can criticize and propose, and the Democrat Congress will do this.

"Congress will also cooperate on a bipartisan basis with the President although there has been little evidence of real bipartisan action on the part of President Eisenhower because the Democratic leadership in Congress has not been consulted before policy is made.

"In the interest of the country, the President would be following a wise course if he consulted Democratic leadership before major decisions are made. This does not mean he has to accept our opinion, but on the other hand we might be able to make excellent contributions and it would have a marked effect on our people and the world, for the world, free and Communist, would know there is real unity."

What about cooperation between the White House and Capitol Hill, now that the Democrats rule the Congress by a 2-to-1 margin?

"No difficulty on real cooperation on the part of the Democrats, because we've been giving cooperation to President Eisenhower under painful conditions.

"The matter of real cooperation rests with President Eisenhower and the Republicans. The interest of the country is greater than any political party."

Looking forward to 1960, McCormack said:

"From the Democratic angle the issues of the 1960 election will be made by the 86th Democratically controlled Congress. It will be the basis for us going before the people. I look for an outstanding record, and look forward to 1960 to a complete Democratic victory, including the White House and Congress."

On the subject of presidential contenders:

"There are a number: Senator KENNEDY, Senator SYMINGTON, Senator HUMPHREY, Senator JOHNSON, Governor Williams, Governor Meyner, Gov. Pat Brown if he has the thought in mind, Adlai Stevenson, several others.

"The Democrats have a wide field of qualified candidates to pick from.

"The Republican Party is in the opposite position. In the first place they are badly split on basic questions. The old guard Republicans are groping out of the underground and they have great strength in their national convention.

"The Republicans have only Vice President NIXON and Governor Rockefeller.

"I do not think Vice President NIXON will make a strong candidate on the voter level. He has powerful opposition in his own party and has lost prestige with the people.

"He's trying to flirt with both progressives and standpatters. That's difficult to do, particularly on the presidential level.

"The progressive-minded people do not like his policies.

"On the other hand the standpatters do not like Rockefeller. There is a bad schism in the Republican Party right across the board. This does not exist in the Democratic Party. Furthermore, President Eisenhower's influence is waning, and his strength has been personal rather than political. He has shown inability to transmit his strength to other Republicans.

"In my opinion NIXON will get the nomination because he has practical control of the party machinery, and the Republicans have no one else to select.

"I think Rockefeller is too smart to be a candidate in 1960 with the political conditions existing then, and he'll wait for a later date."

A Large Section of Hudspeth County, Tex., Is Blacked Out—It Needs Light

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 20, 1959

Mr. YARBOROUGH. Mr. President, a large section of Hudspeth County, Tex., has no electric power. These families must still rely on the methods of lighting in use before Edison invented the incandescent lamp. These people have great need of electrical power for the variety of services it performs on the farm and in the home.

The Rio Grande Electric Cooperative, Inc., located at Brackettsville, Tex., has applied for REA loan funds to serve this area. Approval has been long delayed. The people need light and power now.

The Commissioner's Court of Hudspeth County has passed a resolution requesting that all parties responsible for the granting of REA loans be urged to hasten the approval of this application. I would like to add my voice to theirs.

The splendid accomplishments of the REA are widely known. It is my belief that these vital electrical services should be made available to this area as soon as possible.

Mr. President, in support of my statement, I request unanimous consent to have printed in the Appendix of the RECORD the resolution passed by the Commissioner's Court of Hudspeth County on January 12, 1959, at Sierra Blanca, Tex.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

"Whereas a large section of Hudspeth County, Tex., is without electric power, which is greatly needed for pumping wells, operating power tools, and many other uses including household needs; and

"Whereas application has been made to the Rural Electrification Administration for a loan to provide this section with the much needed electric power; and

"Whereas approval of this loan has been delayed on the above-mentioned section, which is section R, due to the small number of users and the distances involved: Now, therefore, be it

"Resolved by the Commissioner's Court of Hudspeth County, assembled in regular session this 12th day of January A.D. 1959, That all parties responsible for the granting of loans under the Rural Electrification Administration be urged to hasten the approval of the above-mentioned loan so that the residents of this section may be served with the much needed electric power as soon as possible."

I, Tom H. Neely, county judge of Hudspeth County, Tex., hereby certify that the above is a true and correct copy of a resolution passed and approved in open commissioner's court on Monday, January 12, 1959.

TOM H. NEELY,
County Judge, Hudspeth County, Tex.

Attest:

BERNICE M. ELDER,
County Clerk, Hudspeth County, Tex.

Horror in Cuba

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following report from Cuba by Mr. Dale Francis, columnist for Our Sunday Visitor, the national Catholic Action weekly. Mr. Francis' report appears in the January 25, 1959, edition of the newspaper.

HORROR IN CUBA

(By Dale Francis)

The story I must tell you is a story that will chill your blood with horror. It is a story that rivals the worst of the atrocity stories to come from Nazi Germany, the worst of the tales of horror to come from behind the Iron Curtain—and it happened at the very doorstep of the United States on the island of Cuba.

I must tell this story because the truth must be known. The truth must be known so that Americans can understand why the trials and executions going on now in free Cuba are necessary, why in justice criminals must be punished. It is a story that must be told so that Americans can understand why it is that Cubans were sickened by our State Department's closed eyes while murder was going on before their very eyes, why it is that an ambassador who played golf while torturers slashed the living bodies of men and women only a few miles away became a symbol of American stupidity.

This is not just a story told to me by the victorious rebel leaders. It is a story I have heard firsthand from an archbishop, from priests who have seen mutilated bodies, from people I know speak the truth.

How many have been murdered in Cuba? It is difficult to make an estimate. Only yesterday a mass grave was discovered with more than 100 bodies. But I have been told by Archbishop Enrique Perez Serantes of Santiago de Cuba that in his Province alone the murdered have already certainly totaled more than 5,000.

Understand, I am not talking about casualties in war. I am talking about cold-blooded murders of men and women, murders that have been preceded by the cruelest of tortures. Men and women who have been picked up on the street, pulled from their homes. And these 5,000 murders are only the murders in 1 of the 6 Provinces of Cuba, and even that number is but an estimate that is being raised each day as new graves are discovered.

How did you spend December 28? It was, on the church calendar, the Day of Martyrs. In Cuba for five young men of the Catholic Action it was the day of their martyrdom.

They were members of Agrupacion Catolica de Universario in Habana. We told you about this group of young men when we lived in Cuba. They came to our village to help instruct the people, pass out pamphlets; one reads the Gospel aloud in Spanish at mass during the 40 hours. There are only a few members in this select Catholic Action group.

These five were seized by the secret police after Christmas. That was the last time they were seen alive. A few days ago a priest who knew them well searched through a stack of more than 60 bodies for them. They were difficult to identify, for they had been tortured brutally. This morning mass was celebrated for these martyrs of the new Cuban freedom.

I will tell you more about these young men, their names, what they were like, in the stories to come, but now—so you will never forget it—let me tell you the story their bodies told. It is not a very different story; it was repeated thousands of times during these last 2 years in Cuba.

They were shot first of all in the arm, not once but many times, rising up from their wrists. Bullets tore through their body in nonvital places, the ears, the chin, the cheeks. Their bodies were slashed with knives in a manner too horrible to detail. And then, when they could be tortured no longer, they were given the sweet release of a bullet in the temple.

This is not something out of fiction; this is not something from behind the Iron Curtain, not a belated story from Hitler's Germany. It is the truth about Batista's Cuba, and just a few short days ago it happened.

This story is cabled from Habana. I am still gathering the truth about what has happened these last terrible years. They are things that have not yet been reported in the newspapers and magazines of the United States and they are things the people must know.

I have talked with hundreds of soldiers—country boys for the first time in Habana, conquerors who do not swagger, who are polite and quiet, who want only that there should be peace and freedom in Cuba.

I have talked with leaders of the revolution. I spent an afternoon and evening in the private office of Fidel Castro. I not only talked with him but, more enlightening, watched him talk with others, watching the parade of people coming to the hero of Cuba as he works his way through the mass of complications that come with a new government.

I have talked with the other leaders of the revolution—men like Camilo Cienfuegos, another of the Barbudos, the bearded ones, who now heads up the air, sea, land, and police forces of Habana.

I have talked with the 24-year-old youngster who is the new civilian administrator of Santiago de Cuba and I have seen in his eyes he is very old—old enough to remember the group of 34 youngsters who met to discuss ways of ending tyranny, old enough to remember not a 1 of the 34 alive but himself.

Soon I will go to Oriente. There I am going to visit scenes of the atrocities. Archbishop Enrique Perez de Antes is going to take me. One place we will go is to the village of Maffo. Every home in Maffo was leveled by Batista's henchmen.

In articles to come I must detail some of the horrors. I do not like to do this but if I do not then you will never know why it is military courts are sentencing men to die in Cuba and you might be misled, as many Americans already have been misled, into believing justice is not being done.

That justice is being done and done in a reasonable and orderly manner I can testify by one incident I witnessed a few minutes before I sat down to write this article.

I was coming from Castro's headquarters with Father Francisco Guzman, a 6-foot-3 husky, bearded, Jesuit who served as chaplain with the rebels, when two young men came rushing to him. They started thanking him for what he had done for them, telling him how right he had been.

They were four young men who joined the rebels when their brother was murdered by the secret police. They fought because they wanted to avenge their brother's death. A few days ago one of the brothers captured the man who had murdered his brother.

He did nothing to the murderer. He brought him in a prisoner for trial because he knew that a revenge murder would be wrong. The man was sentenced to death, not alone for this murder but for others, and the four brothers asked to be a part of the firing squad.

"It is not right," Father Guzman told them. "You must not ask revenge, only justice."

And so he talked them out of being on the firing squad, let the death of the murderer be a death of justice, not revenge. Now the young men were thanking him, they were deeply grateful. "You were right," one of them said, "we must not ask for anything but justice."

And in Cuba justice is at last coming. It will be a hard process and many prayers and much work is needed, but it is coming.

Relations With Latin America

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 20, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the January 8 edition of the Palm Beach Daily News.

This article, written by former U.S. Ambassador to Bolivia, David E. Kaufman, is a thoughtful and timely comment upon our Latin American relations.

While I have some views not wholly parallel with the author's, I believe that Mr. Kaufman's article warrants wider attention.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORMER AMBASSADOR DAVID E. KAUFMAN SUGGESTS ANSWER

(By David E. Kaufman)

Dr. Milton S. Eisenhower has made some excellent suggestions in his report to the President, his brother, on his trip to Central America, which followed a similar tour of South America.

Because of the recent overthrow in Cuba of President Fulgencio Batista, one of the hemisphere's few remaining dictators, that part of Dr. Eisenhower's report urging a distinction in U.S. official attitude toward dictators and democratic leaders has naturally been given wide attention.

Actually, this recommendation does not go very far. It merely urges that in dealing with the heads of Latin American countries, we have an embrace for democratic leaders and a formal handshake for dictators. In other words, warmer relations toward one than toward the other.

But this appears a rather trifling alteration in U.S. policy in Latin America when it is considered that there are now only three countries in that region ruled by dictators: Paraguay, Haiti, and the Dominican Republic.

And Dr. Eisenhower is careful to qualify his statements by emphatically opposing any nonrecognition on our part of Latin American governments that happen to be ruled by dictators.

One of the basic Latin American policies is the principle of nonintervention. If we interfered, as we did some years ago, in the government of any of the Latin American countries, just because we decided that we did not like the current president or dictator, we would be inviting trouble.

Dr. Eisenhower points out rightly that nonrecognition and noncooperation will not help another nation to achieve democracy. Cooperating with a nation's people, even through dictators, allows the United States to keep open the lines of communication.

It might be added that we have recognized plenty of dictators in other parts of the world, some on our side and some against us. That does not mean that we like them personally or their kind or rule. We are merely being practical.

Underlining the unsatisfactory state of U.S. relations with most Latin American countries are two factors: our own indifference toward that area and Latin American misunderstanding of U.S. aims and policy. The second is largely an outgrowth of the first.

The Eisenhower report recognizes these faults. The United States, he says, does not comprehend the problems of Latin America. And Latin America mistakenly assumes that our economic capacity is unlimited and that the United States fixes prices on Latin American raw material exports. Many Latin Americans think the United States is spending too much on foreign aid in Europe and Asia, while neglecting its neighbors to the south. And the charge is frequently made in South and Central America that the United States treasures freedom for itself but is indifferent to dictatorial rule in Latin America.

Dr. Eisenhower sets all these things down as misunderstandings. They are largely so, although it is not easy to convince Latin America.

To eliminate policies dangerous to European and Asiatic nations, and penny-pinching in our grants to Latin America.

To eradicate misunderstandings, Dr. Eisenhower would have each nation in the hemisphere set up a commission of distinguished citizens to work out a program under the Organization of American States; each nation assume responsibility for promoting understanding by its people; the activities of the U.S. Information Agency in Latin America increased; and the exchange of persons cultural program expanded.

These are good suggestions, but to expect that all of them, or even part of them, be speedily adopted, would be naive.

It is my own opinion, based on experience as U.S. Minister to a Latin American nation—Bolivia—and on knowledge gained since in United Nations agencies dealing with Latin American affairs, that a much simpler means is available to promote better understanding between the Americas.

That is by improved conduct of our relations with Latin American countries on the embassy level.

Our ambassadors and ministers and the members of their staffs in all the capitals of Central and South American countries should have personal knowledge of what goes on in their respective countries. They should have contact with people in and out of government. They should be able to clear up misapprehensions about our policies and promote better understanding.

The trouble is that in many cases our embassies are too far above the common level to know, or care, what is going on in the various countries. The staff members talk to each other, to attachés at other foreign embassies, to government officials and the upper classes. It does not occur to some of them ever to get close to the ordinary people or to acquaint themselves with the political opposition.

The result is the deplorable lack of information furnished by our embassies, as shown especially in the case of the countries where our Vice President was subjected to stoning and calumniation.

Strong embassy staffs, acquainted with the people of the country to which they are accredited, and able and willing to work for improved relations between them and the United States, could do more good in a few months than all the commissions could accomplish in years.

Roger W. Jones, an Outstanding Public Servant

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. HECHLER. Mr. Speaker, I desire to commend President Eisenhower for nominating to membership on the Civil Service Commission one of the outstanding career civil servants of our time, Roger W. Jones.

In the span of three-quarters of a century since the establishment of the Civil Service Commission, there have been few commissioners better qualified by training and temperament than Roger Jones. He will bring to his new job a deep dedication, broad knowledge of governmental problems, and a certain zest for accomplishment.

Nearly 20 years ago I first met Roger Jones while he was serving as administrative officer of the Bureau of the Budget in Franklin D. Roosevelt's administration. There were several qualities which immediately stood out in his approach to his work. As a public servant in the highest sense of the word, he worked by the simple code of making the engines of bureaucracy carry out the public will.

There was a phrase which Franklin D. Roosevelt's Committee on Administrative Management used in 1939 which best describes Jones, "high competence, great physical vigor and a passion for anonymity." Working in high positions for Presidents Roosevelt, Truman, and Eisenhower, he displayed a remarkable ability to serve the institution of the Presidency without regard to political considerations. His respect for and understanding of the Presidency have been invaluable assets.

Roger Jones knows how to cultivate the best and reject the worst in the wonderland of bureaucracy. He can give direction and cohesiveness to a program which might otherwise get tangled in the molasses of the redtape sea. He has an instinct for the jugular.

I do not ever remember seeing Roger Jones when his eyes were not sparkling. When vast quantities of paper moved across his desk, he always seemed to have a freshness of approach to each new problem. He was never bogged down with work and always kept those sparkling eyes on the forest while he was chopping down or replanting the trees.

In the Civil Service Commission, he will have a much tougher job which will demand greater energy and leadership than his previous tasks. Will he be able to measure up? I have watched him also in the role of teacher, and here he has shown that he also has the necessary talents to make him a great educator.

Down through the years there have been great and mediocre members of the Civil Service Commission. The mediocre ones have been those who have tilted their swivel chairs slightly backward and allowed the vast Federal bureaucracy to run them. I do not think Roger Jones will be that kind of Commissioner. I believe he will grasp the reins of leadership.

Mr. Speaker, as a West Virginia Democrat I rise to pay tribute to this Connecticut Republican. The career service and the country are fortunate to have a man like Roger W. Jones to head the Civil Service Commission.

Waste of Helium

EXTENSION OF REMARKS
OF
HON. TOBY MORRIS
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. MORRIS of Oklahoma. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following article from the January 15, 1959, issue of the Denver Post on the important subject of helium gas, by Roscoe Fleming:

WASTE OF HELIUM
(By Roscoe Fleming)

Once there was a man who paid no attention to a cut blood vessel—because it didn't bother him much, at first.

He is no longer with us.

There are times when your Uncle Samuel's policies as to natural resources remind one of that foolish man. Particularly does this seem true—and more serious by the hour—as to helium, the magic gas of the atomic age.

Our country has a world monopoly of this gas, indispensable for defense and for material development of the Nation and of the planet. Further, 90 percent of our supply is wasting. Yet, nowhere on earth, so far as we know, is there any more outside our own midcontinent gas fields. Almost all of our potential supply wastes into the air through our gas burners.

Does that make sense? Is that the long-range economic and conservation thinking which our Nation must ultimately do for survival? Are we the world prototype of the man who said "It ain't rainin' now" when asked why he didn't fix the roof?

The hard fact is that when our present supply of helium is gone, we shall not be able to find more save by straining it from the atmosphere at hundreds of thousands of times the cost we would incur by saving and storing it now.

How long, O Lord, for the people and the Congress to wake up? Will the new Congress do any better than the old? How many more chances shall we have?

A year ago an interagency committee headed by Colorado's own Hatfield Chilson made a report that should have had the ear of every American.

It said that when our midcontinent natural gas is gone, the world's helium is gone, save for a very little that the Government has been able to lay aside. It put the date for this as not beyond 1980–85.

It recommended a dozen extraction plants to be perched astride the pipelines leading from the richer helium fields.

One unit out of 12 proposed is underway. The Interior Department is building a new helium-extraction plant in the Oklahoma Panhandle, to join 4 now operative. But it will barely keep up with demand, providing no helium for storage.

This particular situation is, however, so specialized and the people have heard so little about it, that it is hard to see how a great fuss can be made. But it ought to be.

Wasting irreplaceable natural treasure is a national tragedy.

Veterans of World War I in Massachusetts Opposed to Closing of South Boston Naval Annex, Navy Regional Accounts Office, and Hingham Ammunition Depot

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement issued to the Massachusetts delegation in Congress by Department Cmdr. Melvin D. Eddy in support of the protest registered by Cmdr. Anthony D. Tieso of Barracks No. 1240, of the Boston Naval Shipyard.

The statement follows:

VETERANS OF
WORLD WAR I OF THE U.S.A.,
DEPARTMENT OF MASSACHUSETTS, INC.,
January 8, 1959.

The Honorable THOMAS J. LANE,
The House of Representatives,
Washington, D.C.:

At our regular executive meeting held on Sunday, December 28, 1958, at the Aurora Hotel, Worcester, Mass., a strong protest against the proposed closing of the South Boston Naval Annex, the Navy Regional Accounts Office, and the Hingham Ammunition Depot was registered by Comdr. Anthony D. Tieso, of barracks No. 1240. He was joined in his protest by other barracks commanders.

Speaking in behalf of barracks No. 1240, which is composed of Veterans of World War I who are employed in the Boston Naval Shipyard, Commander Tieso stated: "The proposed closing of these facilities will result in the loss of approximately 2,000 Government jobs and will weaken the defense of the New England area. It does not seem to be good business thus to increase unemployment in Massachusetts by, for example, reassigning a vessel from Boston Naval Shipyard to another yard, where skilled labor might not be readily available; nor does it seem to be good business to transfer work from the shipyard to private industry, at higher cost. We, as employees of Boston Naval Shipyard, and as taxpayers, are strongly opposed to any needless Government spending, and we are firmly committed to the policy of 'greater value for least cost.' Presently available at Boston Naval Shipyard and the South Boston Annex are all the facilities and skills necessary and desirable to undertake the building, conversion, alteration, repair, and drydocking of any ship in the fleet, with the exception of the USS *Forrestal*—and for the latter, improvements to existing facilities are awaiting approval. Should the facilities of the 1,100-foot drydock at South Boston Annex be lost, work would have to be allocated to another shipyard, or to a private shipyard, and the consequence to Boston Naval Shipyard would be a reduction in force. Boston is aware that the proposed closing of facilities is not due to inferior workmanship, inasmuch as we have been commended on the quality of our work; nor is it due to excessive costs based on value received—in this regard, we welcome comparison with other shipyards."

The executive committee of the department voted unanimously to go on record in registering a strong protest at the proposed closing of South Boston Annex, Navy Regional Accounts Office, and Hingham Ammunition Depot. Therefore, the department strongly urges all of you, our Senators and Representatives from Massachusetts, to afford this serious situation your prompt and complete attention and assistance.

Sincerely yours,

MELVIN D. EDDY,
Department Commander.

BELMONT, MASS.

The Forty-ninth Star

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. COLLIER. Mr. Speaker, now that Alaska has officially been proclaimed a

State, the American flag gets its 49th star. Just a century ago, the flag was getting its 33d star, as Oregon became the northwestern boundary of the United States.

The star symbolizes a State of immense natural wealth, breathtaking scenery, unrivaled fishing and hunting, vast mineral resources, and big tracts of farmland. The young and adventurous people of the United States have a new frontier to conquer.

To commemorate this historic event, one of my constituents has written a poem, which in sincere and simple style reflects the feeling of millions of Americans.

THE FORTY-NINTH STAR

(By Mrs. Louise Liebenow)

A 49th star in a field of blue
With bars of red and white,
A pledge of allegiance to a noble flag,
A dream of a State come true.

May we always be proud of the 49th star
As it waves in our field of blue,
United for mankind near and far
Alaska, our trust is in you.

The Saving Grace of Self-Criticism

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the Presbyterian denomination, although far from being the largest religious organization in the Nation, has provided many Presidents and other high officials of our Government, and therefore it is interesting to know what is being preached from its pulpits concerning our political life. On January 4, 1959, Dr. Theophilus M. Taylor, moderator of the newly consolidated United Presbyterian Church in the United States, speaking in the National Presbyterian Church in Washington, emphasized the ideological nature of the struggle in which we are engaged, as De Gaulle is now doing in France. He considered the Soviet Government's attack on Pasternak for his critical work, "Dr. Zhivago," and the high praise and ready acceptance of the similarly critical work, "The Ugly American," by our officialdom as indicating the comparative health and strength of our Nation. True to the Protestant heritage, he recognizes that self-criticism and the acceptance of criticism by our leaders, as distinguished from the attitude of the Kremlin dictators, prevents festering sores, the infection of which continues to increase until at least major surgery or death ensues to the political system.

The moderator dispels misgivings which arose last summer, resulting from the unfavorable press construction of a certain resolution, adopted by Presbyterian Church leaders as being pro-Communist. What was then considered as an attack upon our anti-Soviet policy of the past decade, and a recommendation for peaceful coexistence with the Soviet Communist dictatorship, can hardly be attributed to the present leader of that denomination. For Dr. Taylor's address is aimed at the Soviet Government, not its people. It is common knowledge that self-criticism by the Soviet people is encouraged, even to the point of being forced from them. It is the Communist Party leadership which insists that the totalitarian state set up by it can do no wrong; it is the dictatorship of that state which permits no criticism, by Pasternak or any other citizen or nation. So, also, Dr. Taylor is eulogizing the officials of this country when he speaks of their receptive attitude toward the American counterpart of "Dr. Zhivago."

THE SAVING GRACE OF SELF-CRITICISM

(Scripture: Romans 12: 3: "I bid every one among you not to think of himself more highly than he ought to think, but to think (of himself) with sober judgment.")

In the ideological conflict now raging between the East and the West, that factor which in the end will be decisive is the saving grace of self-criticism. This has been signalized recently by the publication and public reception in their native lands of two books, "Dr. Zhivago" and "The Ugly American." The two books do not belong in the same category at all by literary standards, for according to such standards "Dr. Zhivago" probably deserves to be ranked among the great epics of all time. However, the two books are similar in this respect—each is openly critical of the cultural and political milieu out of which it has come. Both books represent a healthy self-criticism by loyal citizens who love their native lands dearly. It is for this reason that they write as frankly as they do. In each case the authors are attempting to call the attention of their fellow citizens to weaknesses within their own systems and to the obvious need for reform at these points.

It is the reaction of the governments and of the general public in each case which is significant. In Russia where self-criticism cannot be tolerated, Louis Pasternak has been forced by none-too-subtle pressures to reject a well-deserved Nobel prize for his book, and he has been vilified in the public press, by party-inspired critics, as a traitor. In the United States "The Ugly American" has been widely and thoughtfully read by Americans in all walks of life. On a recent trip through the Far East and southern Asia I found Americans, both in and out of Government services, devouring it in its serialized form, and discussing it appreciatively even though they did not agree with what it is trying to say in every detail.

There is something fundamentally weak about any system, or individual, that cannot endure the bright light of criticism, whether it emanates from without or from within—from others or from oneself. Any social, economic, or political system that will neither criticize itself, nor permit itself to be criticized, is like a festering sore swathed in filthy rags in which the infection continues to increase until at last either major surgery, or death, ensues. In the same way, the unwillingness on the part of individuals to accept criticism is a fundamental weakness in personality which will ultimately prove to be their nemesis. It requires a magnanimous and healthy personality to stand up to, and benefit from, the vigorous criticism of others. Likewise it is a magnanimous and socially healthy nation that will accept and benefit from the criticism of its sister nations. But the test of a truly mature personality is that of rigorous self-criticism; and one can never become self-critical in the best sense until one has learned to accept the candid criticism of others.

A nation's ability to be self-critical must never be superficially confused with retrospective evaluations of a 5-year plan, nor with considered estimates of success, or nonsuccess, in winning friends and influencing people at the international level. Any national self-criticism worthy of the name must be free to investigate the moral, ethical, and spiritual foundations upon which the entire system rests. Communist nations today are rushing headlong into a blind alley at this point because they are unwilling to accept any criticism of their life at its roots, whether from within, or without. We in America dare not make the same mistake.

Here, upon the threshold of a new year, it is particularly appropriate that our attention should be called again to one of the most urgent admonitions of the apostle Paul: "I bid every one among you not to think of himself more highly than he ought to think, but to think (of himself) with sober judgment." With these words the apostle invites the Christians at Rome to sober self-criticism. This is good advice psychologically for anyone; but it is mandatory for the Christian.

While Paul certainly thinks of the Christian as living inescapably in the presence of God, he never thinks of him as living on a spiritual vacuum alone with God. Rather Paul always sees the Christian living in a fellowship with all other Christians, and he also sees him living inescapably in the midst of a non-Christian world. In this situation the Christian knows himself to be God's agent for the reconciliation of all mankind. These factors determine the context in which the Christian is to exercise self-criticism and self-discipline. He must judge himself soberly (1) as an individual responsible primarily to God; (2) as a member of the church which is the body of Christ; and (3) as a citizen of this world in which God has been pleased to place him.

I. OUR SELF-CRITICISM AS INDIVIDUALS UNDER GOD

First of all we are called as Christians to examine our lives in terms of our personal relationship to God. This must logically come first, as in our Lord's summary of the law: "Thou shalt love the Lord Thy God, * * * and [then] thy neighbor as thyself." Only when a right relationship is established between ourselves and God, can we be expected to have a right relationship to our fellowmen.

The question we should ask ourselves here at the beginning of a new year is, "Am I a better Christian—a more faithful and obedient Christian—than I was a year ago? Am I really living closer to God? Am I more consistently and more fully living in the center of His will for me?"

Our Christian faith has from the beginning recognized and emphasized the sanctity of the individual—his rights, privileges, and responsibilities. The gospel of the kingdom is addressed to individuals—"whosoever will, let him come." God calls individuals into his service. While it is true that God is concerned for all men, he is concerned for them as individuals, and not en masse. Moreover, when men and women become Christ's men and women they do not lose their individual identity. They are not poured into the same mold. Rather their individuality is enhanced. It is brought to full fruition. It's potentialities are more fully realized than ever before.

The Christian life in fundamentally a life of movement, of growth, of prayers and improvement, not only in this life, but in the life to come. It is a life of continuing fulfillment. Life in which this element of growth is missing cannot be Christian life in the proper sense. Paul speaks of Christ as the very image, or likeness, of God (II Corinthians 4: 4); and says that the Christian is

being changed into the same image, or likeness, from one degree of glory to another (II Corinthians 3: 18). He speaks of a man's old nature, the outer man, wasting away, while his new nature, the inner man, is going through a continual process of renewal (II Corinthians 4: 16). Thus it becomes impossible for the Christian to stand still, or to mark time. If he is truly Christian he must be in a process of growth, always moving in the direction of being changed into the likeness of Christ, who in turn bears the likeness of God.

Now what does Paul really mean when he says that the Christian is being "changed into His likeness from one degree of glory to another?" It means essentially that God-likeness, which is Christ-likeness, is demanded of us; and that it ought to be measurably greater in the Christian today than it was yesterday, a week ago, a month ago, this time last year. Jesus, himself, had a few things to say on this subject: "I say to you, love your enemies, and pray for those who persecute you, so that you may be the sons of your Father who is in heaven." This agrees well with Paul's understanding of the nature of God. It was by virtue of the fact that Christ died for us while we were yet sinners, that God demonstrated, confirmed, and commended His love for mankind (Romans 5: 8). This kind of love—God-like love for men in spite of their sin—must be increasingly characteristic of the Christian. Indeed, we can say that the degree to which we genuinely love those who sin against us, those who are unlovely and unloving, will be a measure of how much the love of God has invaded our lives. Jesus also said, "If you love (only) those who love you, what reward have you? Do not even (sinners) do the same?" If we are to be pleasing to God, if we are to grow in God-likeness, if we are really being changed into His image from one degree of glory to another, then this will surely be reflected in our attitude toward other men.

Yet, one more thing more needs to be said in this connection. The improvement or growth which takes place in one Christian life is not to be measured by the growth in the lives of other Christians. Rather, it is to be measured over against itself. There should be competition in the Christian's life, but it is always competition with oneself. This is true expressly because no two Christians are alike in their natural abilities, in their spiritual endowments, in their education and experience, in the tasks to which God has called them. Thus, as we apply self-criticism, the sober judgment for which Paul calls, to ourselves, we do so in terms of what we have been, and what progress we ourselves have made. Our self-criticism must eventuate in self-discipline, or it will fall short of its goal.

II. OUR SELF-CRITICISM AS MEMBERS OF THE BODY OF CHRIST

In the second place we are called as Christians to examine our lives in terms of our relationship to other Christians, to the other members of the body of Christ. After urging Christians to consider themselves with sober judgment, Paul continues: "For as in one body we have many members, and all the members do not have the same function, so we though many are one body in Christ, and individually members one of another" (Romans 12: 4, 5).

While it is true that the life of Christ is, and should be, reincarnate in the life of each one of us, as an individual Christian, the life of Christ will best be seen by the world as a composite picture of the best in all Christians, for He dwells by His spirit in the church, which is made up of all its members.

The church can only be self-critical through the spiritual sensitivity of all its members. It is self-critical as we, its individual members, are critical of our parts in its corporate life, and of its corporate life as a whole.

We must remember that the great Protestant reformation of the church arose from a rediscovery of this principle—the saving grace of self-criticism. The Protestant reformation began as an attempt by men, like Martin Luther, John Calvin, and John Knox, to reform an existing institution. But existing institutions, whether political or ecclesiastical, usually resist reform. There is a general principle, it seems, which is at work in all human institutions, namely; that the longer an institution exists and the more developed and involved its traditions become, the more likely it is to resist attempts at reformation, the more inflexible it becomes. It is just as bad when a church becomes rigid and inflexible, as when a political state, like Russia, does so.

It is the glory of the Reformed and Presbyterian Churches that they have learned to combat this natural tendency in human institutions, by insisting upon being self-critical. We speak of our United Presbyterian Church as "reformed according to the word of God." A Presbyterian or Reformed Church is true to its heritage and its genius only when it is a continually reforming church. Reformation never ends. As individual Presbyterians, we are true to our great heritage, only when we continue to examine ourselves as members of the body of Christ—the one holy, apostolic, and catholic church which we profess in the creeds. We must continually seek to relate ourselves to that great church.

As we apply this self-criticism to ourselves at this level, we must ask, since all the members do not have the same function, whether we have, as individuals, found that particular place and function in the body which God expects us to fill, and to fulfill. We must also ask how genuinely we know ourselves as individually members one of another. In the Corinthians letter, where Paul discusses the church as the body of Christ, he points out that "if one member suffers, all suffer together; if one member is honored, all rejoice together" (I Corinthians 12: 26). We can, therefore, measure our growth at this point by determining how sincerely we are disturbed by the misfortune and persecution of fellow Christians anywhere in the world And the reality and sincerity of our sympathy may be very well measured by whether we do anything about it in the way of relief, and by whether their calamity causes us to remember them importunately in our prayers.

III. OUR SELF-CRITICISM AS CITIZENS OF THE WORLD

The third area in which we are called to think soberly of ourselves—to be self-critical, is at the point of our relationship to all men. Paul wrote earlier in the Roman letter that he counted himself a debtor, "under obligation both to Greeks and to barbarians, both to the wise and to the foolish." Here in the 12th chapter he urges the Roman Christians, "Repay no one evil for evil, but take thought for what is noble in the sight of all (men). If possible, so far as it depends on you, live peaceably with all (men)." (Romans, 12: 17, 18). But it was not enough to feel oneself obligated to all men, to refrain from retaliation, and to endeavor to live peaceably with all men, for God, who through Christ reconciled us to himself, has given us the ministry of reconciliation for all men. "We are ambassadors for Christ, God making his appeal (to all men) through us" (II Corinthians 5: 18, 20). These were Paul's words, addressed not alone to ministers and missionaries, but to anyone who is a new creature in Christ.

Late in the second century an unknown Christian addressed a letter to a man by the name of Diognetus. In that letter he said, "What the soul is in the body, that Christians are in the world." There is no mistaking the fact that he had here laid hold of a great spiritual truth. Thus the church serves as the conscience of society and of all social institutions, as it seeks to lift them through its own active participation in the life of the world to their highest levels of service. And it is we Christians, as individuals inescapably involved in the social, economic, and political life of our times, who must be the voice of that conscience to humanity.

Here again we must apply a vigorous self-criticism to ourselves. The questions we must answer at this point are, first, whether we have grown as ambassadors for Christ, as holders of the ministry, and bearers of the message of reconciliation to men—"that God was in Christ reconciling the world to himself"; and, second, whether we have been, by our daily behavior and testimony, that soul and conscience which Christians are meant to be in the world. Or we can frame this question in another way: As we think of ourselves with sober judgment, have we influenced the world for good, or have we allowed the world to influence us for evil?

Paul began his exhortation this way:

"I appeal to you, therefore, brethren, by the mercies of God, to present your bodies as a living sacrifice, holy and acceptable to God, which is your spiritual worship. Do not be conformed to this world, but be transformed by the renewal of your mind, that you may prove what is the will of God, what is good, and acceptable, and perfect.

"For by the grace given to me I bid every one among you not to think of himself more highly than he ought to think, but to think (of himself) with sober judgment, each according to the measure of faith which God has assigned him."

Let us, then recapture and maintain for ourselves, our church, and our Nation, the saving grace of self-criticism.

Beer Cans to Moon Are Fine, but Wiser Choice Is Research

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the January 10, 1959, edition of the Eugene (Oreg.) Register-Guard. Dr. Ray Ellickson, head of the University of Oregon's department of physics, is outstanding in his field. In a recent speech before members of the Oregon Association of Nurserymen, Dr. Ellickson cited his reasons for the need for pure research rather than spectacular stunts such as shooting a beer can to the moon. It made a lot of sense to me. The article by reporter Don Brown follows:

BEER CANS TO MOON ARE FINE, BUT WISER CHOICE IS RESEARCH

(By Don Brown)

Pure research, rather than spectacular stunts such as shooting a beer can to the moon is needed in the United States, a University of Oregon physics professor said in a talk in Eugene Friday.

Ray Ellickson, head of the University of Oregon Physics Department, addressed a noon luncheon attended by about 150

Oregon nurserymen and their wives. The members attended a 2-day meeting of the Oregon Association of Nurserymen here Thursday and Friday.

Too many Americans have lost their perspective since Russia's achievements in space, Ellickson said. There is too much of a keeping up with Russia complex he told the nurserymen.

It would cost the United States about $2 billion to send a missile the size of a beer can to the moon, he said. And, Ellickson asked, what would it accomplish?

If the Government put the $2 billion into education, he said, about 200 colleges the size and caliber of Reed College in Portland could be endowed.

Since Russia sent the first satellite into orbit around the earth, he said, Americans have lost their former contempt for Russians' ability to progress in science. Prior to sputnik, he added, Americans believed Russians could not do anything on their own hook.

It is typical of Americans, Ellickson believes, that they have a unique ability to swing rather violently from one end of the pendulum to the other. This applies to favoring or disfavoring football coaches, according to the coach's win-loss record—and it applies to American attitudes toward foreign powers.

Ellickson said that he is concerned with the attitude which Americans now have toward keeping up with Russian developments. For example: Russia has shot a rocket to within 5,000 miles of the moon.

POPULAR CRY

This feat has resulted in a popular cry among Americans for their Government to shoot a U.S. rocket to within at least 1,000 miles of the moon, he said. Next will come the attempt to hit the moon, and possibly to land a beer can there—at least figuratively speaking.

Perhaps it would cost the United States $2 billion to send a can-sized missile to the moon, the scientist said. But, he asked, what will have been achieved if this is done? All this competition, he said, is much like television commercials boasting of fountain pens which will write on butter or on the bottom of a bathtub filled with water. How practical are such tests? he asked.

TRADITIONALLY DIFFICULT

It has been traditionally difficult in America to get public interest aroused in research, the physicist reported. This problem prevailed at the time scientists were trying to arouse Federal officials in researching the A-bomb possibilities. Finally, after other efforts failed, he said, the late Albert Einstein prevailed on President Franklin D. Roosevelt to see what F.D.R. could do to help science and the Nation to win World War II.

F.D.R. was able to obtain only $7,500 for A-bomb research, he said.

This was due to very few persons being able even to guess what might lie ahead in atomic research.

Ellickson also cited dandelion research as once being a little-known factor. A study was undertaken on sunflowers, he said, to determine why they turned their heads to the sun. It was found that a chemical was secreted on the back of the flowers in the absence of sunlight. This led to further study which resulted in discovering dandelion-killing 2-4-D.

CALLED FOOLISH

Research on why sunflowers turn their heads, Ellickson suggested, was termed foolish by persons who did not know the tie-in. But if the sunflower study had not been undertaken, there would have been no 2-4-D. With the development of the weed killer, he said, farmers, nurserymen, and others have saved hundreds of millions of dollars by being able to kill many other weeds.

Tremendous benefits always accrue through this kind of research, Ellickson told nurserymen. At first there may be no notion by the investigator that his study will result in applications to special problems.

He criticized too much secrecy on the part of the Federal Government in research work, also. Again he cited an example: During World War II Ellickson worked on a secret infrared ray project which permitted military men to see in the dark without the enemy's knowing it.

NAVY JOB?

This, he said, started as a naval research job. Laboratory men were sworn to secrecy through fear by Navy men that the Japanese, Germans and the U.S. Army would learn about the infrared light, he added.

Yet, when the project was perfected, it developed that the Army was able to use it to better advantage, through its troops, than the Navy. The lights were used, therefore, by the very agency which the Navy had tried to keep its secret from, the physicist emphasized.

The 2-day event, the first of its kind ever held in Eugene by the 26-year-old OAN, ended Friday night with a president's banquet and ball, to honor past presidents of the OAN.

Mississippi

EXTENSION OF REMARKS
OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks, I include an excellent editorial which appeared in the Jackson (Miss.) State Times on January 11, 1959, written by its distinguished editor, Hon. Oliver Emmerich. It follows:

NO, MY FRIEND, MISSISSIPPI IS NOT SLOWLY DYING

(By Oliver Emmerich)

The State Times is in receipt of the following message, a product of the campaign of hate waged in the East against the people of the South.

"Happy 1959, Mississippi. You are losing population. I hope you will die more slowly in 1959, 1960, 1961, 1962, etc., than you have been dying up to now. Please, Mississippi, die slowly."

Harry Emerson Fosdick once said, "Prayer is dominant desire." We feel sorry for any individual whose desire stems from hate. What spiritual foundation other than hate could wish slow death to a whole State?

The savagery of the dark ages aroused such vicious feeling that men were often condemned to the excruciating pain of slow death. Once a King of England decreed that two robbers be skinned alive. Their skins were tacked to the outer walls of Westminster Abbey.

In this more enlightened age it is tragic to find any person, whose vision is so blurred and whose understanding is so blighted, as to pray for a return of the spirit of the dark ages.

Any individual who wishes slow death for Mississippi will find disappointment in the revitalized spirit of this State. Here is the true story of Mississippi.

One hundred years ago Mississippi was the fifth richest State in the Union. Then came the devastation of war, the exploitation of Reconstruction, and finally the resurrection of a triumphant faith which now is sweeping this State to new plateaus of progress and glory.

Slow death? Let's check the industrial life of Mississippi. Twenty years ago Mississippi had only 843 factories, 47,890 industrial workers and a total industrial output of only $175,000,000.

Last year the new industrial life of Mississippi had increased our industries to 2,041, our industrial workers to 113,800 and our total industrial output to $1,605,000,000, an increase of 850 percent.

No signs of rigor mortis here.

Slow death? Let's look at Mississippi's financial progress. Twenty years ago—in 1938—Mississippi banks had on deposit $195,008,000. Last year the total deposits were $1,153,157,000. We are very much alive in this category as it is easy to see.

Die slowly? Take a peep at Mississippi's agriculture. Total cash farm sales in 1938 were $134,964,000. In 1956, the total was more than 400 percent greater—$596,065,000.

Mississippi dying? Let's look at the educational picture. In 1938 Mississippi spent $24.55 per pupil in elementary schools or a total of $12,000,000. Last year Mississippi spent $81,500,000 on elementary education or $181 per school child.

Mississippi also is in the midst of a $120 million building program for new elementary and high school buildings, seeking to equalize the school facilities of the two races. This program was voluntary. It was enacted in 1953 before the U.S. Supreme Court's school segregation decision.

In addition our State has budgeted $21 million for higher education, plus $7 million for university and college buildings.

The State of Mississippi is second from the top among the States in the percentage of total tax budget spent for education. A State with this concept of learning is very much alive, forward looking, and on the march.

What's the racial situation? The answer is that racially, Mississippi is up-and-coming. This State has more Negro college presidents than all of the New England States combined; more Negro schoolteachers (7,217) than all of the Mid-Atlantic States. These teachers meet the same regulations and enjoy the same salary scale as white teachers.

Of the nearly $40 million spent annually in Mississippi for old-age assistance, aid for the blind, dependent children, and total and permanent disabilities, Negroes who represent 45 percent of the population receive 60 percent of the total. White people, representing 55 percent of the population, receive 40 percent.

Eighty percent of public health funds spent for combating venereal diseases go to Negro residents. Of the total expenditures for public health, our Negro people get a rightful share. This applies to our charity hospitals as well.

What about bombings? Unlike situations in Boston, Peoria, and some parts of the Southland, no churches or other buildings have been bombed in Mississippi. There have been no incidents of racial violence. The two races live here as friends in this, the hospitality State of America.

What about public health? In the past 20 years death from communicable diseases has been reduced more than 85 percent. Twenty years ago Mississippi suffered from widespread effects of malaria and typhoid fever. In 1957, there was not a single death from either of these diseases in Mississippi.

Other communicable diseases are being blotted out. Mississippi is a place to live long, for this is a State where good health prevails. There's nothing deathlike, slow or fast, in this progressive State

Now what is the truth about Mississippi's population? The U.S. census figures for January 1, 1959, reveal that Mississippi is gaining population. She lost 4,882 in

population between 1940 and 1950. But what mossback of the past wants to apply 1940 population figures in the year of our Lord 1959?

Mississippi had no large municipalities a few decades ago. Jackson, our capital, went from 48,282 in 1930 to 128,000 in 1959.

In the same period Hattiesburg jumped from 18,601 to 35,891; Biloxi from 14,850 to over 45,000; Greenville from 22,943 to 44,574; Pascagoula from 4,339 to more than 25,000; Natchez from 13,422 to 25,195.

This is the population trend today in Mississippi. In the next quarter of a century America will see happening in Mississippi what has happened in California during the last quarter of a century.

Remember this, friends, everywhere: The last half of the 20th century belongs to the South—and Mississippi intends to claim and acquire her share of it.

Slow death? How could any description fit less the revitalized and triumphantly growing State of Mississippi?

The Hub of the Universe and the Birthplace of Freedom

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article on the historical city of Boston, Mass., which was part of the souvenir program of the 30th national convention of the National Federation of Post Office Clerks held in Boston, August 24–30, 1958:

THE HUB OF THE UNIVERSE AND THE BIRTHPLACE OF FREEDOM

One afternoon in November just a few years ago a world-famous author strolled across Boston Common. He has said that to him no place in the United States can have associations quite so stirring. A young naval ensign stopped him and said, "What place is this, sir?"

"Boston Common," was the reply.

"What is that, sir?"

"Where we all come from, in a way."

Indeed much of what America has become had its beginnings in this city of ours. We hope that you will think of it as yours also. Many of these single sentences in this short chronology have been the subjects of chapters and often entire books of history. We have set them down here in this simple fashion for easy reading and to attempt to recreate some of the atmosphere and background so that you may better enjoy the many historic shrines scattered about Boston. As you walk our streets you may also get the feeling, as countless others have, that our city's glorious present owes much to its courageous past.

In 1629 John Winthrop had been elected Governor of Massachusetts Bay and had been given a charter for the colony. He and about 700 followers sailed to America in 1630; after a long and arduous passage they made their landfall at Salem. They left there after a stay of only a few weeks, having found that small colony with its limited resources and shortage of food unable to cope with any additional problems.

They moved on to Charles Town across the Charles River, becoming neighbors of Mr. Thomas Walford, a blacksmith who had set up his forge on the slope of Bunker Hill. Though they erected here a great house for the Governor and other types of dwellings for the others of the colony, there was still much dissatisfaction. The most acute need was an adequate supply of good water.

Mr. William Blaxton (Blackstone) lived alone on the other side of the river at a place that the Indians called Shawmutt. It was also called Trimontaine because it was actually a three-hilled peninsula. Blaxton called on the Governor and told him of the existence of an excellent spring on his side of the river and invited the Governor to relocate his colony nearby. The invitation was quickly accepted; the frame of the Governor's house was carried over and the people made the transfer as quickly as they were able. The removal to Shawmutt progressed so rapidly that by the 7th day of September a court of assistants was held and it was ordered that the name of the settlement should be Boston.

Two years after being established it became the capital of the colony; the town meeting form of government was adopted and was used until Boston became a city in 1822.

In the 13 years of the great migration (1630–42) Boston added to its population many of the nearly 20,000 Englishmen who settled in and around the Massachusetts Bay Colony.

Boston now comprises the greater portion of Suffolk County and extends its jurisdiction over an area of 47.81 square miles. Much of this was acquired by the reclamation of the area known as the Back Bay and by the annexation of East Boston in 1637; South Boston, including Dorchester Heights in 1804; the cities of Roxbury in 1868, and Charlestown in 1874; also in 1874 the towns of Dorchester, Brighton, and West Roxbury; and in 1912 Hyde Park from Norfolk County.

On August 30, 1630, Governor Winthrop and his court of assistants held their first session in Charles Town and one of their first acts was to legislate a 2-shillings a day wage ceiling on building trades.

On October 3, 1632, the Massachusetts Bay General Court forbade the public use of tobacco.

Massachusetts Bay Colony established a representative form of government on May 14, 1634.

On April 16, 1635, the Public Latin School was established on what is today the site of the pulpit and chancel of King's Chapel. It was thus that School Street got its name. Philemon Pormont was the first schoolmaster.

By March 3 of 1636 the Massachusetts Bay General Court had enacted laws permitting establishment of new churches only with the consent of the court. On October 28 of that year Harvard College was founded by vote of the court and an appropriation of 400 pounds.

On November 4, 1637, Rev. John Wheelwright was banished from Boston for preaching seditious sermons. His sister-in-law, Anne Hutchinson, was likewise banished a short time later for antinomian heresy.

The first printing press in the colonies was set up at Cambridge late in 1638 by Stephen Daye. He and his son, Matthew, continued to print until 1649.

In 1639 the first post office was established in Boston in the home of Richard Fairbanks. On the wall of the Boston Globe building in Newspaper Row there is a plaque with the inscription: "Rich'd Fairbanks his house in Boston is the place appointed for all letters—and hee is to take care that they bee delivered or sent according to their directions." Order of the General Court, November 5, 1639. Placed by the City of Boston, 1924.

Also in 1639 each Massachusets Bay town was ordered by the general court to construct roadways connecting it with the next town.

In the year 1640 Stephen Daye published the "Bay Psalm Book," the first book to be published in America. By this time the estimated population of the English colonies was 28,000 and New England represented about 22,500 of that figure.

In June 1641 the General Court of Massachusetts granted the towns power to regulate wages and prices of commodities.

On November 13, 1644, the general court ordered banishment of all Baptists from the colony and the same day ordered all county courts to have instructed in the worship of God all Indians in their jurisdictions.

In the year 1648 Boston coopers and shoemakers were granted charters by the general court which were very like those of the ancient guilds.

By 1650 the population of the colonies was estimated as being approximately 52,000.

In 1652 Boston's first bookstore opened for business. Also in May of this year the general court established a mint in Boston where pine tree shillings were coined. It lasted until 1684.

In the year 1656 a library in which the public may read was opened in Boston.

The year 1660 saw the Scots' Charitable Society of Boston established. Its function was to be the relief of the poor.

One Michael Wigglesworth in 1662 published in Cambridge a work entitled "The Day of Doom." That year also saw adopted and published by the Massachusetts General Court the "Halfway Covenant." This permitted baptized persons of good character, though not church members, to present their children to be baptized. The court also appointed that year two licensers of printing presses who had final approval of everything to be printed. This same year the English Parliament passed a law allowing justices of the peace to send to the colonies rogues, vagabonds, and sturdy beggars.

In 1665 the First Baptist Church in Massachusetts was established at Charlestown.

Massachusetts Bay Colony on October 11, 1666, refused to send to England representatives to answer charges brought by the royal commissioners for annulment of the colony's charter.

John Eliot in 1669 published the "Indian Primer" in Cambridge and Michael Wigglesworth published, also in Cambridge, "Meat Out of the Eater," a discussion of the necessity of afflictions being visited upon the children of the Lord.

In May 1674 the Massachusetts Bay General Court, after granting that there may be a printing press elsewhere than at Cambridge, for its better regulation ordered that Increase Mather be one of two additional licensers of the press. In the diary of Increase Mather is the following entry: "December 25 (1674) Marmaduke Johnson the printer died in Boston. He has just fitted his press to go to work. Mr. John Foster bought the press intending to set up printing in Boston."

John Foster was the earliest engraver in what is now the United States. He was a native of Dorchester; was born there in 1648 and was graduated from Harvard in 1667. He first appeared as a printer in Boston at the beginning of the year 1675 and the earliest specimens of his imprints bear that date. In 1678 he appears to have procured a new font of long primer; after which his handsomest work was done.

On June 10, of 1676 Edward Randolph arrived in Boston to investigate the Massachusetts Bay colony. He reported that the colony was unduly independent of British authority and he recommended that its status be changed to that of royal province.

In 1677 the first medical work printed in America was a pamphlet by Thomas Thacher and it was called "To Guide the Common People of New England How To Order Themselves in the Small Pocks."

Increase Mather in 1683 organized in Boston the first scientific society in the colonies

to effect improvements in philosophy and addition to the stores of natural history.

October 23, 1684, brought the annulment of the Massachusetts charter in chancery court and with it went the requirement of church membership in order to vote.

By 1686 there were eight book shops doing business in Boston. On June 15, 1686, Angelican church worship was first set up in Boston. On December 20, Sir Edmund Andros arrived in Boston with the title of Governor-General of the Dominion of New England. He was soon to become one of the most hated men in the colonies.

The year 1689 saw Cotton Mather publish in Boston his "Memorable Providences." On April 18 the Boston inhabitants overthrew Governor Andros. On May 24 Massachusetts reestablished its government according to the old charter.

By 1690 the estimated population of Boston had reached 7,000, that of Newport 2,600, New York 3,900, Philadelphia 4,000, and Charleston, 1,100. About this time the "New England Primer" was printed in Boston. On September 25, 1690, "Public Occurrences," first American newspaper came out in Boston. It was immediately suppressed and there was no second issue. In December of this year Massachusetts issued its first paper currency to pay soldiers returning from the expedition to Quebec.

The year 1691 saw emerge the first native artist of real ability in the person of Jeremiah Dummer of Boston who had done portraits of his wife and of himself.

In 1694 Massachusetts passed a law requiring tavern keepers to sell no liquors to "person whose names appeared on a list of common tiplers."

On June 29, 1699, Massachusetts passed a law designed to prevent the spread of infectious diseases and on July 6 of the same year pirate Captain Kidd was seized in Boston and sent to England to be hanged.

In the year 1700 the population of the colonies reached 262,000. On June 24, 1700, Joseph Seward published in Boston a tract "The Selling of Joseph" which condemned the holding of slaves.

April 24, 1704, the Boston News-Letter began publication. This was the first regularly issued newspaper in America and it was to continue publication until the Revolution.

In 1709 the Quakers built a meetinghouse in Boston and in the town that year was published a "Short Introduction to Latin Tongue—Accidence Abridged," its author was Ezekiel Cheever, a colonial schoolmaster.

Cotton Mather the next year published in Boston his "Bonifacious, or Essays to Do Good"; and by the following year, 1711, town records of Boston show a complaint of too much Latin and Greek in the free schools of Boston. On July 30, 1711, a British fleet with colonial troops left Boston to take Quebec. The expedition met with failure due chiefly to the incompetence of its officers.

King's Chapel in Boston received as a gift from Thomas Brattle in 1714 the first organ to be installed in New England.

In 1716 Boston's famed lighthouse was built, the first one in America. The general court had passed an act on July 23, 1715, for building and maintaining a lighthouse, giving as a reason that the lack of a lighthouse "hath been a great discouragement to navigation by the loss of the lives and estates of several of His Majesty's subjects."

The year 1721 brought an epidemic of smallpox to Boston. Dr. Zabdiel Boylston and Cotton Mather that year introduced inoculation to combat smallpox in America. On August 7 of that year James Franklin published the first issue of the New England Courant. Also in 1721 the general court abolished the Governor's censorship of publications.

In 1722 Benjamin Franklin published anonymously "Silence Dogood Papers" in his brother's New England Courant. The following year he left Boston for Philadelphia.

In the year 1725 Nathanial Ames, a physician and maker of almanacs began publication in Boston of his "Astronomical Diary and Almanac" (1725–1775). The following year someone in the town published anonymously something called "Hoop Petticoats, Arraigned and Condemned by the Light of Nature and the Law of God."

Prof. Isaac Greenwood, of Harvard, published in Boston in 1729 the first textbook on arithmetic by an American.

"The Vade Mecum for America" by Thomas Prince, was published in Boston in 1732. It was the first guidebook in America.

The year 1735 brought to New England a severe epidemic of scarlet fever, and in 1736 Dr. William Douglass published the earliest clinical description of scarlet fever. It was published in Boston and was called "The Practical History of a New Epidemical Eruptive Military Fever, in Boston, 1735 and 1736." Also that year, in Boston, Rev. Thomas Prince published a "Chronological History of New England."

Seventeen hundred and forty-two brought the completion of Faneuil Hall, a gift to Boston from Peter Faneuil, Boston merchant.

Jeremiah Gridley was editor of the American Magazine and Historical Chronicle, which began publication in 1743 in Boston. It was the third magazine in the colonies and lasted for 3 years.

New England, on November 18, 1755, was shaken by an earthquake, and on the 20th day of March in 1760, Boston was swept by a disastrous fire. Boston had fires before, but this was the worst to date. Lacking an adequate water system for fighting a fire, it roared on, leaving thousands homeless and blowing up the Battery. In the laws that were subsequently passed for the rebuilding of the town were provisions that roofs were to of tile or slate thereafter.

On February 24, 1761, James Otis delivered a fiery address before the superior court, protesting against use of writs of assistance by British customs officers. In May he was elected to the general court.

In February of 1768, the Massachusetts House of Representatives adopted a circular letter proposed by Samuel Adams to be sent to the other colonial assemblies for the purpose of uniting in opposition to Britain by petition and discussion. On the 10th of June, riot followed the seizure of John Hancock's sloop *Liberty* in Boston Harbor; it had been charged with wine smuggling by customs officials. On July 18, John Dickinson's patriotic ballad, "The Liberty Song," was published in the Boston Gazette. Delegates from 26 towns in Massachusetts convened in Faneuil Hall on September 22 after call by Boston selectmen to draw up a statement of grievances. The 1st day of October two British regiments landed in Boston to enforce customs laws.

On the 5th of March in 1770, the Boston Massacre occurred, with three persons killed, two mortally wounded, and six injured. In October, Captain Preston and the British soldiers involved in the so-called massacre were acquitted in jury trial. They had been represented in court by John Adams and Josiah Quincy.

December 16, 1773, was the date of the Boston Tea Party when citizens dressed as Indians boarded ships in the harbor belonging to the East India Co. and dumped their cargoes of tea overboard.

On March 31, 1774, the Boston Port Act, first of several coercive acts by the British Parliament received royal assent. On May 12, Boston Committee on Correspondence recommended that all colonies suspend trade with Great Britain. May 13 saw the arrival of General Gage to replace Hutchinson as governor and to command troops. Four regiments quickly followed. By June 1, Boston Harbor was closed to export and import. On September 1, General Gage seized Massachusetts powder supply at Charlestown.

April 18–19, 1775, Paul Revere and William Dawes made celebrated midnight ride to warn of British move to capture supplies in Lexington and Concord. Siege of British in Boston began. On May 25, British Generals Howe, Clinton, and Burgoyne arrived in Boston with troops.

Battle of Bunker Hill was fought on June 17 on Breeds Hill in Charlestown with a British victory though they had the heaviest losses by far. Colonial Gen. Joseph Warren was killed in the battle.

On March 4, 1776, Washington set up fortifications on Dorchester Heights. By the 17th of March the situation of Howe and his troops in Boston had worsened to the point that he evacuated Boston that day with his army and 900 loyalists.

In 1780 the American Academy of Arts and Sciences was organized in Boston.

In 1782 King's Chapel in Boston declared for unitarianism.

On August 9, 1790, *The Columbia* with Robert Gray as captain landed in Boston—the first American ship to circumnavigate the earth.

On May 11, 1792, Captain Gray with his ship entered the Columbia River which he named for his ship.

In 1795 the first commercial paper was published in Boston, called Boston Prices Current and Marine Intelligence.

On October 21, 1797, "Old Ironsides," the frigate *Constitution* was launched at the Boston Navy Yard.

The year 1800 saw the completion of the statehouse in Boston. Its designer was Charles Bulfinch. In 1801 Paul Revere succeeded in producing the first cold-rolled copper in America. It was much needed by the Navy to cover the bottoms of ships. The dome of the statehouse was about the first place Revere's new sheet copper was used. "Old Ironsides" was also soon returned to drydock and had her bottom covered with Revere sheet copper.

Boston in 1804 helped form the Coonskin Library in Marietta, Ohio, when a group of settlers sent coonskins to Boston in exchange for books.

In 1805 Frederic Tudor of Boston was first to experiment in shipping ice to hot countries by sending cargo to Martinique.

In 1812 the word "gerrymandering" first appeared when Massachusetts with Elbridge Gerry as governor passed a bill manipulating election districts, a device to affect vote in senate contests.

William Tudor in 1815 founded the North American Review in Boston.

The Boston Recorder, first religious newspaper, was published in 1816, and in the same year the Boston Provident Institution for Savings was founded, the first savings bank in the United States.

Harvard established its law school in 1817.

Boston's Charles Bulfinch in 1818 was placed in charge of the work on the national Capitol.

English Classical School, the first high school in the United States, was established in Boston in 1821. It is known today as English High School. Also, in this year Catholics were allowed to hold office in Massachusetts for the first time.

In 1822 Boston capitalists founded the town of Lowell on the Merrimac and set up a new cotton factory.

June 17, 1825, Lafayette laid cornerstone of the Bunker Hill Monument and Daniel Webster delivered the oration.

In 1826 a high school for girls opened in Boston. It closed in 2 years. It was far too popular.

The American Society for Encouraging Settlement of Oregon Territory was founded in Boston, 1829.

William Lloyd Garrison, editor, began publication of The Liberator in Boston on the first day of 1831.

Boston in 1832 was the scene of the opening of the Perkins Institute for the Blind. Samuel Gridley Howe was the first superintendent of this remarkable institution which is still doing noble work among the sightless.

In 1835 Samuel F. B. Morse, who was born in the Charlestown section of Boston, invented the wireless telegraph.

He was also an internationally famous artist. He was a founder of the National Academy of Design and a founder of Vassar College. He aided in introducing the daguerrotype into the United States.

On April 19, 1938, a Massachusetts law was passed prohibiting the sale of spirituous liquors at retail except in quantities of 15 gallons; and the next year a man named William Harnden began a railroad express service between Boston and New York, carrying parcels in a carpet bag.

In 1842 Chief Justice Lemuel Shaw of Massachusetts ruled in *Commonwealth* v. *Hunt* that a trade union is a lawful organization, is not responsible for illegal acts of individuals and that a strike for a closed shop is legal.

On February 28, 1955, a right to work bill which was introduced to the Massachusetts Legislature received a thumping defeat. Much of the credit for the defeat of this vicious bill must go to the big turnout of organized labor and its friends who were present at the statehouse that day in a protest demonstration.

Massachusetts passed an act on March 3, 1842, requiring a minimum of education for every child and preventing a child under 12 from working more than 10 hours a day in a factory.

In 1843 Dr. Oliver Wendell Holmes delivered a lecture before the Boston Society for Medical Improvement in which he contended that puerperal fever could be prevented by cleanliness. On June 17 of that year Daniel Webster delivered the oration at the dedication of the Bunker Hill Monument.

Dr. William Thomas Green Morton on October 16, 1846, performed the first public surgical operation using ether for anesthesia at the Massachusetts General Hospital in Boston.

The Boston Public Library opened its first facilities on Mason Street in the year 1854. It was the first free public library in any American city. One of the greatest aids in its beginning came from a wealthy London banker named Joshua Bates who contributed $50,000 in cash plus an equal value in books. He had been born in America and as a poor boy had lived in Boston. Bates Hall in the present magnificent structure in Copley Square is an impressive tribute to his memory; being a mecca through the years of countless serious students bent on research.

Massachusetts Institute of Technology, one of the world's finest technical and engineering schools, was incorporated in Boston in 1861. The first blood shed in the Civil War was Boston blood, when, on April 19, 1861 the 6th Massachusetts Regiment was attacked by a mob while passing through Baltimore.

In February of 1862 Julia Ward Howe's "Battle Hymn of the Republic" appeared in the Atlantic Monthly. The following year the Atlantic published Edward Everett Hale's "Man Without a Country."

The New England Conservatory of Music was founded in Boston in 1867. The first reading in America by Charles Dickens took place in Boston on December 2, 1867, at Tremont Temple. He had a large and enthusiastic audience, which included such notables as Longfellow, Holmes, Lowell, and Quincy.

The first invention to be patented by Thomas A. Edison was made into an operative model in Boston in 1868. It was a vote recorded intended to be used in the House of Representatives in Washington to speed up the counting of the Members' votes. Though it was practical and ingenious, it was not approved.

In 1869 Massachusetts established the first State board of health in the United States. The same year the State also established a bureau of labor statistics.

In 1870 the Museum of Fine Arts was incorporated in Boston. It was opened to the public on the 4th of July 1876.

On November 9, 1872, Boston suffered another disastrous fire with a property loss of $73 million.

On Beacon Hill May 8, 1874, the Massachusetts Legislature enacted the first effective 10-hour-day law for women workers.

The first club in the United States for the exploration of mountains was formed in Boston in 1877. It was called the Appalachian Mountain Club and its purposes have been scientific research and outdoor recreation.

In Boston in 1877 was formed the first sewing workroom for handicapped women. Known today as the Community Workshops, it is still doing excellent work rehabilitating and giving sheltered shop employment to handicapped men and women. The Gilchrist Brothers hired in 1877 the first woman clerk for their Washington Street department store. It was so bold a step for the time that a newspaper commented "Passers-by came in to view the curiosity of a young lady who was not busy with domestic, social or teaching responsibilities." Also in 1877 the first women's exchange in this country was founded in Boston. Known as the Women's Educational and Industrial Union, it provides a market place for goods made by women at home.

The first bicycle club in the United States was formed in Boston in 1878 by 14 cycle enthusiasts. By 1886, the Boston Bicycle Club had a membership of over 200 members.

The first vaudeville performance was given in 1883 in Boston when B. F. Keith opened his Gaiety Museum, and called his entertainment vaudeville. His chief attraction was Baby Alice, a midget.

In 1884 the first long-distance telephone service was inaugurated between Boston and New York.

The First Church of Christ Scientist, opened in Boston in 1895 as mother church of the Christian Scientists; that same year the Boston Public Library opened in Copley Square.

The first life-saving station of its kind in the United States for salt water service was anchored one-half mile offshore in Dorchester Bay in 1896. Two naphtha launches and later a steam-driven one were kept in its unique enclosed harbor.

Boston's subway was completed in 1897, the first in the United States. The first Society of Arts and Crafts in America was founded in Boston in 1897. It became the parent of the handicraft movement in this country.

The first automobile insurance policy written in the United States to cover a car as property was issued in Boston in 1902. Its primary protection was fire risk—$950 on the car and $50 on the tools, implements and personal effects. The State authorities ruled it marine insurance. Also in 1902 was founded in Boston the first lipreading school for adults in this country. The founder was Martha E. Bruhn. The Boston Guild for the Hard of Hearing was established by teachers and pupils in this school.

Boston was the first city in the United States to use an automobile as a police cruiser. It was placed in service at station 16 in July 1903 and covered about 60 miles a day through the Back Bay District. It was driven by a chauffer and a uniformed officer rode on a seat high enough to allow him to look over the back fences.

Britain's Grahame-White flew around Boston Light twice, 33 miles nonstop, to win $10,000 in the first international aviation meet held in America in 1910. Called the Harvard-Boston meet, it was the first time in New England when more than one plane was seen in the air at once.

In 1912 at the statehouse on Beacon Hill the legislature adopted a bill establishing minimum wages for women and children, the first legislation of this type in the United States.

In 1926 Boston Drs. George R. Minot and William P. Murphy discovered the value of using liver in the treatment of pernicious anemia, for which they received the Nobel prize in 1934.

The Boston Tercentenary Celebration held in 1930 was a program of considerable proportions. The opening address was given on Boston Common by the Right Honorable H. A. L. Fisher, warden of New College, Oxford. Perhaps a few of the professor's words are worth repeating here. "Little did the founders reckon," said Professor Fisher, "that a time would come when * * * in the fullness of years, their New England would be followed by a new Ireland, a new Italy, a new Germany, a new Poland, and a new Greece, all destined to be merged into a great and harmonious Commonwealth."

Boston is still the Boston of the Lodges, the Lowells, and the Cabots, but much of its vigor, its color, and its hope for the future derives from the newer stocks that now make up a large part of its population.

Since its tercentenary celebration Boston has marched one-quarter of the way into another century. Another Yankee division went off to another World War; other men of Boston sailed off in other ships to help win that war. Faster, larger, and more powerful ships, to be sure, but the same types of courageous men made up the crews. If there was any difference it was only that we had a greater number of nationalities now represented, but sturdy Americans all.

The port of Boston was the scene of great activity during World War II, as it had been 24 years earlier in the First World War. With its fine harbor and docking facilities and its being 200 miles nearer to Europe than any other American port, it was a very important shipping center.

The great concentration of scientific, engineering, and mathematical personnel in this area was responsible for so much of the development of new techniques, devices, and materials which helped immeasurably to shorten those wars. Those techniques and developments have given the impetus for the creation of the many new and diversified industries whose plants we see springing up all around us in the Boston metropolitan area.

This is a much more healthy condition than formerly when the closing down or relocation of the one industry in a community brought so much misery and distress to the inhabitants.

Boston has often been called the Hub of the Universe and the Birthplace of Freedom. Today, however, in earning the title of "Medical Center of the World" it may well be that our city has made its most enduring contribution to humanity.

Soviet Psychopolitics

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1959

Mr. HIESTAND. Mr. Speaker, the threat of psychopolitics, as practiced by

the Soviet Union, has been the subject of penetrating study by George Todt, able columnist for the North Hollywood, Calif., Valley Times. Mr. Todt's work in this field has attracted the attention and praise of patriots throughout the Nation. I commend it to the Members of this body.

I. MOSCOW'S PLAN TO WIN AMERICANS

"Religion is the opium of the people."—Karl Marx in "A Criticism of Hegelian Philosophy."

What is psychopolitics?

According to the official Russian handbook, it is the art and science of asserting and maintaining dominion over the thoughts and loyalties of individuals, officers, and bureaus, and masses, and the effecting of the conquest of enemy nations through mental healing.

From July 28-August 2 of this year, I wrote a series of six articles on this subject, all of which were subsequently inserted into the U.S. CONGRESSIONAL RECORD and may be found in the Appendix on pages A7286, A7287, A7356, A7357, A7576, and A7577.

That is the background for this article. Now let's go on into the matter further along the same pathway we used before.

Previously, I had quoted chapter 14 "The Smashing of Religious Groups" and chapter 15 "Proposals Which Must Be Avoided" from the Russian textbook on psychopolitics, as well as the infamous address of Beria to American quislings at Lenin University prior to the Second World War.

Nothing Adolf Hitler ever devised could have been more deadly to the Republic of the United States than the Bolshevik proposals to turn the American people into a herd of cattle.

Today we shall consider chapter 11 of the official textbook. It is called "The Use of Psychopolitics in Spreading Communism."

Here is the verbatim transcript:

"Reactionary nations are of such a composition that they attack a word without understanding it. As the conquest of a nation by communism depends upon imbuing its population with Communistic tenets, it is not necessary that the term 'communism' be applied at first to the educative measures employed.

"As an example, in the United States we have been able to alter the works of William James, and others, into a more acceptable pattern, and to place the tenets of Karl Marx, Pavlov, Lamarck, and the data of Dialetic Materialism into the textbooks of psychology, to such a degree that anyone thoroughly studying psychology becomes at once a candidate to accept the reasonableness of communism.

"As every chair of psychology in the United States is occupied by persons in our connection, or who can be influenced by persons in our connection, the consistent employment of such texts is guaranteed. They are given the authoritative ring and they are carefully taught.

"Constant pressures in the legislatures of the United States can bring about legislation to the effect that every student attending a high school or university must have classes in psychology.

"Educating broadly the educated strata of the populace into the tenets of communism is thus rendered tentatively easy, and when the choice is given them whether to continue in a capitalist or a communistic condition, they will see, suddenly, in communism, much more reasonably than in capitalism, which will now be of our own definition."

Those who would like to see the complete synthesis of the Russian textbook on psychopolitics may obtain it by writing directly to Rev. Kenneth Goff at Englewood, Colo., and enclosing $1 in check or money order form. It is an eye-opener, a real shocker.

I met the 45-year-old Goff in Los Angeles last week and found him to be a dedicated fighter against communism. He is particularly interesting in this connection because 20 years ago he had been a member of the Communist Party of the United States for a period of 3 years. Then he saw the error of his ways, repented, and came out of the party to testify concerning it before the Dies Committee on Un-American Activities. I always admire the sinner who truly repents and works hard to redeem himself later. I asked Goff why he had once upon a time embraced the Reds?

"It was because of the economic lure," he told me. "On paper, socialism and its bastard child, communism, can be made to appear good. But it doesn't work out the way it is so glibly drawn for its intended victims. Those who are not hypnotized soon recognize it as fool's gold."

II. PSYCHOPOLITICS IN RUSSIANS' WORDS

"Psychopolitics is an important if less known division of geopolitics. It is less known because it must necessarily deal with highly educated personnel, the very top strata of 'mental healing.' "—Beria, "Address to American Quislings, Lenin University, 1936.

"Have you read chapter 12 of the official Russian textbook on psychopolitics?" was the question put to me last week by Rev. Kenneth Goff. He is but one of several sources from which comes this monstrous document for the public to read for themselves. Copies may be obtained by writing to Goff at Englewood, Colo., and enclosing $1 in check or money order form.

I told him that I had indeed read it.

"Why not reprint it for your readers and let them see what the Reds have in store for them?"

"Not a bad idea," was my reply. "Chapter 12, which deals with violent remedies speaks for itself."

Try this on for size:

"As populaces, in general, understand that violence is necessary in the handling of the insane, violent remedies seem to be reasonable. Starting from a relatively low level of violence, such as straitjackets and other restraints, it is relatively easy to encroach upon the public diffidence for violence by adding more and more cruelty into the treatment of the insane.

"By increasing the brutality of treatment, the public expectance of such treatment will be assisted, and the protest of the individual to whom the treatment is given is impossible, since immediately after the treatment he is incapable. The family of the individual under treatment is suspected for having had in its midst, already, an insane person. The family's protest would be discredited.

"The more violent the treatment, the more command value the psychopolitician will accumulate. Brain operations should become standard and commonplace. While the figures of actual deaths should be repressed wherever possible, nevertheless, it is of no great concern to the psychopolitician that many deaths do occur.

"Gradually, the public should be educated into electric shock, first by believing that it is very therapeutic, then by believing that it is quieting, then by being informed that electric shock usually injures the spine and teeth, and finally, that it often kills or at least breaks the spine and removes, violently, the teeth of the patient.

"It is very doubtful if anyone from the lay levels of the public could tolerate the observation of a single electric shock treatment. Certainly they could not tolerate witnessing a prefrontal lobotomy or transorbital leucotomy. However, they should be brought up to a level where this is possible, where it is the expected treatment, and where the details of the treatment itself can be made known, thus to the increase of psychopolitical prestige.

"The more violent the treatment, the more hopeless insanity will seem to be.

"The society should be worked up to the level where every recalcitrant young man can be brought into court and assigned to a psychopolitician, be given electric shocks, and reduced into unimaginative docility for the remainder of his days.

"By continuous and increasing advertisement of the violence of treatment, the public will at last come to tolerate the creation of zombie conditions to such a degree that they will probably employ zombies, if given to them. Thus a large strata of society, particularly that which was rebellious, can be reduced to the service of the psychopolitician.

"By various means, a public must be convinced, at least, that insanity can only be met by shock, torture, deprivation, defamation, discreation, violence, maiming, death, punishment in all its forms. The society, at the same time, must be educated into the belief, of increasing insanity within its ranks. This creates an emergency, and places the psychopolitician in a savior role, and places him, at length, in charge of the society."

Remember Jane Wyman's prize-winning picture "The Snake Pit" a few years back? What is a lobotomy? A leucotomy? Do we know?

Forty-first Anniversary of Ukrainian Independence Reminds Us of Plight of Captive Nations

---

EXTENSION OF REMARKS

OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1959

Mr. SHORT. Mr. Speaker, under leave to extend my remarks I would like to include a letter from Mr. Lev E. Dobriansky of the Ukrainian Congress Committee of America, Inc. The Urkainians are a patient, hard working people and I have the honor to have some of them as my neighbors near my ranch in southwestern North Dakota. In their homeland Ukrainians have suffered, endured unspeakable hardships, and are still suffering today as one of the captive nations under the Communist yoke. I think it is fitting that we regain some of the perspective that some Americans seem to have lost under the impact of the Mikoyan visit. Mr. Dobriansky's letter follows:

UKRAINIAN CONGRESS COMMITTEE
OF AMERICA, INC.,
New York, N.Y., January 14, 1959

The Honorable DON L. SHORT,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN SHORT: On Thursday, January 22, friends of freedom everywhere will be observing the 41st anniversary of the independence of Ukraine. In the profound faith that Moscow's deceitful campaign of "smiles and trade" could never cause you to forget the aspirations of the captive nations and their fundamental importance to the security of our Nation, we respectfully ask that you join with us in this observance.

Today, more so than in years past, your statement in the RECORD commemorating this event, will help enormously to keep

the spirit of freedom alive in the hearts of 40 million Ukrainians. Your message in behalf of this captive nation will serve notice, too, of your sustained faith in the eventual liberation of all nations enslaved by imperialist Moscow. It will also clearly demonstrate to the Menshikovs, Mikoyans, and Khrushchevs that American memories of their crimes and our standards of civilized decency and justice cannot be erased by their calculated genteel antics or by spurious promises of trade.

The reception given Mr. Mikoyan by some of our wealthy Americans is food for serious thought. It indicates the spiritual climate in some quarters. Twenty years ago, the Nazi, Dr. Hjalmar Schacht, was completely ignored for what he represented. Today, despite his personal crimes, the Armenian quisling is widely feted. The thousands of patriotic Armenians, Azerbaijani, Don and Kuban Cossacks who were annihilated by his orders in 1917–21; the millions of Ukrainains who starved to death in the manmade famine of the 30's while Mikoyan shipped grains abroad; the role he played in the liquidation of Hungarian patriots—these and other facts no longer seem to bestir the consciences of some of us. Only two months ago, before the Moscow City Soviet, Mikoyan delivered a violent anti-American speech; today, without self-respect, some accept him as a deliverer of peace.

Your message on the captive nation of Ukraine will be greatly appreciated as a message with an American conscience, not to say one of political sagacity. We shall be most grateful for it and, in gratitude, shall deliver to you this Friday an interesting brochure of Ukraine's quest for freedom.

Sincerely yours,

LEV E. DOBRIANSKY,
Georgetown University.

Self-Employed Persons

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. KEOGH. Mr. Speaker, the passage of time is beginning to afford the basis for more accurate estimates of the fiscal effects of any program for the establishment of restricted retirement funds for the self-employed. Several years ago a somewhat similar plan was established in Great Britain. The experience since the inauguration of the plan in 1956 reveals that the actual effect on the revenues has been between one-sixth and one-tenth of the original estimates. This is supported by the following letter received by Dr. Frank C. Dickinson, formerly of the American Medical Association, from R. G. Burch, director of statistics and intelligence, Inland Revenue, London:

INLAND REVENUE,
London, December 11, 1958.

Dr. FRANK G. DICKINSON,
American Medical Association,
Chicago, Ill.

DEAR DR. DICKINSON: Your letter of the 26th September addressed to the Right Honorable R. A. Butler was passed to me for reply. I regret that it is only now that we have received the results of our annual survey of the tax assessments of self-employed people which enables us to make a reasonably firm estimate of the amount of the relief for premiums for retirement annuities.

In the April 1956 budget estimates the cost of the relief was given as £7 million in 1956–57, and £30–£50 million in a full year, but there was a footnote against both estimates to the effect that the cost of this relief will depend on the extent to which those eligible take advantage of it. In the event these policies were taken out much more slowly than expected, and it is clear that the cost will not rise in the forseeable future to anything like the level quoted. The amount of relief in the first year 1956–57 was under £1 million. The annual rate for 1957–58 is likely to be nearly £5 million, but new policies are still being taken out and it is clear that the amount of tax relief will continue to grow. It is difficult to forecast the level at which the relief is likely to settle down, but it is probable that this will be under £10 million.

Yours faithfully,

R. G. BURCH.

Most People Saw Through Mikoyan's Mission—He Wanted Us To Help in Our Own Destruction

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the editor of the Washington Star, appearing in its issue of January 4, 1958.

So many have asked what were the real objectives of Mr. Mikoyan's visit to the United States. This letter from a man who saw the Communist conspiracy first hand during his life in the Baltic States before coming to the United States diagnosed those purposes before the visit of the Soviet's professional revolutionary. Events while Mikoyan was here made clear the correctness of Mr. Kalnins' analysis. Furthermore, the negative reaction of almost all Americans except a few businessmen to Mr. Mikoyan's rather transparent blandishments and obvious evasions demonstrated in a heartening way the fundamental soundness of our people. No clever words unsupported by deeds, and no proffered profits, can mislead our rank and file into thinking falsehood is truth or evil is good. Maybe some benefit after all may come out of Mikoyan's visit, through the rejection of his shoddy offerings by the mass of our people despite the ballyhoo and fawning on him by a few.

Mr. Kalnins' letter follows:

BEWARE OF MIKOYAN

Russia's current long-range strategy centers around taking over the remaining countries of the free world by means of economic competition—another kind of a war against capitalism, but on a different level, and at present more promising for the Communists.

The real purpose of Mikoyan's visit to our country is intended to shorten the period of America's planned transition from capitalism to communism. Khrushchev has expressed confidence that our grandchildren will live under communism. The leading Soviet theoretician, Suslov, declared that the historical change will take place in less than 20 years. The turning point is now considered to be 1965, when, after completion of the new 7-year plan period, the Soviet Union will have outdistanced the United States in per capita industrial and agricultural production. The Soviets just need time, which they believe works for them. In addition, they certainly would appreciate it if the capitalists, by providing the Soviet economy with the needed machinery and other equipment, would aid in shortening this period of transition.

On two previous occasions America helped the Soviet Union to get out of a dead end. Our technical and material aid helped build up Soviet heavy industry, which now has become the backbone of communism construction and expansion. Then America saved the Soviet Union from military defeat during World War II by a timely massive supply of war materials and food. American taxpayers sacrificed over $10 billion to this end, and were not even thanked for it. Now, when Khrushchev experiences mounting difficulties with inner opposition, he hopes America—against her own interest—will be kind enough to help the Soviet Union again.

Mikoyan is going to talk trade. He will promise most profitable transactions to our business world. Lenin taught that capitalists, once offered economic concessions, are reluctant to fight the Soviet Union.

Khrushchev could not find a better man to cope with the problem.

Mikoyan is a resolute man. Once he played the leading role in communizing and Sovietizing the Caucasus. He worked for years in the underground, organizing party activities against the Azerbayan national government. He prepared the occupation of that country by the Red army in 1920, after provoking a Communist revolt in Baku. Later he crushed the uprising of anti-Communists in Nizhni Novgorod (now Gorky). From 1922 to 1926, together with Voroshilov, Mikoyan led the purges among the party organizations in the Don, Kban, and Terek River regions. In 1926, he was rewarded with an administrative post within the U.S.S.R. Government. Then trade became his new specialty. In this field he knows how to use trade monopoly to fight capitalism.

Mikoyan is shrewd. Let our Government beware.

KARLIS KALNINS.

Can India Do It Democratically?

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ULLMAN. Mr. Speaker, a recent article by Mr. William H. Stringer, chief of the Washington bureau of the Christion Science Monitor, contained some excellent information concerning the problems facing India.

Mr. Stringer's column also pinpoints a problem which Americans are wont to overlook, namely, that India's problems are also the problems of the United States.

Under leave to extend my remarks in the RECORD, I include the article as follows:

CAN INDIA DO IT DEMOCRATICALLY?

(By William H. Stringer)

NEW DELHI.—Drive from here to the Himalaya foothills and see the huge Bhakra Dam abuilding and you say to yourself, "This is good." Impounded monsoon waters will irrigate 10 million acres and sluice hydroelectric power to new chemical, cement, and aluminum plants.

Then drive about the new oil refineries at Bombay and the new factories there and you conclude, "India's industrial base is coming along."

But then you thread through bullock-cart traffic on northern roads, and you hear how densely populated is southern India, including the state of Kerala, where a Communist government was elected to power. And you learn that India still has a chronic food grain shortage of 1.5 million tons annually—and you finally ask:

"Can India really make it?"

Can India indeed prove that industrial modernization and agricultural reform and the whole colossal task of moving an unwieldy peasant-based state into the 20th century will be accomplished by democratic methods? Communist China is moving ahead by police state, drastically authoritarian techniques. Can India do it while preserving civil liberties?

This is the oft-stated challenge. But it becomes real and poignant and vital here in New Delhi when, right now, hard-working Prime Minister Jawaharlal Nehru and his government wrestle with the goals and objectives—and stark needs—of India's third 5-year plan.

For India, now completing its second plan, must move forward with a third in 1961–62, and a fourth after that. The factories below the Bhakra Dam must be built. Unemployment must diminish in Kerala. Somehow the chronic food shortage must end despite an annual increase in population. Resettlement of 9 million refugees from Pakistan—taking place almost overnight—must be completed.

What's to be done? India can project a bold third 5-year plan and maintain the headway now gained. Or it can decrease its pace of modernization and risk political disaster—and the advent of a more authoritarian form of government.

The point which must be of major interest to the United States and the West is that India's third plan must have major infusions of foreign aid or it will falter and fail. The United States, Canada, West Germany, Britain, and the international lending agencies rode to the rescue of the second plan—their aid will enable it barely to succeed.

The third plan will require as much assistance in loans and credits. One authority estimates that the United States will need to underwrite the last 2 years of the second 5-year plan and the 5 years of the third (ending in 1966) to the tune of $3 billion—plus larger allocations of surplus food grains.

Would this big underwriting—with other western industrialized countries doing their part—be worthwhile? Is it our own enlightened self-interest? Is there value and virtue in the commitment expressed by the Kennedy-Cooper Senate amendment to see India through?

There is intense interest throughout free Asia in development programs of all sorts. The Communist China experiment—communes and all—is being watched carefully. If democratic India were to stumble and fall, and Peking, with Moscow's assistance, were to succeed, there is not the slightest doubt that the repercussions would be tremendous. The United States has seen one of Asia's great nations go Communist; it would be cataclysmic if the second great populous nation went the same way.

Congress should consider the potentialities. It would be useful if it could decide this year how big a stake it ought to have here. Then India's 5-year planners would have a sounder base for their blueprinting. The Kennedy-Cooper resolution could be passed—if that is the estimate of Congress concerning the gravity of the situation—by both Houses.

Then, with other western powers sharing the investment load, a longer range program would be worked out so that too much debt repayment would not fall due during the critical years just ahead. India could decide how much effort to expend in the next forward leap on engineering and secondary industries, and how much on land reform, cooperatives, village improvement, and the whole complicated drive to boost India's agricultural output.

To Americans it should be worth a great deal to have a share in proving to Asia and to the entire watching world that communism does not offer to backward countries the only road into the 20th century.

Hungarians Trusted Mikoyan and Were Slaughtered—All Free People Must Beware Any Communist Bearing Gifts or Wearing Smiles—With Them Bad Faith Is a Virtue

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following deeply moving letter to the President by a refugee from Soviet massacres in Hungary. The letter appeared in the Washington Daily News of January 16, 1959:

SOME MAY ASK WHAT DIFFERENCE DOES ONE MAN'S LIFE MAKE

When President Eisenhower receives Soviet Deputy Premier Anastas I. Mikoyan tomorrow, one young veteran of the Hungarian revolt now living here will be absent from the picket line at the White House. He has written the President a letter to explain why.

He was among the university students who met to draw up the anti-Soviet demands that started the Budapest revolt 2 years ago.

Captured after 5 weeks of fighting, he said his Russian captors decided "to beat me to death" when he refused to name comrades. But he made a frantic dash "when they got tired of beating me and went out to rest," dived into the icedotted Danube, and swam to safety. He is now a student in a Washington college.

Here is his letter:

"Dear Mr. President: I, a Hungarian refugee who hopes to be an American citizen in 3 years, shall respect your call for courtesy and not join my picketing countrymen when Mr. Mikoyan arrives at the White House. I fear I could not remain peaceful, despite the demands of courtesy, for the arrival of the man who agreed to the removal of Russian troops just before they opened an atack in which 27,000 Hungarian men, women, and children died.

"You see, this week I got a letter from home. My close, lifelong friend, George, is dead.

"He was such a little person in the scene of diplomacy and world politics. Tall, warmhearted, intelligent, he was 22, the same as I. He came from a poor family that did not have money to send him to college, but because of his brilliance he won a scholarship to the University of Budapest Law School.

He could speak eight languages fluently. I remember, we used to sit around a table and discuss politics in many languages. Or, he would recite Virgil, whom he could quote for hours. And his only dream was to see once the place where George Washington was born and lived.

"The revolution came along, and he fought with the rest of us. And suddenly, after Mr. Mikoyan visited us there were ruins and flames, and we stood above a trampled nation and a destroyed dream of freedom.

"'A man can only run so far from his fate, and then he has to take a stand,' George told us. 'Where would I go?' he asked. So he stayed on his native soil.

"They let him live, to write urging us here to come back to the university, to Hungary. We felt from the sound of his letters that he was under pressure; we wouldn't go. And so he was of no more use.

"Last week, while Mr. Mikoyan was telling Americans there are no more political arrests in Russia today and we did the same thing in Hungary the United States did in Lebanon in answering the call of a legal government, while Mr. Mikoyan said this, they came. The Hungarian secret police or the Soviet soldiers (who they were really doesn't make a bit of difference) on Wednesday, January 7, early in the morning, dragged him out of bed and shot him.

"Mr. President, some may ask, what difference does one man's life or death mean for a nation of 170 million, or for the world? You, the moralist, know what life is worth. So while we speak of courtesy, will you please ask your visitor, Mr. Mikoyan, to have the courtesy to take his Russian heel off the heart of Hungary?

"Yours respectfully,

"ROBERT SOLYMOSSI."

(The name signed here is not the young freedom fighter's real one, in order to protect his family remaining in Hungary.)

Comprehensive Conflict of Interest Bill and Government Ethics Code

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. CELLER. Mr. Speaker, on January 15 I introduced two bills in Congress to strengthen the Federal conflict-of-interest laws and to enact a comprehensive code of Government employment ethics.

Testimany taken before the Antitrust Subcommittee and before other congressional bodies has revealed that a thorough revision of the Federal laws prohibiting conflicts of interest in Government employment is long overdue. Existing laws are confused and inadequate. They contain pitfalls for the unwary and loopholes for the unscrupulous.

To correct this situation, one of the bills I am introducing today revises, simplifies, and coordinates the conflict of

interest statutes and the related prohibitions against bribery. The measure should assure the Federal Government of the maximum protection against unethical practices, without unduly impairing the attractiveness of the Government service to competent persons.

Principal provisions of this bill include the following:

First. Lifetime prohibition of breaches of confidence in matters formerly worked on by employees who leave the Government.

Second. Prohibition of payments to—as well as receipts by—Government officials of compensation for services rendered before Federal agencies.

Third. Uniformity of provisions prohibiting bribery of officials, and extension of bribery provisions to witnesses before committees of Congress and before Federal agencies.

Fourth. Cancellation of Government contracts, licenses and grants consummated in violation of the conflict of interest and bribery laws.

The other bill that I will introduce would enact an overall code of ethical conduct to cover employees of all Government agencies, as well as all former employees, and members of the public dealing with the agencies. Unlike existing law, this bill would provide administrative penalties, including, first, discharge, for employees who engage in unethical conduct; second, suspension or disbarment of representatives who violate rules governing the activities of former Federal employees; and third, disqualification for contracts and grants of private parties who engage in unethical practices in dealing with the Government.

A Tribute to Congressional Secretaries

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. LANKFORD. Mr. Speaker, in the day-to-day press of our congressional duties we are prone to take for granted the dedicated work of our secretaries and other staff personnel who, in a real sense, keep the wheels of Congress turning so efficiently. The other night Joseph McCaffrey, the distinguished radio-TV news commentator, paid a tribute to congressional secretaries on his radio program "Today in Congress" which is presented each night, Monday through Friday, over WMAL at 6:45 p.m., as a public service by Independent Airlines Association. For the benefit of my colleagues who may have missed that particular broadcast of this oral congressional record, under unanimous consent, I include Mr. McCaffrey's tribute in the Appendix of the CONGRESSIONAL RECORD:

This Congress won't seem the same to many of the oldtimers on Capitol Hill because many familiar faces will be missing.

This reporter will certainly miss at least one of the many who retired at the end of the year and won't be around for the new 86th Congress.

I'm going to miss Dorothy Woodring, a veteran of 36 years on Capitol Hill who has been with Congressman WALTER NORBLAD of Oregon since he came to Congress. Prior to that she had served his predecessor James Mott. In all, 20 of her 36 years on Capitol Hill were devoted to Oregon's First District.

And if the constituents of every district received the attention, care, and worry that those folks in Oregon's first received from Dorothy Woodring there'd be more contented voters from coast to coast.

Dorothy Woodring, to my mind, was proof of the value of a good secretary to a Member of Congress.

She knew the answers; and, if she didn't, she knew something even more important: she knew where to find the answers.

She not only knew her official Washington—which can be a jungle—but she knew the district back home and she matched the two together.

Like people who are a success in any field, Mrs. Woodring learned a little something new every day—and she was willing to learn—and that's why she was probably the best in the business on Capitol Hill. And I hope she enjoys her retirement.

But this actually is more than a few words of praise for a good friend; it's also another way of pointing out the vital role a Capitol Hill secretary plays.

It's a tough job, an important job, and the men and women who fill those jobs don't get the credit that they deserve and earn.

Progress Noted by Bureau of Indian Affairs

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. HALEY. Mr. Speaker, I wish to call to the attention of our colleagues a recent news release issued by the Secretary of the Interior on the Bureau of Indian Affairs educational and economic advances made during 1958. I am pleased with the work being done by the Bureau of Indian Affairs and commend the Commissioner and his staff for their efforts expended in behalf of our American Indian citizens. The news release follows:

EDUCATIONAL AND ECONOMIC ADVANCES IN 1958 REPORTED BY INDIAN BUREAU

Both educational and economic opoprtunities for Indian people were significantly increased by Federal Government action in fiscal year 1958, Secretary of the Interior Fred A. Seaton said in the Department's annual report released today.

One of the most important developments, the Bureau of Indian Affairs section of the annual report points out, was the launching of a new vocational training program designed to improve the job skills and earning capacity of adult Indians. During the year the Bureau reviewed and approved for purposes of the program 165 occupational courses in 65 trade or vocational schools throughout the country and 376 adult Indians were enrolled in these courses. An additional 325 applications from potential Indian trainees were on file and awaiting action at the end of the fiscal year.

Shorter-term training for specific jobs was also provided during the year for 168 Indians in industrial plants near the reservations under contracts between the Bureau and the employing companies.

Another major development was the further expansion of the adult education program which the Bureau initiated on five reservations in 1956 for the benefit of Indians who missed the advantage of schooling in their youth. By the end of the fiscal year 1958 courses of this kind were being regularly given at 72 locations on Indian reservations in the United States and among the native villages of Alaska.

Enrollment of Indian children of regular school age increased by over 3 percent as compared to the preceding year and reached a record high of 130,000. Of the total, 61 percent were enrolled in public schools, 30 percent in Federal schools operated by the Bureau, and 9 percent in mission or private schools. During the year the Bureau operated 80 boarding schools and 214 day schools including 23 trailer schools on the Navaho Reservation and 10 instructional-aid schools conducted without professional teachers in the remoter localities of Alaska. Classes were conducted for student patients in three Public Health Service Indian hospitals. Dormitory facilities were furnished by the Bureau for 2,900 Indian students who attended public schools in communities bordering the Navaho Reservation in Arizona, New Mexico, and Utah.

For the benefit of Indians seeking jobs away from the reservations, the Bureau continued providing financial help and guidance in community adjustment. Offices for this purpose were maintained in Cleveland and Cincinnati, Ohio; Chicago, Joliet, and Waukegan, Ill.; Los Angeles, San Francisco, Oakland, and San Jose, Calif.; Denver, Colo.; St. Louis, Mo.; and Dallas, Tex. At the end of the year the Joliet and Waukegan offices were closed and merged with the office in Chicago. Help in moving was provided during the year to 5,728 Indians. This included 4,331 individuals in 976-family units, 1,023 unmarried men, and 374 single women.

Income to Indian tribal groups and individual Indians from the leasing of their lands for oil and gas development dropped considerably from the record-breaking figure of more than $72 million for 1957 but still reached the second-highest level in history at $55,210,467. Of this amount, more than $28 million represented bonuses in a single lease sale involving lands in the Four Corner portion of the Navaho Reservation.

On the Klamath Reservation in Oregon several important steps were taken leading toward the eventual termination of Federal trust supervision in accordance with a 1954 congressional enactment. An appraisal of the tribal property was completed. Slightly over three-fourths of the tribal members elected to withdraw and receive cash payments for their individual shares of the assets. A management plan for the residual tribal estate was drawn up. At the very end of the fiscal year a division of the property between the remaining and withdrawing members was completed.

To Keep Your Dollar Sound

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. MICHEL. Mr. Speaker, I am happy to see the President's budget message so universally accepted by thinking people throughout the country and was

impressed with the content of this morning's editorial in the Chicago Sun-Times, "To Keep Your Dollar Sound." It would be my fervent hope that those who fall within the category of free-wheeling spenders would meditate seriously over the content of this editorial. It makes good sense.

The editorial follows:

[From the Chicago Daily Sun-Times, Jan. 20, 1959]

TO KEEP YOUR DOLLAR SOUND

President Eisenhower has given Congress a big order. He has asked the Democrats, who control both Houses, to help him fight inflation and keep the cost of living down. To do this, Congress must trim Federal spending and vote some $1½ billion in new or increased taxes, in order to balance the Federal budget. The recommendations have brought cries of anguish from some Congessmen. Neither thrift nor increased taxes arouse enthusiasm on Capitol Hill.

Yet, despite the criticisms that have been evoked from Democratic leaders, the President's program is based on fundamentals that they must recognize if they keep faith with the voters who sent them to Washington. Every American is concerned about the depreciating value of the dollar—it buys about one-fourth less than it did 10 years ago. If the Government, which is going into the red more than $12 billion this year, continues to spend more than it takes in next year, the dollar will buy less and less. As the President has said, if the Government persists in living beyond its means it makes it difficult for every family in the land to balance it own household budget.

In his economic report sent to Congress yesterday, the President asked not only that Congress exercise restraint in spending, but he asked that labor, business and the consumer help the Government defend the value of the dollar. He urged labor leaders not to ask for wage increases not based on increased output of workers. He asked business to hold the price line. He told consumers they could help by shopping carefully for price and quality.

The Government itself must set a good example by holding down its spending. The President is alarmed about the possibility of further inflation because economists see 1960 as a year when inflation could go bounding up. The budget that he sent to Congress covers the last half of 1959 and the first half of 1960.

This year the Nation is expected to recover fully from last year's recession and to go on to the best business year in history.

Especially during such a period the Government should be able to live on its income, which will go up as incomes and profits go up. If instead the Government continues to operate in the red, the pressures of inflation would build up for a real explosion in 1960.

That is why the President said solemnly that if Congress does not help fight the battle of inflation by accepting his balanced budget it may be necessary to restore economic controls. These are just as abhorrent as inflation and would also be an obstacle to economic growth and development.

If the case for a balanced budget is so persuasive and clear cut, why should it be so hard to put across in Congress?

Some Congressmen do not believe that it is dangerous for the Government to continue to operate in the red. They say that the country is growing and that the Government must continue to spend huge amounts for defense and to meet the increasing needs of the people—even if this spending puts the Government deeper and deeper into debt. They belittle creeping inflation, and some even argue that 1 or 2 percent of inflation a year is not only inevitable but beneficial.

We disagree. A little inflation is like a little snowball going downhill. It gathers size and momentum. It swallows up the savings and incomes of retired people who must rely on pensions and insurance policies for their incomes.

Some Congressmen who argue against thrift also argue against increasing some revenues to pay the cost of Government. The President has asked for no general tax increase. He wants an increase in postal rates, aviation, and auto gas taxes, and on a few other special items.

No one likes to see taxes increased. But it is better that a few taxes be raised to keep the dollar sound than to pass an irresponsible budget that steals from every wallet and purse in the land by cheapening the dollars they contain.

What the South Needs Is a Strong Republican Party

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, January 9, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith a very interesting editorial written by Mr. Monroe Sweetland in the Milwaukie (Oreg.) Review. Mr. Sweetland is a leader of the Democratic Party in Oregon, being currently a State senator and having formerly been Oregon's Democratic national committeeman.

The article follows:

[From the Milwaukie (Oreg.) Review, Jan. 1, 1959]

WHAT THE SOUTH NEEDS IS A STRONG REPUBLICAN PARTY

Habit and tradition are both good and evil. While they may be fine attributes in moderation, they can become obsessions which will ruin a man or a nation.

This, we think, is what ails the American South. The fine traditionalists who operate southern business and industry, and do it now with great success, think they still have to be Democrats. Their party is no longer a reflection of their thinking on economics or government. They find themselves rejected by its conventions, outvoted in its highest councils, and at the coming session of Congress they will be cast in the role of an obstructionist minority. On many issues they are in agreement with the Republicans of the North and West, but the obsessions of habit and tradition compel them to pretend they don't even know those who wear the Republican label.

In presidential elections these southern leaders find themselves more and more on the sidelines. Every 4 years they are relegated into the unproductive role of sulking in their tents or bolting their Democratic Party. The platform and the candidates are now invariably unacceptable.

The Nation needs its two-party system. It needs a two-party system which gives the people a real choice between conservative and liberal philosophies of government. Across the North and West, with minor exceptions, this polarization of the people into their two great parties has already taken place. In the South it is confined to the Democratic primary and the November elections have become a farce. The liberal Democrats have won some southern spots, but mostly it is still an old guard area.

Already in Florida and Texas a substantial Republican Party has emerged. It should spread to South Carolina, Georgia, Mississippi, and Louisiana, where a large, restive conseravtive bloc of traditional Democrats should join them. There would be better government in the South, and much more honest registration of public opinion in our November elections.

Mikoyan Came; the People Saw; He Did Not Conquer

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following splendid editorial from the New York Times of January 16, 1959:

MR. MIKOYAN AT THE UNITED NATIONS

Deputy Premier Mikoyan's press conference at U.N. headquarters yesterday revealed little not already familiar to persons accustomed to following the activities and arguments of the Russian delegation in that same set of buildings. The famous personality, the outer aspect of good will, the glow that followed Mr. Mikoyan's electioneering tour of the American hinterland—these were new. Mr. Mikoyan is more pliable and insidious than Mr. Sobolev, who was master of ceremonies yesterday, but the positions taken were essentially those the Soviets have already taken at the United Nations.

Mr. Mikoyan did not yield in any important particular. His expressions of good will were general. His attitudes were the same old attitudes. He was asked some questions that had obviously been prearranged, and some that just as obviously had not been prearranged. He was, at times, momentarily nonplused, but he showed the same skill in parring dangerous questions that has kept him alive and in public life in Russia, alone among the outstanding figures of the old Bolsheviks.

What did he say that was news? This was the question that most of the journalists were naturally asking themselves. He was in favor of cooperation in the use of outer space. He merely deplored that the U.N. committee set up for that peaceful purpose did not give the U.S.S.R. a commanding position. He was asked about the treatment of Jewish writers in Russia. He replied, in effect, that those who preferred to write in Yiddish in Russia were free as anybody else, but that they generally preferred to write in Russian. He accused the United States of attempting to impose a "diktat" on Russia with regard to conditions proposed for controlling tests of atomic weapons. He came out against the enslavement of the Arabs by the colonial powers, with bland indifference to the fact that the Arabs are no longer enslaved by any colonial powers.

He complained of the reluctance of the Western World to enter into a summit conference on Russian terms. He denied that Russia held captive any American fliers who had, unfortunately, come to earth on the wrong side of the boundary. He said that Hungary and the Hungarian people are happy, and that "it would be rather nice if the situation were as normal in many other countries as it is in Hungary." He accepted the business of coexistence and added that "our people do not need or want to interfere

in the internal affairs of other countries." He admitted that "the Americans today have a higher standard of living than ours."

In a moment of greater asperity, at the end of the conference, he denounced freedoms for hooligans—meaning, as we may presume, the Hungarian demonstrators in this country, who have sometimes shown more honest indignation than wisdom in embarrassing distinguished Russian visitors.

This visit to the United Nations, this press conference, well guarded by the New York City police outside and by the U.N. security staff inside, was a spectacle in which the Russian relationship to the United Nations and to the whole free world was vividly dramatized. Mr. Mikoyan made no new enemies yesterday. On the other hand, he revealed more poignantly than he had done before, the shabby nature of the bill of goods he is trying to sell in this country.

Health Insurance for Retired Persons

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1959

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by Dr. Frank G. Dickinson, Ph. D., before the American Association of University Teachers of Insurance at the La Salle Hotel, Chicago, Ill., on Sunday, December 28, 1958. Dr. Dickinson recently retired from his position as economist and statistician of the American Medical Association and director of its bureau of medical economic research:

HEALTH INSURANCE FOR RETIRED PERSONS

(By Frank G. Dickinson)

PREFACE

I would be less than human if I did not express at the outset my pleasure in being invited to give this paper before a growing professional organization which I helped to organize in 1932 and was later honored to serve as secretary and as president before I left the University of Illinois more than 12 years ago. I congratulate the officers of recent years who have so wisely planned the activities of the association.

The topic "Health Insurance for Retired Persons" is far too broad for a short paper. I shall present last my only suggestion for legislation; I shall confine myself largely to presenting brief and inadequate answers to seven basic questions:

1. What is the role of life insurance in financing the terminal illness or accident?
2. Does prepayment diminish in importance as one grows older?
3. Has the present generation now approaching age 65 had a greater opportunity to save than the generation which attained age 65, say, 20 years ago?
4. If accumulation during the working years of life is the ultimate solution, is the current national problem one of saving or one of insurance?
5. Will the increase from 15 to 22 million persons age 65 and over necessarily aggravate the problem?
6. Is the prospect of lengthening life much beyond three score years and ten realistic or fantastic?
7. What Federal legislation, if any, is likely to provide a sound solution to the problem of financing medical and hospital expenditures during retirement?

1. HEALTH INSURANCE VIA LIFE INSURANCE

Many years ago, a wise judge once observed, "What we know as men we must not forget as judges." Why did you and I buy life insurance? Why do we continue to pay the premiums? One of the reasons is to provide a cleanup fund at the time of our death to pay outstanding bills, including those for our last illness.[1] Typically, the last illness, especially among persons age 65 and over, is by far the most expensive illness. Last year the grand total of death benefits paid by life insurance companies on death claims of persons 65 years and over in the United States was about $1,100 million. Of the 1,600,000 deaths in the United States last year, 900,000 were among persons in this older age group.

Unfortunately, we do not know how many of the 15 million people in this older age group are currently protected against the medical and hospital costs of the last illness through life insurance. Suppose it is 10 million; it may be more. We are probably entitled to say that some two-thirds of those suffering their final illness have provided in a large measure the means for meeting the economic costs of their last illness through the institution of insurance—in this case, life insurance.

I submit that life insurance plays a major role in financing the terminal illness or accident. You who teach all branches of insurance are not likely to be so shortsighted in the treatment of health insurance for the aged as to forget this time-honored role of life insurance. As the number of persons aged 65 and over increases from 15 million to 20 or 22 million, the life insurance companies and their agents can make an enormous contribution to the social, political, and economic impact of the final illness by selling more life insurance and keeping more life insurance in force. Moreover, the availability of loans under these life insurance policies constitutes a tremendous backlog upon which our older citizens can rely in postpayment or prepayment of the costs of illnesses before their last illness.

So my answer to my own question about the role of life insurance in financing the terminal illness is that it plays a tremendous role. I trust that the life insurance industry will succeed in making this role even greater in the future.

2. PROPENSITY FOR PREPAYMENT DIMINISHES

The pressure of obligations to a family is one of the basic reasons for buying insurance, for paying in advance if you will. It is one of the reasons why we buy life insurance and health insurance. As you and I have passed through time we have shouldered the rather heavy medical and hospital costs incident to having children and frequent visits to the doctor for children at preschool ages.

As the children grow older they kick out a pair of shoes every month and seem to be hollowlegged when it comes to stowing away food. Later on they present understandable demands for recreation, better clothing, and many social activities. Then come high school and college with their heavy financial burdens. So that when we reach age 50 most of our children have left home and we have paid off all or most of the mortgage on the home. The best savings period of life begins after age 50 for many.

One turns west, so to speak, around age 50. Why should older persons over age 50, or more particularly over age 65, want to prepay the costs of health insurance? The youngsters are grown and even the grandchildren will be teen-agers or older. One reason for prepaying health care costs—that is, to protect the wife—would continue for couples in their later years. As mentioned, as we grow older we look upon life insurance as a means of clearing up our debts including the cost of the last illness when we die.

Although I have no statistical proof, it seems to me that the advancing years bring with them a decrease in desire to prepay health care costs and an increasing desire to postpay them. I daresay that even the best plan and the most attractive program of health insurance for older people may encounter sales resistance simply because the pressure to prepay diminishes after 50 years of age, and more particularly after age 65. I do not present this tendency as an impossible barrier for health insurance underwriters, but I submit that sales resistance will be encountered even where the flow of funds is sufficient to pay term premiums during retirement. Apparently one-third of them are now insured for medical and/or hospital services; and the proportion is rising.

3. A LUCKY GENERATION

Those who are approaching retirement age now are finishing their working period of life in an era favorable to savings. Contrast the situation for a person in this retiring class of 1958 with one in the retiring class of 1938, two decades ago. Those who attained age 65 two decades ago completed their working years during the depressed conditions of the 1930's. Personal savings of the American people in some of those years were negative. On the basis of 1955 prices, per capita personal savings in 1957 were seven times as great as they were in 1938. The source does not give this change by age groups. But the present generation approaching retirement is certainly more fortunate than the generation which approached retirement two decades ago. We shall avoid speculation herein regarding the relative prospects of the two retiring classes having their savings materially reduced by inflation.

This is a lucky generation that can finish out the working years of life in the period of prosperity. The point I wish to make here is that the problem of financing health care during the retired years is on its way to solution, but not for many of those who are now over 80 or 85 years of age as they finished up their working years of life during a period of depressed economic conditions. Considering the people over 65 years of age as a homogeneous group for the purpose at hand leads to generalizations which are not warranted.

4. A PROBLEM OF SAVINGS

My fourth question and fourth point is that the problem of financing health care during retirement is basically a problem of saving during the working years of life. Health insurance has been sold on a term basis. The means of providing a flow of income during retirement to pay these term premiums monthly, quarterly or annually, or to postpay these costs remains the basic economic problem. The entire savings mechanism of our society must be brought to play on this problem of financing health care during retirement. It is not exclusively a problem of insurance, but of savings during the working years of life—life insurance and annuities, mutual savings banks, savings accounts in commercial banks, direct ownership of securities, property, and so forth. The rapid expansion of pension systems is one of the more favorable factors on the horizon. Moreover, an increasing number of employers, often under collective bargaining pressure, are specifically providing for medical and hospital care during retirement over and above the pension payments.

5. FROM 15 TO 22 MILLION

Population projections indicate an increase from 15 to 22 million persons in this older age group. Those on old-age assistance

[1] The author has presented this point elsewhere. "Why People Bought Life Insurance," an editorial, The Journal of the American Medical Association, 167, 7: 866 (June 14), 1958. Reprinted as Bureau of Medical Economic Research Miscellaneous Publication M–113, Chicago, American Medical Association, June 1958.

now number about 2½ million and an unknown, but probably greater number, either do not want to buy voluntary health insurance or do not need it. A rough guess would be that 3 to 6 million of the present 15 million population in this older age group are outside the market for voluntary health insurance. Whatever the number may be, life insurance, other forms of savings and pensions accumulated during the working years of life will probably continue to grow at a faster pace than the number of older persons. I think the stress on the predicted increase in the number of persons in the age group 65 and over—from 15 to 18 to 20 to 22 million—is far too great in public and political discussions. The real problem is to increase the savings and other provisions for old age per 100 persons reaching age 65, or later retirement age, each calendar year. If sufficient progress is made, the increasing number of persons in the higher age group could actually present a smaller problem in future years than the current problem.

6. THREE SCORE YEARS AND TEN—A PLATEAU

While on this question of population forecasts, it may be helpful to examine briefly the claim that medical and scientific progress will continue to lengthen life in future decades as much as it has in recent decades. Assuming that will happen, the alarmist jumps to the conclusion that the problem of health insurance for retired persons will attain vast proportions. The expectation of life at birth has increased by an average of almost 4 years a decade in the 20th century; but the increase between 1950 and 1960 will probably be only 2 years as compared with 6 years during the 1940's. Earlier reductions in infant mortality exercise tremendous leverage on this measure of length of life. But infant mortality is now below 2½ percent and the possibility of reducing it much more is obviously a flight of fancy. Moreover, if mortality could be entirely eliminated at all ages below 45, the present expectation of life at birth of 70 years could be increased only to 74 years. Success in the management of the older diseases of life will doubtless lead to some improvements in expectation of life at ages over 45. But the evidence is clear that in the absence of fantastic medical progress, expectation of life at birth will not move much above 75 years during the balance of this century; if, indeed, it actually reaches 75 years by 1999. But my point here is that some of the scare propaganda about the future increases in length of life aggravating the problem at hand is just scare propaganda and nothing else.

7. TAX ENCOURAGEMENT

I need not give a description of the Forand bill to this audience. If the time has come to consider spending Federal tax money to provide free hospital and surgical care for the 10 to 12 million persons eligible to receive or actually receiving OASI benefits, one may question whether this is the wisest use of Federal revenues. If we consider the primary long-run problem involving savings in its broadest form for retirement, it follows that the encouragement of such savings would seem to be more in the public interest than the Forand bill proposals. Our time on this program today is too short to go into details about Federal legislation. What I have in mind is a bill somewhat similar to H.R. 10 which passed the House but not the Senate last summer—a bill commonly referred to as the Jenkins-Keogh bill—a bill to encourage self-employed persons to save for old age by providing tax deferment on reasonable amounts set aside in a taxable year for the purpose of providing income after age 65 or 70. This same device could also be used to encourage savings by any taxpayer to finance medical and hospital care during the retired years. The annual set-aside in a taxable year might be limited to $100 per taxpayer and placed only in restricted funds of the types provided in the Jenkins-Keogh bill. The accumulation of these savings in funds designated by the Secretary of the Treasury would be primarily a savings function until retirement age was attained; after that these accumulated funds could be used only to purchase health insurance on a current basis or some form of a medical or hospital care annuity, or to postpay medical and hospital bills during the retired years. Such legislation should be carefully drawn so that the savings could be used only for the stated purpose, and the deposits and accumulation of funds prescribed by regulations promulgated by the Secretary of the Treasury. In the taxable year itself the set-aside of a maximum of $100 would not be taxed but the income derived therefrom during retirement would be subject to current income taxes—tax deferment, not tax free. This temporary loss in Federal income tax revenues would be for the purpose of solving a problem for young taxpayers as well as old taxpayers. For the younger taxpayers this contingency could not arise for many years. Such legislation would clearly put us on the right track, namely, encouragement of savings during the working years of life to finance medical and hospital expenditures during retirement.

Korean Government Pledges That Powers of New Security Law Will Not Be Used To Curtail Basic Freedoms but Only Against Enemy Agents

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. JUDD. Mr. Speaker, many people in our country have understandably been concerned at news reports from Seoul that the majority party in control in the National Assembly of the Republic of Korea, after weeks of unavailing persuasion, finally used force to clear out the minority which had seized possession of the chamber in a sit-in strike to prevent passage of a new national security law. The minority expressed the belief that the law could and would be used to suppress the opposition party and the press, not just Communist infiltrators and agents.

Mr. Speaker, it is interesting that in both the U.S. Senate and the National Assembly of Korea, the majority has difficulty getting opportunity to work its will—in each case because of the fears of the minority that too drastic measures may be taken by the majority.

When this incident in Korea was reported in the press, I consulted responsible Korean officials and am happy to include with my remarks a summary of the new law and the reasons for its enactment, a detailed report of the incident by Dr. You Chan Yang, Korean Ambassador to the United States, along with the pledge of President Rhee and the Ambassador that "in the operation of the law there shall not be any abridgment of speech, press, and personal freedoms." This statement will be very reassuring to the American people. We are all friends of Korea and wish for it and its people freedom, reunion, peace and prosperity. We recognize that many of the problems with which it struggles came directly from our own division of the country with Communists controlling the north and determined to undermine and gain control of the south, too:

A COMMENTARY ON THE REVISED NATIONAL SECURITY LAW OF THE REPUBLIC OF KOREA

(Dr. You Chan Yang, Korean Ambassador to the United States, made the following statement today:)

Recently, there have been a number of newspaper articles and editorials which have been appearing in the American press concerning the circumstances surrounding the passage of our revised national security law and its contents. Because some of the newspaper reports indicate fragmentary knowledge, and because some of the editorials indicate inadvertent misrepresentations, I feel that it would be helpful to the American reading public if the actual record were made known.

Why did the administration introduce the bill for this new law? What is generally not realized in the United States is that Korea is still in a state of war. During the past year, the Communists have multiplied their efforts to subvert the Republic of Korea. Hundreds of Red agents, thoroughly equipped with military weapons and tremendous sums of cash, have been sent across the 38th parallel to foment the strife and to bring about the downfall of the Korean Government.

It was to eleminate this clear and present danger that the national security law was enacted. None of our previous legislation was adequate to handle the problem. Last year, over 900 Communist agents were arrested, but went largely unpunished because of the lack of adequate legislation. The previous Korean laws were too obsolete to cope with current Red infiltration tactics, as none of them had been modified since during the early days of the U.S. military government in Korea. The Criminal Code could not be applied to North Korean Communist agents, because its punitive provisions are only for spies of an enemy state—yet North Korea cannot be considered a state but only a puppet regime. Similarly, our national defense law has jurisdiction only over military units, and, thus, is not applicable to acts of espionage committed by civilians outside combat areas. Indeed, supplying North Korea with any private, confidential or secret information or any other act abetting the Communists had not constituted a crime under then-existing legislation.

In view of these facts, the administration presented the new national security law bill to the National Assembly on November 18, 1958.

The opposition minority party, called the Democratic Party, in opposing the new bill, launched an organized program of filibuster in order to delay the orderly deliberation. On December 19, at 5:25 p.m., the opposition party members, without obtaining the permission of the Speaker of the House, physically occupied the main hall. Members of the Government majority party, called the Liberal Party, having finished their general meeting, sought to enter the main hall, together with 30 Sergeants at Arms belonging to the Secretariat. The Sergeants at Arms sought to pick up the bedclothes and bedding and other miscellaneous items scattered about upon the rostrum of the House of Representatives, whereupon the opposition drove out the guards, and destroyed the desks, chairs, and the Speaker's seat in the House of Representatives; the session then had to be adjourned.

It should be noted that these clearly were acts of violence, and Government property in

the main legislative chamber had been destroyed.

Nevertheless, the speaker of the assembly met several times with the opposition to negotiate, while the latter went on a sitdown strike in the Assembly Hall. These negotiations proved fruitless, and on December 23 the Secretary-General of the National Assembly appointed additional security guards so that order could be restored. On the next morning this security guard was asked to clear the hall. The sitdown strikers sought to block the opening of the plenary meeting by barricading the hall. In the violent action directed against the sergeants-at-arms which ensued, 15 security guards were beaten so extensively as to require hospitalization.

The whole event was a black mark upon the mature legislative processes in Korea. The administration had again and again invited the opposition to express their argument against the proposed legislation verbally, instead of through violence. My Government welcomed their early suggestions, and, indeed, incorporated several of them as amendments to the new law. The law itself was badly needed, the sitdown strikers functioned in an undemocratic and unparliamentary way, and the speaker of the house was in his legitimate right in invoking the support of the sergeants-at-arms.

Apprehension has been expressed in some quarters that the provisions of the new legislation would in some way abridge freedom of speech and press. But this has never been, and is not now, the intent of the law. President Rhee, the Government, and I personally pledge and guarantee that in the operation of the law there shall not be any abridgement of speech, press, and personal freedoms. The clear-cut intent of the law absolutely is only to allow the Government to apprehend and punish enemy agents. The world will see in the years to come the utter fairness in the applicability of the national security act.

Removal of Two-Term Limitation on Presidency

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. CELLER. Mr. Speaker, on January 15, I introduced a joint resolution proposing a constitutional amendment to repeal the two-term limitation imposed upon the Presidency. The constitutional amendment which first enacted this limitation was never thoroughly considered. It was never a clearly thought out proposal, used for constructive purposes, but was, in my opinion, an emotional reaction against President Roosevelt, who had succeeded in winning four elections. It was enacted by the Republican 80th Congress with unbecoming haste.

Time has proven how sorry a mistake this amendment is. The country is living with a lameduck President who, in his second term, has lost much of the political power essential to him for leadership. It hampers, in my opinion, the treatymaking powers of the President, and is disadvantageous in the delicate day-to-day operations of our foreign affairs.

In short, with such limitation—namely, that his powers terminate on a day certain—the President loses effectiveness, both at home and abroad. Moreover, this limitation is to my mind an unjustifiable expression of distrust of the electorate.

I firmly believe that the repeal of this amendment is one of the musts of the 86th Congress.

Just How Underpaid Are Our Teachers?

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. METCALF. Mr. Speaker, the purpose of the School Support Act of 1959—H.R. 22—is to strengthen the financial structure of our public schools by Federal grants to the States to be used to build schools or increase teachers' salaries or both, as each State sees fit.

As a cosponsor of this legislation, I was impressed by a recent article in the Star. Special writer George W. Oakes asked, then answered, the question: Just how inadequate are teacher salaries?

Mr. Oakes found that the principal reason for the national shortage of some 135,000 qualified teachers is a salary scale which discourages capable people from becoming teachers, or causes teachers to leave the profession.

Mr. Oakes' article follows:

JUST HOW UNDERPAID ARE OUR TEACHERS?

(By George W. Oakes)

One of our hardiest public perennials is the question of schoolteacher pay.

Everybody admits teachers are underpaid. Everybody talks about it and a few people do something about it. Its ramifications run all the way from people who lay at its door all our scientific inadequacies to those who just say it's a shame for people who train our youngsters' minds to make less than those who fit their shoes.

Just how inadequate are teachers salaries?

The National Education Association has spent a lot of time gathering figures for the answer. Theirs are regarded generally by Government officials as the most reliable available.

They have found out these things:

There are 1¼ million public schoolteachers instructing in elementary and secondary schools throughout the United States.

About 60 percent teach in schools located in urban areas—the highest proportion in cities with a population of 100,000 to 500,000.

Nearly three-fourths of all teachers are women. They predominate in the elementary schools where only 14 percent are men.

AVERAGE MAN TEACHER

The average man teacher in the public school system is 35 years old, married, and has one or two children. He is a college graduate but usually doesn't have more than an A.B. degree. He's probably teaching in a secondary grade, has been in the profession for 8 years, most of this time in the same school system.

The average woman teacher is considerably older, with an average age of 45, is married and has one child. About a third of women teachers are unmarried, a higher proportion than is true of most workers in this country. She holds a college degree but very few have done graduate work. She's likely to have been teaching 15 years in all, 7 in her present school system.

The married woman teacher is financially best off of all as 83 percent have husbands who are employed full time.

AVERAGE EARNINGS $4,520

The average teacher earns about $4,520 per year.

Women's salaries are in general about 10 percent less than men's.

Pay also varies considerably according to different areas of the country. For example, in California the average teacher receives $5,925, and in New York $5,800 per year. In the District of Columbia it's about $5,364. It is due to be more since a pay increase was voted in July.

In Mississippi the average annual salary is only $2,650 and in Kentucky $3,125.

Despite the relatively high scale in some States one out of every four classroom teachers in this country gets less than $3,500.

In spite of his academic training and professional status, the teacher is paid just a little more than the average American wage-earner, including the unskilled.

To take some concrete cases: The average civilian employee of the Federal Government was paid $4,971 and a typical railroad clerk got $4,778 last year while the average professional person earned approximately $7,600.

The most serious aspect of the teacher's financial situation is the fact that he is infinitely worse off today that he was half a century ago in comparison with other workers. Between 1904 and 1953 teachers gained 37 percent in purchasing power but telephone operators gained 111 percent, railroad clerks 92 percent, and those in furniture manufacturing 137 percent. Yet during this period the average school term lengthened by about 23 percent while industrial and office workers reduced their working week from 48 hours in 6 days to 40 or less in 5.

OTHERS PAY MORE

The difficulty in attracting outstanding men into teaching is well illustrated by salaries offered inexperienced college graduates by 20 major Chicago corporations compared to those available in the public schools of one of Chicago's best suburbs, Winnetka. A year ago those entering accounting, sales work, industrial relations, engineering, and general business were paid from $4,800 to $5,300. But Winnetka teachers started at $3,900 a year.

In general the male teacher who must support a family is particularly hard hit financially. Therefore, 3 out of every 10 teachers' wives work full time. In order to make ends meet the typical man teacher has to take other jobs which furnish about 10 percent of his total income. Most earn their extra money during summer vacation.

What makes this serious from the viewpoint of improving teacher competence is that such outside work is generally not even professional in nature and often prevents the teacher from attending summer refresher courses. As a result he does a poorer job of teaching. Less than a third did professional work as a summer job. Most men worked as clerks and sales people, farmers or unskilled workers.

As one married high school teacher who has a $5,200 salary (about $1,000 higher than the national average) and earns $400 from outside jobs put it:

"Every summer is a major crisis for my household. In the past few summers I have been dishwasher, ditchdigger, truck driver, gardener, screendoor salesman, and tutor."

The comments of a fourth grade 36-year-old teacher illustrate how the need for extra earnings penalizes teacher training:

"I should be happy to have at least as many hours each week to devote to my own learning outside the classroom as those I must spend to supplement my inadequate teaching salary. Perhaps I would then be better qualified to help satisfy our need for better education."

SALARIES DON'T GO UP

One important factor which discourages capable people from entering teaching as a career and causes others to leave it is that teacher salaries do not increase over a 10- or 20-year period nearly as rapidly as do those in business or the professions. In the Chicago school district, where a high salary scale applies, earnings for those with a college degree will run after 10 years 52 percent above the minimum.

But a college graduate during the same period, would have had a 78 percent pay raise in engineering, 109 percent in accounting, 123 percent in sales work and 105 percent in general business. As a young English teacher in a big city junior high school sees it:

"If I could plan on sizable raises in pay over the years, which accompany success in other fields, it would add incentive to be sure. But I look at the pay schedules for our State and find it would be in vain to move (ours is average) to greener pastures."

In their living arrangements, teachers are at least in line with the national average. In fact the proportion who own their own homes—59 percent—is practically identical with the national figure. Most teacher homes—one-third—are valued at from $10,000-$15,000. Almost as many are worth less than $10,000.

Eighty-eight percent of the teachers own a car which is 17 percent higher than the national average.

DEPEND ON CREDIT

The consumer debt among teachers shows that as a group, they depend on credit a little more than most Americans. For example in the $4,000-$5,000 income bracket—above average for teachers—34 percent of all teacher families had a debt of more than $500 compared to 32 percent for the average family at that income level.

Despite the fact that teachers do have a difficult time financially and are at a considerable economic disadvantage compared to other professional people, there has been a continuing improvement in their pay. During the past decade the pay of schoolteachers, principals and supervisors has risen in general at an average anual rate of about 6 percent.

In 1957–58, their average salary was approximately 63 percent higher than it was in 1948–49. When this salary raise is translated in terms of purchasing power, however, it is estimated that the net gain for teachers is about 38 percent during these 9 years. In the 1955–56 school year, about half the teachers questioned in an extensive Nationwide survey felt their financial position had improved over the preceding year. Starting salaries have also risen about 10 percent between 1955 and 1957.

Yet it is still true that more men quit teaching because of inadequate financial compensation than for any other reason. Of all who leave the profession more than one out of three does so because of the low salary.

That's why only about half of all men teachers would go into the profession if they could start their careers over again. In the words of the Rockefeller report, "until we pay teachers at least as well as the middle echelon of executives we cannot expect the profesison to attract its full share of the available range of talent." This could well mean a raise of as much as 50 percent in the salary scale.

Mr. Arthur S. Flemming, Secretary of Health, Education, and Welfare commenting on the same problem, says the salary structure is the most serious weakness in our total educational system. He put it this way at a recent press conference:

I think the most serious weakness in our total educational system today is our salary structure. I don't care whether you are talking about elementary or secondary education, or whether you are talking about higher education, I think that as a Nation we should be ashamed of the compensation that we pay those who are willing to serve us in what is certainly one of the most important areas in which people can serve the society of today.

There are those who say that we won't correct the situation unless we are willing to double the salaries that are now being paid.

I appreciate the fact that that is a generalization that possibly is subject to, or should be subjected to, fairly close scrutiny, but personally I am willing to subscribe to it.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Citizen Looks at Government

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1959

Mr. McNAMARA. Mr. President, yesterday my esteemed colleague, the senior Senator from West Virginia [Mr. RANDOLPH], delivered an address in Dallas, Tex., at the annual convention of the American Road Builders Association.

The Senator from West Virginia, who served 14 years in the House of Representatives, and for all of that period was a member of the Committee on Roads, delivered a thought-provoking address on this occasion before 1,200 men and women. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CITIZEN LOOKS AT GOVERNMENT

(Address by U.S. Senator JENNINGS RANDOLPH, of West Virginia, at national convention luncheon of the American Road Builders Association, Dallas, Tex., Jan. 20, 1959)

President Steelman, members of the American Road Builders Association, and distinguished guests, it is a pleasure to be here and to have this opportunity to renew so many of the happy associations that developed during my work with you in the past 10 years. These have been warm and enduring relationships which I trust will remain, even though I have been impelled to withdraw from active participation as an officer of the association. And you may be assured that the work of the ARBA, and the development of our Nation's highway system will always be matters of the most fundamental interest and concern to me.

I am sincerely sorry I was not here earlier to hear the excellent addresses by the able Senator from New Mexico, Senator CHAVEZ, the chairman of the Senate Public Works Committee, and also the address by Senator FRANCIS CASE, a longtime advocate of improved highways. A former House colleague, Representative GEORGE FALLON, of Maryland, was also a distinguished speaker, as was Representative WILLIAM C. CRAMER, of Florida.

It is pleasant being in the home State of two outstanding Americans, Speaker SAM RAYBURN and Senate Leader LYNDON JOHNSON. They are positive in their efforts to build a better America.

Today, although I intend to talk in part about our roads, I am going to discuss them in the context of the general topic, "the Citizen Looks at Government."

As most of you may know, I recently completed a political campaign of almost 8 months' duration for the unexpired term of the late Senator Matthew M. Neely. During that period, I traveled the highways and byways of West Virginia and talked with thousands of my fellow citizens. And I may say quite categorically that there is no substitute for a grassroots campaign in sounding the sentiments of the people.

The framers of our Constitution took this fact into consideration when they established a House of Representatives to be elected every 2 years, their theory being that the House, whose Members must counsel with the citizenry every 2 years, would thus be most responsive to the needs and the will of the electorate. Although the technological development of our communications and transportation systems have, in part, eliminated this distinction between the two Houses of the Congress, the political campaign is still a vital part of the educative process in a democracy, for the candidate no less than for the electorate.

I wish, therefore, to share with you some of the observations and reflections coined from my experiences of recent months. It is not too early to appraise the meaning of the last election. But when I say that, I am not implying any use of partisan political rhetoric. I wish to go beyond such terms to a consideration of the needs of the citizen in relation to the nature of a democratic society itself.

And, in this inquiry, it would be well for us to remember that democracy is still a rather new experiment in the history of mankind—one that has by no means embraced the loyalties of people throughout the world. We who live within the democratic tradition—we who maintain faith in the dignity of the individual—are still a minority of the human race, and it is not written in the stars nor in words of fire across the sky that our way will prevail. Our endurance will be due to our imagination, our intelligence, and our will—not to some benevolent cosmic force in history which protects us from ourselves.

In viewing our topic in generic terms we find that certain material and spiritual conditions must be satisfied in order to develop and maintain a democratic society:

First. A minimum level of material prosperity must be achieved, sufficient to fulfill the basic needs of the populace—the need for food, shelter, clothing, employment, and provision for tomorrow.

Second. An adequate system of communication, transportation, and information must be maintained in order to assure the operation of a free and informed public consensus. In the city-state of ancient Athens the scope of democracy was defined by the range of the orator's voice. This fact, in itself, should preclude any casual comparison between the Greek democracies and our own.

And, the third condition that must be satisfied is an intellectual and spiritual one—the belief that men and women are capable of being governed by reason and good will.

These are the minimal conditions of a democracy. Now, what bearing do these generalizations have on our discussion today and the findings of the recent compaign? In brief, we may state the answer in these terms:

Although the conditions necessary for a democratic society—as I have outlined them—are universal, the way these conditions are satisfied varies with the complexity of the society and the state of its technology. This, in turn, affects the citizen's view of his government's responsibility.

Thus, in a dynamic society such as ours, these conditions are in constant flux—a flux which calls for persistent and continuous reexamination of the role of government itself. I shall, therefore, use the conditions of the State of West Virginia as a laboratory example of the kind of reexamination necessary, and the degree of governmental responsibility the citizen expects.

President Lincoln and other great statesmen and political philosophers have defined the functions of government as doing that for the individual which he could not do for himself. Thus, 100 years ago, with still half a continent virtually unsettled—with free land available for the taking—the Government did not need then to concern itself with problems of unemployment, social security, retirement benefits, etc.

The hardy men and women who pioneered West Virginia— as well as the rest of America—were well able to provide for themselves from the fertile land they settled, and the close-knit family group provided for its own aged.

But what of today? Their descendants who work the coal mines of West Virginia are no less hardy than their fathers and grandfathers. But they are less independent—and through no fault of their own. They now are part of an immense industrial complex which they cannot control—an industry, the condition of which is controlled by the technology of our society as a whole, the development of new fuels, new blast furnaces for steel, and new ways of producing power, to name only a few changes.

The production of coal, incidentally, in West Virginia declined from 150 million tons in the year 1957 to a gross production of only 112 million tons in 1958.

In 1948 there were 125,000 persons who labored in the coal mines of my State. But, by 1957, coal industry employment dropped to 58,000—and as of December 15, 1958, there were only 47,000 men working in the coal mines of West Virginia.

It is not surprising, therefore, that in all of the polls taken during the Senate campaign in West Virginia the issue overriding all others in the minds of the voters was the recession and the problem of unemployment. At the present time, when we are being told that the Nation is pulling out of the recession, and business is on the road upward, in West Virginia approximately 15 percent of the labor force remains unemployed, and 300,000 people of the State are living on surplus food commodities, or are eligible to receive these Government surplus food items.

Self-righteous talk about stern measures of economy in Government thus means little to able-bodied men and women who have the will to work but are denied the opportunity. Nor is this a problem that confronts the people of West Virginia alone—as the recent figures in the rise of unemployment testify.

We are, indeed, faced with the ironic and anomalous situation of a nation at the peak of its productive capacity impelled to give thought, as a result of technological advancements, to impending unemployment in many sectors of its productive system—in the mines, in the steel industry, in the automotive industry, and in agriculture.

And this, I reiterate, is a responsibility of government, for we are here concerned with the survival of a democratic society—a concern which cuts through party divisions or

questions of moderate or liberal or conservative political philosphies.

I do not choose to be considered a prophet of doom and gloom—a Cassandra reading in the flight of birds the downfall of our society. But democracy means a certain condition of morale among the people—a condition in which the citizen walks upright, assured of his own dignity as an individual. A jobless man, whose family lives by sufferance rather than by right, does not long retain his sense of strength and freedom. And a democratic society cannot long afford the erosion of morale that follows.

Thus, through Federal planning and Federal action, as was quite clearly implied in the Full Employment Act of 1946, we must assure the material conditions of democracy by maintaining full employment. Such a view is not the product of liberal sentimentality, nor Christian charity, nor socialistic theory—it is the product of a hardheaded regard for what is necessary for our survival—and an acknowledgment that we have the material resources if we but have the imagination, the intelligence, and the will to use them.

Turning now to the second set of conditions I mentioned earlier—the need for an adequate system of transportation, communication, and information—it is interesting to note that these factors also weighed heavily in the minds of the West Virginia voters. In the same polls that showed unemployment as the chief issue, the second-ranking issue was invariably either the improvement of roads or schools. In both respects the citizen looks to the Federal Government for a contribution to the solution of the problem.

As most of you know, I have for many years been convinced of the vital importance of transportation—all forms—to the development of our expanding Nation. And of all forms, none is more important than our highway system. For highway transport not only supplements every other form of transportation, but it makes available to us the wealth of choices in where we live and work and seek our recreation.

It is important, also, to be reminded that many of the educational advancements of recent years—that have been achieved through our consolidated schools—have been made possible by an improved highway system.

It is worth considering, as well, that an adequate highway network which provides farm-to-market roads might do much toward easing the plight of the independent farmer who has contributed so much to the quality of American life. Indeed, a balanced highway program is one that not only provides for interstate superhighways between cities, but, also, for other primary arteries, and a large network of secondary roads that serve mining, agriculture, and other rural industry.

When I was a Member of the Congress in 1944, serving the sixth of my seven consecutive terms, the Federal-Aid Highway Act of that year authorized and designated 40,000 miles of a National System of Interstate Highways, but only the regular Federal-aid funds were available from the Federal Government to finance its construction. Such limited funds, of course, were utterly inadequate to complete the much-needed development in any reasonable time.

By 1956, as you are aware, Congress was in a position to pass legislation establishing a long-range program for improving the Interstate System and authorized $25 billion, to become available over a period of 13 years. The Federal-Aid Highway Act of 1956 also stepped up the regular Federal-aid highway program—often now referred to as the ABC program.

These funds, which must be matched 50–50 with State funds, are available for the improvement of two Federal-aid systems and their extension into urban areas—the 250,000-mile Federal-aid primary system and the 528,000-mile Federal-aid secondary system.

Funds for the ABC program are generally authorized by the Congress every 2 years. These averaged $500 million for the first 9 years after World War II. But the 1956 act stepped these funds up to $850 million for the fiscal year 1958, and to $875 million for fiscal 1959. Then came the 1958 Federal-Aid Highway Act, which increased the outlay to $900 million for fiscal 1960, and to $925 for fiscal 1961.

With such a large expansion as is anticipated, however, there must be close consultation between Federal, State, and local governmental agencies with the local citizenry to so plan our highway work that it will benefit local areas, rather than ruin tracts of land that would be useful for agrarian, industrial, and residential purposes.

As much as we need vast highway developments, we must do our utmost in careful planning to avoid strangling ourselves with our own improvements.

Equal in importance—in the minds of the citizen, as in the fate of the Nation—is the question of maintaining and improving our educational system in the face of the challenges of increasing population, and the growing complexities of technology and society itself.

Although the problem has recently been dramatized by our contest with Russia and the tremendous educational and scientific strides of our adversary, this contest did not create the problem. Nor should we attempt a solution by imitating the Russian example, as some have suggested.

For the greatness of a nation is shown in many ways—in its cultural and scientific achievements, in its moral responsibilities, in its art, in its national aspirations. But its ultimate strength lies in the quality of the individuals who comprise its living substance.

And the strength, the final strength, of these United States lies in our belief in the dignity of the individual, the belief that man should live in the light of reason, should exercise his own free choice, and should develop to the full the latent talents within him. To this end we have established our free public education system.

Our system is not designed merely to mold a select few into polished aristocrats of a preconceived pattern—as are the older systems of Europe; nor is it designed to make our young people servants of the state—as are the schools of Russia, China, and the satellite nations.

On the contrary, we have designated to our schools the chief responsibility for the development, in all our young people, of the emotional, moral, and intellectual capacities that will qualify them as responsible members of a democratic society.

If the schools have partially failed, as some would now maintain, it is in large measure because we, citizens and representatives alike, have failed also in providing sufficient support, moral and intellectual, as well as financial.

Forty-three million Americans—one out of every four go to school. On this basis, with the expected population in 1975 of over 222 million, our school population will have soared by that time to 55 million. While, according to the authoritative Rockefeller report, we now have 22 million in our elementary schools, by 1960–61 we will have 34 million. By 1969, high schools will be deluged with 50 to 70 percent more students than they can now accommodate; and by 1975, our colleges and universities will face at least a doubling and, in some cases, a tripling of present conditions.

To carry this tremendous burden we have, in the recent past, devoted only slightly more than 3½ percent of our gross national product. To refer again to the Rockefeller report, in 1955, with a gross national product of $391 billion, we spent—on both private and public education—a total of $14 billion, or 3.6 percent. According to the same source, the cost by 1967 will be $30 billion, or about 5 percent of an estimated gross national product of $600 billion.

To this end, more than 20 members of the Democratic majority, including myself, have joined in cosponsoring a bill introduced by Senator MURRAY, of Montana, to provide Federal support for the public schools. The bill, given the number S. 2 to indicate its high priority in the business of the Senate, authorizes assistance to the States for the purpose of helping to pay for school construction and increases in faculty salaries. Financial aid would be granted on a per capita basis of $25 per child the first year—to be increased $25 per year until the fourth year—at which time it would be stabilized at $100 per child per year. The total outlay would range from $1.1 billion the first year to $4.7 billion the fourth year—increasing thereafter with the rise in school population.

There are specific provisions in the measure guaranteeing local school board control, which is a necessary requirement.

This, if the bill is enacted into law, would be a significant contribution, but it would be no more than the national Government should do to fulfill its responsibility for what has become a national problem. But our efforts must not end here.

This should be only the beginning of a concerted program of mobilizing our resources, private as well as public, local as well as national, to assure our young people of the quality of education they deserve.

Equality of opportunity in education means not only the opportunity to be exposed to learning, but the opportunity to achieve excellence in the development of one's full potential. This, in turn, means that we cannot and must not sacrifice quality for quantity; we must have both. This will be an expensive business, one where there are no shortcuts or easy solutions, but surely the wealthiest Nation in history can afford whatever is required to preserve and utilize its most precious national resources—the hearts and minds of its youth.

It is no less true today than in Thomas Jefferson's time that the integrity of a democratic society rests upon an informed and intelligent citizenry—or, as Jefferson himself stated it, "The people are the only censors of their Governors; and even their errors will tend to keep these to the true principles of their institutions. * * * The way to prevent these irregular interpositions of the people, is to give them full information of their affairs through the channel of the public papers, and to contrive that those papers should penetrate the whole mass of the people."

These, then, are the necessary conditions of a democracy which the citizen looks to his Government to maintain:

A sufficient prosperity and employment level to satisfy the fundamental needs of the individual, an adequate communication and transportation system to maintain the vital flow of ideas and commerce, education of high quality and adequate quantity for our youth, and governmental practices that are responsive to the right of the citizen to participate in making those decisions which shape his or her own destiny.

Youth, Communist Target

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1959

Mr. THURMOND. Mr. President, J. Edgar Hoover is always willing to warn

the citizens of our country to beware of communism. One of the most recent examples of this is a column in Our Sunday Visitor of Sunday, January 18, entitled "Youth, Communist Target."

Mr. Hoover does not mince words in his warnings. The Communist movement is seeking out the young, impressionable people of the country, realizing that they are most apt to believe their misleading statements about a better world under communism.

I ask unanimous consent that Mr. Hoover's latest contribution to the opponents of communism be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUTH, COMMUNIST TARGET

(By J. Edgar Hoover)

The English statesman, Burke, said, "Tell me what are the prevealing sentiments that occupy the minds of your young men, and I will tell you what is to be the character of the next generation." Goethe, the German poet and philosopher, expressed much the same thought in these words: "The destiny of any nation, at any given time, depends on the opinions of its young men under 5 and 20."

Today's youth are tomorrow's future. No one is more acutely aware of this fact than are the Communist conspirators—and no one is more eager to exploit the idealism, enthusiasm, credulity, and inexperience of youth than are they. Lenin pointed the way in his words: "We need young forces. • • • The youth will decide the issue of the whole struggle, the student youth and still more the working-class youth."

There has been no deviation. At this moment—all about the earth—the Communists are striving to make youth the key by which they can open the door and force the whole of mankind across the threshold of a Communist world.

To bring about this end, Communists the world over are taking advantage of two fundamental facts: the urge to experiment and improve which is common to idealistic and enthusiastic youth, and the present condition of the world.

All of us must recognize the idealism of youth—the great dreams, hopes, and aspirations which are the impetus to action. This eager idealism of the young insists on perfection, and this is a good thing for it is the spur which helps eliminate injustice. But idealism, without the checkreins of knowledge and sound judgment, may take one on a short cut to disaster.

There is always an element of rebellion against authority in the young. Every child is eager to reach the age when he can make his own decisions—when he doesn't have to do what he is told. And that which is new and novel holds great appeal for the immature, rebellious youth particularly if it differs from traditions.

Communists know that innovations appeal to the young, and they know that the more idealistic youth can be trapped by the emotional appeal of a cause presented with crusading spirit and zeal.

In past decades, the Communists have captured the minds of thousands of inexperienced youth by presenting a wholly false picture of a brave new world, while, at the same time, their most intense efforts were bent toward the creation of a menacing totalitarian monster.

This brazen and cynical exploitation of the wonderful traits of youth is one of the most vicious aspects of the whole conspiracy to enslave and dominate the world. But despite their best efforts, the Communists cannot keep the false curtain entirely closed to inquiring young minds. The freedom fighters of Hungary and a Russian poet, in their own way, made rents through which reality shone all too briefly.

Unfortunately, the very unsettled conditions of the world today—conditions created in large part by Communist activity—help the Communist in his work of subversion. This is an age of great social change. And change—the breaking of the moorings of parental control, and the breaking with past traditions—makes it much easier for exploiters to ridicule and destroy the principles, standards and morals which have proved the safeguards of freedom throughout history.

The complete amorality of the convinced Communist enables him to take full advantage of the proneness of youth to relinquish the stable moorings of principle and tradition. The young mariner too often sets sail with false charts to steer by and a false star to guide his course.

And make no mistake about it. Every child in America is an ultimate target of Communist effort in some form or other. Students and young workers, particularly those in industry, are objects of concentrated propaganda effort. This effort is extremely subtle. It consists in large part of a ceaseless, relentless campaign against our American way of life, our ideals, culture, laws, morality, religions, traditions, principles, customs, and institutions.

It seeks to destroy the respect of the young for all of these things which are termed by the Communists "petty bourgeois ideologies and influences."

It seeks to eliminate—often by means of ridicule—that patriotic love of country which at Valley Forge held a ragged, barefoot army together in a cause that many times seemed hopeless.

It seeks to weaken character, destroy individualism, and create a mass man who will offer little resistance to Communist collectivism.

Much Communist propaganda directed at youth feature a pacifist, antimilitarist theme. This, of course, is calculated to weaken the military potential of the United States.

By every posisble means, propagandists seek to present the false face of communism to inexperienced youth.

They not only seek the college campus as a forum, but they also strive with every means at their command to place Marxist members in sound, wholesome youth groups for the purpose of influencing and subverting nonparty youth.

Again and again Communist functionaries have indicated that they consider the assignment of party members to work among teenagers as vital. Every youth organization is a target. No group is immune.

In one instance we learned of the formation of a Communist-dominated youth group which had, as its main purpose, the infiltration of two specific organizations.

In another instance we learned of an individual boasting that he had succeeded in turning a youngster, met through a sound youth organization, away from the latter's religion and had nursed him along to the threshold of communism.

We are beginning to learn how the Communist conspirators exploit the natural idealism of youth to advance an unnatural brutal and godless tyranny. How do we propose to meet such a challenge here at the threshold of the nuclear age?

It is our responsibility to recognize and to understand the forces motivating our youth. Confronting the same conditions which Communists use in exploiting youth for evil ends, we must, in a positive and dynamic fashion, direct the same forces to serve the ends of justice, truth, and freedom.

The future belongs to youth. If the world of the future is to be a free one—a wholesome one, in which the word "justice" has meaning—we must offer nourishing food to build the minds and characters of youth. We must implant sound ideas, hold forth high standards, and develop the ideals essential to the preservation of freedom. We must teach true values and instill necessary disciplines. We must, by example, help our youth live up to—and preserve—the spiritual heritage which is the birthright of every American.

Our Republic is predicated upon the premise that extraordinary qualities exist in ordinary people and that freedom of opportunity enables those qualities to develop and flourish. This is traceable to the creativeness inherent in Christian metaphysics. It is the direct antithesis of the quality of negation which marks the Communist philosophy.

In no area of living can the spirit of man soar skyward when it is chained to earth by an ideology which denies man either soul or spirit.

What is to be the character of the next generation? Goethe said that the destiny of any nation depends on the opinions of its youth under 25. There is no question but that this vital group is a direct target of intense Communist endeavor. How are we going to meet that challenge?

Address by Hon. Vance Hartke, of Indiana, Before the National Political Science Conference on Urban Problems

EXTENSION OF REMARKS

OF

HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1959

Mr. BIBLE. Mr. President, on Friday, January 16, the able Senator from Indiana [Mr. HARTKE] gave a very thought-provoking speech on urban problems before the National Political Science Honorary and Citizens Conference on Washington Area Problems, at the American University in Washington.

I ask unanimous consent that the text of the speech entitled "National Policy for Urban America" be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am honored that you have asked me to speak to such a distinguished gathering. Let me make it clear that, as a freshman—a Senator, I do not want to be presumptuous. Let me add also that I do not claim to be an expert. However, as a former mayor who is now operating in higher echelons of government, I have had some experience along the lines which you folks have been discussing.

Problems of our cities can't be explored too deeply or too often. But we must do more than explore. We have to prepare to act, then act.

It is concerning the role of Federal Government in helping promote effective action for a better way of life for our urban citizens that I speak tonight.

Before continuing with this talk, "National Policy for Urban America," I want to take note of something that happened to me just 2 days ago.

As you may know, I have been appointed to the District of Columbia Committee. Now,

some Senators, frankly, do not consider this a choice assignment. However, I am as pleased with the challenge this committee offers as I am with my appointment to the Finance and Interstate and Foreign Commerce Committees, which are considered major appointments.

You see, I am pleased that the Senate leadership has considered my experience as mayor of Evansville, Ind., valuable background for this work here. I consider the challenge of helping wipe out slums and traffic bottlenecks in the Nation's Capital as important—or more so—as the challenge I felt in facing these problems in Evansville.

I hope I can help bring better government to Washington. And I hope to have a part in bringing local self-government to the presently voteless residents of the District.

In addition to Washington, we have 167 metropolitan areas in our country, ranging in size from Macon, Ga., and my own city of Evansville, Ind., to the multi-million-sized centers of New York, Los Angeles, and Chicago. Around 80 percent of these metropolitan areas now have fewer than half a million inhabitants.

In the next few years, we're going to have many more metropolitan areas. By the year 2000, we are told, some 235 million persons will be living in these metropolitan areas alone in our country.

Cities which now have between 100,000 and 200,000 residents will grow far beyond their present boundaries. These areas offer us opportunity. We have opportunity to help them avoid the problems that have ravaged our largest cities.

Somehow, the meaning of population and growth figures is so simple it has escaped us. Cities, which once served as service areas for the countryside, now dominate the landscape and our civilization.

The figures are impressive. They're almost frightening. But the full significance comes in translating the figures into problems of real impact on the cities and their people.

For those of us who must travel to work in such areas and who use municipal services, metropolitan growth problems are personal problems.

But, the implications and the size of urban growth can hardly be classed as something strictly local. It is statewide. It is interstate. Indeed it is national.

The new swift means of getting from place to place, the way in which our people move from one place to another, have made the problems national in impact. Transportation needs, requirements for huge quantities of water, national defense needs, all of these have made it unrealistic to talk of metropolitan problems in terms of one community or as something less than a national situation.

With two out of three American citizens already living in metropolitan centers, no single level of government alone possesses the organization, the funds or the leadership to cope with the problem.

The sad truth is governments have not been equipped to handle the metropolitan problem. They have not been able to, or have been unwilling to, anticipate the changes which our century has brought to cities.

The impact of the car is a good example. We have been unable to move fast enough or with enough determination to prevent the problems brought to our cities by 60 million cars on their streets.

Yet, cars are simple things compared to jet planes and helicopters. They're simple compared to automation and atomic power. All of these more complicated instruments will probably be in common use in another 50 years.

We can anticipate their use and the problems they may create just as we could have anticipated the impact of the car. But if we can't turn this anticipation into action our problems will multiply. That is because we still haven't solved exhaust pollution, street congestion, and roadbuilding. On top of this we know we can expect air-transport congestion and prospects of pollution and waste disposal from atomic sources.

What's more, there will be a mass of leisure time which automation is bound to bring.

To date we have not used mobility as something creative. Instead, we have let it too often be a noose for strangulation as well as a force for growth and opportunity.

The challenge of these new scientific and technological developments lies not alone in making out life more productive, but in making it more fruitful and more decent. Why must we go through growing pains of technological advancement when advances can be anticipated?

Let's gear our policies to change and to the warning signs. As a nation, we have never been adverse to experimenting in Government programs and organizations. Indeed, our representative democracy is itself an experiment not yet in full flower.

The problems of this new technology are focused on our cities. The products of the mines, the fields, the factories, the laboratories, and of the cultural heritage of this country are stored in our cities.

Our cities are rich.

Rich in material things. Rich in human resources.

They are themselves important resources.

Our cities are our latest frontier. Unless outer space can be substituted for green space and parking space, the cities may be our last frontier.

Like earlier frontiers, our cities have been settled, exploited, and somewhat eroded. Continuing this patern means degrading the lives of millions. Yet, our goal should be continuous raising of human dignity. This is impossible in the midst of urban erosion.

Rising crime rates, social diseases, juvenile delinquency, segregation, filthy living conditions flourish partly because of uncontrolled or poorly controlled urban growth and population management.

Out in the countryside our rural residents learned some of these lessons long ago. They found out conservation is essential to growth.

Soil conservation, for instance, is widespread and national in scope. Yet, there is almost no urban conservation program.

If we can work to save and restore the resources that God has given us, surely we ought to be able to do the same with resources that have been largely of our own making. The spectacle of urban growth, then, requires anticipating needs of citizens for applying technological achievements to make life better through them. It requires stopping erosion and restoring its effects.

First, we must anticipate the problems we will soon face. I refer to anticipation in the full, active sense of the word.

Let us mobilize, for instance, all the sources of information on city problems and funnel this information into a policy. Right now the Federal Government has programs in urban renewal, highways, flood control, water and land management, economic aid, housing, school construction, and law enforcement, all of which are designed to help cities.

But there is a sad lack of coordination among these programs, just to mention a few. What's more, many cities aren't even aware of what help is available or how to get it.

Similar programs are being carried forward on other levels of government without being dovetailed with Federal programs.

They cannot be divorced. A highway linking two major cities has in itself impact on commercial and residential growth, on relocation of residents, even on crime rates. Urban renewal is related to transportation, to water supplies, to sanitation facilities, to law enforcement. All are tied into the expanding economy of the Nation. All are part of the defense system in supplying the goods and getting the goods delivered, as well as to a better standard for us to hold up as a model to our friends and allies.

We need to anticipate the net effect of these programs on specific places.

For instance, a community needs to know how, if at all, it may benefit from the distress-areas bills and from highway legislation. In Evansville, for instance, we found that by pushing a sewer-development program ahead at an accelerated pace we were able to get around $250,000 in Federal funds for planning.

To gage how well needs of individual cities are being met by existing legislation, each metropolitan area has to be studied and the national implications weighed. To do this means local, regional, and national planning.

Many conferences on metropolitan problems are held every year. But these efforts are not coordinated. So far as I know, no one community has mobilized all the forces available to cope with its problems, let alone any such national mobilization.

The Federal Government, it seems to me, can provide the incentive to pool information, talent, energy, and resources to focus attention on metropolitan problems and suggested solutions. It can help anticipate and plan. It can help gain public support and understanding.

Existing agencies might be called on to analyze present programs and their net effect, adding how these programs can be used in other places.

There also is a need for reviewing the relationship of these programs at the top level. The Council of Economic Advisers should be concerned with a new dimension in our complex economic situation—the probable consequences of trends on our civilization. Or, put another way, where are we likely to end up if we continue on the same road?

The council could perhaps tell us where this production is, from what markets and to what markets do products flow, what the effect of certain policies will be, and developments on the opportunity for a full life for citizens.

The Budget Bureau or some other agency of the executive could well review programs for urban growth and see that these are meshed in such a way as to spread their benefits. We have books on farms and their products and on such things as jobs. Why not on our cities?

It should, indeed, be the business of all agencies to report on implications to our people of new scientific developments. This could be done through urban research in the National Academy of Science or some similar group.

Such a group could make information available to local groups such as the metropolitan study group of Washington. Pooling and sharing of information then would be possible. Cities could learn from each other from an agency trying to store knowledge on problems and possible new problems.

But this anticipation and presentation is only the first phase.

We must also plan.

Now is the time for a long-range program to pool brains, energy, money, and experience which is being frittered away in separate meetings, conferences, and institutes.

It should be a goal to keep talking about problems and also to start doing something about them.

I refer to setting goals in welfare, public works, transportation, water supply, sanitation, decontamination, living standards, defense, communication, recreation, and many more. I refer also to setting up requirements to meet needs which can also serve as a yardstick to measure local achievement.

Along these lines, I understand the best guess for residential renewal requirements is $700 billion or 10 percent of the gross national product between now and 1970. The same estimate calls for quadrupling present outlays for these purposes. Yet, national urban renewal plans now propose only spending 10 percent of this amount.

Going too slowly is not economy. It isn't fair to those who suffer the consequences. We can afford what is necessary, surely. Just as surely as we cannot afford a thing that is not necessary.

But how are we to judge? If our information is correct, we are spending no more than 3 percent of what we are told is needed.

But we also need to know the effects of these goals on other programs for urban development. And we have few standards on which to base judgment.

We face similar problems in transportation and water resource development. We must project effects of present programs and anticipated needs if we are to make even an educated guess. And, with the size of the problems we have and will have, guessing ought to be reduced to a minimum.

The Federal Government should serve two-thirds of its citizens by helping them with information for rational decisions. This calls for looking into all policies affecting urban life, highways, housing, urban renewal, water supply, stream pollution, etc., to find out if they measure up to our obligations.

After anticipating and planning to meet anticipation, we must set up adequate standards.

These can be set up only with understanding of problems and with plans that require local areas to measure up. Again the Federal Government can supply both initiative in presentation and resources to accomplish the goals. It can set a pattern for planning and it can set standards.

By publicizing the problem, it can give aid to new values for the new way of life. If our cities are the just brunt of public scorn, it is a national disgrace that they should continue to be when most of our people live in them. The very vitality of democratic government is at stake in the rebuilding of our cities. If democracy fails to meet these urban problems, how can we hold out our system as one for others to follow?

Our culture, oddly, has two images of city life. One is that of Sodom and Gomorrah. The other is that of the Heavenly City.

If many of us cling to the idea that cities are dens of iniquity, we may get little more than that from many of our cities. I believe, however, from experience in Evansville, that we can raise our cities to new stature and prestige. To do otherwise is to allow erosion of great material and spiritual resources.

Our cities must provide highest standards of convenience, efficiency, service, and beauty. If they do, the cities can become monuments to our civilization. If we don't, the cities may become our tombstones.

Third, we must spell out our standards and plans in a strategy for urban development. To be meaningful, this strategy should have national leadership. I believe this can be furnished by National Government.

It could use its resources to coordinate the plans I spoke of. It could use scientific information resources to analyze trends in growth and development and the implications. It could help spell out, with all the minds and skill available everywhere, objectives and goals and standards.

This could be done through a White House conference. A joint congressional-Presidential commission is another way. Revitalizing and revamping National Resources Planning Council or some other group is another way.

We need information, digesting of this information, analysis of statistics. Without these, there can be no review of implications, no evaluations, no setting of standards.

Then these goals must be implemented. There are, perhaps, two interim approaches for constructive criticism.

We certainly can see the need for more land. And we can see the need for conservation of present resources.

Let's learn again from the farmer. We need something like an urban land bank to acquire in urban areas land for future expansion. This may take Federal assistance at least until State legislatures release cities from 18th century financial straitjackets.

Perhaps we can use a city agent—someone who can help cities help themselves as the county agent does for rural America.

Urban growth is a fact. Our metropolitan living is the dominant way of life. We can't escape it.

I know of no domestic problem which does not have a bearing on the problems of urban growth.

The solution is not one of capability. It is not one of lack of brainpower. And it certainly is not one that can be shoved from one level of government to another as someone else's problem.

It is the problem of all of us.

We cannot afford the price of undue delay.

We must develop national policy. To do so, we must plan, set standards, spell out the standards with strategy for accomplishment. Then we must provide the machinery and money to realize the goals.

In all this, we must not lose sight of the greatest goal—human dignity of high order for all.

I think it can be done.

I think we can come a little closer at least to the "heavenly city."

If we don't try, we may come closer to hell on earth.

Item Veto for President Way To Save Money

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1959

Mr. PROXMIRE. Mr. President, last Monday the Milwaukee Journal published a forthright message to this Congress in an editorial which called for enactment of the item veto bill which President Eisenhower has requested. I especially commend the editorial to those of my colleagues who disagree with the President on this request, but who are willing to be told in blunt language why they are wrong.

The Journal put a perceptive finger on congressional motivation when it wrote:

> Congressmen don't want the President rummaging through pork barrel bills, killing the wasteful pet projects for their home districts. They don't want him knocking "riders" and "sleepers" 'off of otherwise good bills.

Mr. President, I ask unanimous consent that the editorial entitled "Item Veto for President Way To Save Money," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ITEM VETO FOR PRESIDENT WAY TO SAVE MONEY

The President's opening message to Congress was typically studded with climactic points at which applause was indicated if there was enough enthusiastic agreement on the floor. But one burst of applause was all unexpected, when he asked for item veto power over spending bills. Surprised and pleased, he departed from his text and gave the point added emphasis off the cuff.

The lack of enthusiasm for yielding this point in past Congresses has set some sort of record. Presidential pleading for it goes back at least to Grant, regardless of party.

Yet the ability to delete or reduce single items in appropriation bills, without risking loss of the whole bill, is thoroughly accepted as an elementary and needful part of executive power in 40 States, including Wisconsin. It was routinely included in the new Alaskan constitution, which the last Congress approved without question.

Lack of it in the Federal Government is fearfully costly. Congress lumps all sorts of spending in a bill and forces the President to approve the bad with the good, or veto the good with the bad—all or nothing.

Powerful, old Representative CANNON, of Missouri, chairman of the House Appropriations Committee, professes to see in the item veto proposal an invasion of the legislative "power of the purse." Nonsense; this would be no more true than it is of the existing veto power, which is one of the constitutional checks and balances between the two branches. The President can't get money from Congress unless Congress votes it—that's what the "power of the purse" means. But he can prevent congressional spending if his veto will stand up. And an item veto is just as subject to overriding as any other.

The real reason why the Cannons have historically balked at this reform is not constitutional; it is simply "pork." Congressmen don't want the President rummaging through pork-barrel bills and killing the wasteful pet projects for their home districts. They don't want him knocking riders and sleepers off of otherwise good bills. These are ignoble and unprincipled reasons.

The substantial approval shown this time when Eisenhower again mentioned the item veto is encouraging. Maybe we're getting somewhere. Nor would a Congress in earnest about the reform have to wait for a constitutional amendment, although it should start that, too. It can begin right away to specify in each appropriation bill that its items are separately subject to veto.

Texas Won More Civil War Battles Than It Lost

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1959

Mr. YARBOROUGH. Mr. President, although it is not generally known, the first and last military actions in the Nation's War Between the States were fought on Texas soil. In addition, a number of other sharp engagements were fought in the Lone Star State, including the defense of Sabine Pass and the recapture of Galveston by the Cottonclads.

These important events have never been fully publicized in Civil War lit-

erature. However, John W. DeVine, editor of the Nueces County News, a weekly newspaper published at Corpus Christi, has proposed that the Civil War Centennial in 1961 would be a fitting time for recognition of these important historical events.

The editor of this newspaper suggests to the Civil War Centennial Commission that that remote theater in the great conflict not be overlooked in the observances which might be had, designed, we hope, to bring the people together, rather than to disunite them.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled "Texas Can Obtain Recognition for Part It Had in Civil War; Coastal Battles Could Be Shown to Entire Nation as Portion of Centennial Celebration in 1961," published in the Nueces County News of Friday, January 2, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEXAS CAN OBTAIN RECOGNITION FOR PART IT HAD IN CIVIL WAR—COASTAL BATTLES COULD BE SHOWN TO ENTIRE NATION AS PORTION OF CENTENNIAL CELEBRATION IN 1961

Texas, next year (1961) has a wonderful opportunity to see that Texans are properly credited for their efforts during the War Between the States.

It is all being brought about through the Civil War Centennial Commission, appointed by Congress to set up for reenactment a series of the early battles of the occasion on the 100th anniversary of each battle.

Congress appropriated sufficient funds to pay expenses of the Commission for the next few years, and set up its duties as supervising the efforts of individual communities so there will not be a duplication of effort; so that each community will, if it wishes, be able to again bring to life the olden days and the part it played in the struggle that for over 4 years divided our Nation. It also provides each of these communities an opportunity for much publicity that is appealing and tourist-attractive.

Here on the coastal area of Texas were enacted many dramas of nationwide interest that are completely ignored in the history books of our Nation, but which at the time were all important in the all-out war effort both by the North and South.

In chronological order, these are:

1. The capture of Fort Brown (now Brownsville) 3 months before the first gun was fired at Fort Sumter. (First actual battle of the Civil War.) It was fought by early day pioneers of both Corpus Christi and Galveston who banded together, marched from here to Brownsville, surrounded and captured it, taking the U.S. Army soldiers prisoners;

2. The capture of Padre Island by the Union, and its patrolling by Union soldiers to prevent British ships from bringing supplies to Corpus Christi to be hauled overland to New Orleans and other southern points; and to prevent smuggling of war supplies from Mexico to the South;

3. The attack on Corpus Christi, featuring the cannon balls filled with whisky;

4. The attack that resulted in the fall and occupation of Corpus Christi by Union troops;

5. The attempt to launch a land invasion of Texas at Port Arthur, defeated when a large formation of U.S. battleships were defeated at Sabine Pass by a little handful of southern soldiers stationed at Sabine Pass. The original plan called for capture of Port Arthur, a land march, and capture of Houston, San Antonio, and Corpus Christi, tearing out the entire segment of Texas that was enabling the South to obtain supplies from Mexico; and

6. The capture again of Fort Brown 3 months after the war ended and the dramatic arrival of a ship bringing news to the U.S. soldiers stationed there that the war was finally over and the South had surrendered. This attack again was made by volunteers from Corpus Christi and Galveston who were determined to oust the Union soldiers from south Texas.

These were important events in Civil War history of Texas and its part in the war. However, little is known of them outside this area, and when you get over the Texas borders you will find that nothing is known about them.

This condition can be and should be remedied.

The Commission, set up by the Government, would work with the local chamber of commerce in making them come alive, and installing them into U.S. history books. The records of the Union's part in them can be found in the records in Washington. It was not until 3 or 4 years ago that the importance of the Sabine battle was determined when an interested local historian who had "heard" of the event from ancestors, made a search of the war records and discovered the Union had meant to stage a "march from sea to sea" in Texas that would have resulted in the burning and sacking of Houston, San Antonio, and probably this city if not also Austin, Fort Worth, and Dallas. No doubt if a serious check of these records was undertaken now, it would result in many exciting incidents in the War Department records.

The Commission in charge is urging communities to get their State legislators to help by appropriating funds for some of this work.

Our local chamber of commerce could help much in engineering and developing a plan whereby these events might be pictured or televised and released to the rest of the Nation on the anniversary of their occurrence.

Few people in Texas and practically none outside of Texas know that the first and last battles of the Civil War were fought in Texas—history books made no mention of them, yet if Union soldiers had remained at Fort Brown during the war much of the goods used by the South that came from both England and Mexico could have been obtained.

We have over a year in which to develop the theme, have moving pictures of it taken for TV presentation on the dates in question, or to set up a program reenacting the events for a television audience on these dates.

Such action on our part would acquaint the rest of the Nation with a portion of Texas history of which they know nothing; would bring "reams" of publicity to this area, and, who knows, might later result in a TV series as interesting to the viewing public as present-day westerns.

We respectfully submit it to the chamber of commerce, the library, and historical associations of our city for study, thought, and action.

It wouldn't cost as much as one Buccaneer Days celebration and would bring us 10 times as much publicity.

Treatment of Negroes in the South

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 21, 1959

Mr. THURMOND. Mr. President, there is a tendency among newspapermen hostile to the South to seize upon isolated occurrences in the South which would show it off to the rest of the Nation and the world in a bad light. Then, exponents of so-called civil rights legislation aimed at forcing the Southern States to adhere to public opinion frequently say: "You southerners must correct your ways because you are giving the United States a bad name throughout the world."

The Greenville (S. C.) News ably portrays the latest case of this in an editorial entitled "Negro Boys Helped, Not Persecuted." This editorial appeared in the January 20 edition of the News, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEGRO BOYS HELPED, NOT PERSECUTED

Antisouthern propagandists in other parts of the United States and anti-American propagandists in other parts of the world have made a cause celebre out of the affair involving the commitment of two Monroe, N.C., Negro boys, to a State training school after they had molested a small white girl.

The hatemongers couldn't have picked a worse case, if the truth could be gotten across to those who have been grossly misinformed and have chosen to believe what they wanted to believe, even after the Governor and other North Carolina officials had taken steps to correct the false impressions so wide spread about.

Naturally, the NAACP got into the act. Through its attorneys, it demanded and got a court hearing in which it sought to have the boys released. The higher court ruled against the organization.

But the truth is that the NAACP, if it is genuinely interested in the welfare of individual Negroes, should long before have been doing all it could to get the two boys into a training school where they could be retrained and rehabilitated.

And, instead of trying to get them released, it should either have been taking steps to see that they were kept there or, else, placed in a foster home where responsible members of their own race could see to their training and welfare.

The juvenile court system, which keeps records secret, and the North Carolina newspapers, which have failed to send out the full story as they should have since it came to light, are partly to blame for the distorted story which has spread around the world. (The latest incident, since the higher court refused to intervene, was the breaking of a five-column spread in an Italian Communist newspaper published in Rome.)

Around the world and throughout the United States the story has gone to the effect that two Negro boys were imprisoned because one of them was so presumptuous as to kiss a little white girl. Some accounts have said they were sentenced to life. Others have said they received an indeterminate sentence.

Here are the facts:

The two boys, 8 and 10, were turned over to the juvenile court last October after they were accused of molesting the white girl. They caught her in a culvert near her home in a white neighborhood, and one of them held her while the other kissed her. (In a few more years the pair will be old enough for rape.)

The judge of the juvenile court committed them to the State training school until such time as the officials there were convinced that they could be returned to their homes and that their parents were ready, willing and able to give them proper supervision and care. They were not imprisoned nor, in the usual sense, were they sentenced.

The clerk of the juvenile court and the superintendent of the training school both have said they will be released as soon as they and their homes are ready. Meanwhile, they are going to school regularly, which they never have done before.

The kissing incident was not the whole reason for the committal of the boys to the training school. Before that they had a long record of misdemeanors of the sort that lead to a life of crime. Both were on probation and under supervision of the court for thievery. The record shows that one one occasion they had stolen a bicycle and on another a ham.

More to the point, the court had records of their having molested little girls on at least two other occasions.

Both come from the worst sort of home environment. The mother of the older boy says she was deserted by her husband, leaving her with one child, in 1941. Since then, she admits, she has lived with a succession of men to whom she was not married and has borne nine other children.

The mother of the other boy has twice been married and has about nine children. The family lives in a neighborhood where the police constantly have trouble.

In neither instance have the children been encouraged to go to school and other children of the families have been in trouble with the police. Police officers testify that they have many times picked up the two boys in question off the streets late at night and taken them home. Usually the mothers were not at home.

The older boy is in the fourth grade at the age of 10. Yet the report of the court shows that he has failed every subject he has ever taken in school. He has been given a series of social promotions.

These are the facts, as made public by Gov. Luther Hodges after a careful investigation.

This is the case that the antisouthern and anti-American propagandists have built into a glaring example of southern mistreatment of the Negro. Actually, the kids are better off than they ever have been.

If Monroe and the State of North Carolina are in any way at fault in the affair, it is because they did not act sooner to get those boys off the streets and out of trouble into an environment where they could be trained for a useful place in society.

As for the role of the NAACP, it betrayed itself in the eyes of all thinking people when it tried to make a big thing of the case by trying to free the boys from the chain gang for publicity purposes.

Unless and until the NAACP begins to do something constructive toward the improvement of Negro institutions and educating Negroes in the ordinary decencies of family life and responsible citizenship, it had better stay out of the civil rights courts.

The episode should point out to the NAACP a great opportunity to do something really worthwhile for the "advancement of colored people." It could start by assisting, rather than impeding, law enforcement among Negroes.

But the sorriest aspect of the whole affair is the fact that white Americans, who should know better, contributed to the spreading of a false impression of race relations in the South.

Mikoyan Handling Trade Like a Gun

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, January 21, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Ray Tucker entitled "Mikoyan Seen Handling Trade Like a Gun," which was published on January 16, 1959, in many newspapers across the country.

Mr. Tucker, one of the top columnists in the country today, calls attention to the immaturity and gullibility of captains of American industry, business, finance, and motion pictures in their lavish treatment of Soviet Deputy Premier Mikoyan during his visit here. Mr. Tucker asserts very strongly that the Russian Deputy Premier for Economic Affairs is "world public enemy No. 1 to those who are now extending their warm greetings to him. He is robbing the gracious hosts of present and potential markets throughout the world," Mr. Tucker points out. Mr. Tucker has performed a distinct public service with his concise, hard-hitting column regarding Mr. Mikoyan, and I ask that it be printed in the RECORD as a means of distributing it as widely as possible.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIKOYAN SEEN HANDLING TRADE LIKE A GUN—CAPTAINS OF INDUSTRY SHOW GULLIBILITY IN WARM WELCOME TO RUSSIAN

(By Ray Tucker)

WASHINGTON.—The warm welcome given to Anastas Mikoyan by the captains of American industry, business, finance, and motion pictures at Washington, New York, Cleveland, Chicago, and San Francisco testifies again to their immaturity and gullibility in the presence of distinguished foreign visitors.

Although the State Department may not have warned them in advance, Russia's deputy premier for economic affairs is their World Public Enemy No. 1.

A shrewd Armenian who has managed to survive Lenin-Stalin-Khrushchev purges, he is robbing his hosts of present and potential markets throughout the world.

He is disrupting the normal flow of commerce, and destroying historic price structures.

He is executing Khrushchev's orders to handle trade like a gun and for political rather than economic purposes. He is trying to make good his master's threat that "we will bury you."

His ultimate objective is to force neutrals into the Communist camp by making them utterly dependent upon Moscow's favors and friendship.

They would then become vassal or satellite states, as Finland, Egypt, Iraq, and East Germany have become, willingly or unwillingly.

The grand design of this Khrushchev-Mikoyan trade war is to isolate the United States economically, and to bankrupt the one Nation which furnishes the resources and the leadership for the worldwide, anti-Communist coalition.

Once the United States cannot afford to finance this alliance, Khrushchev figures, he will have only to pick up the pieces of the free world bit by bit.

In welcoming Mikoyan so warmly, American businessmen are also disregarding the administration's viewpoint and attitude.

Although they could not deny him the minimum amenities, President Eisenhower and Secretary Dulles have treated him with only slightly veiled unfriendliness.

They recognize the Mikoyan menace, if his private enterprise hosts do not. President Eisenhower has described the Russian and Chinese offensive in this field, as a "subtle and long-range instrument of warfare."

Secretary Dulles says that it is fully as dangerous and insidious as the Communists' military activities in Korea, Indochina, and the Far East.

Allen W. Dulles, Director of the Central Intelligence Agency, warns that "it is the most serious challenge that has ever confronted the United States in time of peace."

And yet, simply because Mikoyan smiles, speaks fair but meaningless words, pats children on the head and stands in line at supermarkets, the men he would destroy open their hearts—and their factories—to him.

The reception which the trade war generalissimo received from the heads of the great automobile firms in Detroit is especially ironic, in view of his planned offensive against that industry.

On the very day that they dined him, an American firm announced that it was selling steel to Russia in return for chrome. It is really the kind of primitive barter deal which Mikoyan favors in trading with nations that cannot pay in cash.

Russia needs that steel because Mikoyan plans to swamp West European and other markets with a new, small, cheap automobile. It will be called the Satellite, a reference to the Soviet's outer space triumphs rather than to the nations it has imprisoned.

Mikoyan recently crushed little Finland—again—in an unusually callous and brutal trade war strategy, forcing the Fagerholm government to fall because of the resultant hardships and actual suffering.

He did so because, after liquidating heavy reparations payments to Moscow, the conservative Finns preferred to buy western goods.

And the American commodity whose purchase precipitated Mikoyan's wrath was automobiles made in Michigan from parts manufactured in small plants throughout the United States.

Criticism of NAACP

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 21, 1959

Mr. THURMOND. Mr. President, in many quarters the NAACP is given credit for truly advancing the cause of the Negro. It has been my opinion that more often than not, the organization has agitated rather than advanced our Negro citizens.

A recent editorial, entitled "The NAACP Has Gone Too Far and Needs To Be Checked," appeared in a Negro-owned South Carolina publication, the Herald, and gives some facts seldom published about the NAACP. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Herald, Jan. 11, 1959]

THE NAACP HAS GONE TOO FAR AND NEEDS TO BE CHECKED

(By Davis Lee)

In attacking the publisher of Lee publications, last week, Roy Wilkins, executive secretary of the NAACP, demonstrated to what extent that organization will go to destroy anyone who stands in its way.

Mr. Wilkins stated in news releases that our newspapers have no following, and that no one pays any attention to Davis Lee. Then why did he go out of his way to attack Lee, and to attempt to discredit him? Mr. Wilkins

underestimated Davis Lee, and may spend the rest of his life regretting his unwise act.

Roy Wilkins has set the NAACP up as the national clearinghouse for Negro thought and opinion. If a Negro leader expresses himself, and his expressions do not coincide with the policy of that organization, he will be discredited and destroyed. This has happened dozens of times.

SEEK TO DIVIDE NEGRO AND WHITE CITIZENS

The NAACP is a vicious, undemocratic, un-American organization that is dedicated to the destruction of our way of life. It is an organization that seeks to divide the Negro and white citizens of this Nation. It does not have the welfare of the masses of Negroes at heart. It seeks to exploit for the purpose of getting power, and making money.

It agreed to sponsor Mrs. Bradley, mother of Emmett Till, on a speaking tour and pay her $500 per week. The meetings were successful. At these meetings the collections ran from one thousand to twenty-five hundred. When Mrs. Bradley saw her son's death was being exploited, she demanded more money. The NAACP refused to give her more money and the tour was canceled. This also happened with other so-called victims of southern injustice.

The only cases that the NAACP enters into are those that have excellent exploitive possibilities. The organization is staffed with well-trained agitators; they agitate for pay. The Negroes in this Nation are well aware of this fact; and that accounts for the reason that the NAACP has only 300,000 members out of 17 million Negroes.

SEEK TO PUT DAVIS LEE OUT OF BUSINESS

Wilkins and company now seeks to put Davis Lee and his newspapers out of business, because Lee has the courage to speak out against their high handed methods.

Racial strife, dissension and prejudice is sweeping this Nation like a prairie fire as the result of pressure and agitation by this irresponsible organization. It is irresponsible because the heads can libel any citizen in the South, including elected officials, and there is nothing you can do about it. The organization doesn't own anything, and has nothing that you can attach.

Just last week the courts in Georgia attempted to collect $700 in court cost, and the NAACP didn't have a typewriter or a desk that could be attached to satisfy that court cost.

THOUSANDS OF NEGROES OPPOSE NAACP

There are thousands of Negroes in the South who are opposed to the NAACP's program of force and pressure. But these Negroes are afraid to speak out because they don't want to be hurt. If the South enacted adequate laws to protect these Negroes from Wilkins and company it would be a different story.

Before an insurance company can operate in a State it must put up a stipulated sum with the insurance commission or secretary of state. If the most reputable citizens want to organize a bank, they must go through the same procedure to protect the citizens.

The legislatures of the South can end all of this pressure, agitation brought on by this organization by passing legislation requiring all national organizations that engage in organizing citizens for pressure purposes to deposit with the State $250,000 in cash. This money would be held by the State for the protection of its citizens in the event some might suffer some loss brought about by said organizations.

If a State can enact financial responsibility laws to force motorists to carry such protection for others, it can enact laws to force these pressure organizations to be financially responsible for their acts to protect others.

SOUTHERN NEGRO MADE GREATEST PROGRESS

This type of legislation would bring an abrupt halt to all of this agitation, and would cut off the flow of dollars that is pouring into New York from the South, dollars that are now bringing grief, hardship, and economic pressure to millions of Negroes who are not aware of the suffering they bought.

The southern Negro has made more progress than Negroes any place else in this Nation, and he made that progress with the aid of white friends, but if something is not done quick, he will lose those friends. And this he cannot afford to do.

Roy Wilkins and no other top NAACP official is in a position to know the suffering, the hardship and pressure that has been forced upon the Negroes of the South as the result of all of this agitation. Thousands of Negroes are jobless, homeless, and are now being denied many privileges and opportunities which they enjoyed 4 or 5 years ago.

NEGRO EMPLOYMENT DROPS

Just last week this writer addressed a white group in Georgia and made an appeal for tolerance and understanding for his people. One businessman came to him afterward and stated that 1 year ago he was employing 100 Negroes. At present he is employing just 10. The others were replaced by white workers. He hated to admit it, he said, but all of this force and agitation had turned him against doing anything for Negroes.

Another businessman came up and joined in the discussion. He had 45 Negro truck drivers 2 years ago, but now he has only 11, and he intends to let them go. He is going to let the NAACP hire them, he said.

Last week this writer met another prominent Georgian who employs 100 Negroes. He has seven young Negroes in college. He is supplying all of the money, but his attitude is changing.

LEE HAS DONE MUCH TO EASE TENSION

This writer has done more to ease tensions and to convince white people that the southern Negro is not responsible for all of this racial upheaval and should not be penalized for it, than any other person alive. Mr. Wilkins and the NAACP couldn't help these defenseless Negroes, and in fact they don't want to help them.

This writer enjoys the friendship and respect of millions of white people throughout this Nation, and because of this fact is able to do more for his race peacefully than the NAACP will ever be able to do. There is no money in keeping the relationship between the two races on a friendly basis, but there is in pitting one race against the other.

The NAACP is a destructive force that needs to be checked before it causes riots between the races in the South, and before it causes the southern Negro to lose everything he has.

This writer is no stooge or an Uncle Tom; he doesn't have to be. And he is not afraid of any man alive, and that includes Wilkins and company.

Wilkins and the NAACP has caused the kind of bitterness, hatred and strife that it will take years to erase, if ever, and neither race in the South wants that.

NEGRO SHOULD BE TREATED AS A CITIZEN

The Negro is a citizen, and should be treated as such. He should enjoy every right that any other American enjoys. His color should not prevent him from the same job opportunities that others enjoy if he is prepared, and southern Negroes are working at many jobs that Negroes in other sections of the country cannot get because of race.

PRESSURE NOT THE ANSWER

There is certainly lots of injustices being perpetrated against Negroes in the South, and a big job lies ahead to correct these conditions, but you can't do it by threats and pressure. You can't uproot a well established custom over night by legislation and court decree. If the NAACP has a constructive, practical, workable solution to this Nation's racial problem, then sell it to the people, don't ram it down their throats.

NEWSPAPER DEDICATED TO SERVING THE NEGRO NEEDS

My newspapers are dedicated to serving the needs of the little Negroes, and this includes the Telegram, which Mr. Wilkins criticized, and public castigation by the NAACP cannot silence us, nor will it put us out of business.

We are for right, justice and fair play. The NAACP believes in law and order, but it wants to make the law and give the orders. It is responsible for Little Rock and the cities in Virginia that are without schools, and if something is not done immediately to curb its activities and make it financially responsible for its acts, we won't have any schools in Georgia, South Carolina, Alabama, or Mississippi.

Strengthening the Cooperative Movement

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, January 21, 1959

Mr. WILEY. Mr. President, a major challenge facing this Congress is: What action will be possible to help improve the farm situation? We recognize, of course, that economic problems cannot be entirely resolved by legislation. However, in view of the predicted 5 to 10 percent drop in farm income this year, the situation must be carefully and sympathetically examined.

At the same time, it is important to recognize the constructive efforts of the farmers themselves and their organizations in trying to work out a solution of their problems.

Over the years, a major pillar in these programs has been our cooperatives.

Dairy, wool, poultry, eggs, and other cooperatives have helped the farmers by enabling them to pool their physical, financial, and human resources for the purpose of marketing farm products, obtaining production supplies, and securing needed farm services.

Overall, these organizations have:

Improved farm income; enabled more of our farmers to weather the downtrend in prices; and provided better living on the farm.

In Wisconsin, we have more than 415,000 farm co-op members. Many farmers are members of two or three cooperatives.

Today the farm co-ops are attempting to grow, to build themselves into more efficient organizations for helping the farmers.

We recognize, of course, that at times questions have been raised as to just how big they should ultimately grow.

However, within their proportionate role in the farm economy, the cooperatives in the future—as in the past—will, I believe, continue to perform an outstanding service for the farmers.

The January 17 edition of the Wisconsin Agriculturist contained a thoughtful article on the efforts of cooperatives to improve their ability to be of maximum benefit for the farmer. I request unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARM COOPERATIVES MUST GROW

Speed up consolidation so farm cooperatives can bargain better for their members. That's the theme of cooperatives in Wisconsin for 1959.

Compared to giant business corporations, the baragining power of farmers is going downhill, says Milo Swanton, secretary of the Wisconsin Council of Agriculture Cooperatives. "To improve this situation, cooperatives must expand their marketing facilities. They must grow at least as rapidly as the corporate firms in industry," he says.

Today many cooperatives are engaged in only one marketing function. For example, 48 percent of the net sales of dairy co-ops comes from those having practically no processing facilities. Most livestock associations also perform only a selling function.

It is only natural that large cooperatives operate more efficiently than small ones. A large organization can afford to hire more qualified personnel and can spend more money on processing equipment.

Dairy Economist Linley Juers, with the Wisconsin Council of Agriculture Cooperative, points out that a large cooperative or a network of cooperatives have the advantage of being able to carry on research. By improving a product and finding new uses for it, a cooperative can expand its market. A small cooperative can't afford to venture into research even on a small scale. Take a cheese plant, for example.

If the plant has two vats and the cheesemaker decides to try a new starter, he's gambling with half the day's cheese. On the other hand, a plant with 25 vats wouldn't stand to lose more than 4 percent of its cheese.

Actually, consolidation isn't anything new in Wisconsin. Juers says that Wisconsin leads all other States in consolidation of fluid milk plants.

Lake-to-Lake Dairy Cooperative in east central Wisconsin merged with the Modern Dairy Cooperative of Sheboygan 2 years ago. Truman Torgerson, manager of Lake-to-Lake, says that both organizations benefited by the merger.

Lake-to-Lake, being a large dairy cooperative, wanted to get into the bottling business. Modern Dairy bottled milk, but didn't have a large enough volume to operate efficiently. As a result of the merger, members have a greater outlet for their milk and are more assured of a good price.

In September 1958, Jefferson Farm and Home merged with the Jefferson County Farmco Cooperative. Bob Johnson, manager of Farmco, says that it's a little early to tell, but it looks like the merger will increase buying power and help streamline the administration.

Marvin Schaars, University of Wisconsin farm economist, says that a university study of dairy marketing in six southwestern counties shows that many small dairy plants would do themselves a favor by consolidating. "Larger organizations usually have an easier time selling at a good price because they can maintain the quality of their products. They can also do a more complete job of processing," he says.

However, this doesn't mean that all small co-ops should consolidate, Schaars says.

"Take the local livestock co-ops, for example. They are rather small, but they do the job for farmers in their community. There isn't any particular economy in their consolidating," he says.

There are some small cooperatives that, because of an aggressive and efficient manager, operate just as efficiently and return just as much to their members as large cooperatives. If they can keep an efficient manager, they will probably do all right. If not, they may be in for trouble.

But Schaars points out that sometimes consolidation can eliminate some of the competition and indifference between cooperatives in the same community. "It doesn't make for an efficient operation, or add to the respect and dignity of cooperatives when there is ruthless and antagonistic competition between them," he says.

"There isn't always a need to abandon present facilities for a new plant," says Milo Swanton. Some small co-ops may be able to consolidate on paper.

They can form super pool or contractual agreements and split the profits. This way they increase their bargaining power, return more profits to their members, and operate without any change in their present facilities.

Membership in farmer cooperatives continues to increase. Latest figures show that members in marketing, farm supply, and related service cooperatives total more than 7.7 million, an increase of 1.7 percent over the previous year.

Wisconsin has more than 415,000 farm co-op members. This is 4,000 new members in 1 year. Since there are some 145,000 farms in the State, each farmer is a member of nearly 3 cooperatives.

In the same period the number of cooperatives headquartered in the State has dropped slightly—808 to 785. The national figure dropped from 9,887 to 9,876. Thus, outside of Wisconsin the number of co-ops actually increased rather than decreased.

Only Minnesota, which has 1,297, leads Wisconsin in the number of cooperatives.

Cooperatives are businesses which must be operated efficiently and kept up to date with sound, modern business practices, such as salesmanship, accounting, service, and credit extension. They must strive to be just as efficient as privately owned businesses with which they must compete.

However, cooperatives are more than just another business. They are people organized to help themselves by helping each other. They emphasize neutrality in the sense that men of all creeds, races, and classes can be members of a cooperative association.

All members share in the savings and other benefits in proportion to their participation. Cooperatives are a bulwark of democracy when they are kept free from partisan politics. They can be a common meeting ground for men of differing viewpoints.

Criticism by the Attorney General of the Association of State Chief Justices

---

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1959

Mr. THURMOND. Mr. President, early this year Attorney General William P. Rogers attempted to soft-pedal the State supreme court justices' report of last August which criticized recent decisions of the National Supreme Court. The inference was that the jurists on the State supreme courts did not mean to include in their criticism the decision which would require States to desegregate their schools.

The Greenville (S.C.) News, in a January 12 editorial entitled "Facts Show Through Rogers' Whitewash," shows that it has seen through the Attorney General's statement. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FACTS SHOW THROUGH ROGERS' WHITEWASH

Comes now Attorney General William P. Rogers to try to apply whitewash to the report of the Association of Chief Justices of the States criticizing recent decisions of the United States Supreme Court.

That report was widely publicized because of its great significance, and even the severest lay critics of the Court were surprised at the lengths to which the dignified and even staid State justices went in taking the highest tribunal in the land to task.

In calm, judicial language the chief justices who comprised the committee which prepared the report for presentation to their association literally took the Supreme Court apart.

From the point of view of their proper concern for State-Federal relations, they deplored the fact that the Supreme Court has assumed a policymaking role and has usurped many of the powers and functions of Congress and the State courts and legislatures.

Their strongest indictment was that the Supreme Court has failed in recent years to practice the virtue of judicial restraint; that is, to refrain from trying to write into the law as they interpret it their own ideas of what it ought to be rather than what it actually is.

The report was read in the presence of Chief Justice Earl Warren and others of the Supreme Court. It not only was adopted by an overwhelming majority of those present, but the wording of the resolution which accompanied it in some respects was stronger than the language of the report itself.

Mr. Rogers now says that the report was not aimed at the Supreme Court decision attempting to overthrow the power of the States to run their own schools and to separate the races in the public schools if they see fit.

He cites as proof of his position an exchange of letters with Chief Judge Frederick W. Brune of the Maryland Court of Appeals, the equivalent of our State supreme court.

In his letter, Rogers said that letters he had received implied or assumed that the report was directed at the segregation cases.

Judge Brune replied, according to Rogers, that the "report did not mention the school cases and it did not undertake to deal with them." He went on to say that he knew of no exception to the rule that Supreme Court decisions on constitutional questions are binding.

Judge Brune replied honestly. But he did not say what Rogers says he did.

It is, of course, true that decisions of the Supreme Court on constitutional questions are binding. That is the heart of the trouble. That is why the trends the Court has established are so threatening to the proper balance of power among the branches of the Federal Government and between the Federal and State Governments.

The highly critical report adopted by the State chief justices deliberately avoided mentioning the decisions in the school cases. It did mention other more obscure and less controversial decisions in which the Court took much the same sort of course. That, too, is somewhat beside the point, for the report addressed itself primarily to the dan-

gerous and alarming trends established in a long line of Supreme Court decisions.

And if Attorney General Rogers were the lawyer he should be, rather than the politician he obviously is, he would have recognized this fact and let it go at that.

However, what he has now done makes it necessary to point out once more what everyone realized at the time: the criticism of the State chief justices applies more clearly and more directly to the antisegregation decisions than to any of the others.

It was the most clearcut instance of the Court's trying to make policy rather than to interpret the Constitution and the acts of Congress. Its actions then and, especially, in subsequent decisions have shown an utter lack of judicial restraint.

Other trends established by the Court are equally serious. For instance, there is no end in sight for the precedent established by the Court when it said that, once Congress enacts a law in a certain field, that the field of law has been preempted by the Federal Government and pertinent State laws are null and void.

In one such case the Court virtually forbade the States to enact and enforce laws against subversion, and in another it seriously weakened the power of the States to enforce laws pertaining to the purity of food and drugs.

And this despite the fact that Congress plainly had no such intentions when it enacted the Federal statutes.

In another series of decisions, the Supreme Court all but destroyed acts of Congress intended to keep the Communist conspiracy in the open and has made it almost impossible to try and punish Communists for acts which amount to sedition if not treason.

The report of the chief justices was rendered in August. Mr. Rogers waited until the public might well have forgotten the summaries of its contents published in the newspapers of that period. He then placed his own interpretation on Judge Brune's letter.

He should not be allowed to get away with it. The facts show too plainly through the whitewash.

Decline in Coal-Mine Fatalities

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. GRAY. Mr. Speaker, as the son of a former coal miner and as the elected Representative of a large coal mining district, I cannot but rejoice in the news that in 1958 the State of Illinois set the finest mine safety record in the history of the State. I congratulate Director Ben H. Schull of the State Mines and Minerals Department and Director Marling J. Ankeny of the Federal Bureau of Mines for this remarkable achievement. And while I am at it, I think that those Members of the House who were here in the 82d Congress, which passed almost unanimously the amendments to Public Law 40, are entitled to congratulations for their foresightedness and statesmanship.

For an industry that once killed as many as 2,500 miners a year and numbered its injured in five figures, we have come a long way. In 1957, 473 men were killed. It is estimated for 1958 that there will be 350 fatalities nationwide, an improvement, but still far too many. The greatest killer of all, roof falls, remains to be conquered and I am satisfied that continued cooperation between the mining States and the Federal Government will one day bring about this desirable end.

From Springfield, Ill., under a UPI heading, comes the following announcement:

Illinois, in 1958, set the finest mine safety record in the history of the State, it has been reported by the State Mines and Minerals Department.

Ben H. Schull, department director, said Thursday there was an unprecedented period of 174 consecutive days without a single mine fatality. The period was from February 21 to August 14, when 15,563,797 tons of coal were mined. October also was a death-free month.

There were nine fatalities in the mines last year, Schull said. In 1957, there were 21 deaths, he said. There were six fatality-free months in 1958. This compares with four in 1957, three in 1956, two in 1955, and the first death-free month in the history of the State, August 1954.

Schull said some 183 Illinois mines, including some of the largest in the country, produced an estimated 43,200,000 tons of coal in 1958.

Economic Relief for West Virginia

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. MOORE. Mr. Speaker, it has become a matter of public concern in my State of West Virginia that our economy is badly crippled. Several factors enter into this, including a decline in soft coal production, our basic industry, because of competing, laborless fuels. Mechanization of our mines, too, has reduced the labor force in that industry from approximately 125,000 a decade ago to less than 50,000 at the present time.

West Virginians have always shown a capacity to solve their problems and in this instance we are making a determined effort to attract new industries to an area where there is ample transportation, power, and available labor.

However, leaders in our State administration, and our congressional delegation here have taken official notice of the situation and will neglect no opportunity to help better conditons back home. ity to help better conditions back home.

To give the true picture of West Virginia's plight, which I fervently hope is only temporary, I submit an official resolution adopted by the steering committee of the West Virginia Legislature:

Whereas a steering committee from the membership of West Virginia Legislature on the 19th day of December 1958, met and considered the economic conditions of the State of West Virginia; and

Whereas the committee ascertained that there are now 80,000 people, or 15 percent of the total population of West Virginia, drawing surplus commodities; and

Whereas the committee further determined that there were 75,000 persons, eligible for employment, that were unemployed; and

Whereas it was further shown that in the year 1948, there were 125,000 persons employed in the coal mines of West Virginia and that in the year 1957, there were 58,000 and as of December 15, 1958, there were only 47,000 men employed in the mines; and

Whereas in the industries of West Virginia, excluding mines, there has been a decline in employment, and, in the year 1957 there were 10,000 unemployed and in the year 1958 this figure was increased so that there are now 20,000 unemployed in West Virginia industries, amounting to a 100-percent increase in a 1-year period; and

Whereas there are now 42,125 people drawing unemployment compensation or benefits from the West Virginia Department of Employment Security, and it would also appear that there are many thousands others unemployed who are not eligible to draw such benefits; and

Whereas the production of coal in the State of West Virginia has declined from a gross production of 150 million tons in the year 1957 to a gross production of only 112 million tons in the year 1958, or a decrease in production of 38 million tons in a 1-year period; and

Whereas it would now appear that the revenues of the State of West Virginia are declining, and the board of public works has pointed out that State revenue has declined $3.7 million for the first 5 months of the fiscal year 1958–59; and

Whereas the per capita income of the citizens of West Virginia is at least 30 percent below the national per capita average; and

Whereas the steering committee has determined that immediate action must be taken for the benefit of business, industry, and particularly for those unemployed in West Virginia: Be it therefore

Resolved as follows—

That the steering committee does now recommend and urge that the president of the Senate of West Virginia and the speaker of the House of Delegates of West Virginia, each appoint a committee consisting of four members, with representation from the minority party, to work with his excellency the Governor of West Virginia and the West Virginia congressional delegation and the United States Senators, representing the State of West Virginia, in an effort to obtain an immediate conference with the President of the United States of America, the Vice President of the United States, and the Speaker of the House of Representatives of the United States; that those persons representing the State of West Virginia request the President of the United States, the Vice President of the United States, and the Speaker of the House of Representatives of the United States, to take immediate action to provide help and aid to the people of West Virginia and that said committee from the State of West Virginia further request the President of the United States, the Vice President of the United States, and the Speaker of the House of Representatives of the United States, to take prompt action to establish public projects in the State of West Virginia in order to provide work for the unemployed, food for the starving, relief for the destitute, and to stimulate the economy of the State of West Virginia as a whole; be it further

Resolved, That a copy of this resolution be promptly forwarded to Cecil H. Underwood, Governor of West Virginia; Senator-elect Robert C. Byrd; Senator Jennings Randolph; Richard Nixon, Vice President of the United States, and Sam Rayburn, Speaker of the House of Representatives of the United States; and the congressional delegation from West Virginia in the House of Representatives of the United States.

One Was Absent

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the Editor's Corner of the National Tribune-the Stars and Stripes for November 20, 1958:

EDITOR'S CORNER—ONE WAS ABSENT

Veterans Day, or Armistice Day—take it as you wish, was celebrated throughout the Nation on November 11, the 40th anniversary of a day which resulted in a truce between the warring powers and resulted in the end of World War I.

Veterans of our wars and our citizens generally remembered the day and held appropriate ceremonies in the big cities, the smaller ones, the towns, and the hamlets.

By far, as was to be expected, the most important observance of the anniversary was held in the amphitheater at Arlington National Cemetery in Virginia.

Here, led by the Veterans of Foreign Wars, whose year it was to take charge of the rites, many wreaths were laid before the Tomb of the Unknown Soldier and the last resting places of his companions in arms from World War II and the Korean war.

Despite the cold and high winds the ceremony went off in good fashion. Who, that witnessed it was not impressed by the massing of the colors in the amphitheater prior to the beginning of the exercises? Who, that listened to the words spoken by Brig. Gen. David Sarnoff, was not impressed by the message he brought not only to his immediate listeners but to all the Nation—to all the world?

But something was missing. We cast about to determine just what was lacking in this tribute to the veterans of all our wars, living and dead, and finally began to understand when we were informed over the loud speaker that Sumner G. Whittier, Administrator of Veterans' Affairs had been designated to represent the President of the United States and place the President's wreath at the tombs.

Now Sumner G. Whittier, as we have been able to watch him and listen to him in his utterances on veterans' affairs since he took office, seems to us to be a fine upstanding young man—a war veteran—one whom we know to have been instilled with the spirit of patriotism from his earliest days. A good man to choose but for one thing, Sumner G. Whittier did not represent himself as Administrator of Veterans' Affairs. In his position he, himself, might have appropriately laid a wreath for the great organization he heads, devoted to the care of veterans and their dependents.

No, he did not speak for the thousands of his employees whose duty it is to advise and guide veterans as to their rights under existing laws but he spoke for the President of the United States, the Commander in Chief of all our Armed Forces—a veteran of two world wars who could not find time to be present.

We were informed by the local press that the President was too busy to attend—too busy at the White House. At least that's what the city dailies said.

Now, when we consider that the distance from the White House to the Arlington amphitheater would take up about 7—no, let us say 10 minutes, especially when escorted by motorcycle policemen, perhaps 10 minutes to lay the wreath, and 10 minutes to return, we wonder why our veteran President could not give up half an hour of his time to pay his respects in person to the men and women for whom he had proclaimed Veterans' Day.

A good many attended. Young and old, civilians and veterans, members of practically every veteran organization in the Nation. But one was absent. The leader, who could not spare 30 minutes of his time to join with the country in its tribute to the warriors of our Nation. The ceremony, as we have said, was an inspiring one but left us with a feeling of sadness that our leader, our Commander in Chief, was not there.

Statement by Hon. Lindsay Almond, Governor of Virginia

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. ABBITT. Mr. Speaker, for some time now, Virginia and her people have had the guns of Federal judicial tyranny trained upon them. The NAACP and the liberal leftwing groups that are trying to nationalize and mongrelize our Nation have made an all-out effort to bring Virginia to her knees and to compel her to submit to judicial tyranny and unconstitutional usurpation of authority. The vast majority of our true Virginians have stood firm and refused to forsake principle. They have stood on the solid rock of sound, constitutional government and the concepts of individual liberty and freedom of our people as envisioned by our forefathers who gave us our Constitution as well as our form of Government.

This week a number of the so-called massive resistance laws enacted by the General Assembly of Virginia to prevent integration in the public schools and thus preserve public education in Virginia, were declared unconstitutional. This does not mean and will not mean that the public schools of Virginia will be integrated. It simply means that Virginians must continue to stand firm and continue more than ever to fight for constitutional government and the right of the State to govern in its own internal affairs. We cannot and we must not permit integration in a single public school in Virginia. Ways and means can be and must be found to cope with this situation and to preserve public education in Virginia. The State administration working with the general assembly, I am convinced, will find a solution. The thing needed most is to have the people of Virginia support and stand with those of us who are dedicated to the preservation of the sovereignty of our State and our way of life.

Last night, the Honorable J. Lindsay Almond, Governor of Virginia, poured out his heart to the people of the Commonwealth of Virginia and reaffirmed his determination to resist usurpation of authority to the utmost and to preserve segregated schools in Virginia. It was an outstanding analysis of the present situation facing Virginians and noble covenant with the people to preserve the rights of our people, the integrity of our State and the continued operation of segregated schools.

Realizing the importance of the Governor's statement and what it means to the people of Virginia, I include it with my remarks:

My fellow Virginians, I am grateful for the privilege of this brief appearance to discuss with you some aspects of the constitutional crisis shackled upon us by a judicial oligarchy and its shocking and terrible impact on our public school system.

Throughout this struggle Virginia has fought to preserve and defend her rights vouchsafed to her under and within the framework of the Constitution of the United States. On the highest plane of honor, inherent conviction, and loftiness of ideals and principle she has sought only to maintain those rights reserved by her and her sister States, and which have never been delegated, forfeited, or surrendered to the Federal Government. Her loyalty to our Federal system of government as ordained by the Constitution is woven with indestructible thread into the heart and fiber of her people. A combination of forces motivated by political expediency, armed with arrogated power and inimical to our constitutional system, has advanced with ruthless threat to strike down and destroy the right of the people of this State to have a voice in the education of their children. This is lamentably true, notwithstanding the indisputable fact that the fundamental law of the land embraced and protected the use and enjoyment of this right for nearly a century. The right is now denied through the process of judicial legislation amendatory of the Constitution in contravention thereof, and in violation of the oath to uphold and defend it.

VIRGINIA WON'T WEAKEN

Without reference to the people as the Constitution requires, it is demanded of Virginia by the executive and judicial departments of the Federal Government that she forsake honor, abandon principle, and eschew her loyalty to the Constitution by slavish acceptance of this travesty upon the Constitution, and grace the violated oath with a modicum of decency.

Virginia will not weaken in her allegiance to the compact which forms the basic structure of this indissoluble Union of indestructible States; she will not dilute and desecrate her concept of honor; she will not abandon or compromise with principle to have it lost never to be regained.

To those of faint heart; to those whose purpose and design is to blend and amalgamate the white and Negro race and destroy the integrity of both races; to those who disclaim that they are integrationists but are working day and night to integrate our schools; to those who don't care what happens to the children of Virginia; to those false prophets of a little or token integration; to those in high places and elsewhere who advocate integration for your children and send their own to private or public segregated schools; to those who defend or close their eyes to the livid stench of sadism, sex, immorality, and juvenile pregnancy infesting the mixed schools of the District of Columbia and elsewhere; to those who would overthrow the customs, morals, and traditions of a way of life which has endured in honor and decency for centuries and embrace a new moral code prepared by nine men in Washington whose moral concepts they know nothing about; to those who would substitute strife, bitterness, turmoil and chaos for the tranquility and happiness of an orderly society; to those who would destroy our way of life because of

their pretended concern over what Soviet Russia may think of us, to all of these and their confederates, comrades, and allies let me make it abundantly clear for the record now and hereafter, as Governor of this State, I will not yield to that which I know to be wrong and will destroy every rational semblance of education for thousands of the children of Virginia.

PEOPLE WILL DECIDE ISSUES

I call upon the people of Virginia to stand firmly with me in this struggle. Be not dismayed by recent judicial deliverances. I propose to restore the tax revenues of this Commonwealth to the control of the people. They and they alone will decide these issues. United in the common purpose of defending constitutional government and advancing the welfare of our children—with determination more relentless than ever before—we have just begun to fight.

No price is too high to pay; no burden too heavy to bear; no consequence too grave to endure in defense of the right and duty of this Commonwealth to protect the people of Virginia in the proper enjoyment of their right and obligation to mold the character and promote the welfare of their children through the exercise of their voice and judgment in their education and development.

The grave constitutional crisis which has been thrust upon us makes it imperative that our energy, resources, and efforts be launched and applied on a statewide basis. Abandonment of the principles involved anywhere is to foresake them everywhere. The inevitable result will be total engulfment with the progress of dissolution and chaos measured by the combination of forces confederated and arrayed to divide, conquer, rule, and ruin.

The people of Virginia through their elected representatives and by registering their convictions in the exercise of their franchise have repeatedly made it crystal clear that they cannot and will not support a system of public education on a racially integrated basis. I make it equally clear that I cannot and that I will not break faith with them.

PEOPLE HAVE RESPONDED

No parent of guardian is under any legal compulsion from any source to send a child to a racially mixed school. In certain areas affected by adverse Federal decrees the people have responded magnificently to the emergency created through the closing of schools. Thousands of our children have adjusted to the situation. The processes of education are being admirably and effectively administered. The hardships and sacrifices have constituted a challenge to overcome obstacles with the result that fundamentally sound educational progress is being made without chaos or undue confusion.

Amid the agony of these trying days I have been heartened and inspired by the profound spirit of dedication and determination of these citizens and their children, as well as the teachers, who have comported themselves so as to reflect immeasurable credit on the highest qualities of patriotic citizenship.

It is my purpose to appoint and convene with all practical expedition a commission composed of members of the general assembly for the purpose of assessing and evaluating the entire situation in the light of existing conditions. It is my earnest hope and desire that we may be able to formulate a sound and constructive program for submission to a special session of the general assembly. The problem is not one lending itself to an easy solution. It is most grave and difficult. It will require hard work, patience, and a deep sense of dedication.

To prevent the pyramiding of chaos, confusion, and disruption, I urgently request that private instruction now obtaining, and wherever it may become necessary, continue and go forward without interruption. I urge the wholehearted cooperation of all concerned to this end. It is my firm belief that to break the chain of continuity in the administering of private instruction and the consequent confusion of a transition which may invoke conditions justifying its termination would be productive of incalculable harm.

CALLS FOR RESTRAINT

I shall not hesitate to use every available and proper means at my command to keep the peace and good order of this commonwealth. I call upon our people to comport themselves with dignity and restraint to the end that the honor and name of Virginia be not defamed.

I have implicit faith and confidence in the genius of the people to cope with any emergency, and their loyalty and dedication to the preservation of their inherrent and inalienable rights. Our cause is sound, right, and just. With your unwavering loyalty under the guidance of Almighty God we shall go forward to higher and greater accomplishments.

Adrift in a Sea of Corn

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I offer an editorial which appeared in the January 13, 1959, issue of the Jefferson Bee, Jefferson, Iowa. Let this serve to remind the Congress that the farm problem confronts us today in more serious proportions than ever before, and unless immediate action is undertaken to aid in the solution of this situation our whole national economy will suffer an irreparable setback.

The editorial follows:

ADRIFT IN A SEA OF CORN

Last fall farmers voted in a controversial corn referendum. They had two choices: a higher support price of $1.25 per bushel with corn allotments; a lower support price of $1.14 with no planting restrictions.

Farmers chose the latter. This year, for the first time since the so-called farm program was enacted by Congress in the early thirties (war years excluded), no corn acreage allotments will be issued. Voting out allotments also means the elimination of the commercial corn-growing area with whatever advantage farmers may have enjoyed under the plan.

Some people interpreted the referendum results as defiant action on the farmers' part. No choice, they said. A vote against acreage allotments was a vote against the general policy of the Agriculture Department and its administrators.

Still, powerful farm spokesmen heralded the referendum outcome as a step toward greater freedom. Farmers don't want controls, they declared. The law of supply and demand will stabilize prices, offer greater opportunity.

So, here we are at the beginning of another crop year. Corn stocks are at an all-time high—33 percent over the 10-year average in Iowa—and no relief in sight.

Indeed, if we are favored with another good growing season, and farmers take advantage of unrestricted corn planting, our present surpluses may look small.

The farm problem seems to grow each season, along with the corn.

This Monster, Mikoyan

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1959

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by unanimous consent of the House, I include the following editorial published in the New Bedford (Mass.) Standard-Times of Sunday, January 18, 1959:

THIS MONSTER, MIKOYAN

Deputy Soviet Premier Anastas I. Mikoyan is reported to have been unusually frank for a Soviet official in replying to questions from executives of the Detroit auto industry.

One of the topics was the revolt in Hungary in October–November 1956. Mikoyan's comment was that he was distressed that many Americans thought the Russians enjoyed shooting people.

The Soviet, he said, came to the assistance of a lawful government (in Hungary) just as the United States did in Lebanon last summer.

The truth of the Hungarian massacre is almost unbelievably shocking—and, of course, a far cry from Mikoyan's above explanation.

Deputy Premier Mikoyan was sent to Budapest to take charge for Moscow, when the freedom-fighters deposed the puppet regime and set up a new government under Premier Imre Nagy.

On October 31, 1956, Mikoyan personally assured Zoltan Tildy, Minister of State of the new Hungarian Government, that Soviet troops would be withdrawn from Hungary. This welcome news was announced over the Budapest radio by General Maleter, Defense Minister in the new Hungarian Government, and reported from free-world news correspondents on the scene.

Even as Mikoyan gave his pledge, however, he was calling for Soviet troop reinforcements to mass outside Hungary, in preparation for the attack of November 3–4.

Having put the Hungarian leadership off guard, Mikoyan arranged a series of conferences between Soviet and Hungarian military leaders, "to plan the withdrawal." After several sessions, an emergency "parley" was arranged for 10 p.m. November 3, at Soviet military headquarters outside Budapest.

Once inside the conference room, General Maleter and his aides were arrested, and immediately, the signal was given for a massive Soviet tank and infantry attack on Budapest. While Premier Nagy, unaware of the trap, implored over the radio for General Maleter to return to his post, the Soviet forces moved in for the kill.

A few days later, with Mikoyan still in full charge for Moscow, Nagy himself was tricked into leaving asylum in the Yugoslav embassy and taken prisoner.

Mikoyan's vital role in this bloody chapter of history has not been as widely reported as it should have been. The Soviet Government has never mentioned it, and the witnesses who would have testified to it have gone—by death in the fighting, by deportation and by execution. The voices of General Maleter and Premier Nagy were silenced by

firing squad. As is his custom, Mikoyan tried to leave no trace!

It is an insult to the American people for this arch-murderer Mikoyan to pretend to be a good-will ambassador to the United States.

Only disaster can come from American businessmen and officials fawning over this Machiavellian monster.

The Federal Budget

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. TABER. Mr. Speaker, I insert in the RECORD a letter from Howard W. Burden, of Cortland, N.Y., which I feel should be read generally:

CORTLAND MEMORIAL HOSPITAL,
Cortland, N.Y., January 4, 1959.

Representative JOHN TABER,
House of Representatives,
Washington, D.C.

DEAR MR. TABER: Because this is the start of the budgeting year, I am asking you to forgive a letter written in from a hospital bed on a day too rough even to have any of my business stationery brought down. Unless I send this out at once, there's no sense even writing. It's about the Federal budget, and I wish that you would see that every single U.S. Senator and Representatives gets a copy. I wanted to get one typed and maybe photocopied, but you can't do that with a broken leg, in bed.

First, let me refer you to the article, entitled "Do You Want a 10-Cent Dollar?" in this month's Reader's Digest, by Roswell McGill.

Writers have harped on this for years, and it's about time that we did something besides keeping on going in the hole.

The skids are greased. If we keep on we may start a slide we can't stop. When it does come, I don't care if you are worth $1,000 or a million, we're all in for a fall.

Read the article. It's good; it's careful. Just let me refer to a few figures from it.

First, on family debt: A $288 billion debt and 180 million people, that's $1,600 per individual or over $6,000 per family. State and county debt may run $2,000 to $4,000 and local $4,000. There you tally up $1,400 before your homeowner has bought his house, his car, and all the rest. Say you put down only $1,600 for them and you are up to $30,000. That's a lot of money for the average person to owe. The interest eats him up.

Again, I refer to page 26 of the article in the amount of time for a man earning $4,500 a year, to get certain things out of life: 2 hours 39 minutes per day for Government; 1 hour 39 minutes per day for food; 1 hour 25 minutes per day for housing; 37 minutes per day for clothes. Lopsided? You are the only hope of the people to control this rat race at the national level. This is a brandnew January. Now is the time to act. Let's do it.

Referring again, this time to page 29, left of the article each $1 billion you shave off the budget saves the average family $200. I'm for it.

Looking again at page 29, left, center: "It looks as if the Government had better take the other fork of the road, uphill and stony though it may be, and reduce expenditures and levy such taxes as are needed to pay for current costs."

I think I've said enough.

So to you, Mr. TABER, and to each of you other representatives in our two Houses of Congress, do your best to sharpen that red pencil, and thanks, we're looking for you.

Earnestly and with a personal wish to each of you for a fine 1959, and for a new sensible deal starting now for our country from here on in.

HOWARD W. BURDEN,
Cortland County Republican Committee.

Businesslike Mailman

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. HALLECK. Mr. Speaker, the January 19, 1959, issue of Barron's, National Business and Financial Weekly, carries as its lead article a much-deserved tribute to a distinguished member of President Eisenhower's Cabinet, the Honorable Arthur E. Summerfield, Postmaster General.

The article points out the remarkable progress that has been made toward improved mail service under the leadership of Postmaster General Summerfield and under leave to extend my remarks I offer the magazine's comments in their entirety:

BUSINESSLIKE MAILMAN—MR. SUMMERFIELD HAS DELIVERED A BETTER POSTAL SERVICE

One of the less glorious traditions of the American Republic requires its Postmaster General to be, if not exactly a dunderhead, at best a figurehead. Down through the years, the highest office in the postal system all too often has served as a refuge for the party hack, a sinecure granted as a reward for managing a successful presidential campaign. Indeed, to call the roll of those who have held top command in the Post Office is to turn up a succession of public nonentities. Seldom does a famous name—a Benjamin Franklin or a John Wanamaker, a Will Hays, or a Jim Farley—grace the roster. The rest are blanketed today in a common obscurity.

The present incumbent, however, hardly conforms to this dreary stereotype. Since taking office 6 years ago, Arthur Summerfield has made notable progress in modernizing and streamlining the operations of his department. To be sure, owing largely to the financial obstruction of Congress, as well as that of some Federal agencies, the postal deficit in fiscal 1958 soared to an all-time high. Nonetheless, by successfully pushing through the first general increase in rates in a generation, the ex-Chevrolet dealer unmistakably has stemmed the rising tide of red ink. Meanwhile, he has increased the efficiency of the Post Office and speeded up its service. Most promising of all, he has begun to enlist the talents and energies of private industry to help find better ways of processing an ever-mounting volume of mail. Thus, to the great task of keeping the massive Federal budget under control, Mr. Summerfield has made a signal, if largely unsung, contribution.

The job has not been easy. Both the physical and financial challenges faced by the Postmaster General were, and remain, formidable, indeed. Over the years, while Congress kept postal rates at the levels set in the thirties, a steady rise in costs rolled up bigger and bigger deficits. In 1958, as the gap between income and outgo rose to a new fiscal year high of nearly $900 million, the administration, spearheaded by Mr. Summerfield, waged a last-ditch fight to raise rates. It was only partly successful. The lawmakers increased some charges less than the President asked, and ordered more generous pay raises for postal workers than he thought justified. The net result was largely to offset a gain of some $530 million a year in the Department's receipts by a payroll boost, current and retroactive, totaling over $360 million. Furthermore, after Congress adjourned, the Interstate Commerce Commission dealt another blow to postal finances by awarding the railroads huge increases, including a retroactive $54 million, for carrying the mails.

Despite these temporary setbacks, the long-range financial outlook of the Post Office plainly is improving. For one thing, the retroactive boosts in costs now are out of the way, while the higher postal rates voted last year will be swelling revenues throughout calendar 1959. Moreover, some of the rate hikes are progressive; those on third-class mail went up by one-third on New Year's Day, and second-class rates jump a second notch this year and a third in 1960. Finally, as the budget message today presumably will underscore, the administration is launching another determined effort to boost postal receipts. At the same time, the Department is working hard to cut costs. As the expense of shipment by train has climbed, for example, it has switched increasingly to transportation by truck and plane. Consequently, the deficit for fiscal 1959 will decline fairly sharply, for the first time in 6 years, to an estimated $625 million. In fiscal 1960, it is likely to drop further.

While costing the taxpayer less, the Post Office also is taking steps to improve its service. Thus in the past year, it has expanded rural deliveries, extended window hours, and stepped up its collection of mail. It has adopted such up-to-the-minute transportation facilities as Bunyan Boxes, which are huge aluminum containers designed to eliminate bag-by-bag loading of commercial cargo liners; Mailsters, small three-wheeled vehicles which enable postmen to deliver parcels along with regular mail; and Flexi-vans, loaded highway trailers which, in a refinement of piggyback railroading, can be separated from their wheel assemblies and placed aboard a flatcar in a few minutes. Such innovations are combining to speed deliveries. Indeed, Mr. Summerfield, always the optimist, talks buoyantly of eventual overnight service between any two cities in the United States.

Even more significant, in the long run, is the beginning of a drastic change in mail handling within the post office itself. To help mechanize his Department's antiquated internal operations, Mr. Summerfield has sought the aid of many a private concern in designing, producing, and testing equipment. Enlisted in this program, under the supervision of the National Bureau of Standards, are such knowledgeable enterprises as Aerojet-General Corp., American Machine & Foundry Co., Burroughs Corp., Emerson Radio & Phonograph Corp., Food Machinery & Chemical Corp., Mechanical Handling Systems, Inc., and Pitney-Bowes, Inc. Currently in experimental use in selected post offices are mechanical and electronic gadgets for sorting, facing, postmarking, and canceling huge quantities of mail—as much as 36,000 pieces an hour—with a minimum of human attention. Beyond these intermediate Rube Goldberg devices looms the more distant goal of a completely automatic post office. Intelex Systems, a subsidiary of International Telephone & Telegraph, expects shortly to receive a contract to build and equip the first such installation in the country.

Under the Summerfield management, in short, the Post Office has displayed unusual initiative and vision in coping with its difficulties. Undeniably, the service still has a long way to go, in terms of both efficiency and solvency; the postal authorities, in the latter instance especially, cannot do the job alone. Certainly, the 86th Congress should raise rates again, and thus help reduce the deficit to less burdensome proportions. Nonetheless, for the progress already achieved, and for the gains in prospect through the new partnership with private industry, Mr. Summerfield clearly deserves a belated thank-you note from the taxpayer.

The Corn Allotment Vote

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. COAD. Mr. Speaker, under permission to extend my remarks, I include an informative editorial on the corn allotment vote. This editorial appeared in the November 27, 1958, issue of the Des Moines Register, and offers an excellent and valuable commentary on the reasons and events leading to the farm vote on the 1958 corn referendum. The editorial follows:

THE CORN ALLOTMENT VOTE

The heavy vote by corn farmers against acreage allotments for 1959 will be widely interpreted as a vote against production controls in principle—and for freedom to plant. Secretary Ezra Benson already has attached this meaning to the vote, which is no surprise. But it would be more logical to interpret the results of Tuesday's referendum as a rejection of production controls which did not work.

There is no evidence to indicate that farmers would not welcome a production control system that would hold output in line with demand. There is some evidence that farmers in the Corn Belt, at least, prefer the soil bank method of taking land completely out of production as a means of controlling output. This has been the position of the Iowa Farm Bureau.

We fail to see how the allotment program was any more of an interference with farmers' freedom than the soil bank. It was voluntary as the soil bank is. There has been a great deal of nonsense spoken about this matter of "controls," especially by the Secretary of Agriculture himself. Mr. Benson's speeches create the impression among nonfarm people, that the Government has been ordering farmers around, telling them what to grow and what not to grow. This isn't true, and we don't believe farmers voted against any such purely imaginary control setup.

Farmers have seen that the allotment procedure, affecting corn alone, has not limited the output of feed grains. Secretary Benson has not administered this program sympathetically in an effort to make it work. He has refused to require cross compliance on other crops as a condition of eligibility for benefits. He has reduced corn allotments rigorously according to formula, with no attempt to get a minimum national allotment as in the case of wheat. He has provided a corn loan about 25 cents below the regular loan for farmers who didn't comply with allotments.

Thus everything has been geared to discourage farmers from participating in the program and to make the allotment program look bad. Allotments worked poorly enough even with the most sympathetic administration. But Benson stacked the cards against them.

The referendum offered farmers such a choice that they could hardly fail to vote against the allotments for next year. The allotments were to be reduced sharply, and the price support loan for compliance also to be cut. Benson announced that there would not be a noncompliance loan next year.

The alternative was a corn loan for everyone at a somewhat higher level than the noncompliance loan this year—with no limitation on corn acreage.

Under these circumstances it is surprising that as many as 30 percent of the farmers voting chose to stick with the allotment program.

Zeboim Lupton Patten

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. REECE of Tennessee. Mr. Speaker, on December 7, Tennessee lost to eternity one of its finest native sons and loyal citizens. Zeboim Lupton Patten, of Chattanooga, died at the age of 51 years and his passing brought great sorrow to all citizens of our State and to his many acquaintances throughout the entire country.

Lupton Patten was a close friend of many years. To know him was, simply, to love him. His personality, his kindness, all of his fine qualities of heart and mind, and his great selfless service to his community and the Nation placed him a notch above other men. Born of an honorable and distinguished pioneer family of Tennessee his life was devoted to high principles and standards that brought benefit to all with whom he was associated.

This great man who has been lost to the people of Tennessee served to build one of the great family industries of our State. As president of the Chattanooga Medicine Co., and its various subsidiaries, he led his firm into a position of nationwide prominence. Under Mr. Patten's leadership, his company has conducted much original research that has contributed greatly to medical advances. His business principles were equally as exemplary as his personal life. As a national president of the Proprietary Association he contributed to development of safe and ethical practices in a field of business that affects all our lives.

The interests of Lupton Patten were as varied as his talents. He not only brought the Chattanooga Medicine Co. to a position of leadership but he was equally interested in and was given a position of leadership in civic, religious, and educational movements. He was voted the young man of the year back in 1940. He was chairman of the board of the University of Chattanooga and saw it grow to become one of the South's great educational institutions. He was a delegate to the Republican National Conventions in 1940 and 1948 and his talented widow is now a member of the Republican National Committee. He was a member of the board of the National Manufacturers' Association and president of the Tennessee Manufacturers' Association. He served as president of the Community Chest. No worthwhile civic movement was without his interest and support. One interesting example is the fact that, as busy as he was, he served as foreman of the grand jury in Chattanooga at a time when inspiring leadership was needed.

It was typical of Lupton that he would prepare his business so that his high standards of business practice would be continued. The announcement of his nephew, Alex Guerry, Jr., as president of the Chattanooga Medicine Co. to succeed Lupton Patten was in line with his wishes and I am certain the great traditions of this firm will continue.

Mr. Speaker, I would like to submit for the RECORD at this time some of the editorials that were written and published in Tennessee newspapers upon the demise of Lupton Patten. I am proud of the respect and honor paid him in these editorials. The sincerity of these thoughts and the great compliments given him are well deserved. I know that Lupton Patten would bear these words of compliment humbly and honorably. He was a kindly and simple man; a trusted and beloved friend.

The editorial comments follow:

[From the Chattanooga Daily Times, Dec. 8, 1958]

LUPTON PATTEN DEAD AT 51—BUSINESS AND CIVIC LEADER—PRESIDENT OF CHATTANOOGA MEDICINE, CHAIRMAN OF UNIVERSITY OF CHATTANOOGA BOARD—BANK, INSURANCE EXECUTIVE, METHODIST—FOUNDED TENNIS CLUB

Lupton Patten, 51, civic and business leader and member of one of the city's pioneer families, died at 7 a.m. Sunday at his home, 1636 Hillcrest Road, after a heart attack.

Mr. Patten was first stricken in the fall of 1957 and after a short stay in the hospital returned to his home to recuperate. He later was able to resume most of his activities and had been at his office several times last week.

Funeral services will be held at 2 p.m. in John A. Patten Memorial Chapel of the University of Chattanooga, the Rev. Arthur H. Jones, Jr., pastor of First Methodist Church, and Dr. LeRoy A. Martin, president of Tennessee Wesleyan College, officiating. Burial will be in Forest Hills Cemetery.

Active pallbearers will be the following university students: Richard Holcomb, Bill B. Jones, Thomas A. Williams, Charles Pierce, Craig Smith, Larry Houghton, Art Grayson, and John Green.

The family asked that flowers be omitted and suggested gifts may be made to the university.

The body is at the home. Funeral arrangements are by Wann's.

Mr. Patten was president of the Chattanooga Medicine Co., one of Chattanooga's oldest and most widely known institutions. He was a guiding figure in other enterprises and movements in Chattanooga.

He made outstanding contributions to the community through his service as chairman

of the Community Chest campaign of 1939, as president of the chest in 1948 and 1949 and as chairman of the board of trustees of the University of Chattanooga and as a member of the boards of the Bright School and the Girls Preparatory School.

He also was a leader in several businesses and in worthwhile movements and organizations at both the local and national level. Active in the Republican Party, he served as a delegate to the Republican National Convention in 1940 and was an alternate delegate in 1948.

Zeboim Lupton Patten was born in Chattanooga January 29, 1907, the son of the late John A. Patten and Edith Manker Patten. His father was the nephew of the late Z. C. Patten, one of the founders of the medicine company, which Lupton Patten had headed since 1938.

BAYLOR GRADUATE

Lupton Patten was graduated from Baylor school in 1923. In 1927 he received a B.A. degree from the University of Chattanooga. He was a member of Sigma Chi fraternity, the Blue Key, and Alpha societies.

In 1927 and 1928 he served as instructor in French and philosophy at U.C.

In 1928, he became associated with the medicine company as a member of its credit department. Subsequent promotions made him assistant sales manager, sales manager, and then president. He also was chairman of the board of the Brayten Pharmaceutical Co.

At the time of his death he was chairman of the board of trustees of the university and a member of the boards of the Bright and Girls Preparatory Schools.

WAS 1940 JAYCEE MAN OF THE YEAR

In recognition of his leadership in civic affairs he was selected as the junior chamber of commerce's young man of the year of 1940. He served as vice chairman of the Greater Chattanooga War Fund in 1941, after having served as Community Chest campaign chairman in 1939. He was president of the Chest in 1948 and 1949.

He was a member of the executive committee and a director of the American National Bank & Trust Co. and a member of the board of directors of the Provident Life & Accident Insurance Co. He was the founder of the Chattanooga Tennis Club.

He received national recognition from the medicine industry when he was elected president of the Proprietary Association to serve in 1950–52. He also was a member of the board of directors of the National Association of Manufacturers and the Tennessee Manufacturers Association and on the L. G. Noel Memorial Foundation.

LAUDED AT WESLEYAN

At commencement exercises of Tennessee Wesleyan College in Athens, Tenn., in May 1957, Mr. Patten was given the honorary degree of doctor of laws. At the ceremony he was extolled by Dr. LeRoy A. Martin, the college president, as "an example of the man of business whose decisions and standards flow from an understanding of the philosophy of the Greeks and the truths of Christianity."

He served as foreman of the Hamilton County grand jury in 1949. In 1950 he was a member of the blue ribbon grand jury which looked into jury irregularities.

He was an active leader in the First Methodist Church. His clubs included the Mountain City, Fairyland, and Chattanooga Golf and Country Clubs.

He was married to Miss Mary Sanford in June 1928. He is survived by his wife and their four daughters, Mrs. Richard Winningham, Mrs. David Michael Whelchel, Mrs. Reid Douglas Hardin, and Miss Mary Fontaine Patten.

[From the Chattanooga Times, Dec. 8, 1958]

ZEBOIM LUPTON PATTEN

When Tennessee Wesleyan College conferred the honorary degree of doctor of laws upon Lupton Patten in 1957, it cited him for being, among other things, a man whose "leadership has extended beyond the boundaries of personal business interests."

Simple in its truth and profound in its implications, the statement might well be included in the epitaph this community now must write in its sorrow. For here indeed was a man whose abilities were manifold, whose concern for the betterment of the place of his birth and of his deserved success was without limit, whose willingness to give of himself in its behalf was without measure.

Lupton Patten was of a family which has contributed so richly to Chattanooga's growth that we might almost say with meaning that it would not have been possible without them. He was aware of this heritage; he accepted its privileges with humility and its responsibilities with a deep sense of obligation. He was worthy of both.

At the core of his position in this community, of course, were his business achievements which were both varied and sound. After a brief tenure as an instructor at the University of Chattanooga—a facet of his life which many of his friends never knew or tended to forget but which might explain his lifelong interest in education—he joined the family-founded Chattanooga Medicine Co. in a subordinate position in 1929.

His rise in the company was through the sales department, and at the age of 31 years he became a successor to his father, John A. Patten, as president of the firm. This was in 1938, and the 20 years since have been those of the medicine company's greatest growth.

In addition, he served on the directorates of the American National Bank & Trust Co., the Provident Life & Accident Insurance Co., and of the Brayten Pharmaceutical Co.

To say that Mr. Patten was active in civic affairs is merely to suggest the barest sort of outline of what he did and of what he gave for Chattanooga and its people. There was scarcely an area of its development in which he had not worked with ardor himself or supported with sound advice and material aid.

He had long been a trustee of the University of Chattanooga, his alma mater, and had served as chairman of the board. In addition, he was on the boards of the Bright School and Girls Preparatory School.

He had headed War Fund and Community Chest campaigns, and was active in most of the city's cultural undertakings.

In 1949, Mr. Patten served as foreman of the Hamilton County grand jury, a tenure marked by action against masked nightriders in the county.

He was a Republican, an unabashed conservative, and much of his energies in recent years have gone into serving the party's cause as he envisioned it on the local, State, and national levels.

A man with an easy smile and a soft voice, he could argue his convictions cogently and disagree with others without rancor. He had a ready wit and was an accomplished storyteller in moments of relaxation.

Lupton Patten's death at the age of 51 is a blow to this city, a grievous burden for his friends. None will doubt that his good works have erected monuments more enduring than stone and memories warmer than any engraved words.

[From the Chattanooga Observer, Dec. 12, 1958]

A GREAT AND GOOD MAN IS GONE

When the grim reaper Death stilled the voice of Zeboim Lupton Patten early Sunday morning, December 7, it carried to his eternal home a great, good man. He was good and great at the same time. He was the guiding genius of one of Chattanooga's leading enterprises, the Chattanooga Medicine Co., and also a director in many of Chattanooga's leading businesses.

He was a man of great wealth, but he used that great wealth and ingenuity to help people. He followed in the steps of his illustrious father, who preceded him in death, by giving to many worthy causes thousands of dollars to help them on their way. Lupton Patten, like his father gave much of his means to Negroes, particularly Negro ministers. When adversities knocked on Negroes' doors they made a beaten path to the Chattanooga Medicine Co. to see the little man with the big heart, Lupton Patten. When Negro churches needed a roof and other things to keep them in good repair where they may religiously educate their children Mr. Patten furnished the means by which they could do the necessary work needed to be done. In that he was following in the footsteps of his illustrious father because his father, in all probability, gave more money to Negro churches in this community than any one that I know about. Sometimes it wasn't a need for the church proper, but it was a need for the minister of the church and he also considered their pleas and helped them on their way.

It can truthfully be said of him that he lived in a house by the side of the road where the races of men go by—some were white some were black, some were rich, some were poor, some were learned and some were unlearned but he considered their cries and used much of his money in answering their prayers. Thus, in the passing of Mr. Zeboim Lupton Patten the Negroes of Chattanooga sustain the loss of one of their greatest benefactors. Yes, he was a friend to man. He was an easy man to approach; he was very understanding; he harbored no prejudice because of race, religion, or previous condition of servitude.

Hundreds of people jammed and packed the Patten Chapel on the campus of the University of Chattanooga Monday, December 8 at 2 p.m. to pay their last tribute of respect to their fallen leader—captains of industry, insurance executives, bankers, real estate men, Negroes, lawyers, doctors, preachers, and laborers, in fact people of all walks of life.

He was a great Republican. He believed in the principles of the party of Lincoln, Theodore Roosevelt, Calvin Coolidge, and Dwight D. Eisenhower. I don't know of any one in the image of man since the days of my father that I held in higher esteem than I did Mr. Patten. He was genuinely a good man and because of his goodness, he was a great man. It has been said that the true measurement of a giant oak can best be taken when it is down. That is also true in the lives of great men. In the presence of death all people are impartial, then envy has no motive to actuate it, malice has no motive to inspire it, ambition sees no genius in its path, then history becomes the unbiased witness. Judging by every standard, whether in the full glow of his business career or at the journey's end, he served with marked ability in every position he was called upon to fill. He has gone to try the realities of another world, but his spirit will remain with us forever.

[From the Chattanooga News-Free Press, Dec. 8, 1958]

LUPTON PATTEN

In the truest sense of the word, Lupton Patten was a gentleman. And the characteristics that made him so made him a great Chattanoogan.

Integrity, ability and vision were blended with an inquiring mind, an enterprising spirit, a broad horizon of interests and a deep sense of civic responsibility. These are some of the factors that make Mr. Patten's death yesterday a real loss.

President of one of Chattanooga's major industries, Mr. Patten's business acumen caused the Chattanooga Medicine Co. to develop under his direction into a larger vital concern of greater national importance, and led to the development of subsidiary companies that have increased Chattanooga's importance in the drug world.

His business activities alone were sufficient to mark Mr. Patten as an outstanding Chattanoogan. But while they were the center of his interests, business was only one of the many fields in which his influence was constructively felt.

Having assumed the presidency of the Chattanooga Medicine Co. 20 years ago at the age of 31, Mr. Patten already was active in civic affairs, so much that he was named young man of the year by the junior chamber of commerce in 1940.

The year before, the young Mr. Patten had successfully provided civic leadership through his service as campaign chairman of the community chest, an organization he was to serve as president for 2 years a decade later. In 1941 he was vice chairman of the Greater Chattanooga War Fund Campaign. He was scheduled to receive next month an honorary life membership in the United Fund.

Having received his schooling at Baylor School and the University of Chattanooga, Mr. Patten was deeply interested in the field of local education. Two of his early years were spent as a University of Chattanooga instructor. At his death he was chairman of the board of trustees of the University of Chattanooga and a member of the boards of the Bright School and Girls Preparatory School.

During the past several years the Chattanooga Tennis Club has proudly developed one of the best centers for the sport in the Nation, having built on the basis established by Mr. Patten as founder of the club and one of its most interested members.

A constitutional conservative in political outlook, Mr. Patten was active in local and national Republic affairs, serving as GOP National Convention delegate in 1940 and an alternate delegate in 1948, providing leadership in the Tennessee delegation for stanch, free enterprise Americanism.

Nor did he turn away from a call for governmetal service. He was a distinguished foreman of the Hamilton County grand jury. During his term the community was stricken by a rash of mob violence as hooded hoodlums burned crosses and flogged residents of outlying areas. Grand jury investigation under Mr. Patten's leadership helped restore the peace in that troubled period.

In his church, the First Methodist, Mr. Patten was an active member and vital leader for many years.

With all his business and civic service, Mr. Patten was a man devoted to his family. He and Mrs. Patten were the parents of four daughters.

Though his years of life were relatively brief, Mr. Patten engaged his time better than most in more endeavors than most, living fully, constructively, honorably, and in a manner that causes his death to be a real community loss.

MEDICINE FIRM ELECTS ALEX GUERRY AS PRESIDENT, PAT ABSHIRE AS DIRECTOR

Alex Guerry, Jr. was elected president of the Chattanooga Medicine Co. at a special meeting of the firm's board of directors Monday afternoon.

Guerry succeeds the late Lupton Patten, who died at his home early Sunday morning.

In other action taken by the directors, Patten Abshire, secretary of the company, was named a director to fill the vacancy created by the death of Mr. Patten.

Associated with the drug firm since 1945, Guerry was named executive vice president last September.

Guerry, 40, is one of the city's most active young executives. He is president of the Rotary Club and a leader in various organizations and civic undertakings.

Prior to his promotion to executive vice president, he had served as secretary of the company since 1948.

Guerry joined the firm after establishing a distinguished record in the Army Air Force during World War II.

He is a graduate of Baylor School and the University of the South and holds a master's degree in business and economics from the University of North Carolina.

Guerry has been active in the work of the United Fund-Red Cross campaigns. He was primarily responsible for an exhaustive 8-month study of UF operations in other cities which resulted in the adoption of a combination plan for Chattanooga.

The new president is a member of the Church of the Good Shepherd on Lookout Mountain. He resides with his wife, Louise Pemberton Guerry, and children, Alexander III, Louise Chappell, and John P., at the family home on Lula Lake Road, Lookout Mountain.

Abshire, the new director, is a member of the law firm of Wilkerson and Abshire, general counsel for the company.

A Tribute to Hon. Overton Brooks, of Louisiana

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. VINSON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include therein a resolution adopted unanimously by the Committee on Armed Services which pays high tribute to the distinguished Member from Louisiana, the Honorable OVERTON BROOKS:

Resolved, That the Armed Services Committee, House of Representatives, does hereby express regret at the loss from its membership of Hon. OVERTON BROOKS, a Representative in Congress from the State of Louisiana;

That the committee recognizes the valuable contributions to the national defense made by him during his long tenure in Congress;

That the committee in particular recognizes the untiring efforts he has put forth in order to build strong and effective Reserve components of the Armed Forces;

That the committee believes that both Regular and Reserve personnel of the Armed Forces are indebted to him for his endeavors to secure for them increased pay and allowances, better housing, equitable methods of promotion and retirement, and the present system of military justice;

That he is to be commended for his attention to duty and conspicuous ability in the field of military legislation, both as a member of the Military Affairs Committee and the Armed Services Committee;

That in the future the committee will sorely miss his great ability and wise counsel, but congratulates him on his selection as chairman of the House Committee on Science and Astronautics;

That the chairman of the Armed Services Committee be, and he hereby is, authorized to take appropriate steps to have this resolution made a part of the CONGRESSIONAL RECORD.

A Bill To Assist in Relieving the Shortage of Housing for Elder Persons

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I am today introducing a bill to assist in relieving the shortage of housing for elderly persons which became part of the housing bills passed by both the Senate and House Banking and Currency Committees last year and, I am hopeful, will become part of the omnibus housing bill this year. However, in order to bring this matter to the attention of the House and Senate, I am introducing a separate bill along with the statement I made before the Senate Banking and Currency Committee at the time I suggested this bill as an amendment to the housing bill:

A bill to amend the National Housing Act to assist in relieving the shortage of housing for elderly persons and to increase the supply of rental housing for elderly persons—It is the further purpose of this bill to assist in provision of urgently needed construction of nursing homes, renovation, and equipping existing licensed nursing homes for the care and treatment of persons, particularly elderly persons

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to carry out the purpose of this bill section 201(a), title II of the National Housing Act, is amended by adding at the end thereof the following new section:

"SEC. 229.(a) The purpose of this section is to assist in relieving the shortage of housing for elderly persons and to increase the supply of rental housing for elderly persons. It is further the purpose of this bill to assist in the provision of urgently needed nursing homes for the care and treatment of persons, particularly elderly persons.

"For the purposes of this section—

"(1) The term 'housing' means eight or more new or rehabilitated living units, not less than 50 per centum of which are specially designed for the use and occupancy of elderly persons;

"(2) The term 'elderly person' means any person, married or single, who is sixty years of age or more;

"(3) The term 'nursing home' means a facility which is or will be licensed or regulated by law, which provides continuous

nursing care, under medical supervision or direction, to the long-term, convalescent, infirm, or elderly patient in a home-like atmosphere, furnishing facilities and comforts normally found in a patient's home, and which provides, in addition thereto, such specialized service, equipment, and safety features as may be required for the safe, proper, and adequate care of patients at all times; and

"(4) The terms 'mortgage', 'mortgagee', 'mortgagor', and 'maturity date' shall have the meanings respectively set forth in section 207 of this Act.

"(b) The Commissioner is authorized to insure any mortgage (including advances on mortgages during construction) in accordance with the provisions of this section upon such terms and conditions as he may prescribe and to make commitments for insurance of such mortgages prior to the date of their execution or disbursement thereon.

"(c) To be eligible for insurance under this section, a mortgage to provide housing for elderly persons shall—

"(1) involve a principal obligation in an amount not to exceed $12,500,000 or, if executed by Federal or State instrumentalities, municipal corporate instrumentalities of one or more States, or nonprofit development or housing corporations restricted by Federal or State laws or regulations of State banking or insurance departments as to rents, charges, capital structures, rate of return, or methods of operation, not to exceed $50,000,000;

"(2) not exceed, for such part of such property or project as may be attributable to dwelling use, $9,000 per dwelling unit: Provided, That the Commissioner may, in his discretion, increase the dollar amount limitation of $9,000 per unit to not to exceed $9,400 per unit to compensate for the higher costs incident to the construction of elevator-type structures and may increase each of the foregoing dollar amount limitations by not to exceed $1,250 per room in any geographical area where he finds that cost levels so require;

"(3) if executed by a mortgagor which is a private nonprofit corporation or association or other acceptable private nonprofit organization regulated or supervised under Federal or State laws or by political subdivisions of States, or agencies thereof, or by the Commissioner under a regulatory agreement or otherwise, as to rents, charges, and methods of operation, in such form and in such manner as, in the opinion of the Commissioner, will effectuate the purpose of this section, involve a principal obligation not in excess of the amount which the Commissioner estimates will be the replacement cost of the property or project when the proposed improvements are completed (the replacement cost may include the land, the proposed physical improvements, utilities within the boundaries of the land, architect's fees, taxes, interest during construction, and other miscellaneous charges incident to construction and approved by the Commissioner);

"(4) if executed by a mortgagor approved by the Commissioner but which is not a nonprofit organization, involve a principal obligation not in excess of the Commissioner's estimate of the replacement cost of the property or project when the proposed improvements are completed (the replacement cost may include the land, the proposed physical improvements, utilities within the boundaries of the land, architect's fees, taxes, interest during construction, and other miscellaneous charges incident to construction and approved by the Commissioner, but shall not include any allowance for builder's and sponsor's profit and risk): *Provided*, That the Commissioner may in his discretion require such mortgagor to be regulated or restricted as to rents or sales, charges, capital structure, rate of return and methods of operation, and for such purpose the Commissioner may make contracts with and acquire for not to exceed $100 stock or interest in any such mortgagor as the Commissioner may deem necessary to render effective such restrictions or regulations; such stock or interest shall be paid for out of the section 207 Housing Insurance Fund and shall be redeemed by the mortgagor at par upon the termination of all obligations of the Commissioner under the insurance;

"(5) provide for a complete amortization by periodic payments within such terms as the Commissioner shall prescribe;

"(6) bear interest (exclusive of premium charges for insurance) at not to exceed 4½ per centum per annum on the amount of the principal obligation outstanding at any time;

"(7) cover a property or project which is approved for mortgage insurance prior to the beginning of construction, with 50 per centum or more of the units therein specially designed for the use and occupancy of elderly persons in accordance with standards established by the Commissioner, and which may include such commercial and special facilities as the Commissioner deems adequate to serve the occupants.

"(d) In order to carry out the purpose stated in the second sentence of subsection (a), the Commissioner is authorized to insure any mortgage which covers a new or rehabilitated nursing home, subject to the following conditions:

"(1) The mortgage shall be executed by a mortgagor approved by the Commissioner. The Commissioner may in his discretion, require any such mortgagor to be regulated or restricted as to charges and methods of operation, and, in addition thereto, if the mortgagor is a corporate entity, as to capital structure and rate of return. As an aid to the regulation or restriction of any mortgagor with respect to any of the foregoing matters, the Commissioner may make such contracts with and/or acquire, for not to exceed $100, stock or interest in any such mortgagor as he may deem necessary. Any stock or interest so purchased shall be paid for out of the section 207 Housing Insurance Fund, and may be redeemed by the mortgagor at par upon the termination of all obligations of the Commissioner under the insurance.

"(2) The mortgage shall involve a principal obligation in an amount not to exceed $12,500,000, and not to exceed 75 per centum of the estimated value of the property or project when the proposed improvements are completed.

"(3) The mortgage shall—

"(i) provide for complete amortization by periodic payments within such terms as the Commissioner shall prescribe; and

"(ii) bear interest (exclusive of premium charges for insurance) at not to exceed 4½ per centum per annum of the amount of the principal obligation outstanding at any time.

"(e) In carrying out the provisions of this section with respect to the insurance of mortgages on properties or projects designed for use as nursing homes, the Commissioner shall consult with and secure the advice and recommendations of the Public Health Service of the Department of Health, Education, and Welfare.

"(f) The Commissioner may consent to the release of a part or parts of the mortgaged property or project from the lien of any mortgage insured under this section upon such terms and conditions as he may prescribe, and shall prescribe such procedures as in his judgment are necessary to secure to elderly persons a preference or priority of opportunity to rent the dwellings included in such property or project.

"(g) The provisions of subsections (d), (e), (f), (g), (h), (i), (j), (k), (l), (m), (n), and (p) of section 207 shall apply to mortgages insured under this section and all references therein to section 207 shall refer to this section."

(b) Section 212(a) of such Act is amended by adding at the end thereof the following: "The provisions of this section shall also apply to the insurance of any mortgage under section 229 except that compliance with such provisions may be waived by the Federal Housing Commissioner in such cases or classes of cases in which laborers or mechanics, not otherwise employed at any time on the project, voluntarily donate their services without compensation for the purpose of lowering the costs of construction and the Federal Housing Commissioner determines that any amounts thereby saved are fully credited to the nonprofit corporation, association or other organization undertaking the construction."

SEC. 213. This bill shall take effect sixty days after this enactment.

STATEMENT OF THOMAS B. CURTIS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MISSOURI

I first want to thank the chairman for the opportunity of testifying before the committee on this important subject of adequate facilities for the aged.

No subject seems to be receiving more attention today than the problems that face our older citizens. It is very important that their problems receive attention. Indeed, the point has been raised of what value has been this increased lifespan given to us through the achievements of our medical and pharmaceutical professions if the years added to the lives of our people are to be spent in unhappiness.

What should be one of the greatest boons to mankind has in some respects become a bane. I believe it is well within our power to give the boon real meaning. However, it requires some clear thinking of what should be done. What has been done, although done with good intentions, has often produced poor results.

The problem of the aged is to a large degree a financial problem. Most older people are on fixed incomes, pensions, social security, or retirement of some sort. Their plans for financing their retirement have been thrown out of kilter by two major economic and social forces.

1. Instead of living 10 years they now are living 20 years. This is the boon that has become a bane, because they have not prepared themselves for this financial burden. The cost of staying alive is great—unnecessarily great. The drugs and medical care are available, but their cost is burdensome.

2. Inflation has hit this group of people most cruelly. What they had set aside has been cut in half. Although we have sought to alleviate this damage through granting double personal exemptions to persons over 65 in our income tax laws, and in other ways, this has amounted to too little for those who get it and has been of no help to those in the lower economic brackets who do not have enough income to be on the income tax rolls.

One way in which we can help these older citizens is to analyze with some care just what their needs are and see if we cannot provide the facilities that are tailored to their needs. What we have been doing, I suggest, is trying to convert the facilities that already exist in our society to fit their needs or, equally as bad, to distort their needs to fit what facilities exist. This does not work, and it is costly.

Let me illustrate. Older people need more medical attention than younger people but do not need constant doctor care, nor do they need constant nursing care. Yet, ofttimes, they are confronted with the choice of either staying at home or going to a hospital. They do not need hospitalization. They need something much less expensive, something in between. The result is we tend to overload

our hospitals and inadequately meet the needs of the aged and unnecessarily burden them financially.

I am going to make a confession. I was the first member of the male sex to serve on the board of the Visiting Nurses Association of St. Louis. I was deeply interested in the work that the visiting nurses were doing. I observed how their caseload had changed over the years. The primary caseload of the visiting nurses used to be instructing young mothers in prenatal and postnatal care, because most births took place in the homes and not in the hospitals. Today, there are very few maternity cases in the home. In place of maternity care, the visiting nurses now find their primary caseload is geriatrics—teaching the families of older people in the home how to care for the aged person in the home; how to administer a hypodermic shot; how to handle other problems of chronic illness or just old age.

I regret to state that the use of the visiting nurse approach, which is so much less costly than the hospital approach and much more suitable, has not received the attention and the development that it should. But it illustrates the point I am trying to make that facilities geared to the problems of the aged should be set up specifically for them rather than to try to make the aged problems fit into the facilities we have been using for the general society.

So I come to the specific question at hand—the encouragement and implementation of nursing homes designed to take care of the aged. As a matter of fact, the very terminology I am using—nursing homes—confesses that I am guilty of the very thing I am urging that we avoid. What we need is not nursing homes in the traditional way we know nursing homes to be. Nor do we need old folks' homes as we have known them. We need an entirely new type of facility. It may be a village of old folks, such as I have read has been established in Arizona. It may be just homes clustered around a medical facility that is set up to care for older people. Frankly, I am not certain just what kind of facilities we should be talking about.

And so we come closer to the question at hand. How do we go about providing the type of facilities that will most adequately fit the problem of our aged citizens? Do we do it by establishing a commission to study the matter, or a congressional committee? All this may help, but I suggest that there is a more direct way, a quicker way, a more satisfactory way—indeed, a way which is being followed to some extent in the natural course of events, whether the Government is aware of it or not.

The way is the private enterprise system. What Government should be doing is encouraging what is already coming about.

So many people misunderstand the private enterprise system. To me it is essentially a trail-and-error system, a system which permits individual citizens or groups of citizens to follow out their ideas of how to sell to or service certain social needs. The best way I know to provide adequate facilities to the older people is to allow various people to go ahead and provide what they think the older people would like at the price they can best afford to pay.

Ninety-seven percent of the nursing homes for the aged today are private institutions. These institutions are under State regulations, and the regulations are improving as experience with the operation of nursing homes grows. All that is needed now is to give some encouragement to private enterprise to move more effectively into the area of administering to the needs of our aged people. The Federal Government is in a very logical position to do just this through the FHA program.

I am familiar with the testimony of George T. Mustin, the head of the American Nursing Home Association, before your committee on May 14, 1958. I want to endorse what he has said wholeheartedly.

I believe that in this area the most can be done for the money to assist our older people, and this can be done right now. The plans, thousands of them, are in existence; all they need is financial implementation. Why we have not extended the FHA program to include private nursing homes before now is hard for me to understand. These are not fly-by-night operations. They all must qualify under State standards. Indeed, the Federal Government through the use of FHA funds can encourage the growth of the State-approved "Nestorian" facilities—I am coining a new term; Netser was the respected older citizen in Homer's "Iliad"—and give impetus to the growth of qualified private facilities for our older citizens.

I urge this committee to give consideration to amending S. 3497, an act to expand the public facility loan program of the Community Facilities Administration of the Housing and Home Finance Agency or whatever proposed legislation would be most appropriate to include proprietary Nestorian facilities that meet adequate State standards.

Thank you, Mr. Chairman.

Abuse of Freedom

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which appeared in the Washington Post of January 17, 1959:

ABUSE OF FREEDOM

Throwing eggs and spitting at a visitor from abroad, you venture, are not good manners ("Abuse of Freedom," editorial, January 10). Indeed they are not. Tossing temple-de-filers out of the place on their ears is not good manners either, but some people think well of the practice: people who hold certain things to be more important than good manners. Such people tend to be particular about who is treated as a guest of the Nation and who is not.

Would you invite just anyone into your house? A murderer? A rapist? A race agitator? A hard anti-Communist? Presumably a line must be drawn somewhere. Presumably there is a point at which good manners toward perpetrators and symbols of the things we despise implies condonation of the things we despise. Would you have welcomed Adolf Hitler to our shores as a guest of the Nation and have attended a dinner in his honor?

You sneer at these small minorities, these refugees from behind the Iron Curtain. I regard them as the chief defenders, at this moment, of our national honor and our national ideals. You say their conduct has no place whatever in a free society. I say their spirit is the only hope of free societies. You have the cheek to assert that they—they—have not yet learned the meaning of freedom. I throw eggs at you and spit.

BRENT BOZELL.

Time To Check Again

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Stars and Stripes of September 4, 1958:

TIME TO CHECK AGAIN

This editorial is written to all veterans of United States wars and to the dependents of those veterans.

In our issue of June 26 we addressed an editorial to veterans of World War I primarily and to their dependents. In it we called attention to the attitude of Congress on the aspirations of this group and urged them to consider carefully their choice of Members of Congress when the coming election arrived.

We suggested that they pay particular attention to the voting records of the incumbents and endeavor to ascertain just who were their friends in Congress in both the House and the Senate.

We suggested that despite party predilections they set aside partisanship and send Representatives to Congress who would more understandingly speak for them when the time arose for a vote in both Houses of Congress on the question of benefits for veterans and their dependents.

We went so far as to suggest certain questions that might be asked of candidates in order that the veterans at home might know, in advance, the stand these candidates took on veterans' affairs, and be guided accordingly when it came time to cast their votes on election day.

We also suggested that we would discuss this subject again and believe that now is an excellent occasion to bring the question up in order that veterans may see to it that at voting day men and women will be chosen for the National Legislature who will truly represent them.

Just a few weeks remain before candidates for the 86th Congress will be chosen but in that time we believe that interested veterans can determine whom to vote for in order that their interests may not be lost sight of when the new Congress convenes.

In order that our veteran group may learn as promptly as possible just how each candidate stands we repeat our earlier suggestion that each candidate—those seeking reelection and the newcomers, be asked direct questions as to their stand on this important question and that the inquirer not accept pious lip service but a plain statement of fact in order that the veterans will know how to vote on election day.

We suggest that these inquiries be made now and be continued up until the time the veterans go to the polls in order that this vast potential strength might be definitely informed on the subject and thus know how to cast its vote when the proper time arrives.

On the question of service pensions the direct question should be asked, "Do you believe that men who served their country in time of war and who, in their old age find themselves in need of aid from their country are entitled to a pension in the true tradition of the United States of America?"

In response to such a question the veteran should not be satisfied with any wishy-washy reply or any beating around the bush,

but should insist upon as straightforward an answer as was the question.

Department leaders of the various veterans organizations in each State should know by now just who of the candidates seeking reelection have proven friendly to the veteran cause and can inform their members.

If they do not possess this knowledge we feel sure they can secure it by communicating with the national legislative representatives of the organizations and thus prepare their members with the knowledge to guide them at election time.

All other groups seem to have no qualms in determining those in Congress who are favorable to them or who oppose them and act accordingly.

For this reason veterans should try to find out those who will have the power to vote for or against them in the 2 years beginning next January and see to it that only friends are sent to Washington in order that veterans and their dependents may be assured of a fair break on the subject of veterans legislation.

Every veteran must remember that there are powerful influences in our land who would deny any and all benefits to ex-servicemen.

The one sure way to combat such influences is to send friends of veterans to Congress and the best way to find out your friends is to make certain of their position before the vote is cast.

Federal Employees: Time Off To Enable Them To Vote

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. DOLLINGER. Mr. Speaker, I have today introduced a bill to allow 2 hours' time off to Federal employees for the purpose of voting in person. My bill directs the head of each department, agency, or establishment in or under the executive branch of the Federal Government to excuse from duty each employee under his jurisdiction, without loss of pay or deduction from annual leave or loss of other employment benefit, for a period of 2 hours for the purpose of voting in person in primary or general election for Federal, State, or local office. Also, additional time may be granted when, in the discretion of the head of the department, it is necessary.

There was much confusion and difficulty in my own congressional district in the past election because of the conflict in the various regulations in effect concerning time allowed employees for voting. Federal employees were allowed only 1 hour, whereas other employees in the State of New York were given 2 hours off. A number of Federal employees got in touch with me and complained that they had difficulty in getting more than the hour off, and in some instances the additional time was denied them, although because of great distances they had to travel to their Federal jobs it was absolutely necessary for them to have the additional time requested. I presume this same situation must have prevailed in other areas as well.

Rather than leave the question of necessary voting time to the discretion of the heads of the Federal departments, provision for sufficient voting time should be made by law. In my opinion, at least 2 hours' time off should be granted Federal employees, to prevent any inability to exercise their franchise; this is only reasonable if our Federal employees are to be spared hardship. Surely they should be permitted to enjoy their privilege of voting, a right guaranteed them, without being penalized by the Federal Government, their employer.

Decade Brought Jersey's Biggest Boom

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include the following article, "Decade Brought Jersey's Biggest Boom," by Mr. Richard O. Shafer, which appeared in the Newark Star-Ledger, January 18, 1959:

DECADE BROUGHT JERSEY'S BIGGEST BOOM
(By Richard O. Shafer)

New Jersey had the greatest boom in its history during the last 10 years.

Everything that indicates a growing, healthy economy went up, up, up—population, employment, manufacturing, sales, buying income, farm production, bank deposits, housing, motor vehicle registrations, schools.

And all indications are that the next 10 years will equal or exceed the phenomenal rate of growth of the last decade.

In fact, economic forecasters predict that by 1969 there will be a 100-mile strip city the length of New Jersey between New York and Philadelphia, teeming with industry, business, and homes. Such a strip city actually is well under way.

The greatest factor in New Jersey's past and present growth is its location between those two cities, the Nation's first and fourth largest. It is at the center of distribution for nearly all consumer goods for the Atlantic seaboard and overseas market. It is in the highest density of development in the Middle and North Atlantic States.

It is one of the most heavily industrialized of the 49 States. While only 45th in area, it ranks 6th in industrial activity, measured in total value added by manufacture, according to New Jersey Business Review magazine.

It is first among all the States in production of chemicals and plays a leading part in the manufacture of petroleum products, rubber goods, electrical machinery, foods, textiles, and ceramics.

The economic growth of New Jersey has produced a living standard for its citizens that is one of the highest in the Nation, according to a recent survey.

INCOMES UP 43.4 PERCENT

For example, the average net buying income per family in the Garden State rose 43.4 percent in the last 10 years—from $4,961 in 1948 to $7,115 in 1958.

Thanks mostly to ever increasing job opportunities, the population rose at the rate of 100,000 a year, a total increase of 16 percent during the decade, and now is 5¾ million.

Latest available figures show total employment in New Jersey is 2,258,050, a jump of 13.6 percent, with 850,000 employed in manufacturing.

The State Chamber of Commerce reports 8,383 new manufacturing plants located in New Jersey between 1948 and the end of 1957, the latest year for which figures are available, and that factory payrolls jumped from $2,214,159,000 in 1947 to more than $4 billion in 1957. The total net buying income for the State rose more than 100 percent.

RETAIL SALES SOAR

During the 1947–57 decade, retail sales in the State increased 76.1 percent from $4,034,374,000 in 1947 to $7,104,475,000 in 1957, and bank deposits 53.1 percent from $4,879,073,000 to $7,468,101,000.

Motor vehicle registrations, which numbered 1,252,000 in 1947, today are well over 2 million.

The purchasing value of the dollar in New Jersey, based on a 100-cent value in 1939, dropped from 53.7 cents in 1948 to 46.9 cents in 1958.

In the last 10 years, New Jersey municipalities have made stupendous and costly efforts to keep pace with the growing population and school enrollment. The number of public school children in the State jumped from 616,000 in 1948 to 971,000 last year.

MILLIONS FOR SCHOOLS

To meet this increase, $630 million was spent on new school construction, raising the total number of classrooms from 25,950 to 33,700 and the number of teachers from 26,121 to 41,500. Today, 62 more new public schools are under construction or authorized costing another $57 million.

Teachers' salaries have risen along with other education costs. The minimum salary has gone from $2,000 in 1948 to $3,600 in 1958; the average salary for teachers from $3,263 to $5,530; the highest salary from $5,600 to $8,000, which now is earned by 351 teachers. These statistics were furnished by the State education department.

In the decade just ended, the total cost of public education jumped from $126,970,457 to $339 million.

In housing, despite herculean efforts, private builders and public agencies have been unable to keep pace with the population growth. It is estimated New Jersey will need 333,000 more dwelling units by 1968, to augment the 491,000 built in the last 10 years. The population growth for the next decade is estimated at 750,000 persons, or 250,000 families.

NORTH OF RARITAN

New Jersey's greatest growth in the last 10 years has been north of the Raritan River, but experts say the same factors that promoted that growth are at work in the southern sections of the State today.

Opening of the George Washington Bridge was one of the main factors for development of Bergen County and adjacent sections.

Today, south Jersey is benefiting from such projects as the Walt Whitman Bridge linking Camden and Philadelphia, the New Jersey Turnpike and Garden State Parkway and the Delaware Memorial Bridge.

The turnpike and the Walt Whitman Bridge place Philadelphia today in the same position as the George Washington Bridge placed New York City.

SOUTH JERSEY BOOM

One industrial expert says the pressures of growth from the Philadelphia area are causing it to spill over in such volume as to spell the same kind of boom for south Jersey as north Jersey experienced in the last decade.

This same expert cites New Jersey's tremendous inherent qualities of being a good place to live as certain to stimulate continued growth of the State.

Its easy accessibility to seashore and mountains and the cultural centers of New

York and Philadelphia attract many new residents, he points out.

"An industrialist who moved to New Jersey recently told me he was amazed at his ability to get anywhere in the State within 2 hours," he said.

HIGH FARM INCOME

In agriculture, New Jersey has maintained its rank as No. 1 among the States for cash receipts per acre—$197. Connecticut is second, $145, while such large agricultural States as California and New York are 6th and 12th respectively—$74 and $55.

U.S. census figures show New Jersey has 22,686 farms averaging 73.4 acres each.

Like all other phases of our economy, agriculture has undergone drastic changes during the past decade, said the State agriculture department.

These changes include increased mechanization due to greater use of electricity as a means of meeting higher labor costs, increased output and yield per plant as well as per acre, introduction of chemical weed control, vastly better control of animal diseases, and larger flocks of poultry and herds of cattle.

Fewer farms with less help are maintaining production levels despite the encroachment of residential and industrial developments into rural areas.

The department believes agriculture will survive in New Jersey despite the onward march of industry—total value of production on the State's farms rose from $320,079,000 in 1948 to $343,062,000 in 1957.

New Jersey agriculture is geared to the production of eggs, milk, vegetables, poultry, fruits, hay, grain, and berries, for nearby urban, industrial, and commercial centers.

Consequently, it is dependent on prevailing industrial activity and payrolls. Prosperity or depression on the farm is determined by business trends.

Could It Be?

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1959

Mr. ABBITT. Mr. Speaker, we have always heard that truth will out. On Wednesday, January 7, 1959, there appeared a very pertinent editorial in the Richmond Times-Dispatch, an outstanding newspaper published in Richmond, Va. The editorial comments very briefly but cogently upon the news item stating that Mr. Chief Justice Warren has dropped his membership in the American Bar Association. The question is raised that perhaps the Chief Justice now realizes that he is not a lawyer. The editorial is as follows:

COULD IT BE?

Chief Justice Earl Warren has dropped his membership in the American Bar Association, according to word received by the association's executive director from Justice Warren's office in Washington. No explanation was given.

Could it be that Chief Justice Warren no longer considers himself a lawyer?

The Air Force-Industry Family

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the remarks of Maj. Gen. Kenneth P. Bergquist, USAF, Commander of the Air Defense Systems Integration Division, Laurence G. Hanscom Field, Bedford, Mass., on the occasion of the Seventh Annual Massachusetts Aviation Conference at the Andover Country Club, Andover, Mass., on September 25, 1958:

THE AIR FORCE-INDUSTRY FAMILY

(By Maj. Gen. Kenneth P. Bergquist, Air Defense Systems Integration Division, Laurence G. Hanscom Field, Bedford, Mass., at the Seventh Annual Massachusetts Aviation Conference, sponsored by Greater Lawrence Chamber of Commerce, September 25, 1958)

I appreciate this opportunity of speaking with you on the Air Force-industry family, and hope to convey some of the significant things that are happening with respect to this family association—particularly as regards the defense of this country against enemy air attack.

Never, in the history of military planning and operations has the industrial relationship, and support needed, to successfully achieve military objectives been so pronounced as it is today. This trend will unquestionably continue indefinitely with the military-industrial association becoming an ever closer and interdependent relationship.

This type of relationship also applies to the scientific community, particularly as represented by the research analysis activities conducted under the aegis of educational institutions. Thus most of our equipment problems are tackled by teams of military, scientific, and industrial personnel.

There are great numbers of different military requirements and programs that, in the field of research and development alone, depend on technological and scientific assistance from outside the military.

The areas I refer to utilize weapons systems and supporting systems that are so technically involved they are difficult to describe in normal, everyday terms. However, the amount of time devoted to the research and development of these systems, taking into account the smallest details, becomes a controlling factor when expressed in terms of having an operational weapon in the time period required. The performance of the research and development effort within the military departments alone will not satisfy the requirement. We must depend on the scientific and engineering skills of the scientific community and industry to participate in weapons systems research and development in order to meet stated operational needs. What this really means, is that in current and future concepts for military planning, full consideration must be given to the role industry plays in order to reach the objectives specified in these plans. We, that is, both military and industry, are, in effect, a team, whose efforts are directed toward a common objective best described as "maximum defense, and maintenance of offensive capability so strong as to make any attack by a possible enemy against the United States completely unprofitable."

You have no doubt heard the foregoing remarks expressed in a number of different ways by various individuals both in the military and the industrial environment.

Regardless of what interpretations may have resulted, there is really only one conclusion—we are in an era of great scientific achievement. We, as a nation, are dedicated to the establishment of permanent peace and complete harmony between all nations. We respect the rights of nations to be self-governing and to be completely free of aggression in any form that denies nations their freedom of government and political, social, and economic way of life. As long as there are nations whose policies and objectives are in direct conflict with these basic desires, and whose scientific achievements are exploited for the purpose of furthering their campaign of world domination, we must develop our military forces to counteract this threat to the best of our ability and capability.

I stated that the task of research and development is tremendously involved from a technological standpoint. I also indicated that industrial assistance is needed, but don't let me give the impression that the job ends with the completion of the research and development task. In reality, this is only the beginning.

Of equal importance, if we are to have military forces in being, is the production and procurement of the hardware. We find, in most cases, that the industrial organization performing the research and development job on a particular weapon, or weapon system, is also the production organization. Then, on the other hand, there are also industrial organizations, laboratories, and institutions confined solely to the research and development area and whose findings are used by the production people in the building of weapons and weapon systems.

An example of this is the work performed by the Massachusetts Institute of Technology at their Lincoln Laboratory in the field of research and development of air defense systems. Lincoln Laboratory has played a big role in the development of a semiautomatic system for air defense and continues to do research on this system so that it can be continually improved in keeping with the objective of providing maximum air defense capability.

The production phase of the program is highly important to obtaining our military goals. In general terms, it involves money, time and people. In the Air Force, as an example, we must keep in constant touch with all industries producing our hardware to assure that production schedules are in phase with our implementation plans for equipping our forces. This requires the utmost care in arranging budgets, financial plans, and fund expenditures to make certain that production and procurement is properly supported by the required money. This is primarily the job of the Air Materiel Command located at Dayton, Ohio.

Let me get a little more specific on what the production and procurement programs mean in terms of dollars. Since you gentlemen would be principally interested in how this expenditure affects the New England States and, even more specifically, how it affects Massachusetts, here are some facts. In Boston, the Air Material Command of the Air Force has established the Boston Air Procurement District whose job is to administer certain Air Force contracts with various industries in the New England States.

I would like to point out, however, that these contracts and figures I am about to give you do not include such things as local procurement by individual air bases for supplies and other support needed for daily operations. Also, they do not include Air Force contracts at the Pratt and Whitney plant at Hartford, Conn., which are administered by the Department of the Navy. The contracts I'm referring to are those the Air Force has with New England industry. As of June 30, 1958. the total dollar value of these contracts administered by our Boston office totaled $552,683,000. This total was divided among 97 large contractors and 122 small contractors for a total of 119.

I'm sure you would be interested in how this is further divided among each of the New England States. In Maine, the contract dollar value totals $44,000 involving four small contractors. In Vermont, there are two large and two small contractors with a total dollar value of $1,192,000. Rhode Island has eight large and seven small contractors with a total dollar value of $496,000. In New Hampshire the total amount is $5,259,000 with four large and eight small contractors. Connecticut has 32 large and 34 small contractors with $105,772,000 of the total.

Last, but not least, and of most interest to you is Massachusetts. Here there are 53 large and 67 small contractors with a total value of $439,917,000. This is approximately four times the total amount of all the other New England States combined.

As you can see, the Air Force dependence on New England industry, particularly that located in Massachusetts, is of large proportions. As a matter of fact, over a span of about 5 years, the dollar value of these contracts has increased from $266,636,000 in November of 1953 to the $552,683,000 figure I previously mentioned, or an increase of $286,046,000, which averaged to $57,209,000 per year. It is most indicative of the relationships expressed in my earlier remarks where I referred to the Air Force industry family.

Within all of these programs, relationships, objectives, and work performance is the one underlying task—management. In the Air Force we view the management job as that which holds the key to success. When considering that the funds contained in the Air Force fiscal year 1959 budget total $17,800,000,000, the management within an enterprise of this size must be nothing short of the best. We have made considerable progress toward this objective. Our management program, however, is not confined exclusively to the military structure. Many of the programs of weapons and weapons system development, production, and operation have management techniques which directly involve industry. This, I hope you have gathered, has been implied in some of my previous remarks. But now let me get a little more specific by covering some air defense aspects of the Air Force industry family.

In this connection I would like to discuss the development of the Air Force management approach to the tasks and problems associated with the overall air defense system. The industrial relationship in this endeavor will, I am sure, be self-evident.

Air defense is, within the Air Force and the Department of Defense, perhaps the most technically involved program of all. It is a multibillion-dollar enterprise. The management task involved is a challenge to one's imagination.

So that you may better grasp the scope of the air defense management job let me identify some of its component parts for you. There are long-range search radars and associated gap-filler radars and height-finding radars, subsonic and supersonic manned interceptor aircraft, ground-launched and air-launched air defense missiles, airborne and seaborne radar search equipment to extend our search boundaries, automatic data-processing equipment for assembling and displaying essential information, and for calculating and directing air defenes battle actions, people representing every known skill in the military inventory—bases and installations from which operations must be conducted and supported—a communications network covering the entire Northern Hemisphere and, in some cases, beyond, and the coordination and correlation of all civilian aviation through air traffic control facilities with the air defense mission.

These are the broadest possible expressions of the main components of the air-defense system. The management job involved is concerned with one prime objective—how to get all these things together and make them work.

In recognition of the problem, the Air Force recently established an organization known as the Air Defense Systems Integration Division, which I command. We are located on Hanscom Field at Bedford, Mass., with Lincoln Laboratory as our next door neighbor. Our task is to insure that the overall air defense system is technically compatible. That the implementation of the system and the integration of improvements are properly time phased, and that the system is effective. To do the job we have assigned highly qualified officers and civilian employees from Air Research and Development Command, Air Materiel Command, and Air Defense Command, all working toward the common objective I have just outlined.

This, however, is not enough to get the full job accomplished. The various components, and other related systems requirements are so technically involved that engineering support must be provided from scientific and industrial sources. The Air Force has, for several years, recognized that this situation exists, but, due to the various ramifications of the total management effort required, purposely withheld from making basic decisions until the problem areas could be sufficiently defined and a management course of action developed in line with the total air defense management job. This has now been done. Secretary of the Air Force Douglas recently invited the Massachusetts Institute of Technology to undertake the furnishing of engineering services to my organization. The Air Force Air Defense Systems Integration Division, utilizing professionally qualified personnel and facilities of Lincoln Laboratory.

This arrangement has been accomplished by the Massachusetts Institute of Technology, and it is now in operation. However, this is only an interim and partial step toward the provision of full engineering support to fully and effectively accomplish the management of systems implementation and integration. The fine talent and capabilities of Lincoln Laboratory must be complemented with other skills and endeavors. It is also interim due to the MIT desire, as an educational institution, to have its Lincoln Laboratory revert to a strictly research activity.

Recognizing the relationship of industry to the air defense system and the extent to which industry participates in the research, development, production, installation, and maintenance of Air Defense Systems, the Air Force has agreed to having MIT sponsor the formation of a separate corporation to be under contract to the Air Force. The purpose of this nonprofit organization is to provide the engineering support required to assist ADSID in solving the intricate and technically involved problems of system compatibility, integration, and effectiveness. The new corporation is called the MITRE Corporation. The chairman of the board of trustees is Mr. H. Rowan Gaither, Jr., who is also chairman of the board of the Ford Foundation. The corporation's president is Mr. C. W. Halligan, formerly head of the military engineering division of Bell Telephone laboratories. The MITRE Corporation is now being organized and a phased program of personnel assignment and project action is being established.

The MITRE Corporation will be the chief engineering agency for all Air Defense Systems problems which require top-level solutions and management control. In this capacity they will coordinate their studies, and in most cases, actually work with industrial organizations participating in air defense matters. This greatly simplifies the mangement procedure and that industry can now look to one primary organization within the military structure on air defense integration matters. Many of you who have dealt with the military will certainly recognize that this procedure is one that will promote better military-industrial relations.

Annuities for Federal Employees Engaged in Hazardous Duties

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. HOLTZMAN. Mr. Speaker, I am today introducing legislation in the House of Representatives to increase the amount of annuity for those employees of the Federal Government engaged in hazardous duties, whose annuities were not increased at the time Public Law 854 was passed October 1, 1956. Included in this class of employees are those of the Federal Government such as FBI agents, members of the Bureau of Prisons, Treasury enforcement officers, Customs enforcement agents, U.S. marshals, and employees of the Criminal Investigation Division of the Immigration Service, whose primary duties include the investigation, apprehension or detention of persons suspected or convicted of offenses against the criminal laws of the United States, or whose duties involve frequent direct contact with such persons.

In introducing this legislation, I call to the attention of my colleagues that in 1956 when Public Law 854 was enacted into law, the deduction from salaries of all Federal employees was increased from 6 to 6½ percent for payment into the civil service fund. Simultaneously with this increase the annuities of employees of the Federal Government was increased from 2 to 2½ percent. In spite of the fact that the employees performing hazardous duties were obligated to pay an additional one-half of 1 percent into the retirement fund they were unfairly omitted from the law which would increase their benefits the additional one-half of 1 percent.

To compound this inequity further, Public Law 85–157 was passed during the 2d session of the 85th Congress increasing the retirement annuities for employees in hazardous occupations for the District of Columbia. While legislation was introduced in the 85th Congress to rectify this inequity, the bill never saw

the light of day and no action was taken thereupon.

Mr. Speaker, it is impossible for me to understand why this kind of injustice should be suffered to continue despite the fact that all other employees of the Federal Government are receiving increased retirement annuities. This bill will simply place those in the enumerated hazardous occupations on a par when they retire with those covered in the act cited as the Policemen's and Firemen's Retirement and Disability Act of 1957.

I am completely convinced that no Member of Congress will want to oppose this bill and I most respectfully urge my colleagues to give it a full measure of support.

Keep This Committee

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am including an editorial, entitled "Keep This Committee," which appeared in the Nashville Banner, Nashville, Tenn., on January 13, 1959.

This editorial, concerning the need for continuing the House Un-American Activities Committee, will be of interest to everyone interested in a free America. I commend it to your reading.

The editorial follows:

KEEP THIS COMMITTEE

Whether it is an enforcement arm, like the Federal Bureau of Investigation, or a congressional investigative agency—like the Senate Internal Security Committee—any unit of government that challenges subversive conspiracy makes enemies. The House Committee on Un-American Affairs also is distinguished for the foes it has made, some of whom periodically and constantly for 20 years have been after its scalp.

Its chief antagonists of course, have been the subversives themselves. Martin Dies, of Texas, was the chief target of these when this congressional agency started out, as the Dies committee.

Significantly enough, the loudest critics are the superliberal dupes whose theory apparently is that if Uncle Sam will play ostrich, and stick his head in the ground, internal dangers will just go away.

It is a characteristic oddity of these elements that with the 86th Congress less than a week old—and its work sheet filled with essential business—they leaped to the floor of the House, Monday, to demand that the committee be abolished. It was as if they just couldn't wait; as if, to quote a glib maxim, time was of the essence—for what they declined to say.

That Representative JAMES ROOSEVELT headed this assault is no particular recommendation; nor is his pretext, the glib assertion that in the light of court decisions, the House cannot possibly continue the life of the committee.

Actually it is more than a shade peculiar that he should cite a Supreme Court decision of 1957 as the basis for this conclusion, when the liberal antipathy from which his opposition stems goes back two decades.

Nobody ascribes to the House Committee on Un-American Activities a record of perfection. But it could match for value, and fundamental address to national security, any of the committees that over the years have functioned to that end. It has pulled no punches in sifting and revealing facts; its revelations in case after case have been authenticated.

It has been the target of smear and of frontal assault because of the job it was doing.

It is a needed weapon in the internal security kit. The majority of America knows that and will not willingly consent to its abolishment.

A Portion of a Speech by Abraham Lincoln on "Internal Improvements"

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. RAY. Mr. Speaker, next month we will be celebrating the 150th anniversary of Abraham Lincoln's birth. At the same time and later in this session the House will be considering many bills for increased Federal spending for a variety of purposes. It is timely therefore to place in the RECORD, a portion of the speech delivered by Mr. Lincoln on "Internal Improvements" on the floor of this House, June 20, 1848. That speech was printed in full on pages 28 to 48 of volume 2 of the "Complete Works of Abraham Lincoln," edited by Nicolay and Hay. The portion I quote is from pages 47 and 48:

I would not borrow money. I am against an overwhelming, crushing system. Suppose that, at each session, Congress shall first determine how much money can, for that year, be spared for improvements; then apportion that sum to the most important objects. So far all is easy; but how shall we determine which are the most important? On this question comes the collision of interests. I shall be slow to acknowledge that your harbor or your river is more important than mine, and vice versa. To clear this difficulty, let us have that same statistical information which the gentleman from Ohio [Mr. Vinton] suggested at the beginning of this session. In that information we shall have a stern, unbending basis of facts—a basis in no wise subject to whim, caprice, or local interest. The prelimited amount of means will save us from doing too much, and the statistics will save us from doing what we do in wrong places. Adopt and adhere to this course, and, it seems to me, the difficulty is cleared.

One of the gentlemen from South Carolina [Mr. Rhett] very much deprecates these statistics. He particularly objects, as I understand him, to counting all the pigs and chickens in the land. I do not perceive much force in the objection. It is true that if everything be enumerated, a portion of such statistics may not be very useful to this object. Such products of the country as are to be consumed where they are produced need no roads or rivers, no means of transportation, and have no very proper connection with this subject. The surplus—that which is produced in one place to be consumed in another; the capacity of each locality for producing a greater surplus; the natural means of transportation, and their susceptibility of improvement; the hindrances, delays, and losses of life and property during transportation, and the causes of each, would be among the most valuable statistics in this connection. From these it would readily appear where a given amount of expenditure would do the most good. These statistics might be equally accessible, as they would be equally useful, to both the Nation and the States. In this way, and by these means, let the Nation take hold of the larger works, and the States the smaller ones; and thus, working in a meeting direction, discreetly, but steadily and firmly, what is made unequal in one place may be equalized in another extravagance avoided, and the whole country put on that career of prosperity which shall correspond with its extent of territory, its natural resources, and the intelligence and the enterprise of its people.

Net Farm Income Has Lost Its Stretch

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. HULL. Mr. Speaker, the February issue of the Missouri Farmer features an illuminating discussion of inflation and its effect on our farm families.

Under unanimous consent, I include herein this article, as follows:

The "old grey mare ain't what she used to be," and neither is the Yankee dollar. It has just as much silver in it and the same inscription, but when it comes to trading it for things, it just doesn't stretch as far.

Folks in this country have had to learn to live with inflation—to make adjustments here and there. It's been our national policy to help those with fixed incomes. Special tax deductions for those over 65, fast depreciation for big business, capital gains provisions for investors, increases in social security, and so on, tend to soften the brunt of a shrinking-dollar economy.

Farmers have been hit hard by inflation. They are of course entitled to many of the income tax deductions listed above, but the catch is that farmers' incomes are such that they are not often subject to the income tax. One out of five farm families had a net income in 1957 of less than $1,000. Three out of 5 farm businesses had a total income of from $1,000 to $5,000.

On the other hand, inflation catches farmers square on the chin every time they purchase a production tool or meet a living expense. When you brush aside all the financial statistics and take a close look at the economic position of the Nation's farm-production plant it is certainly not reassuring. * * *

Farm income reached a peak of $17.8 billion in 1948, fell sharply to $12.9 in 1949, topped out again at $16.3 in 1951, and then began the steady decline to the 1957 level of $11.6 billion.

But there is more to it than that—inflation has further eroded the dollar's value, until in 1957 a total net farm income of $11.6 billion would buy no more of the things farmers use than would the $4.5 to $5 billion income they received in the late thirties. Note the accompanying table. Even in the hard-time thirties there were 2 years—1935 and 1937—when agriculture had a greater purchasing power than in 1957.

It's true, of course, that this income must go for both family living expenses and for farm improvement and upkeep, and there are fewer families in agriculture today than in the earlier part of this period.

But, on the other hand, there is a much greater investment in land, machinery, and supplies to maintain and replace. Farmers now have invested $177 billion in these items. (Much of this figure is an inflated value. USDA estimates, for instance, that farmers have 6 percent more invested in real estate than last year—but it has also been reported by USDA that farmland prices over the past year increased on an average of 6 percent.) Local taxes are assessed accordingly, and replacement costs continue to increase.

U.S. farmers total net income for years 1935 to 1957 and purchasing power in terms of 1947–49 dollars

[In billions of dollars]

Year	Total net income	Purchasing power [1]
1935	5.3	10.6
1936	4.3	8.6
1937	6.0	11.5
1938	4.4	8.8
1939	4.5	9.2
1940	4.6	9.2
1941	6.6	12.5
1942	9.9	16.2
1943	11.8	17.3
1944	11.8	16.2
1945	12.4	16.3
1946	15.2	18.3
1947	15.5	16.1
1948	17.8	17.1
1949	12.9	12.9
1950	14.0	13.6
1951	16.3	14.4

Remarks of the Chief Justice of Pennsylvania on Resolution of the Committee on Federal-State Relationships as Affected by Judicial Decisions

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Saturday, January 17, 1959

Mr. CLARK. Mr. President, last August, the Conference of State Chief Justices adopted a resolution, introduced by the Committee on Federal-State Relationships as Affected by Judicial Decisions. The report of the majority of chief justices has already been printed in the CONGRESSIONAL RECORD.

The distinguished chief justice of Pennsylvania, the Honorable Charles Alvin Jones, one of the great judges in the country, in my opinion, made at that time a forceful and convincing statement in opposition to the majority opinion. I ask unanimous consent that the views of this distinguished Pennsylvania jurist be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF CHIEF JUSTICE CHARLES ALVIN JONES, OF PENNSYLVANIA, ON THE RESOLUTION INTRODUCED BY THE COMMITTEE ON FEDERAL-STATE RELATIONSHIPS AS AFFECTED BY JUDICIAL DECISIONS AT THE CONFERENCE OF CHIEF JUSTICES IN PASADENA, CALIF., AUGUST 23, 1958

Mr. Chairman and members of the Conference of State Chief Justices, for this intrusion upon your time to speak in opposition to the pending resolution, I shall neither apologize nor palliate. The matter is of such transcendent importance constituting, as it does, an unwarranted attack on the constitutional structure of our Federal Union of such shocking portent in the circumstances as to warrant the fullest and freest discussion before definite action with respect thereto is taken by this body.

My only embarrassment in speaking, as I shall on this occasion, stems from the pleasant social relations I have heretofore enjoyed with the members of the committee, as well as other of the conference, which relationships I trust may continue to endure unimpaired. But, however that may be, a stern duty confronts me which requires me to do all that I can within my limited capacity to help bring about, if possible,, the defeat of the resolution now before us.

The committee report, which the resolution approves, concludes that the overall tendency of decisions of the Supreme Court in more recent years has been to press the extension of Federal power; that, to an extent, the Supreme Court has assumed the function of policymaking; that, too often, the Supreme Court has tended to adopt the role of policymaker without proper judicial restraint, particularly in respect of the extent and extension of Federal power and the supervision of State action by the Supreme Court by virtue of the 14th amendment; and that the result of all this is that a study of recent decisions of the Supreme Court will raise at least considerable doubt as to the validity of the longtime American boast that we have a government of laws and not of men.

These strictures on the Supreme Court are entirely uncalled for and certainly are not justified on the basis of the decisions, which the report cites for criticism, such as *Pennsylvania* v. *Nelson* (350 U.S. 497), designated by the report as an example of "the wide sweep now given to the doctrine of preemption"; or *Schware* v. *Board of Bar Examiners of New Mexico* (353 U.S. 232); *Konigsberg* v. *State Bar of California* (353 U.S. 252); *Watkins* v. *U.S.* (354 U.S. 178), and *Sweezy* v. *New Hampshire* (354 U.S. 234). Each of the latter decisions afforded appropriate judicial protection to the rights of the individual involved against hostile State action violative of the 14th amendment. Regardless of one's point of view, none of those cases can, in my opinion, be logically cited as an extension of Federal power or a contraction of States rights. Each was merely a judicial application of a long-ordained Federal power to a new set of circumstances.

Judging from the public prints and the agitation in Congress ever since *Pennsylvania* v. *Nelson* was handed down by the Supreme Court of the United States on April 2, 1956, it has been evident that the doctrine of Federal preemption, as applied in that case, was being made the special bête noir of the bitter critics of the present-day work of our Supreme Court. As it happened to fall to my lot to write the majority opinion in the Nelson case for the Supreme Court of Pennsylvania, whose judgment, incidentally, was affirmed and not reversed, I beg your indulgence while I endeavor to demonstrate that the ruling in the Nelson case was in no sense "a wide sweep of the doctrine of preemption" or any extension whatsoever of Federal power. It was but the enforcement of a power inherent in our Federal Government ever since the adoption of the Constitution in 1787, namely, the right to protect itself most efficiently and effectively against all enemies, foreign or domestic.

The curt observation with which the committee report dismisses and implicitly condemns the Nelson decision derives from a monograph by a law professor whose services, as the report indicates, were specifically enlisted by the committee for the purposes of its work. While the monographer, himself, devoted 14 of his total 28 pages of writing to treatment of the Nelson case, the committee report disposes of that decision, as the primarily designated object of its criticism, in one brief paragraph with the palpable and irrelevant nonsequitur that the fact that the Supreme Court's decision was an affirmance of the State court "emphasizes rather than detracts from the wide sweep now given to the doctrine of preemption."

And, while we are considering State complaints of Supreme Court decisions, fairness compels it to be recognized that in the Nelson case the Supreme Court of the United States did not ascribe to the Federal Government any greater power than what Pennsylvania's highest court had considerately conceded to be the Federal Government's. But, before getting into the established constitutional principle, which the Pennsylvania Supreme Court deemed to be decisive of Nelson's appeal, let me make the following plain beyond misunderstanding.

The ruling in the Nelson case will not impede or interfere with the detection, prosecution or conviction of a single Communist or other subversive who advocates the overthrow of our Government by force and violence, and no one can authentically assert to the contrary. What the Nelson decision did was to recognize in the Federal Government the unrestricted right to control its defense against internal subversion, unhampered by meddlesome or officious interference from any subordinate sovereignties or political subdivisions. At the same time, the Nelson decision does not deny to the States the right to condemn sedition against themselves. But, of course, it is fanciful to contemplate sedition against a State which is not at once sedition against the Federal Government, whose constitutionally imposed duty it is to guarantee the maintenance of a republican form of government in each of the several States.

Any information as to possible offenders against the Federal Sedition Act which a State obtains can, and should be, promptly transmitted to the Federal Bureau of Investigation. And, if sedition cases should, perchance, become numerous, Congress can constitutionally confer concurrent jurisdiction on State courts to try such cases in relief of Federal court administration. But—and this is basically essential—information against alleged seditious offenders must be made under the Federal statute and the prosecution of indictments therefor conducted at the direction and under the supervision of the Department of Justice.

In Nelson's appeal to our court, he contended that the Pennsylvania Sedition Act of 1939, under which he had been convicted of conspiracy with others to overthrow the Government of the United States by force and violence, had been superseded by the Smith Act of 1940. We accredited the contention on the authority of the Supreme Court's decision some 13 years earlier in *Hines* v. *Davidowitz* (312 U.S. 52). In that case the Supreme Court had held that the Pennsylvania Alien Registration Act of 1939 had been superseded by the alien registration provisions of title III of the same Smith Act of 1940. The Nelson case cannot rationally be distinguished on constitutional principle from *Hines* v. *Davidowitz;* and no one, so far as I am aware, ever objected to the decision in the Hines case. The difference

between the two cases which the monograph advances is a factual immateriality which does not point a legal distinction.

Four of the five members of the Pennsylvania Supreme Court who sat for the argument of the Nelson appeal accordingly held that the Smith Act of 1940 superseded the Pennsylvania Sedition Act of 1939. That the opinion of the court was fully concurred in by all the members of the majority was not left to inference. Chief Justice Stern, joined by Justice Allen M. Stearne and Justice Chidsey, filed the following succinct and cogent joinder: "We concur in the foregoing opinion [for the court] in its entirety. Sedition against the United States is not a local offense. It is a crime against the Nation. As such, it should be prosecuted and punished in the Federal courts, where this defendant has been prosecuted and convicted and is now under sentence. It is not only important but vital that such prosecutions should be exclusively within the control of the Federal Government, and we are of the opinion that this is required in order to harmonize the respective constitutional powers of the Nation and the several States."

Responsible Pennsylvania newspapers of wide circulation understood and approved the Supreme Court's affirmance of the State court's Nelson decision. A Washington correspondent of the Philadelphia Inquirer in a special article of April 15, 1956, wrote, "In the Steve Nelson case, the court ruled the protection of the Nation against sedition is a Federal, not a State, responsibility, and that, therefore, the State antisedition laws are unconstitutional [i.e., superseded]. This decision does not mean that the States can't help the Federal Government guard against subversion. It does mean that the responsibility for investigation belongs to the Federal Bureau of Investigation and the responsibility for prosecution belongs to the Department of Justice."

The Pittsburgh Post Gazette of April 3, 1956, editorialized that "* * * the Federal Government, having entered the field of sedition control, has preemptory interest in that field and is the agency to prosecute therein. This view is endorsed by the U.S. High Court, which says further that 'a State sedition statute is superseded regardless of whether it purports to supplement the Federal law.' Commonsense as well as law argues thus. The control of sedition is tricky business; it calls for timing, tact, and central direction. The intrusion of State governments in this field could impede the work of Federal agents, confuse the issues, and even discredit laws against sedition."

The New York Times in an editorial of April 16, 1956, entitled "Three Decisions," said: "In the second of this series of decisions, the Nelson case, the court spelled out its view that the area of national security belongs primarily to the Federal Government rather than to the States. * * * The decision, which seems to us to be a simple matter of commonsense, puts the responsibility for internal security where it belongs, and in fact the only place where it can be effectively exercised, with the Federal Government."

Thus far, I have endeavored to prove to those of you who would vote for the pending resolution, in the belief that the Supreme Court was guilty of an unconstitutional extension of Federal power in its decision in the Nelson case, would do so on a fallacious assumption and give aid and comfort to those who are striving in Congress and out of it to curtail the powers of the Supreme Court to interpret, expound and apply the Constitution.

On August 8 last, the New York Times said editorially, "The consistently liberal decisions of the U.S. Supreme Court in the general area of civil liberties have produced a reaction in Congress which may have been inevitable but can and should be thwarted. The reaction has taken the form of several bills designed in one way or another to override or to turn back the rulings at which they are aimed. The worst of these bills to have passed the House is the one that would wreck the historic doctrine of Federal preemption by providing that no Federal law could supersede a State law on the same subject unless Congress specifically so stated or unless the two were absolutely irreconcilable." And then, speaking with special reference to H.R. 3, the editorial continued, "This bill grew out of the decision in the Nelson case in 1956, in which the Supreme Court agreed with the Supreme Court of Pennsylvania in invalidating a State statute aimed at sedition against the Federal Government, on the sensible grounds that Congress had already preempted the field by the Smith Act of 1940."

Whence, then, comes the impetus behind the movement to obviate by congressional action the effect of the ruling in the Nelson case? Is it possible that that decision is the whipping boy (to employ a somewhat mixed metaphor) of those who would flay the doctrine of Federal preemption to extinction? Let us stop beating around the bush about this thing. Let us come out in the open and acknowledge the decision which is the real basis for the current widespread criticism of the Supreme Court. Only in that way can we deal fairly and above board with the recent civil liberties decisions of the Supreme Court which share the report's criticism. The preponderant backing of the attack on the decision in the Nelson case is made up of those who would undo the Supreme Court's decision in *Brown v. Board of Education* (347 U.S. 483). That statement finds confirmation, as lately as night before last, in the vote in the Senate on the motion to recommit H.R. 3, which was admittedly introduced in an effort to nullify the doctrine of Federal preemption as applied in the Nelson case.

It is true that nowhere in the report is the public school segregation decision mentioned. According to reliable newspaper account of the introduction of the resolution and the report whereon it is based, "It was explained that Committee members felt that to inject this into the study would stir sectional feelings and defeat the overall purpose of the study." I readily and wholeheartedly concede the good faith of the Committee's desire and intent in such regard, but the fact remains that no matter how meticulously reference to the school segregation case is avoided, it must be recognized that the principal cause of the present-day criticism of the Supreme Court is that decision. And, thus, the Committee report, quite unintentionally but nonetheless actually, exploits a hostility to the Supreme Court bred of a decision (involved in current litigation) which the report does not, and could not properly, discuss.

Of course, the segregation issue has no proper place in determining whether the decision in Pennsylvania *v.* Nelson constituted an extension of Federal power by the Supreme Court in its application of the doctrine of preemption, or whether civil liberties cases above referred to worked a deprivation of States' rights because of the Supreme Court's interpretation of the protection afforded the individual by the 14th amendment against hostile State action. The segregation issue is here nevertheless, inextricably imbedded in the background of the resolution you are asked to adopt. You might as well face that fact.

If prosecution for sedition against the Federal Government were permitted to State courts acting under State statutes (and that is what the pending resolution envisions), confusion amounting to chaos in the hunt for and prosecution of alleged subversives would result to the detriment and peril of the internal security of our citizenry. In such a deplorable situation, I would hold with Judge Learned Hand that "Risk for risk, for myself, I would rather take my chance that some traitors will escape detection than spread abroad a spirit of general suspicion and distrust which accepts rumor and gossip in the place of undismayed and unintimidated inquiry."

Coming, then, to the matter of procedure to be pursued with respect to the pending resolution, it is my opinion that the best thing to do would be to dispose of it without reference to its substance. Consequently, I shall move that the resolution be tabled. If that motion should fail and a vote is taken on the resolution, I desire that I be recorded as having voted against it. Indeed, it seems no more than appropriate that, in a matter of such grave importance, a rollcall vote should be had.

I now move that the resolution be tabled.

A Bill To Amend the Internal Revenue Code of 1954 To Provide a Special Method of Taxation for Real Estate Investment Trusts

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I have today introduced a bill to amend the Internal Revenue Code of 1954 to provide a special method of taxation for real estate investment trusts. This particular bill was reported favorably during the last session of Congress by our Ways and Means Committee but unfortunately did not pass Congress. This bill provides substantially the same tax treatment for real estate investment trusts as present law provides for regulated investment companies. Real estate trusts are organizations specializing in investments in real estate and real estate mortgages, while the regulated investment companies specialize in investments in stocks and securities. Under present law regulated investment companies which distribute 90 percent or more of their ordinary income are taxed only on their retained earnings. Thus, the distributed earnings of these companies are taxed only to the shareholders. This same type of tax treatment is accorded by this bill to real estate trusts.

Mr. Speaker, the equality of tax treatment between the beneficiaries of real estate trusts and the shareholders of regulated investment companies is desirable since in both cases the methods of investment constitute pooling arrangements whereby small investors can secure advantages normally available only to those with larger resources. These advantages include the spreading of the risk of loss by the greater diversification of investment which can be secured through the pooling arrangements; the opportunity to secure the benefits of expert investment counsel; and the means of collectively financing projects which the investors could not undertake singly.

In addition to providing equality of tax treatment between the trust beneficiaries

and the investment company shareholders, I believe it is also desirable and so did the Ways and Means Committee to remove taxation to the extent possible as a factor in determining the relative size of investments in stocks and securities on the one hand, and real estate equities and mortgages on the other. This is particularly important at the present time because of the countrywide complaints about the shortage of private capital and mortgage money for individual homes, apartment houses, office buildings, factories, and hotels. At the present time the financing of these real estate equities and mortgages is dependent largely on Government-guaranteed money, and investments by special groups, such as insurance companies and pension trusts.

The text of the bill follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subchapter M of chapter 1 of the Internal Revenue Code of 1954 (relating to regulated investment companies) is hereby amended by adding at the end thereof the following:

"PART II—REAL ESTATE INVESTMENT TRUSTS

"Sec. 856. Definition of real estate investment trusts.
"Sec. 857. Taxation of real estate investment trusts and their beneficiaries.
"Sec. 858. Limitations applicable to dividends received from real estate investment trust.
"Sec. 859. Dividends paid by real estate investment trust after close of taxable year.

"SEC. 856. Definition of real estate investment trust.

"(a) IN GENERAL.—For purposes of this subtitle, the term 'real estate investment trust' means an unincorporated trust or an unincorporated association—

"(1) which is managed by one or more trustees;

"(2) the beneficial ownership of which is evidenced by transferable shares, or by transferable certificates of beneficial interest;

"(3) which (but for the provisions of this part) would be taxable as a domestic corporation;

"(4) which does not hold any property primarily for sale to customers in the ordinary course of its trade or business;

"(5) the beneficial ownership of which is held by 100 or more persons, and no 5 individuals own (directly or indirectly) more than 50 percent of such beneficial ownership; and

"(6) which meets the requirements of subsection (b).

"(b) LIMITATIONS.—A trust or association shall not be considered a real estate investment trust for any taxable year unless—

"(1) It files with its return for the taxable year an election to be a real estate investment trust or has made such election for a previous taxable year which began after December 31, 1956.

"(2) At least 90 percent of its gross income is derived from—

"(A) dividends;

"(B) interest;

"(C) rents from real property;

"(D) gain from the sale or other disposition of stock, securities, and real property (including interests in real property and interests in mortgages on real property); and

"(E) abatements and refunds of taxes on real property.

"(3) At least 60 percent of its gross income is derived from—

"(A) rents from real property;

"(B) interest on obligations secured by mortgages on real estate;

"(C) gain from the sale or other disposition of real property (including interests in real property and interests in mortgages on real property);

"(D) dividend or other distributions on, and gain from the sale or other disposition of, transferable shares in (or transferable certificates of beneficial interest in) other real estate trusts or associations; and

"(E) abatements and refunds of taxes on real property.

"(4) The amount by which the gains from the sales and other dispositions of stock or securities held for less than 6 months exceed the losses from such sales or other dispositions is an amount less than 30 percent of its gross income.

"(5) The amount by which the gains from voluntary sales and other voluntary dispositions of real property held for less than 5 years exceed the losses from such sales and dispositions is an amount less than 30 percent of its gross income.

"(c) RENTS FROM REAL PROPERTY DEFINED: For purposes of paragraphs (2) and (3) of subsection (b), the term 'rents from real property' does not include—

"(1) any amount received or accrued with respect to any real property, if the trust or association makes any expenditure which is properly allocable to such real property while rented (or to the rentals from such real property), other than—

"(A) expenditures properly chargeable to capital account;

"(B) expenditures for taxes, interest, or insurance;

"(C) expenditures for the collection of, or the accounting for, income; and

"(D) expenditures properly allocable to the entering into, renewal, or termination of any lease;

"(2) any amount received or accrued with respect to any real property, if the amount to be derived from such property depends in whole or in part on the income or profits derived by any person from such property (except that any amount so received or accrued shall not be excluded from the term 'rents from real property' solely by reason of being based on a fixed percentage or percentages of receipts or sales);

"(3) any amount received or accrued directly or indirectly from any person if the trust or association owns, directly or indirectly—

"(A) in the case of any person which is a corporation, stock of such person possessing 10 percent or more of the total combined voting power of all classes of stock entitled to vote, or 10 percent or more of the total number of shares of all classes of stock of such person; or

"(B) in the case of any person which is not a corporation, an interest of 10 percent or more in the business, assets, or net profits of such person.

For purposes of paragraph (3) of this subsection, the rules prescribed by section 318(a) for determining the ownership of stock shall apply in determining the ownership of stock, business, assets, or net profits of any person. For purposes of the preceding sentence, section 318(a)(2)(C) shall be applied without regard to the 50 percent limitation contained therein.

"SEC. 857. Taxation of real estate investment trusts and their beneficiaries.

"(a) REQUIREMENTS APPLICABLE TO REAL ESTATE INVESTMENT TRUSTS.—The provisions of this part shall not apply to a real estate investment trust for a taxable year unless—

"(1) it distributes to its shareholders or holders of beneficial interests an amount not less than 90 percent of the amount by which the real estate investment trust taxable income for the taxable year exceeds the sum of its net long-term capital gain and net short-term capital gain for such year; and

"(2) the real estate investment trust complies for such year with regulations prescribed by the Secretary or his delegate for the purpose of ascertaining the actual ownership of the shares or certificates of beneficial interest of such trust.

"(b) METHOD OF TAXATION OF REAL ESTATE INVESTMENT TRUSTS AND HOLDERS OF SHARES OR CERTIFICATES OF BENEFICIAL INTEREST.—

"(1) IMPOSITION OF NORMAL TAX AND SURTAX ON REAL ESTATE INVESTMENT TRUSTS: There is hereby imposed for each taxable year on the real estate investment trust taxable income of every real estate investment trust a normal tax and surtax computed as provided in section 11, as though the real estate investment trust taxable income were the taxable income referred to in section 11. For purposes of computing the normal tax under section 11, the taxable income and the dividends paid deduction of such real estate investment trust for the taxable year (computed without regard to capital gain dividends) shall be reduced by the deduction provided by section 242 (relating to partially tax-exempt interest).

"(2) REAL ESTATE INVESTMENT TRUST TAXABLE INCOME: For purposes of this part, the term 'real estate investment trust taxable income' means the taxable income of the real estate investment trust, adjusted as follows:

"(A) There shall be excluded the excess, if any, of the net long-term capital gain over the net short-term capital loss.

"(B) The deductions for corporations provided in part VIII (except section 248) in subchapter B (section 241 and following, relating to the deduction for dividends received, etc.) shall not be allowed.

"(C) A deduction shall be allowed for the dividends (other than capital gain dividends) paid during the taxable year computed in accordance with the rules provided in section 562.

"(D) The taxable income shall be computed without regard to section 443 (b) (relating to computation of tax on change of annual accounting period).

"(E) The net operating loss deduction provided in section 172 shall not be allowed.

"(3) CAPITAL GAINS.—

"(A) IMPOSITION OF TAX: There is hereby imposed for each taxable year in the case of every real estate investment trust a tax of 25 percent of the excess, if any, of the net long-term capital gain over the sum of—

"(i) the net short-term capital loss; and

"(ii) the amount of capital gain dividends paid during the taxable year.

For the purposes of this subparagraph, the amount of dividends paid shall be computed under the rules provided in section 562.

"(B) TREATMENT OF CAPITAL GAIN DIVIDENDS BY SHAREHOLDERS: A capital gain dividend shall be treated by the shareholders or holders of beneficial interests as a gain from the sale or exchange of a capital asset held for more than 6 months.

"(C) DEFINITION OF CAPITAL GAIN DIVIDEND: For purposes of this part, a capital gain dividend is any dividend, or part thereof, which is designated by the real estate investment trust as a capital gain dividend in a written notice mailed to its shareholders or holders of beneficial interests at any time before the expiration of 30 days after the close of its taxable year. If the aggregate amount so designated with respect to a taxable year of the trust (including capital gain dividends paid after the close of the taxable year described in section 859) is greater than the excess of the net long-term capital gain over the net short-term capital loss of the taxable year, the portion of each distribution which shall be a capital gain dividend shall be only that proportion of the amount so designated which such

excess of the net long-term capital gain over the net short-term capital loss bears to the aggregate amount so designated.

"(c) EARNINGS AND PROFITS: The earnings and profits of a real estate investment trust for any taxable year (but not its accumulated earnings and profits) shall not be reduced by any amount which is not allowable as a deduction in computing its taxable income for such taxable year.

"SEC. 858. Limitations applicable to dividends received from real estate investment trust.

"(a) CAPITAL GAIN DIVIDEND: For purposes of section 34(a) (relating to credit for dividends received by individuals), section 116 (relating to an exclusion for dividends received by individuals), and section 243 (relating to deductions for dividends received by corporations), a capital gain dividend (as defined in section 857(b)(3)(C) received from a real estate investment trust shall not be considered as a dividend.

"(b) OTHER DIVIDENDS:

"(1) GENERAL RULE: In the case of a dividend received from a real estate investment trust (other than a dividend to which subsection (a) applies)—

"(A) if such real estate investment trust meets the requirements of sections 856 and 857(a) for the taxable year during which it paid such dividend; and

"(B) the aggregate dividends received by such trust during such taxable year are less than 75 percent of its gross income,

then, in computing the credit under section 34(a), the exclusion under section 116, and the deduction under section 243, there shall be taken into account only that portion of the dividend which bears the same ratio to the amount of such dividend as the aggregate dividends received by such trust during such taxable year bear to its gross income for such taxable year.

"(2) NOTICE TO SHAREHOLDERS: A real estate investment trust to which paragraph (1) applies for any taxable year shall, in a written notice to shareholders or holders of beneficial interests mailed not later than 30 days after the close of the taxable year, designate the portion of the dividends paid by the real estate investment trust during such taxable year which may be taken into account under paragraph (1) for purposes of the credit under section 34, the exclusion under section 116, and the deduction under section 243.

"(3) DEFINITIONS: For purposes of this subsection—

"(A) The term 'gross income' does not include gain from the sale or other disposition of stock or securities or of real estate (or interests therein).

"(B) The term 'aggregate dividends received' includes only dividends received from domestic corporations other than dividends described in section 116(b) (relating to dividends excluded from gross income). In determining the amount of any dividend for purposes of this subparagraph, the rules provided in section 116(c) (relating to certain distributions) shall apply.

"SEC. 859. Dividends paid by real estate investment trust after close of taxable year.

"(a) GENERAL RULE: For purposes of this chapter, if a real estate investment trust—

"(1) declares a dividend before the time prescribed by law for the filing of its return for a taxable year (including the period of any extension of time granted for filing such return); and

"(2) distributes the amount of such dividend to shareholders or holders of beneficial interests in the 12-month period following the close of such taxable year and not later than the date of the first regular dividend payment made after such declaration,

the amount so declared and distributed shall, to the extent the trust elects in such return in accordance with regulations prescribed by the Secretary or his designee, be considered as having been paid during such taxable year, except as provided in subsections (b) and (c).

"(b) RECEIPT BY SHAREHOLDER: Amounts to which subsection (a) applies shall be treated as received by the shareholder or holder of a beneficial interest in the taxable year in which the distribution is made.

"(c) NOTICE TO SHAREHOLDERS: In the case of amounts to which subsection (a) applies, any notice to shareholders or holders of beneficial interests required under this part with respect to such amounts shall be made not later than 30 days after the close of the taxable year in which the distribution is made."

SEC. 2. Subchapter M of chapter 1 of the Internal Revenue Code of 1954 is hereby amended:

(1) by striking out the heading thereof and inserting in lieu thereof the following:

"Subchapter M—Regulated Investment Companies and Real Estate Investment Trusts

"Part I. Regulated investment companies.

"Part II. Real estate investment trusts.

"PART I—REGULATED INVESTMENT COMPANIES";

(2) by striking out "this subchapter" in section 852(a) and inserting in lieu thereof "this part"; and

(3) by striking out "A capital gain dividend means" in section 852(b)(3)(C) and inserting in lieu thereof "For purposes of this part, a capital gain dividend is".

SEC. 3. (a) The table of subchapters for chapter 1 of the Internal Revenue Code of 1954 is hereby amended by inserting "and real estate investment trusts" after "Regulated investment companies".

(b) Section 11(d)(3) of such Code (relating to tax on corporations) is hereby amended by inserting "and real estate investment trusts" after "regulated investment companies".

(c) Section 34(d) of such Code (relating to credit for dividends received by individuals) is hereby amended by adding at the end thereof the following new paragraph:

"(3) A dividend received from a real estate investment trust shall be subject to the limitations prescribed in section 858."

(d) Section 116(c) of such Code (relating to an exclusion for dividends received by individuals) is hereby amended by adding at the end thereof the following new paragraph:

"(3) A dividend received from a real estate investment trust shall be subject to the limitations prescribed in section 858."

(e) Section 243(b) of such Code (relating to deduction for dividends received by corporations) is hereby amended by adding at the end thereof the following new paragraph:

"(3) A dividend received from a real estate investment trust shall be subject to the limitations prescribed in section 858."

(f) Section 318(b) of such Code (relating to constructive ownership of stock) is amended by striking out the word "and" at the end of paragraph (4), by striking out the period at the end of paragraph (5) and inserting in lieu thereof a semicolon and the word "and", and by adding at the end thereof the following new paragraph:

"(6) section 856(c)(3) (relating to definition of real estate investment trusts)."

(g) Section 443(d) of such Code (relating to computation of tax on change of annual accounting period) is hereby amended by adding at the end thereof the following new paragraph:

"(5) The taxable income of a real estate investment trust, see section 857(b)(2)(D)."

(h) Section 1504(b)(6) of such Code (relating to consolidated returns) is hereby amended by inserting "and real estate investment trusts" after "Regulated investment companies."

SEC. 4. The amendments made by this act shall apply only with respect to taxable years beginning after December 31, 1956.

School Legislation in the 86th Congress

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, I introduced two major education bills on the day Congress convened. I am deeply interested in education and have been since the days when I served on the State university committee of the New Jersey State Assembly—a committee which was concerned with the problems of Rutgers University and other educational matters. In the last Congress I introduced President Eisenhower's own school construction bill, the one he had recommended to the Congress on three separate occasions. This measure had been brought to the floor of the House; it lost by only 5 votes when the President's own party leaders failed to support it. To my mind, however, this was no reason for not continuing to work for it.

One of my bills provides Federal scholarships, which had been recommended by the President. The other bill provides Federal aid for school construction and to raise teachers' salaries. Both are strongly supported by the teaching profession and the leading educational organizations. Federal grants to the States would be on the basis of each State's school-age population and would amount to $25 per child during the first year, $50 the second, $75 the third, and $100 for the fourth and succeeding years. Written into the bill is the assurance that "no department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over policy determination, personnel, curriculum, program of instruction or the administration of any school or school system." To make sure that the States and local school districts do not slacken their own efforts, the bill provides for a reduction of the grants if a State's educational program is below the national average. The effective date of this reduction provision would be delayed for 3 years to give State legislatures two sessions to work on their programs.

Federal officials have estimated that we are short 140,000 classrooms and 135,000 teachers. It is a shocking thing to realize that only one-half cent of every Federal tax dollar goes to support public schools. This must be compared with the 43 cents out of every local tax dollar and the 31 cents out of every State tax dollar which goes to public education. Our school children must have the support of the one level of government which to date has been resting on its oars where education is concerned—the Fed-

eral Government. It is time that we began putting first things first. A nation which does not put a top priority on education will not remain a first-class power very long. At the present time we have launched a multi-billion-dollar Federal road-building program; we spend $40 billion plus on defense, and several million dollars apiece for our missiles. Our citizens spend hundreds of millions of dollars each year on liquor, tobacco, advertising, automobiles and other luxuries. Our materialistic culture can and it must find funds for education which is essential to our survival as a free nation.

I include here an article from the New York Times and an article from the Washington Sunday Star on the subject of education for the information of my colleagues:

[From the New York Times, Jan. 21, 1959]

G.O.P. PUSHES AID FOR NEW SCHOOLS—WHITE HOUSE SESSION IS TOLD OF FUND-MATCHING PLANS FOR STATE'S BUILDING

(By Bess Furman)

WASHINGTON, January 20.—The projected administration proposal for a deferred-payment school-construction bill was put before Republican congressional leaders at the White House today.

The existence of a school-construction plan that would not affect the current budget previously had been indicated both by Budget Director Maurice H. Stans and Arthur S. Flemming, Secretary of the Department of Health, Education, and Welfare.

Details of the plan became known today. As worked out in Secretary Flemming's department, this grant Federal money on a matching basis with the States for payments on debt services, both interest and amortization.

A time-lag of a year to 18 months would be involved between the time a school board asked for a bond issue and the time the first payment fell due.

At the end of the White House session today, Representative CHARLES A. HALLECK, of Indiana, House minority leader, said that no conclusions on school legislation had been reached.

Whatever proposals the Republicans may make will have to meet the competition of a determined drive by liberal Democrats for school construction.

The plan would run on an amortization basis over a period of years.

Its proposed cost would be about the same as that of previous administration proposals on school construction. It might later be expanded to include the building of college classrooms.

LOAN PLANS SUGGESTED

On the subject of college housing, President Eisenhower recommended in his budget message a limited loan guarantee program to bridge the gap between the current limited Federal building program on college campuses and whatever new plan Secretary Flemming might propose.

Such a drive, however, could be blocked by the conservative majority in the House Rules Committee.

Some of the Republican leaders said today that the President would send up a special education message. This presumably would be for the purpose of starting the new school-construction legislation.

The budget message made few new proposals along this line. It urged Congress to approve two proposals that failed last year, one would have required the States to take over all education costs in nongovernmental areas having large Federal installations, and the other would have had the States take over vocational education through a tax-adjustment plan.

[From the Washington Star, Jan. 4, 1959]

CONGRESS TO GET NEW SCHOOL BILLS

(By George W. Oakes)

Passage of significant new education legislation by the next Congress is considered more likely because of the liberal Democratic sweep in the November elections.

As projected now, the school aid campaign will focus on passage of bills for school construction and teachers' salaries and something to help improve the college housing situation.

Friends of school legislation are quick to point out that success of such legislation depends to some extent on the ability of the so-called liberal bloc in Congress to break the power of the House Rules Committee, perhaps the greatest hurdle education legislation has faced at the Capitol.

The House has been the traditional foe of education legislation. In 1957 the administration's school construction bill was defeated on the floor by only five votes. In the last session Senator HILL, longtime leader in the Senate for education legislation, let the House take the lead in passing the National Defense Education Act by arguing that the Senate would adopt any program that passed the House.

HOUSE BATTLEGROUND

This year the House may again be the major battleground but the election has radically altered the traditional lineup of opponents to Federal support of education. For example, of the 62 new Democratic Members, it is estimated that 50 are likely to support Federal funds for school construction or teachers' salaries or both.

In fact, high administration officials concede privately that Congress will certainly pass school construction legislation. The enthusiasm of leading Democratic Congressmen who will direct the fight for school construction and teachers' salaries leads them to the conclusion that the real issue may be whether Congress can override a presidential veto.

The administration's current economy-mindedness in education—as in other things—apparently has reached the point that funds to operate several important sections of the National Defense Education Act signed by the President only last September may be entirely omitted in the coming budget.

When Congress adjourned at the end of August it appropriated only enough money to get most of the program started. Specifically, it is reliably reported that there may be no request for funds to put into effect that important section of the law authorizing payments of $70 million a year in matching grants to the States for the purchase of equipment to be used in teaching science, mathematics and foreign languages.

Of the two most serious needs for the Nation's public schools—a rise in teachers' salaries and the building of classrooms and related facilities—Secretary Flemming, of the Department of Health, Education, and Welfare, has said that he regards the salary structure as our most serious weakness and believes that the teachers' salary scale should be doubled. The average teacher in the public school system earns about $4,520 a year. This year there are 1,292,000 public school-teachers in our elementary and secondary schools to instruct 34,642,000 students. It is projected that the public school population, which rose 38 percent between 1946 and 1957, will probably increase, due to the continuing extraordinary population rise—another 24.5 percent by 1965.

CLASSROOM SHORTAGE

For the same reason, the classroom shortage is and will remain acute. There is a present need for approximately 132,800 additional classrooms, even on the assumption that 70,500 instruction rooms scheduled to be built this year were in fact completed. In the last 12 months it is estimated that an extensive building program could only have reduced the shortage by 9,500 classrooms.

Probably the most comprehensive proposal that will receive massive backing in the coming session is the Murray-Metcalf bill, to be introduced by the Democratic Senator and Representative from Montana. Since Senator MURRAY is close to the leadership, it is probable that priority will be given to early Senate hearings on his bill. He may attract a large number of cosponsors, including his fellow Montanan, Senator MIKE MANSFIELD, the Democratic whip. In the House, the subcommittee of the Education Committee reported favorably a similar proposal during the last session.

The bill, to be known as the School Support Act of 1958, proposes Federal financial grants to the States on the basis of each State's estimated school-age population, to be expended either for public school construction, teachers' salaries in the public schools, or for academic equipment in any proportion the State's education authority may determine.

On the basis of an initial appropriation of $25 per child of school age, the first annual appropriation would cost $1.1 billion. The amounts would increase proportionately during the following 3 years to an annual figure of $4.7 billion, at which rate it would continue. This would mean that the District of Columbia, for example, would receive $3,657,000 in the first year on the basis of 135,000 children in public schools.

THE FEDERAL ROLE

The sponsors state in the bill that there will be no Federal interference in the program of instruction or administration since the Federal Government will merely channel funds to the States which the States will distribute according to their individual requirements.

To provide maximum congressional support, many Democratic proponents of large-scale Federal aid to education, like Representative FRANK THOMPSON, JR., Democrat, of New Jersey, will withhold separate bills. Also, the National Education Association plans to put the active grassroots support of its 700,000 members throughout the country behind the Murray-Metcalf bill. Postelection inquiries of its national membership reveal that in many election contests, especially in the Midwest, opponents of Federal aid were defeated. For example, Representative GEORGE MCGOVERN, South Dakota Democrat, believes that his 14,000 vote margin was due in considerable part to his ardent backing of increased Federal support to education, a clear-cut issue in his campaign.

Authoritative sources suggest that the administration may recommend a Federal-loan program for school construction, perhaps along the lines of the Hobby plan of 1953. The new proposal might provide that the Federal Government guarantee bonds of local districts that have been unsuccessful in floating their own issues so that they could proceed with building programs already planned. Or the Federal Government might support additional financing for local school districts that have reached the limit of their indebtedness.

For colleges, Congress undoubtedly will hear a renewal of last year's demand for federally financed scholarships. However, it appears now that there may be considerably less support for this program than a year ago.

STUDENT LOAN PROVISION

First of all, the administration will argue that at least a year of operation must elapse before there can be a fair test of the student loan provision of the National Defense Education Act. So far 883 colleges and universities already have indicated their desire to seek the full amount of Federal

funds authorized for this purpose under the law or $47.5 million. Large universities as well as small colleges are anxious to participate. Many institutions are particularly attracted by the "forgiveness" feature which provides that half the college student's loan will be canceled if he enter school teaching full time for 5 years.

Enthusiasm for Federal college scholarships also has waned in academic circles because the colleges and universities have not the facilities to absorb a larger student body. Many programs in recent years have stimulated a rise in the college population—now 3,258,556 or 6.2 percent higher than last year—which is severely taxing college capacity.

Therefore higher education authorities are pushing the Federal college loan program, started in 1950, under which almost $1 billion has been loaned to the colleges and universities for the construction of dormitories, dining facilities, and student unions at a reasonable rate of interest. Since its inception the program has provided essential expansion on 650 college campuses in 46 of the 49 States, plus Hawaii and Puerto Rico, even though it only serves 5 percent of the current college enrollment in the United States.

In the last session the College Housing Loan bill of $200 million to finance the program for the current fiscal year was lost when Congress failed to pass an omnibus housing bill. However, applications for $65 million have been filed since last June 30. The President has said he will request, and Congress will probably approve, the necessary $200 million in the coming session.

The American Council on Education regards such legislation as the most useful support Congress can give now to higher education. In addition the council will again urge passage of a $250 million Federal loan program for the construction of college academic facilities, such as classrooms, libraries, and scientific laboratories.

Garnishment of Salaries of Federal Employees

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I have introduced today a bill to provide for the garnishment, execution, or trustee process of wages and salaries of civil officers and employees of the United States.

Good government is based upon the theory that through the discipline of all members of a society the individual members of society gain rights and freedoms they did not possess before.

Regrettably many Federal employees have looked upon the power to garnish their salaries for a judgment debt as taking away certain rights and freedom they presently possess. Upon analysis, however, just the reverse is true. Because of the lack of discipline in this area Federal employees enjoy poorer credit ratings than do nongovernment employees who are subject to garnishment proceedings.

The reason for this is very apparent. The Federal employees who exercise self-discipline when it comes to paying their bills are paying the load for the license exercised by the small percentage of Federal employees who do not pay their bills. All Federal employees lose certain benefits to make up for the shortcomings of this small group.

The attitude of certain governmental bureaus against garnishment proceedings of Federal employees likewise is based upon a misconception of the true nature of the garnishment discipline. Certain bureau heads are of the opinion that handling garnishment proceedings would add to the work of the Federal agency garnished. They state they prefer to exercise discipline themselves over employees who fail to pay their bills. Most business executives will tell them from experience that the mere existence of the power of garnishment provides the best way for them to exercise voluntary discipline; so true is this that the use of the power of garnishment seldom has to be resorted to.

I am satisfied that an objective review of the time and effort spent by Federal agencies in trying to exercise the necessary discipline over their employees to pay their just bills will reveal that they could use to good advantage the existence of the power of garnishment in bringing their employees into line.

Certainly the power to garnish is much less harsh than the present power to discharge a Federal employee for nonpayment of bills. There needs to be this less harsh and intermediate power of garnishment to have a workable system.

Everyone benefits by the discipline of garnishment as we have learned long since in the nongovernmental sector of our society. The creditors will benefit. The Federal employees will find their credit rating is improved. The Federal administrators will find that the administrative time they have to spend on the failure of their employees to pay their bills will be lessened.

The bill follows:

A bill to provide for the garnishment, execution, or trustee process of wages and salaries of civil officers and employees of the United States

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the wages and salaries of all civil officers and employees, including Members of the Congress, the judiciary, and all other elected and appointed officers, of the United States, its instrumentalities and agencies, shall be subject to the remedies of garnishment, execution, and trustee process in the same manner as may be applicable in the case of wages or salaries due from private employers in the State or Territory in which is located the court wherein such remedies are sought, but said right of garnishment, execution, or trustee process shall be limited to and based upon a final judgment only after personal service upon the debtor and the writ, summons, and other process shall be accompanied by a certified copy of such judgment. The writ, summons, or other process shall be served personally or by registered mail upon the officer by or through whom the debtors wages or salaries are paid and the said writ, summons, or other process shall be accompanied, in addition to said certified copy of said judgment, by a statement under oath of the judgment creditor suing out such writ, summons, or other process that he is an original creditor of the debtor in such proceeding and that the judgment upon which such process is sought does not include interest in excess of 6 per centum per annum computed upon the original indebtedness. The said writ, summons, or other process shall likewise be accompanied by the sum of $2.50 if the judgment is $100 or less, and $5 if in excess of that amount, to be paid by the judgment creditor at the time of the service of said writ, summons, or other process to the officers so served for and on account of the United States and to be covered into the miscellaneous receipts of the Treasury. It shall be the duty of the officer so served as herein provided within thirty days from the service thereof, to respond to said writ, summons, or other process by causing to be delivered by registered mail or in person to the party designated, or to the officer specified in said writ, summons, or other process, a certificate stating the amount, if any, of the wages or salary due such officer or employee on date of service thereof, which amount shall be held subject to the further order of the court. Said certificate shall be conclusive evidence of the facts therein stated, but in no event shall a person so served be required to leave his office to testify in any proceeding hereunder: *Provided, however,* That there shall be deducted from said amount to be so certified such deductions from such wages or salary as may by law be authorized to be made. There shall also be deducted from said amount to be so certified, such amount as the debtor may have designated for purchase of war bonds under the plan of the department, agency, or organization in which the debtor is employed. It is provided further that such officer shall not be required to respond to more than one such writ, summons, or other process in any one calendar month in respect to the wages or salary of any debtor and that in the event more than one such writ, summons, or other process is served within such calendar month upon such officer in respect to the same debtor it shall be the duty of such officer to respond to the first of the writs, summons, or other process so served.

SEC. 2. (a) That the earnings, salary, insurance, annuities, or pension or retirement payments, not otherwise exempted, not to exceed $100 each month, of any person residing in such State or Territory, or of any person who earns the major portions of his or her livelihood in such State or Territory, regardless of place of residence, who provides the principal support of a family, for two months next preceding the issuing of any writ or process against him, from any court or officer of and in such State or Territory, shall be exempt from garnishment, execution, or trustee process, upon such writ or process, and the same shall not be seized, levied on, taken, or reached, by writ of garnishment, execution, trustee process, or any other process or proceedings of any court, judge, or other officer of and in such State or Territory: *Provided, however,* That where the husband and wife are living together, the aggregate of the earnings, salaries, insurance, annuities, and pension or retirement payments of the husband and wife shall be the amount which shall be determinative of the exemption of either in cases arising ex contractu.

(b) The earnings, salary, insurance, annuities, or pension or retirement payments, not otherwise exempted, not to exceed $60 each month for two months preceding the date of attachment of all persons residing in such State or Territory, or of persons who earn the major portions of their livelihood in such State or Territory, regardless of place of residence, who do not provide for the support of a family, shall be entitled to like exemption from garnishment, execution, or trustee process.

SEC. 3. The officer served as provided in section 1 shall cause to be delivered and paid over the amount of any wages or salary after deductions as provided in sections 1 and 2 of any such officer or employee afore-

said, in accordance with the order of the court or justice having jurisdiction in such proceeding, and any payment so made shall constitute a complete and valid acquittance of the United States for the amount of the wages or salary of any such officer or employee of the United States so paid.

SEC. 4. That the said right of garnishment, execution, or trustee process shall apply not only to civil officers and employees, including Members of the Congress, the judiciary, and all other elected and appointed officers of the United States, its instrumentalities and agencies, but also to employees of the District of Columbia.

SEC. 5. That the term "Territory" as used in this act shall include political subdivisions of the United States of America.

SEC. 6. This act shall not affect, curtail, or in anywise limit the right of garnishment against officers or employees of Government owned or controlled corporations as such right now exists.

SEC. 7. This act shall take effect immediately but shall not apply to a final judgment prior to the date of its approval.

Trading Away Jobs

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. DENT. Mr. Speaker, I sincerely believe the following remarks are important at this time:

There have been some questions put to me lately that are hard to answer. Mainly they deal with the question of foreign and mutual aid, reciprocal trades, automation, and unemployment.

Of course, the question of personal, corporate, and business taxes is inseparable from these questions since it is the money that comes in from taxes that makes the wheels go around, in any of our governmental activities.

I visited a local bank lately and the president asked me a question that many of you would probably ask if I had the opportunity to talk to you.

He wanted to know why a local manufacturer was planning a trip to Europe to set up a production facility to produce the goods now produced here at home. He would be able to ship said goods into the United States cheaper and, with the operations of our income tax schedule, he would make more money with less headaches than he could by keeping his factory operating here.

A side line of his conversation was very interesting. This manufacturer said he could also travel to Europe at will and charge it off his income tax because he would be presumably visiting his business operation.

One wonders how far we can carry this kind of operation. How long can we go on taxing our local industries and people to subsidize foreign production and competition.

All of us want to help our neighbors raise their standard of living, but do we raise their standards by financing their productive facilities if the goods produced are sold here instead of over there where the people need it?

We do not need glassware, rubber goods, steel products, clothing, and other consumer goods; they need these things.

We can make all the typewriters, hi-fi's, televisions, refrigerators, cars, glassware, dishes, and so forth, that we need.

However, we cannot undersell them in our markets because our producers have to pay taxes to put them in business.

If nothing else, the import duty ought to take into consideration the taxes assessed against our own products, and give protection against subsidized goods coming into our country.

The argument that our wages are too high does not hold water. Our factories could produce goods for our consumption at a competitive level if we were to eliminate the many hidden taxes, and open, those that are assessable against our consumer goods.

It is reasonable to assume that if the Government gives incentive to foreign competition that our own people will believe it to be proper and patriotic to buy foreign made goods in preference to our own productions.

In the old days most of the imports, competing in the bulk consumer goods markets were inferior to our own. That day has passed. With the advent of automation, any unskilled person can soon learn the duties of mechanized production and with labor and taxes at a minimum, the competition is out and the products are equal or better in quality.

I recently purchased a set of heavy, well patterned, stainless steel tableware consisting of five pieces—two forks, one knife, and two spoons for 69 cents at a chain food store.

Just for comparison, I put it along side an American made set of the same pieces. The imports were heavier, better polished and finished, and cost less than half as much.

This may be good, but I cannot see it. The American producer paid higher wages, including hospitalization, vacations, social security, pension funds, paid holidays, time and a half for overtime, full lunch periods, break periods, clean rest rooms, supervised first aid, donations to local and national charity and worthy causes, Government records, real estate, State, and local taxes.

He was supervised, checked on, and kept books for Government deductions made voluminous reports, and a hundred and one other disturbing, costly items that make up numerous production costs today.

We have these provisions, safeguards, and regulations because we believe them to be necessary for both the economic and the employee welfare of our country.

How much did the Japanese manufacturer have to add on his selling price for these or any other Government mandated expense?

One fears the criticism of the welldoers and therefore one does not talk about these things, but if someone does not soon start paying attention to this situation we will surely be without prosperity and more serious—without allies.

Basically, most of our allies and friends are becoming kept relatives. Kept relatives are not usually your best friends.

One incident I cannot forget is the refusal of Saudi Arabia to allow us to use our own airport and the Israeli ban on flying over Israel with supplies for our Lebanese occupation and our British allies in Jordan.

Kept relations are not always your best friends is again proven by the furor in Cuba and the anti-American sentiments being formed by the rebellious winners. The three main income sources of Cuba are sugar, tobacco, and American tourists. American taxpayers are the mainstay, financially, of Cuba's economic credit.

Out of 89 nations in the world, we have been and are still giving money out of our so-called mutual aid to 72 nations.

Any nation that depends upon mercenary troops for its security will find itself as useless as a ship in drydock; it looks good, but it is not going anyplace.

Our aid to other countries should come out of surplus, not out of deficiency financing.

How long can we keep up going into deficit financing for foreign spending?

I found in Europe and the Caribbean that we are respected about as much as a sheepherder at a western rodeo.

The only reason he was tolerated was because he had the price of admission.

Not all we are doing or have done is wrong, but certainly a closer look at our program is overdue.

We started out in 1948 with the clear-cut assumption that $15 billion would do the complete job on mutual aid. We are spending $89 billion and powerful voices are demanding more.

We have heard a great deal about the European free market area and agreement, and yet a close study of the proposal shows that not one competitive article can be imported into any country without a compensating tariff to protect local productive costs.

It seems to me that if a government puts extra costs by way of regulations, supervisions, or taxation upon the costs of any article the least it can do is to see to it that the same extras are put on competitive goods.

No sane person wants to close our borders; yet no sane person can expect to finance his competition and stay in business.

It is still a competitive world; and, if we want to help others have a better way of life, let's do it without jeopardizing our own standards.

If we have war with Russia, we must win; and, if we then build Russia and its satellites up to the economic well-being we have established for Japan and West Germany, the question might come up as to whether we can afford the victory.

Victory today means rehabilitation, not reparations.

It is a good Christian doctrine and would be excellent if we were all Christians and lived up to the credo of the Prince of Peace.

Time may prove our system and program to be right; however, I am reminded of the story my father told of the man with the mule.

He figured if he cut down on the mule's fodder he could have more profit from the mule's work.

He was down to three straws a day, but the inconsiderate mule died.

Let us hope we can be around when we have built up the whole world and our shelves have nothing to sell but foreign subsidized goods.

In a community such as mine, the pressures are getting worse and if it were not for the props built into our economy by unemployment compensation, social security, pension plans, United Funds et cetera, there would be less light on Main Street and more personal misery per square foot than at any time in our recent history.

Recently, I read of a hardware manufacturer who shut his plant in this country, opened up in Italy and is shipping his ware into the United States and selling through his old channels at a greater profit.

Under our new formula he is a very patriotic man.

One of my old friends from days in the labor movement, now associated with a rubber company, called and told me of the serious threat of foreign-made goods to their particular field.

One of their good customers who has started producing raincoats in Japan has cancelled a sustaining order for 1½ million yards of rubber fabric and is now cutting the throat of his American competitors who have not moved to Japan yet.

A few years ago it was clothespins and toys, now it is getting into the heavy consumer goods field.

The time has come for a select committee to look into the apparently chronic unemployment.

I shall introduce such a resolution if a committee now in existence cannot take this matter under consideration.

Voices Raised in Protest

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Advocate, official publication of the archdiocese of Newark, N.J.:

VOICES RAISED IN PROTEST

You're just an ordinary person, an average citizen with little influence, but you do have an opinion or two. You express them on occasion, but to other ordinary persons, average citizens with no more influence than you have.

You follow the suggested pattern of writing letters to your Congressmen and to the editor of your local paper. Yet get a stock reply from Washington and often wait in vain for your letter to appear in print.

Somehow, in someway, you feel, the ordinary person must have his voice heard, his opinion listened to; otherwise he tends to lose interest after a while. What good does it do to have an opinion, he reasons. Who cares?

Take all this hullabaloo—public demonstrations, big banquets held in honor of the Soviet First Deputy Premier, Anastas I. Mikoyan.' Headlines, feature stories, and press interviews for the "Butcher of Budapest." The leaders in Government, big businessmen, and big bankers laying out the red carpet from coast to coast for this smooth talker from the Kremlin.

But you can't help remembering that this is the man who spawned the famous double-cross of a few years ago. He promised to have the Russian forces withdrawn from Hungary as he endorsed Imre Nagy as the new Premier. All the while the Red Army was being reinforced to crush the Hungarian revolt and plans were being made to have the Communist puppet Kadar take over as Premier.

You want to shout a protest with a voice loud enough to be heard all over the land. But your voice is a small one, and who would listen?

Then you're heartened as two strong voices are raised in protest against honoring Mikoyan. Voices that can be heard.

Turning down an invitation to a dinner honoring the Soviet visitor, Representative WALTER H. JUDD, of Minnesota, said, "The ghosts of too many enslaved, tortured, and murdered human beings will be looking down on the dinner. Private negotiations with tyrants in power in a country are one thing. Conferring of respectability on them and increasing their prestige and power by acceptance into civilized society is quite another."

And the other, the voice of Richard Cardinal Cushing, of Boston, who charged that American business leaders "now singing the praises of Soviet Russia (are) drowning out the cries for help and sympathy of the Hungarian people, upon whom, in effect, the American nation has turned its back * * * the year 1958 will be recorded in the annals of atheistic communism as a year of great progress within the United States."

A voice from the past might well be recalled at this time—that of the late Pius XII. The statesmen, businessmen, and bankers who are falling all over each other to make Mikoyan's visit among us so pleasant, would do well to remember the words of the late Pontiff: "Our paternal heart is deeply moved by the sorrowful events which have befallen the people of Eastern Europe and especially of our beloved Hungary who is now being soaked in blood by a shocking massacre. And not only is our heart moved, but so too are the hearts of all men who cherish the rights of civil society, the dignity of man and the liberty which is due to individuals and nations."

The Most Unique Plan in the World

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Assistant Federal Housing Commissioner Roy F. Cooke:

THE MOST UNIQUE PLAN IN THE WORLD
(By Roy F. Cooke, Assistant Commissioner, Title I)

It is always a pleasure for a Washington Government official to be so pleasantly and generously received.

I find some businessmen outside of Washington are a little skeptical of Government men, but I promise you, I have no forms for you to fill out, at your own expense, nor any inquiries about how you conduct your business.

Instead, I bring you the greetings and warm wishes from Federal Housing Commissioner, Norman P. Mason. We, in Title I, look upon Mr. Mason as "Mr. Housing," because he is the spearhead of our many programs. The FHA home improvement program is only one of a number under his jurisdiction; the others are home mortgage insurance, homes for servicemen, cooperative housing, rental housing, housing for the elderly, military housing, trailer courts, and the urban renewal programs. The outstanding feature about all of these efforts is that none of these programs would be possible without the complete cooperation of private industry in this great free-enterprise system of ours.

On the other hand we are oldtimers in the field of urging better housing for all. The Federal Housing Administration has been tested by time and criticism and this year we are entering our silver anniversary. We have been in business for 25 years, tempus fugit.

My responsibility is FHA Title I. I am here to tell you how FHA Title I—the Government's home improvement loan insurance program—does business, and how you can profit by doing business with Title I. I believe no banker objects to making money, especially when the net proceeds of the loan is insured by the Federal Treasury.

We like to refer to the FHA home improvement program as the "3 R's." These "3 R's" for us in Title I symbolizes three little, but mighty important words: "Remodel, repair, repay."

Wrapped up in these "three little words" is an $8 billion industry—home improvement. This is not a one-shot expenditure of $8 billion, but the yearly outlay by American homeowners to maintain their properties. A great portion of this money to maintain homes comes out of savings or income. On the other hand, at least 20 percent of this home-repair investment must be financed by lenders.

The FHA Title I loan insurance program began in 1934. It was a depression device to stimulate our sagging economy. In those days very few lenders, especially banks and savings and loans, had any experience or interest in installment credit lending.

It developed that it was up to FHA Title I to lay down the broad principles of consumer credit and guarantee loans until lenders gained experience. All this was done to induce lenders to make unsecured loans to homeowners to promote our industrial recovery.

Today I am proud to report that FHA Title I is a going business. We have 12,800 approved Title I lenders engaged in installment credit lending in about every county of the Nation and in every possession. We are self-supporting; paying all of our overhead—salaries, claims, rent, equipment, etc.—and have a sizable reserve for insurance. There are more than 60 new lenders entering the FHA Title I program each month.

Title I pays its own way by charging a one-half of 1 percent insurance premium on each dollar of the net proceeds of the loan. This insurance premium has been reduced three times since 1954 when the rate was lowered from 0.75 to 0.65 percent, in August 1957 to 0.55 percent, and in April 1958 to one-half of 1 percent. But the rate to the borrower has remained the same, $5 discount. This rate gives the lender a good net profit, plus 90 percent insurance on the unpaid balance in event of claim.

During this period of premium reduction, the average loan has increased from $200 to nearly $1,000. These larger loans have re-

sulted in bigger profits to lenders because the initial cost of putting sizable loans on the books is the same as for smaller loans.

At this time, Title I has 1¼ million active loans in its insurance portfolio valued at $1½ billion. New loans are being insured at the rate of about 5,000 per day and the amount insured each month often reaches $100 million. These are all consumer loans.

We consider consumer credit as the most modern advancement in banking and truly one of the greatest creative ideas of this era because it enlarged the buying power of the average man who lacked cash for purchases. Title I is pleased to be one of the outstanding pioneers in this business revolution.

Now what does this huge home improvement market mean to all lenders engaged in our Title I program? Already we have insured 21 million loans valued at more than $11 billion. There are over 50 million homes in this Nation and more than 1 million new ones are being built each year. This presents an inexhaustible market for home improvement loans because people always want improvements—additions, alterations, decorations, air conditioning, etc.—whether a house is 1 or 50 years old. It is well to remember, "A home is only as modern as the last improvement."

Of the 50 million houses I just referred to, it is of interest to analyze them. The most recent survey shows that 66 percent are from 20 to 30 years old and that 45 percent of them were built before 1920; 30 million have not been painted in 10 years; 16 million have no central heating; 9 million no hot water; 9½ million no bath tubs, but still, 23½ million are owner-occupied. What a market. Let your own good business sense and imagination evaluate this tremendous market especially in view of the new technological developments and the young family formations seeking to establish a modern home.

Many modern families—you, and the families of your sons and daughters—have been reared in the use of consumer credit. We know it's the way to buy and obtain possessions which would otherwise be impossible if it were purely a cash transaction. However, a recent Federal Reserve survey showed that 50 percent of all families have no installment credit obligation. Also, it showed that of families with annual incomes from $3,000 to $7,500 per year only 40 percent used consumer credit which leaves a 60 percent market to be developed. The basic function of consumer credit is to aid the purchaser, and in view of these figures there is a lot of pent-up purchasing power available in this country. However, on the other hand, sales promoted by unwise and risky credit use are dangerous to the economy of the Nation.

Often the question is asked, "What rules for granting consumer credit should a good lender use?" The criteria I use, and this is based on experience in both banking and manufacturing, are (1) consumer credit is intended to serve the buyer rather than the producer; (2) consumer credit should be granted on a sound basis to create an asset and not a liability; (3) consumer credit should be sold on a commonsense basis; and (4) consumer credit should be extended in accordance with the accepted code of ethics perfected by industry and the banking profession. Good consumer credit builds character in the borrower; it does not destroy it.

So that FHA title I may keep all fingers on the pulse of its program from a practical operating approach, we have created two advisory committees who meet periodically to give us advice. The members of these committees are appointed by Commissioner Mason.

One advisory committee consists of 25 of the leading consumer credit bankers in the country. These lenders represent each geographical area of the Nation. We are in constant communication with our Lenders Advisory Committee and find its advice from the practical operating point of view most helpful and useful. We have the same regard and admiration for the local title I lenders groups which have been organized in the larger banking communities throughout the Nation.

Our other committee has a membership of men on the president or vice president level representing business, building material manufacturers, retail dealers, the National Better Business Bureau, and a credit rating organization. This group is known as the Industry Advisory Committee. It advises title I on how the program is working for the dealers and consumers.

All in all, we have a balanced program that operates for the benefit of all—the lender, the manufacturer, the dealer, and the homeowner.

To give an indication of how title I is growing, 4 months ago the Federal Reserve reported title I as insuring 63 percent of all home improvement loans; now their figures show we are insuring 71 percent of all loans. The same reports show that title I business has increased $100 million in outstandings compared to $20 million for lenders on their own plan."

The American Bankers Association survey of delinquencies reports "own plan" delinquency at 1.48 percent and title I at 1.37 percent. Our own call report, as of March 31, reveals title I delinquency to be 1.11 percent in 1958 as compared with 1.29 percent in 1957. This low ratio indicates that people have been paying on their title I loans even though there is some unemployment.

To assist lenders in collecting on delinquent accounts, we have begun the use of a communication to delinquent borrowers known as the preclaim letter. This preclaim letter is sent at the request of the lender by the local FHA office to the homeowner advising that his account is overdue and the lender is about to file a claim with the Government for the unpaid balance. The results of this letter have been amazingly successful; 55 percent of all delinquent accounts, where this letter has been used, have been paid in full or made active again. This letter is now in nationwide use and is available to all title I lenders.

Another assistance given approved title I lenders is the policing of unethical dealers and contractors, commonly known as "suede shoe boys" or "dynamiters." After thorough investigation, we have listed over 6,500 such operators who are out to cheat and swindle homeowners by not installing material according to contract or exorbitantly overpricing the job. A disappointed homeowner is not a good payer on a loan. This type of contractor or dealer is put on our precautionary measures list which to all intent and purposes because him from doing title I business because no lender will buy his paper except under certain regulatory conditions.

This precautionary measures list program is most effective because legitimate contractors can serve the homeowner without the shadow of suspicion which a few morally low ones can cast on the 165,000 contractor-dealers participating in the title I program.

To help our contractor-dealers further, we have an educational program underway. Our dealer relations unit and financial representatives, which are spotted throughout the Nation, meet with and address manufacturers' sales meetings, conventions of trade associations, State, and local groups to advise them on the operation of title I.

This program is paying big dividends. It has met with such an enthusiastic reception that the Governors of the States of West Virginia and Vermont have issued Home Improvement Month proclamations urging all citizens of their respective States to remodel and repair their homes.

About the biggest compliment paid the title I program came by way of a visitor from Australia. After sitting in on one of our title I Industry Advisory Committee meetings he spoke: "I have visited all countries of Europe studying housing but this is the first and only country in which I've seen bankers, industry, and Government sit down together and work for the common good of the homeowner.

"It is truly 'the most unique plan in the world,'" he said.

A Good Year—And Its Example

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks I am inserting in the CONGRESSIONAL RECORD an editorial which appeared in the Chicago Daily Drovers Journal on Friday, January 2.

The thought-provoking editorial calls attention to the good year experienced in 1958 by the livestock farmer. It well points out that the solution to our farm problem lies in affording the farmer freedom and not in the imposition of rigid and penalty-bearing governmental controls.

The editorial follows:

A GOOD YEAR—AND ITS EXAMPLE

Before turning the ledger to a fresh, clean page marked "1959," the livestock farmer pauses for a look at the totals on the page representing his 1958 efforts.

"A good year," he notes with satisfaction. Costs were high, but returns on cattle, sheep, and hogs were higher.

Almost never in his memory has the ratio of feed costs to livestock prices been as favorable for an entire year as in 1958. Seldom has the margin between purchase price and selling price of livestock been as wide. Rarely have the markets been stabilized at such relatively favorable levels during a year. Hardly ever has there been so little red ink in evidence on a year's page.

Seldom, too, he notes, has there been a time when the position of livestock farmers contrasted so sharply with that of grain farmers. Swamped in the heavy seas of record production despite everything the Government did to hold down output, the grain producer eyes cost-price ratios that look anything but good. The comparison of results with livestock and with grain emphasizes once again the frustrating difficulties which lie in wait for him who would substitute artificial control of an industry for the natural control imposed by supply and demand.

Livestockmen, by refusing to be stampeded into submission to Federal aid and control when prices have tumbled in the postwar years of cyclically heavy production, have paved the way for years of really profitable operations like those of 1957–58.

Grain, on the other hand, enmeshed in the web of controls and artificial stimuli designed to guarantee producer prosperity, has struggled along painfully in surplus-influenced markets that never had a chance to show their true colors.

Several times in the last 10 years, when the production of livestock had exceeded demand and forced prices to temporary new

lows, a clamor for Government price supports and production controls arose. But wiser heads staved off the help.

There was financial hardship for all livestock producers while the economic penalty was being paid, but always it resulted in adjustments which brought the market price level back to normal. There is every good reason to suspect that had the livestock industry exchanged its freedom for Government largess, it might today be in exactly the same position as the grain industry.

These thoughts seem particularly appropriate as the farmer begins a new year, inasmuch as experiences of the past seem to offer some reliability as guidance for the future. There are those who scoff at the archaic system of supply and demand, often referring to it in scornful terms as "the law of the jungle." They conveniently overlook the sterling examples which prove the wiseness of reliance on the free enterprise system. And they will be in the forefront of those who will demand of the new 86th Congress, soon to be organized, that new schemes be formulated to guarantee prosperity for the farmer.

During the year just ended, advocates of firm Government control of agriculture took several setbacks at the hands of a Congress convinced that controls were discredited and would never be feasible. Although jolted severely, the diehards have by no means given up. They regrouped their forces and, bolstered by a seeming vote of confidence in the November election, are ready for a fresh onslaught against free enterprise. They are prepared to overwhelm the new Congress with suggestions of panaceas of every sort, including subsidies, quotas based on bushels and pounds instead of acreages, marketing orders two-price plans, and whatnot.

But the weakness that has characterized all such similar schemes in the past will still be there—inability of any man or group of men to devise controls that can supplant and suppress natural economic forces. All will lead to renewed dominance by Government over the farmer and lead eventually to greater socialization of agriculture.

It is argued that all they want is for the farmer to have the same chance that other segments of the American economy have. That is, indeed, a proper goal. The farmer is the No. 1 producer from the standpoint of primary importance. But has he been given any real help toward that goal by Government programs of the past 25 years? Have those programs improved his lot in comparison with others? Or have they merely led him into a straitjacket of regulations that prevented him from realizing his fair share from the abundance he has produced?

A noted farm leader said recently that the way to a healthy, prosperous agriculture is not to make farm income dependent upon congressional appropriations. He declared that 175 million people must eat and wear clothing—they will pay prices that will return a good income to farmers if we produce what they want and keep farmers free to make the changes that are indicated by changing demand.

The need for pliability to permit needed changes is something politicians and farm programs never recognize. In the last 25 years the rigidity imposed by Government programs has caused farmers to produce large quantities of crops for which there was no market. Under the guise of helping, such programs actually slowed farm progress and reduced farm income. They have kept the farmer from adjusting to meet the changes of his market and, instead of giving him a fairer shake, have helped keep him at a disadvantage with other segments of the economy.

One has only to look at the vigorous free economy of livestock production and compare it with those of commodities that have been under Federal (and political) control to see the truth in this statement.

It's time to turn the page in the ledger to "1959." Will we forget the lesson that 1958's page conveys?

Russian Invasion of Hawaii Evident

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BURNS of Hawaii. Mr. Speaker, in the CONGRESSIONAL RECORD of January 19, 1959, I inserted for the information of the Members of the Congress the statement of the Honorable FRANK CHURCH, junior Senator from Idaho. I include for printing in the RECORD a news item from the Washington Star of January 18, 1959, which is most interesting from the point of view of the statement of the able and distinguished junior Senator from the State of Idaho, as well as from the point of view of the psychology of the Russian whose operations in the 1800's bear remarkable resemblance to his undertakings today, the middle of the 20th century.

The Members of the Congress will find the article of interest in relation to the many problems before them.

The article follows:

RUSSIAN INVASION OF HAWAII EVIDENT

WAIMEA, ISLAND OF KAUAI, T.H.—The only evidence of a zany Russian's scheme to seize the Hawaiian Islands for the Czar, a century and a half ago still stands near this sun-drenched town on the south coast of this island.

It is the ruin of one of two Russian forts built in the area by a Dr. Yegor Scheffer, who came to Hawaii ostensibly to retrieve the cargo of sandalwood from the wrecked ship *Bering* belonging to the Russian-Alaskan Co.

Dr. Scheffer turned out to be a sort of "Man Who Came to Dinner" with a Russian accent. At the time, King Kamehameha the Great had unified all of the Hawaiian Islands by conquest except Kauai. There was no love lost between Kamehameha and the Kauai king, Kaumualii.

The latter fell in with the doctor's grandiose scheme to recover the Hawaiian Islands for Russia. This was at a time when several of the great powers were interested in Hawaii. The doctor began purchasing land, building forts, and changing names of Hawaiian villages into Russian. Waimea (red water) became Alexandrovosk and Hanalei (most beautiful) became Yelisabetinsk.

FAST TALKERS

In 1816, King Kaumualii was talked into trying to put his little domain under Russian protection and agreed to try and conquer Kamehameha's domain on the island of Oahu in return for the *Bering* and 200,000 rubles.

This agreement suddenly fell apart at the seams as the Russian trading company repudiated Scheffer and his scheme and King Kamehameha ordered him to move on and to stay away from the major part of the kingdom he ruled. That ended the doctor's dream of conquest. Kauai later was united with the rest of the kingdom, which became a Territory of the United States in 1898.

Today, Waimea basks in the warm Hawaiian sun and the reflected glory of its historic past. Long before the advent of the white men, it was the seat of island government. Capt. James Cook made his first landing in the Hawaiian Islands at Waimea. The final union of Kauai with the Hawaiian kingdom took place there. It was the favored port of the sandalwood traders.

MAGIC PEOPLE

Nearby is visible evidence of the magic of Hawaii's legendary little people, or elves, called Menehunes. Alongside the highway is the Menehune ditch, a watercourse of cut stone blocks reportedly built by the Menehunes in one night to bring water to taro patches.

Some 200 feet of the wall remains intact. Archeologists maintain that the carefully cut stones were not hewn by early Hawaiians, but by a race that preceded them, possibly the Menehunes.

On this south coast of the island there are dozens of interesting and scenic spots which are part of regular tours. These include the Spouting Horn, a geyser in the shoreside rocks that trumpets as it spouts forth water, sands that bark, and the "Grand Canyon of the Pacific" called Waimea Canyon.

The south side of the island is part of a 2-day itinerary on Kauai. The lushly tropical north shore, a favorite location for motion picture companies, provides the second day's tour. There are two resort hotels on Kauai, which is one-half hour by air from Honolulu.

Proposal To Increase Postage Rates

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. LESINSKI. Mr. Speaker, I disagree most emphatically with President Eisenhower's proposal to increase first-class postal rates to a rumored 5 cents.

As a member of the House Committee on Post Office and Civil Service, I will not go along with another first-class postal rate increase; I think it is unfair to ask the average American, the small taxpayer and small businessman, who are already overburdened with taxes, to assume this additional tax load. This proposal of the President's is another clear indication of his complete subservience to the big business interests.

Take a look at the following statistics showing the differences between first-class mail, which is used by the average American when he writes a letter, and second-class mail, which is used by the big magazine publishers. The figures are for fiscal year 1958:

	First-class mail	*Second-class mail*
Pieces handled	32,218,319,000	7,147,956,000
Total weight	921,402,000	2,695,076,000
Total revenue	$1,092,441,000	$65,622,000

Total income from all classes of mail, $2,314,038,000.

Therefore, of the total income to the Post Office Department in fiscal year 1958—which, incidentally, was before the 4-cent rate went into effect—first-class mail was already producing over 47 percent, while the big business users of second-class mail contributed only a little over 2 percent. Add airmail revenue of

$136,580,000 to first-class mail revenues and you will see that the everyday users of the 4-cent and 7-cent stamps are the ones who are carrying the burden of postal costs, while the postman who delivers your mail has to shoulder the burden of one-third of a pound on an average for each piece of second-class mail, but only one-thirty-second of a pound for each average piece of first-class mail.

I think that President Eisenhower would do well to devote his efforts toward closing the tax loopholes and special concessions to big business in order to get additional revenue for the Federal Government, instead of constantly trying to milk the small individual taxpayer and small businessman.

Reactions to Visit of Soviet Deputy Prime Minister Mikoyan

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I call attention to the following ably written editorial, entitled "Mikoyan's Tour of the United States and Nikolai Lenin's Prophecies," which appeared in the Shreveport Times, Shreveport, La., on January 18, 1959:

MIKOYAN'S TOUR OF THE UNITED STATES AND NIKOLAI LENIN'S PROPHECIES

Nikolai Lenin, father of Russian communism, wrote a book around the turn into the 1920's telling Red leaders of that day and days to come how to bring about communism's dream of world conquest.

Lenin specified that weak and backward countries of Europe and Asia could be overcome and held beneath the Red heel by murder purges and military might. But, he wrote, Russia must never enter into a shooting war with the United States for, no matter how bright the prospects of Red victory, Red annihilation would be the result.

Lenin pictured the American people, in effect, as a big fat sow rushing always to the slop trough of greed for easy life, quick wealth, and disregard of national or personal responsibilities. Such a nation, in Lenin's view, should be encouraged to spend itself to death, to psychologically disarm itself through viewing with less and less discernment the dangers to itself from the world Communist movement.

That has been and is the Soviet policy toward the United States—to force this Nation into peacetime spending beyond any previous wartime spending; to thus compel it to maintain peacetime taxation beyond previous wartime taxation; to seem to be constantly crying "Wolf!" in a manner to lull the people into belief that no external danger existed; to create shooting wars or threats of shooting wars involving the United States but with Soviet participation only in cold war.

As Soviet Deputy Prime Minister Mikoyan completes his tour of the United States, he well may be mulling in his mind the possibility of reporting back to Premier Khrushchev that the United States is doing quite well in psychologically disarming itself. Mikoyan may be dead wrong, yet much has happened on his tour to justify serious thoughts along this line.

Mikoyan has been greeted with some eggs and tomatoes and jeering pickets here and there. Mostly they have been from Hungarians who were driven from their native land and their relatives slaughtered by the Kremlin murder crew in which Mikoyan is and has been, since the first days of Stalin, a leading factor. But there has been much to offset those comparatively minor demonstrations.

Mikoyan has been a feted guest of honor at banquets and luncheons in such cities as Detroit, Chicago, San Francisco, and Los Angeles.

His hosts have been some of America's leading industrialists. In California, university students gathered to cheer him. Everywhere, some of the finest people of business, industry, and politics—and often of culture—have formed his audiences and given him applause which seemed to be more than perfunctory.

Quite a few movie stars in Hollywood were described in one press dispatch as virtually "going wild" in the warmth of their greeting to the Soviet second-in-command.

All of this seems to have gone far beyond desire to be courteous to a visitor who is the second highest official in a powerful foreign nation. It has gone beyond the point of mere curiosity of people to look upon a man belonging to a group operating a political dictatorship built on murder or willingness to commit it.

Some press dispatches have described fellow guests of Mikoyan at some of these banquets and luncheons as openly approving Mikoyan's views—meaning, presumably, the views he professionally expresses as he travels. But, there is the seeming inference that these people seem to think—or at least give the impression—that if President Eisenhower and Secretary Dulles were not such stupid old fatheads, and if all the American people could understand Mikoyan, the troubles between the Soviet and the United States would end.

Against this welcome for Mikoyan are these facts:

Only 2 years ago Marshal Tito of Yugoslavia had to cancel his planned trip to Washington because of uproar in Congress and in the press over letting a Communist dictator come to this country. Tito has played footsie-wootsie with Moscow even as he played footsie-wootsie with Washington, but he never conducted or ordered mass murder of Hungarians or any other people; he has not instigated wars between nations or persuaded and backed any nation to war against the United States—as the Soviet did with Red China and Korea in the Korean war. He has not attempted to bring new war in the Middle East nor does he conduct a spy system covering the globe.

Yet, Tito was told by the government of this country that he should not come here, while, only 2 years later Mikoyan comes and gets, to a certain degree, an open-arms welcome.

Only 6 months ago Khrushchev made it plain that he would like to come to the United States. But the threats of demonstrations, and the reported warnings by the U.S. Government that it could not be certain of guaranteeing his physical safety, caused cancellation of the planned visit.

Even as Mikoyan walked the streets of Washington, the House Committee on Un-American Activities issued a report on the Russian spy system in this country which a few years ago would have had eight-column headlines all over the nation and indignant outbursts from political leaders of both parties. It has gained virtually no attention anywhere.

Many of the Nation's self-styled liberal newspapers have greeted Mikoyan with editorial warmth, as have many of the press and air commentators.

So far as available press dispatches show, only one man in public life has arisen in blunt protest. He is GOP Representative WALTER JUDD, of Minnesota, who refused to attend a wining and dining of Mikoyan by a big American industrialist, publicly stating that he refused because:

"Only harm to our country and to humanity can come from entertaining here men whose hands drip with the blood of millions already dead, still dying, or being crushed in slave camps."

Perhaps America is psychologically disarming itself in a manner to fulfill the Lenin prophecies and to make happy such as Khrushchev. Mikoyan should be greeted with official courtesy, but not as a man decent people should admire.

It Was 1947 and the Pope Spoke of Faith

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include an excellent article written by the distinguished editor of the Nashville Tennessean, the Honorable Coleman A. Harwell, following the death of Pope Pius XII.

Mr. Harwell was 1 of 10 American newspaper editors and writers touring Allied-occupied areas at the time of the audience with the Pope. The memorable experience is indelibly stamped on the mind of Mr. Harwell and he now shares it with everyone. He said of the late Pope Pius XII:

I felt strongly, and still do, that his personality was enough to make him stand out in any place among any group, though he had been unknown and unheralded.

I believe you will want to share Mr. Harwell's experience.

The article follows:

IT WAS 1947 AND THE POPE SPOKE OF FAITH

(By Coleman A. Harwell)

Looking back to 1947, it seems much longer ago than 11 years.

Italy was still on its knees, groping for a place to stand and for light with which to see. Rome was a dark, quiet city.

January of that year was the coldest in modern history. This, added to hunger, created great misery in a land that loves sunshine and laughter.

We were a group of 10 American newspaper editors and writers on an Army-conducted tour of Allied-occupied areas.

There were still many American soldiers on duty there. There were signs of war in the ruins of Cassino and in the lines of white-faced children who gathered around the kitchens of American Army units and held out their cups and plates hopefully for morsels of food.

Even the luxurious surroundings of the Excelsior Hotel on the Via Veneto seemed drab that chill postwar day.

We bundled up in heavy overcoats and mufflers and shivered into the American limousines which were to take us on a notable assignment.

As we followed the staff member of the U.S. Embassy through the chill halls of the Vatican's great museum, up the vast marble

stairway, we continued to experience a sense of unreality.

These were not the scenes of war we had known 3 years before, nor was this the happy land we recalled from any almost forgotten era of the 1920's.

We were ushered from the great hall into a small, simple but beautiful room, in which ancient tapestries hung from the ceiling. There was 1 chair toward the center of the room and 12 or so others in a small circle facing it.

We stood about for a few minutes, chatting quietly.

The huge doors opened and a man walked in. He was simply dressed in white cassock, a cap upon his head. He had the kindest and yet the most penetrating eyes I ever saw.

His presence seemed almost a benediction in itself. His serenity suggested great strength.

I realized then and do now that all I had known about Pope Pius XII was in my mind as much as was my impression of him at the moment. I also realized that what I knew of his spiritual power and his high place in the worldwide Catholic Church came to bear upon that scene. And yet I felt strongly, and still do that his personality was enough to make him stand out in any place among any group, though he had been unknown and unheralded.

He sad down and beckoned to us to do likewise.

He picked up a piece of paper about letter-size, adjusted his plain spectacles, and began to read in English. His voice was thin but very firm. When he came to the bottom of the paper he turned it to the other side and continued to read.

This was surprising to me because I would have thought his every word was put upon paper by a precise secretary. I would have expected it to be on engraved paper, large and impressive. But this paper was plain. At a distance of several feet, it was clear that the typing was not professional.

(It was explained to us later that the Pope writes every message he delivers on his own typewriter whether it be in Italian, French, Spanish or Portuguese.)

Suddenly the war was forgotten. The fact that we had flown in less than a day from bustling Washington to awestruck Rome was unimportant. The scene we were witnessing was as much of the past as it was of the 20th century. The man might have lived a thousand years ago or he might be facing the problems of today. This was the Vatican, the center of a church that encircles the world and spans 20 centuries. Here was the successor to those who had kept Christianity alive through the Dark Ages, one to whom millions look for spiritual guidance.

The message we were hearing suddenly brought me back to reality. I realized that Pope Pius was not speaking of something in the long ago but was dealing with the world today.

He said to us, "Ruthless persecution of man's civil and religious rights has not ceased."

He praised the generosity of the American people who were aiding Europe's war sufferers in the struggle to revive.

"Yet Americans who came to the assistance of the victims who survived the appalling holocaust little thought that the food and clothing which they were so lavishly shipping overseas would be in some countries tagged with a price—the price of adherence to a political party," the Pope read.

"Denial of men's civil and religious rights has not ceased," he continued. "Ruthless persecution of men's conscience has not abated. Nor is it surprising. But it is tragic.

"But one dare not be discouraged. Leaders will not be wanting, they are not wanting, men of sterling character, not self-seeking but genuinely devoted to the physical and social betterment of all classes, who in the light of Christian principles will gladly and effectively recognize that religion and morality are the indispensable supports of political prosperity."

"You have come," he said to us, "desirous of getting first hand knowledge of postwar conditions * * * little is of greater interest to the millions who compose your reading, listening public than to get at the facts."

"Must you tell them that their hope has been shattered against a succeeding tyranny?"

At that time, the cold war was being intensified. We saw evidence of this in several places, such as Austria, where Soviet officers were placing obstacles in our officers' way constantly. The Pope's great concern, of course, was the growing persecution of the church in Communist areas.

He emphasized that there was hope in the world—the hope of Christian faith.

After he completed his message, the Pope chatted affably with each of us, recalled his visit to the United States while he was Vatican secretary of state, and asked that his greetings be conveyed to President Truman and the American cardinals.

One of our group asked if we might have copies of the statement. Yes, he said, he would have copies made available for us as soon as possible.

Then he answered questions and sent messages of affection and blessings to all of America. As he spoke to us I could not let pass unnoticed the appearance beneath his white brocade frock of a warm woolen undershirt, which served to remind me that to him all these ornate surroundings were historic rather than personal, and that he lived the sparse life of a priest dedicated to leadership of a vast following.

These recollections come alive today as the world mourns one of its great religious leaders.

Milwaukee Police Aid Program Solves Department's Recruiting Problems

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. REUSS. Mr. Speaker, Milwaukee, Wis., has developed a sound means of recruiting able young men to serve on its police force. The plan, Milwaukee's smoothly operating police department apprenticeship program for high school graduates, benefits both the force and our city.

The apprentices become familiar with the full scope of the department's activity by serving for a time in its various offices. They are initially trained for and assigned to clerical tasks allowing the city's experienced officers and men to devote full time to their law enforcement assignments. In addition the apprentice program gives the city an exceptionally well trained manpower pool for its police force.

Much of the credit for the program must go to Richard Block, chairman of the fire and police commission in Milwaukee in 1952 when the police aid program was established.

Mr. Block described its inception and development in an outstanding article for the October 1958 issue of Public Personnel Review. May I suggest to my colleagues that the police departments in their own constituencies might find this article an extremely valuable source of ideas.

The article follows:

MILWAUKEE POLICE AIDE PROGRAM A SUCCESS—APPRENTICESHIP PLAN OFFERS HIGH SCHOOL GRADUATES CAREER OPPORTUNITIES IN THE POLICE SERVICE

(By Richard Block)

Because of entrance-age requirements in the police service, many well-qualified young men who have indicated an interest in entering law-enforcement work as a career have been forced to take up other employment. Later, when attaining the age necessary for police-entrance examinations, these young men have become entrenched in, and satisfied with, the positions they occupy, and thus have been lost to the police profession. The problem has long been recognized by many police authorities.

In 1952 a group of Milwaukee citizens was called together by myself, then chairman of the fire and police commission, to discuss the problem and to consider a proposal to establish an apprenticeship program within the police department. The committee consisted of John W. Polcyn, then chief of the Milwaukee Police Department; Dr. William Rasche, director of the Milwaukee Vocational and Adult Schools; Judge Robert Hansen, then secretary and chief examiner of the commission; and Robert Garnier, classification examiner of the commission. As the result of this and other meetings, the police aide program was set up as operative in the Milwaukee Police Department, the first of its kind in the United States. With 6 years of valuable experience now behind it, the Milwaukee Police Department has been able to help other police organizations throughout the country in adapting its successful apprenticeship plan.

Originally the number of candidates was limited to 2 boys from each of the 20 high schools in the city of Milwaukee; the principals recommending the boys who were to be considered. These candidates were given an aptitude test and a thorough medical examination, and the 12 highest qualifiers in these examinations were appointed to positions in 1952.

OFFICE SKILLS ARE IMPORTANT

Because of the vast amount of clerical work necessary in a police operation, the police aids are assigned to this function. During the first year of their service they attend school half days at the Milwaukee Vocational School, where they take courses in typewriting, shorthand, business English, office practice, etc. Afternoons they report to their respectively assigned police offices where they perform varied tasks, dependent upon the office involved.

The program provides for a rotation of the police aids, each 6-month period, so that they obtain a broad knowledge of the functions of the various police divisions in which they work. Upon completion of their 1 year of service, and upon obtaining a passing grade in their vocational school courses, they are assigned to full-time duty, again on a rotating basis, office to office and shift to shift.

"Today," observes Chief Howard Johnson, "a young man entering upon a police service career has the opportunity of learning about the detective bureau, traffic, youth aid, identification and records.

"He understands communications because he has worked there; he understands criminal procedures because he has worked in detective clerical; he understand criminal process and court procedures because he has worked for the city attorney preparing warrants and briefs.

"It is the apprentice program in this country that has elevated the American workman

to his position as the best skilled worker in the world. Why not a similar program for young men who might want to become policemen?"

METHOD OF RECRUITMENT CHANGED

Each succeeding year a new group of aids has been recruited and our present authorized strength calls for 48 positions in the department. To further expand the program, a change in the method of recruitment was inaugurated in 1956—the field was thrown open to all Milwaukee high school graduates of the current year on a competitive basis. Also, at this time, the entrance exam was expanded to embrace all the requirements of intelligence tests, medical examinations, physical agility tests, and an oral examination comparable to the entrance examination for all police officers.

This action resulted in a broader selection of candidates, and created increased interest among the young men in our high schools.

BENEFITS

The 1958 Police Aide salary begins at $3,251.16 annually, with increments each 6-month period of the 4-year apprenticeship to a maximum at the fourth year of $4,191.36.

While at work in the offices, the aides wear a regulation Milwauke Police Department uniform shirt and a special badge for police aides with a number designation. In addition, they wear a black four-in-hand tie and blue serge trousers.

They are members of the city employees pension unit and, after completion of one year of service, are entitled to two weeks' vacation. They also participate in the Blue Cross insurance plan and other departmental fringe benefits. They are required to live up to the rules and regulations laid down for employees of the Milwaukee Police Department and are expected to set the proper example in all of their on-duty and off-duty associations.

PROGRAM'S PROGRESS

The original group of police aides completed their 4-year apprenticeship on June 24, 1956, at which time eight of the original group were appointed as regular police patrolmen in the department. In 1957, a second group completed the program and have graduated from the recruit school with other candidates for the police service.

The administrators of the Milwaukee Police Department report that the young policemen who completed the police aide apprenticeship have adjusted remarkably well and are competent officers. It is anticipated that the knowledge they acquired in their work in the rotation plan through the various police offices and bureaus has given them a background of information, that will be of tremendous value to them in their police careers, and that this background will give them many advantages in promotional examinations as they progress in the department. Their knowledge of shorthand and typing is of tremendous value to them as police officers, the quality of their reports and their increased knowledge of the reports' functions will, in time, greatly increase the efficiency of police operations.

During the apprenticeship period the police aides perform a valuable and necessary function in the department. Many clerical positions in the clerk-stenographer and clerk-typist classifications have been eliminated and the work carried on by police aids. Their work in the offices also enables many policemen to return to the field duties for which they were intended.

SOME OF THE PROBLEMS

Some of the problems we have encountered in the police-aide program might be of interest. Probably the largest of these is the matter of military service, in that a large percentage of the young men have been called to serve their 2-year military obligation during the apprenticeship period, and this interruption has handicapped both the department and the individual to some extent.

Another problem that, at the present time, has been largely overcome, was the acceptance of the police aids both by the regular police personnel and our civilian clerical force. As mentioned, the boys have largely overcome this problem by carrying out their assignments satisfactorily and being of great value to the operation of the office to which they are assigned.

FOLLOWTHROUGH

The police training school staff is generally charged with the broad responsibility of overseeing the police aide program. During the first year of service, they are in close liaison with the vocational school instructors and assist in setting up situation examinations, etc., to provide a realistic program. After the first year in the program, all of the aids are called to the training school semiannually and are given typewriting and shorthand tests to insure that they are maintaining a satisfactory performance level. In addition, the rating reports of their immediate supervisory officers are received in the training school and the police aids' progress is carefully noted in this area also.

In a few instances it has been necessary to terminate a police aide for cause. It is necessary from time to time that all persons be reminded that the program must be looked on as a training and development program, and in order to be successful, must have the full cooperation of all supervisory officers of the department in that regard.

The training division carefully watches the tranfers and adjustments of the police aides, as the interest of the candidate sometimes varies with his assignment. In some offices the opportunities and diversified activities are more interesting than others.

It is our belief, in the Milwaukee Police Department, that the police aide program is a valuable asset to our department and that similar programs should be valuable to other law-enforcement agencies. We feel that the program, as operative in Milwaukee, will eventually improve the quality of personnel and will, to an extent, solve a portion of our recruitment problem. As a result of this program, the citizens of our community will have the benefit of better informed and more efficient police officers.

The Late Bernard Austin

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ANFUSO. Mr. Speaker, the late Assemblyman Bernard Austin, who represented the 4th assembly district of Brooklyn in the State assembly in Albany since 1935, was a very dear and close friend of mine. His assembly district was a part of my congressional district, and we often not only campaigned together but collaborated in helping constituents and the community in general. His passing is a great personal loss to me.

Assemblyman Austin died under very tragic circumstances. His death occurred on January 6, 1959, in the city court of Kings County—Brooklyn—during induction ceremonies for our former colleague, the Honorable Louis B. Heller, who was being sworn in that day as city court justice. Assemblyman Austin had just completed a congratulatory address, when he collapsed and within moments died of a heart attack.

On Monday, January 12, 1959, memorial services were held at the city court for the late Bernard Austin at which Justice Heller presided. I wish to insert into the RECORD the proceedings at these services as published in the New York Law Journal:

MEMORIAL SERVICES FOR ASSEMBLYMAN AUSTIN—CITY COURT, KINGS COUNTY, N. Y.

Memorial services were held last Monday in the city court, Kings County, for Assemblyman Bernard Austin, who died of a heart attack the previous Tuesday, a few minutes after having delivered an address at the induction ceremonies for city court Justice Louis B. Heller.

Justice Heller presided at the memorial services. The speakers were Assemblyman Max M. Turshen, domestic relations Justice Nathaniel Kaplan, former Deputy Comptroller Abraham L. Doris, Raymond Reisler, vice president of the Brooklyn Bar Association, and Harold Jacobs, president of the Crown Heights Yeshiva.

The proceedings, in greater part, follow:

"Judge HELLER. It is my sad duty to record a great tragedy which occurred in this building on January 6. While induction ceremonies were being conducted for me that day, as a justice of this court, and within a matter of minutes after he had delivered a beautiful congratulatory address, Assemblyman Bernard Austin died of a heart attack.

"As soon as the veteran assemblyman collapsed, county Judge Nathan R. Sobel, who was chairman of the ceremonies, brought them to a close.

"The sudden and untimely death of Assemblyman Austin, whom we all so fondly called 'Bernie,' took from our community a man greatly believed in and most highly esteemed. For a quarter of a century he had the complete and unswerving confidence of the people of the Fourth Assembly District of Kings County, whom he so ably represented in Albany.

"They came in droves to his funeral to pay their last respects to their trusted and dedicated representative.

"He was a very dear and personal friend of mine for over 20 years. We worked together in the State legislature in 1943 and 1944, when we served on the Commission Against Discrimination, which is credited with laying the ground work for the introduction and passage of the Ives-Quinn law, commonly referred to throughout the country as the F. E. P. C. Bernie, in his remarks at my ceremonies last week, briefly touched upon this law, which was close to his heart.

"And I can bear witness to the magnificent contribution he made in the many deliberations, debates, and conferences the commission conducted. He missed not a single meeting. He put his heart and soul into this labor of love, for he was deeply concerned with the elimination of discrimination in every field of human endeavor, in employment, in housing, in education, and in the realm of public accommodations. Working closely with him on this commission, I could observe that he was a foe of intolerance; that he was intensely human in all his aspects of life. He looked only for the uplifting and the welfare of all the people of the State, without regard to race, color, creed, or national origin.

"Over the years many honors came to him. Bernie wore his honors modestly, without arrogance or ostentation, and humility and kindness marked his course. He can best be described as a true friend, a man of dedicated public service, of gentleness and com-

passion, and of selfless devotion to the welfare of his fellow men. He was a man without cant, without hate. He was a wise man, and a good man, a man of much learning. He had an intense love of God and His law.

"It lifts my spirits to recall today that I was honored to be the last man to shake his hand, and as he looked into my eyes I could sense that deep in his heart Bernie felt that he would rather be a servant in the House of the Lord than sit in the seat of the mighty.

"When this court adjourns today, it will do so out of respect to the memory of Assemblyman Bernard Austin.

"Assemblyman TURSHEN. The State of New York has lost a very distinguished citizen. It was my privilege to know Bernard Austin for upward of 22 years. He was a great patriot. He loved his country with an intensity that was only matched by his love for his fellow man. He was an organizer of the American Legion post of the Williamsburg district.

"He was a follower of that great army that has the utmost faith, and many a time in the intimate walks and talks that I had with Bernard Austin, that faith came to the fore. He was a brilliant Talmudical scholar. He knew every book of the Old Testament by heart. He was extremely well versed in the Hebrew cuture. His wisdom was enormous. But he sought no rewards, and, as the judge has already said, he was a man who sought no ostentation and no publicity and no limelight; but he loved his fellow man with a great intensity.

"He came to this country as a young immigrant. He mastered the language and he was so intense an American that not only did he enlist in the First World War but he was in the frontline and was decorated for bravery; when the war was over, he went back to the frontlines in the fight between Russia and Poland, in order to save human beings. And the experiences of Bernie Austin—and it was almost impossible to get him to talk about them—were something remarkable to hear, how he risked his life time and time again to save a fellow human being.

"The same spirit of valiance and valor and brilliancy for others was manifested in all his work and doings. He was a cosponsor of the Austin-Mahoney bill, which was a bill to prevent discrimination in public accommodations. He was the most ardent sponsor in working for the first State university and first State medical school.

"Bernard Austin was one of the most conscientious and hard-working legislators that Albany ever know. That man stayed up nights and days, long after his fellow legislators had left the capitol, working on legislation and humanitarian work for human beings.

"And you could never get from him a word of self-praise or a word of self-satisfaction. He sought no rewards, except the pure reward of seeing beneficience performed for the human race.

"Yes; his district, and the county of Kings of the State of New York, is greatly impoverished in the loss of this great man, this great citizen, this great legislator. It is not going to be easy to fill that great void. We have lost a dear friend, a great American, and I know that the community, State, and Nation, and the human race, will be poorer for his passing.

"Justice KAPLAN. I join today in this tribute to a departed friend, both as a personal friend and as a justice of the domestic relations court.

"It was my good fortune to know Bernie for many years, as a personal friend—warm, simple, kindly—one who sought no praise, but whose friendship really meant something. And as we go through life, the only assets that we really gain are our friends, and we suffer a real loss when one of them departs. As a personal friend, I have lost someone that I cherished deeply, and as a justice of the domestic relations court, we in the court have lost a true friend of that court.

"Every year Bernie used to come to the judges of the domestic relations court and ask: 'Is there anything that the legislature can do to help your court?' He was deeply interested in the unfortunate youngsters and others who came into that court, and it was for that reason that Bernie always sought to do something by way of legislation to improve the lot of those people.

"Not only we in the court, but many thousands and thousands who appear there, have lost a true friend; and we mark this sad occasion with the consolation that Bernie had lived a useful life.

"Former Deputy Comptroller DORIS. I appear here today not only on behalf of the Young Men's and Young Women's Hebrew Association of Williamsburg, of which Assemblyman Austin was a director for many years, but as an old friend.

"In 1934, when Assemblyman Austin was elected from his district here in Brooklyn, it was my privilege to have been a deputy comptroller of the State for approximately 7 or 8 years. And, like others in the legislature, Bernie, as I came to know him, used to meet with me for aid of one kind or another; because the State comptroller was, as he still is, the chief fiscal officer of the State, and has always been in a position to help on many occasions. I got to know Bernie very intimately. And very frequently, when I was invited to attend a meeting of the brotherhoods of various congregations in Albany, I would take Bernie by the hand, and he would regale the brotherhoods of these various congregations with the law in the Talmud, with the fine stories in the Perek, the Ethics of the Fathers, in the vernacular.

"It was Assemblyman Bernard Austin who always stole the show in Albany. Yes, he did deserve higher honors, and if he had lived, I have no doubt they would have come. But, as the previous speaker has said, Bernie Austin was a modest man. I think the poet Gray, in his "Elegy in a Country Churchyard" put it very aptly when he said:

" 'The boast of heraldry, the pomp of power,
" 'And all the beauty, all that wealth e'er gave,
" 'Await alike the inevitable hour,
" 'The paths of glory lead but to the grave.'

"We in the YMHA knew Bernie Austin as an indefatigable worker, not only on behalf of our project for the aged, because he was deeply interested in that during his official career, but we can note that during a long span of official life in Albany he was, for approximately 18 years, a member of the important committee on ways and means, which is the committee that initially passes on the approval of the budget of the State of New York.

"Judge Heller has alluded to the fact that he was very active in the committee on discrimination, which ultimately led to the unit known as SCAD. I note, too, that Bernie was a member of the important committee on rent control.

"But beyond that, I think it is even more noteworthy that during the course of approximately a quarter of a century this man served his community, served the State, and served people of all races and creeds.

"He goes to his Maker not only with an excellent record, officially, and as a good citizen, but as he, perhaps, undoubtedly would have liked it, to earn his eternal reward.

"And so I conclude by paraphrasing William Cullen Bryant in that great poem of his entitled "Thanatopsis." I believe that Bernie has lived so that when the summons came to him to join the innumerable caravan that moves to that mysterious realm where each finds his chamber in the silent halls of death, Bernie Austin went, not like the quarry slave scourged at night to his dungeon, but sustained and soothed by an unfaltering trust, he approached his grave like one who wraps the drapery of his couch about him and lies down to pleasant dreams.

"Your Honor, I thank you for this privilege of paying my tribute to Bernie Austin."

"Vice President REISLER: A lawyer of distinction, of ability, of integrity, and with all quiet dignity has passed to his reward, and on behalf of the Brooklyn Bar Association it is my privilege and my wish to join in the sorrowful tribute to him here today, and in an expression of deep sympathy to the members of his family.

"Bernard Austin's sudden passing brought not only a great shock but a very real sense of loss to all who were acquainted with him and, particularly, I think, to the many members of the bench and bar who knew Bernie so long, and so favorably, and so well, not only socially but professionally.

"I have lapsed into referring to this great man as Assemblyman 'Bernie' so quickly because that is indicative of Bernie's character, his genial and warm personality. I think we all thought of him that way.

"Bernie Austin had a vitality of presence, a warm smile and that wonderful character that makes it difficult to realize that this shining light has been extinguished. Indeed, in a very real sense, I think we can say that it burns on, for Bernie has influenced many for the good, as you have heard here this morning, and these will influence others, as a ripple in the water seems never to end.

"It is customary to think that the encomiums and eulogies that are embodied in most services sometimes overstate the point, as in a great drama, for emphasis; but in Bernie Austin's case, it is not true. What we heard here this morning does in reality bear justice to his true merits, his very fine qualities, for Bernie was a distinguished legislator, an able lawyer, a devoted worker in many philanthropic causes, in many communal causes, and a loyal member of the organized bar, and of the Brooklyn Bar Association, of which he was a member for a long, long time.

"I had the privilege of knowing Bernie personally for many years, as a friend, as a fellow lawyer and bar association member, and as a fellow director and officer of the Young Men's and Young Women's Hebrew Association of Williamsburg. I know in my own heart and in my own knowledge that genial smile, that modesty, that warmth, that fine character, that ever-ready willingness to help all who called upon him; and I know that those many fine qualities that you have heard referred to today will form a memory that will long live in the hearts and mind of Bernie Austin's associates at the bench and the bar.

"May his soul rest in peace.

"HAROLD JACOBS: I speak as a layman not working with Bernie Austin in the field of law work or legislation, but in the field of communal work for all races and creeds, and particularly members of his own faith.

"Those of you who were here last week remember that a somber silence ruled the courtroom last Tuesday. It was a silence of impending doom which enveloped all of us who were gathered here to participate in the induction ceremonies of a distinguished jurist. For, in the midst of the festivities, a fire bolted out from heaven and struck with stunning suddenness one of our most respected and distinguished civic leaders, Bernard Austin, who served his people with distinction for more than a quarter of a century.

"When the sad news finally reached us, everyone was shocked beyond words, for here was a man who had endeared himself in the hearts of all who were privileged to know him. He was blessed with those rare qualities of leadership that commanded the

admiration and affection of the entire New York community. These qualities spring from the richness of his life, the wealth of religious inspiration which he absorbed in his childhood, and which throughout his life constituted the core and bulwark of his unflagging and unswerving loyalty to his God and to his people.

"There is no better way of describing the essence of his short but distinguished life than by referring to that Biblical chapter that was read during the very same week in which Bernie was torn out from our midst. It describes the growth and development of a great leader of men—Moses. Moses grew up and went out among his brethren. The popular concept today of growing up, of becoming big, is one that implies climbing on the ladder of success, from which one looks down with disdain upon his humble origin and beginning, refusing to mix with old friends, trying to avoid his brethren, rather than becoming a part of them. But Moses, we are told, became great because he went to his brethren, not away from them. He saw their sufferings, and what did he do? Did he just preach words of comfort and hope? No—he did something more. He put his shoulders to everyone's load. He ran from one unfortunate to another, and helped to carry his burden, and bear his suffering, and when he saw his fellow men persecuted, hurt, humiliated, he championed his cause and helped to redeem him from his plight. Whoever had a heavy heart and was crushed under a heavy burden knew that he would find a receptive ear, a tender heart and helping hand, in Bernie Austin—a man who was ever ready to put his shoulder to someone's burden.

"In the years of Nazi tyranny, when waves of refugees were seeking a haven from their tormentors, he plunged headlong into this adventure of rescue, disregarding personal convenience—risking popularity and position to save his fellow men.

"Many a man who enjoys today the blessing of liberty and freedom will look back with undying gratitude to Bernie for enabling him to live in the land of the free.

"Here was indeed a man worthy of leadership. He won his following not by preaching of the lips, but by noble deeds. He will be remembered as a leader of his synagogue, as a parton of institutions of learning and charity, and as a singularly effective leader of his party, where his deep and abiding love for his country found a wholesome expression. His constituents, irrespective of color or creed, will long remember him as a leader of men whose services will be enshrined forever.

"May his soul rest in peace."

Confusing Their Enemies Is Main Communist Tactic—Only Clear and Courageous Leadership Is Adequate for Our Times

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Sign of November 1958:

CONFUSION AND LEADERSHIP

There are two ways to paralyze a man's will to action. One is to throw him into jail. The other is to throw him into confusion. The latter is the more effective way. It is as old as mankind. Jungle tribes used it when they sneaked up on the enemy camp, howled and screamed and beat their drums in order to collapse the enemy's will to resist. Roman statesmen did it with the programs of divide and conquer. Moscow does it today, annually pouring billions of dollars into world propaganda schemes.

Confusing their enemies is the special business of contemporary Communists. They do not use language as a means of communication between intelligent people. They use language as a weapon of deceit, deliberately designed to confuse and divide all who oppose their drive for world conquest. Such books as J. Edgar Hoover's "Masters of Deceit," Louis Budenz' "Techniques of Communism," and recently Lin Yutang's "The Secret Name," describe the inhuman system.

How successful the Soviet strategists have been is, in some measure, attested by the periodic fumbling of NATO in presenting a vigorous united front to Communist arrogance; the uncertainty in the foreign policies of Britain and France; the general scarcity of great statesmen in postwar Europe; the periodic markdown of the United States in many areas of world public opinion.

Communist Party conquests of Russia and China, Russia's conquest of the captive nations of Eastern Europe, were not won from positions of strength. They were won by wresting easy victories from people who were misinformed, divided, and confused. At times, the Communist victories were aided and abetted by the miscalculations and indecisions of the strong Western nations.

America needs a clear and definite voice as she finds herself passing through her gravest hour. It is not merely a political defeat we face. Nor is it merely a matter of a military defeat. It is a question of losing our way of life to an enemy which is ruthless—an enemy that boastfully operates in defiance of law, of morality, of international agreement, of decency, honor, and truth. Annually the Nation sweats to pay up $45 billion of tribute to hold this menace in check. Thousands of American boys are ready and poised to meet this enemy at any point on the globe. Yet too many statesmen are acting like mere politicians—intent on telling the people how wonderful everything is—that business is not merely as good as usual but even better—that they should eat, drink, and be merry for tomorrow social security will take care of them.

The people need great leadership. It is not leadership that sickeningly follows popular whim or artificially cooked up public opinion. It is not leadership to make wild and rosy promises (never to be kept) merely for the sake of votes. Leadership is of sterner stuff.

True leadership knows what to do when some arrogant labor leaders threaten the common welfare of the Nation. True leadership knows what to do when the decisions of the Supreme Court open up gaps in the law, to the aid and comfort of Communist conspirators in our midst; true leadership knows what to do when business executives show no desire to cooperate in holding down inflation; true leadership knows what to do when the national debt keeps mounting dangerously while people are encouraged to live ever more comfortably, charging it up to the future generations. True leadership knows what to do when the moral fiber of a nation is weakening; when crime overruns the land.

America is passing through her most critical hour. Wise leadership and not political cunning; firm leadership and not demagoguery, are the great needs of the hour.

Diplomacy Cannot Remain Static

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mrs. BOLTON. Mr. Speaker, probably never before in our history have the people of this country felt the need of clarity in everything related to our foreign policy. They want a clear explanation and sane comment. In the Christian Science Monitor of January 12, the editor, Mr. Erwin D. Canham, has given a very thoughtful presentation entitled "Diplomacy Cannot Remain Static." Under unanimous consent to extend my remarks, I include the editorial, as follows:

DIPLOMACY CANNOT REMAIN STATIC
(By Erwin D. Canham)

What is the Soviet Government up to? On the one hand, it proposes a peace conference and treaty on Germany which might have been drafted—and in important respects probably was—by V. M. Moltov 5 years ago. It is a stiff, unchanging note which would perpetuate the division of Germany and imperil the freedom of Berlin. But the Soviets dispatched a second note today: a proposal that the Geneva Conference on Surprise Attack be resumed although Soviet policy at that Conference had also been unyielding. The American Government agrees the Conference should be resumed. Perhaps its own policy will be more creative on the second time around.

On the other hand, the Soviet Government's No. 2 man, Anastas Mikoyan, continues to sing a song of peace and sweet reasonableness in California, after his journey across the American Continent. In the words of Governor Brown, of California, the first State executive to greet Mikoyan, "he seems to be fighting hard for understanding." Whether this is really what Mikoyan is fighting for may well be doubted. Just how significant is his trip if the Moscow Government remains unyielding on the fundamentals which the West must have to reach agreement?

SALESMAN MIKOYAN

It is very easy to overestimate the job of salesmanship Mikoyan is performing. He is being received politely by the civic groups he addresses. At press conferences, reporters sometimes applaud his skillful debating and shrewd dialectic. Americans are flattered and pleased at his interest in their typical institutions, such as supermarkets and middle-class homes. But all this does not go very deep. Americans know Mikoyan was one of Stalin's right-hand men, through the blood purges and repressions of the past 40 years. They know he must be very skillful to have survived. They know he is in the United States for one purpose alone—to serve the interests of the Soviet Union. And most of them are determined not to fall into any traps, however amiably and hospitably they may react to Mikoyan the tourist and even to Mikoyan the salesman.

In informed circles there are many questions: Is the Mikoyan visit more than a diplomatic and public relations stunt? Apart from being an effort to cultivate American good will, to gather firsthand information about the United States, and perhaps to confuse American policymakers, is there any more important motive? Are the Soviets really prepared to negotiate seriously and reasonably about the grave issues which di-

vide East from West? Of that there is no tangible hint. But perhaps that is the unexpressed meaning of the Mikoyan visit.

The only way to tell would be to negotiate.

It would seem, therefore, that some kind of negotiation on Germany is both inevitable and desirable. Safeguards are necessary. It is vital that the United States does not get drawn by the Soviet Union into a two-power peace conference to solve the world's problems. The strength of the Western World depends upon understanding and cooperation between all the western powers. Thus, Washington is keeping the allied western capitals fully informed of all Mikoyan says to American officials.

NO TWO-POWER SUMMIT

There is going to be no two-power summit. Moscow has long sought the beguiling prospect of the two great powers settling the world between them. That would be one way to destroy western unity. A second safeguard is that no settlement on Germany should neglect the interests of the German people. Those interests will best be served by free elections.

This position, on which the United States has long insisted, can be approached in various ways. If we accuse the Soviets of inflexibility, we must watch our own rigidity. If the price of free elections and free choice for the Germans were to be limitations on German armament, especially on nuclear armament, this is an agreement that should be very seriously considered. German unification, on anything like acceptable terms, would automatically solve the Berlin question. And the possession of atomic armaments by Germany becomes decreasingly important if (a) long-range missiles take over the defense job or (b) we obtain any enforceable limitation on armaments. As Chancellor Adenauer has freely said, a general agreement on armaments would certainly preclude German rearmament. And perhaps limitation on German armament might be a first step on the road toward general agreement. There are many in Germany, as well as in the West, who have their doubts about extensive German rearmament, especially with nuclear weapons.

For the West to agree to a peace treaty which perpetuates the division of Germany would also perpetuate communism's present penetration to within a few miles of Hamburg. It would perpetuate grave injustice to the 17 million Germans who must now live under Communist rule. There are better ways of contributing to a peaceful role for Germany than by continuing its division any longer than is unavoidable. So it is up to the West now to produce forthright and vigorous approaches to the question of Germany.

Diplomacy cannot remain static. Moscow has entered a highly volatile phase of its diplomacy. The West should be equally effective. Instead of merely reacting to successive Soviet stages—notes, visits, ultimata, speeches—it is time the West came up with strong and persuasive plans of its own to solve German problems. The status quo is no solution.

Mikoyan's San Francisco visit began with egg throwing and ended with apologies from Governor Brown.

Soon we shall see what he has to say to President Eisenhower, after he returns to Washington. Is there any serious content to his visit? Will he propose a Khrushchev visit to the President? And what will we say then? Can we refuse the No. 1 man what we have granted the No. 2 man? And should we especially if we keep a Khrushchev visit from turning into an effort to divide the world between the two great powers?

Is this kind of contact wrong? Surely it is not, if it does not produce illusions and misunderstanding and public or diplomatic confusion. A precept of American thinking and action has always been the value of contact. This we believe. Can we repudiate that belief now? And can we turn whatever is delusive in the Mikoyan or prospective Khrushchev visit into sober realism? Beyond such visits, can we negotiate seriously and realistically for the peace agreements to which Mikoyan is giving abundant lipservice?

A CONSERVATIVE CONGRESS

Congress is underway with some rather sound defeats for the liberals in both parties who wanted to change leadership or rules. Clearly there is a conservative majority in this Congress, as there were in the last ones, when it is organized and manipulated by as skillful a political operator as Senator LYNDON JOHNSON.

President Eisenhower's message was also conservative, in the true sense of the term, and directed toward constructive policies. Though Democratic leaders criticized it, the President's position may in general be one which will readily gain congressional majorities.

Moreover, the President and Vice President intend to take the administration's program to the country. They plan a series of dramatic television-radio programs on such key issues as cost of living, adequacy of defense and space programs, and other controversies. Indeed, the Vice President asserts the United States is ahead of the Soviet Union in developing military missiles, and is catching up fast in other aspects—such as the power of rocket engines—in which the Soviet Union is now admittedly ahead.

There is wide divergence of authority on this question, but the Vice President's views are not to be dismissed lightly. His position is in sharp opposition to the report of the committee headed by JOHN W. MCCORMACK, the House Democratic leader. That report, to which Representative JOSEPH W. MARTIN, the recent Republican leader did not dissent, pictured the United States as being behind the Soviets in the struggle for space mastery by a year or more, and said it might take 5 years to catch up.

The President and Vice President apparently seek to convince the country that utmost efforts are being made, both in missilery and in conquest of space, and that no new and expensive crash programs are required.

In more general terms, the Democratic majority as led by Senator JOHNSON and Speaker RAYBURN is unlikely to dissent far from the Eisenhower program. The Democratic left will break away sharply, but the heavy majority, including most of the Republicans, is with the more conservative position.

According to all evidences, this will not be a do-nothing period for administration leadership. The President cannot run to succeed himself, but he is deeply committed to the country's well-being. He knows that a vigorous program will not only help the country but his party as well. And the crux of the program is not merely the national defense. It is also the Nation's defense against value-destroying inflation. A balanced budget, a curb on marginal spending, an improvement in administrative practices and expenditures—all these things are essential. But above all policy is needed which can help to hold down the mounting wage-cost spiral. Here the combined efforts of both political parties will be needed if the deeper inroads of inflation are to be checked.

A Report Mikoyan Could Well Make to Khrushchev as They Proceed With Their Plans To Bury Us

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Michael Padev, foreign editor of the Arizona Republic, published in Phoenix:

MIKOYAN MAY WELL BOAST OF UNITED STATES VISIT

(By Michael Padev)

An important diplomatic dispatch must have reached Moscow late last night. Marked "urgent and top secret" and addressed personally to the Soviet Prime Minister, the dispatch must have said in part: "Most Esteemed Comrade Khrushchev:

"The first week of my visit to the United States can only be described as an unqualified success for the Communist cause and for foreign policy of the Soviet Government. Here are its most notable achievements:

"First, nobody paid any attention to the so-called unofficial character of my visit. As you had anticipated, Comrade Khrushchev, I was treated with the greatest possible official courtesy by every top-ranking U.S. official, and I have been able to conduct official business all of the time. On the first day of my visit, I saw Secretary of State Dulles for an official talk lasting 90 minutes. Dulles had been stricken by a virus infection the previous day, but in spite of the fact that he had a fever and was confined to bed, he came to the State Department especially to welcome me. Yet a few hours before he met me, Dulles had canceled his long-awaited official trip to Canada, on the grounds of ill health.

"I also had official talks with Vice President Nixon and practically every top-ranking congressional leader, especially those interested in foreign affairs. I am seeing President Eisenhower next week. Only one congressman refused to meet me. He is Representative Judd, a reactionary Republican from Minnesota and a well-known friend of that Fascist beast Chiang Kai-shek. Nobody paid any attention to Judd's unfriendly act, however. It was barely noticed in the press and only a handful of newspapers throughout the United States supported his anti-Soviet behavior.

"Second, generally speaking, the U.S. press has welcomed my visit. Unfavorable comments against me personally and against the Soviet government have been very, very rare. You can literally count on the fingers of one hand the U.S. papers that took an editorial position against my visit. By contrast, President Eisenhower's public request that I be greeted everywhere with courtesy and attention was given the greatest possible publicity and most newspapers have endorsed it. You remember the vicious capitalist press propaganda against your visit to London in 1956? Well, the situation has very much improved now, from the Communist point of view. On the whole we have every reason to be very satisfied by the attitude of the capitalist press toward my visit.

"Third, the only people who protested against my visit and staged demonstrations

against me in several of the cities I visited were Hungarian warmongers and former East European landlords and capitalists now living in the United States as refugees. No American organization of any importance supported these anti-Communist refugee activities. On the contrary, in every city where these demonstrations were organized, the local community leaders went out of their way to disassociate themselves from these anti-Communist refugee outbursts. Many important Americans asked me not to pay any attention to these protests, pointing out that most of the demonstrators were not even American citizens.

"Fourth, I have proved a great success with the American capitalists, and this includes not only such dear friends as Cyrus Eaton, of Ohio, and Eric Johnston, of Washington, D.C., and Hollywood, who have been really wonderful to me. Everywhere I go, the leaders of big business, among them the presidents and owners of some of America's biggest corporations, do their utmost to wine and dine me and to organize sumptuous receptions in my honor. This development was really unexpected, for, frankly, I feared that these people might perhaps remember what we Communists do to capitalists everywhere we come to power. The more I watch the behavior of American capitalists toward me, the more I am convinced that Karl Marx was quite right when he said that most capitalists are so stupid that they could easily be made to work for their own destruction.

"As Communists, we should cetrainly welcome and encourage the efforts of U.S. capitalists to destroy themselves. For this reason I have made many speeches requesting the immediate increase of Soviet-American trade. What could be better than to enlist the help of American capitalists in the building up and strengthening of Soviet industrial and military power? If American capitalists continue to show such friendly feelings toward us Communists, the day will not be far, Comrade Krushchev, when, in your own memorable and prophetic words, we shall, indeed, be able to bury all capitalists in the world.

"As ever, your obedient,

"ANASTAS MIKOYAN."

Sounds fantastic? Hardly.

Mikoyan may not have sent the above dispatch in the form you have just read it. But the sad truth is that a similar report must have been sent by him to Moscow over the weekend. And the sadder truth is that more and more such dispatches, reporting Mikoyan's success in capitalist America, will be forthcoming—to the comfort and delight of the Kremlin bosses.

We Farm Folks Must Take the Lead Ourselves

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. HULL. Mr. Speaker, the Congress of the United States will soon receive the annual report and recommendations on America's agricultural situation from the administration.

The report, if it follows the form of other such promulgations of the past few years, will focus on the light in the center of the room and will not peak into the dark corners of American agriculture. It will speak of favorable trends, of challenging goals to be met and of farm prosperity which is just around the corner or across the barnyard. But nowhere, using candid facts and figures, will a showing be made that the farm policies of the present administration have been anything other than a wretched failure.

In the February 1959 issue of the Missouri Farmer, an accurate appraisal of the farm situation is given by one of the clearest thinkers on American agriculture, Fred V. Heinkel, president of the Missouri Farmers Association.

Under leave to extend my remarks, I include Mr. Heinkel's editorial:

WE FARM FOLKS MUST TAKE THE LEAD OURSELVES

Unless its purpose is to lift the standard of living of farmers, a farm program is not worth the paper on which it is written.

Yet our farm laws continue to be so directed as to reduce farm prices and the incomes of farmers.

If you could have known 10 years ago that by 1958 the population of this country would increase by 25 million, that the national level of prosperity would be the highest ever known, and that farmers would make heretofore unparalled strides in cutting costs and improving efficiency, would you have predicted a dismal decade for agriculture?

Would you have guessed that with nearly 20 percent more persons to feed, the prices of meat, milk, and grain would be sharply reduced?

Could you have believed that despite this boost in efficiency, profits from farming would become so slim that 1 million farm families wold find it necessary to give up the job for which they had been trained and go elsewhere in search of a living wage?

Would anyone have imagined that during a period of such unprecedented prosperity, this Nation would continue to wrangle over whether or not to aid agriculture and would pile up millions; yes, billions, of bushels of grain while hungry nations restlessly looked on?

It has happened.

It is history that from a peak of $17.8 billion in 1948, total agricultural income has fallen to an annual level of about $12 billion. Inflation has further eroded this until presently total farm income will buy scarcely more than one-half of what it would in 1948.

There can be no doubt about the effect of this lack of purchasing power on the financial condition of the Nation's rural economy. The Census Bureau reports that 2.8 million families in this Nation have total earnings of less than $1,000 per year—and 60 percent of them live in the country.

Some have said that this has nothing to do with farm prices, because these low-income families don't sell many products anyway. But in order to net $1,000 a farm would have to produce, say, $3,000 worth of farm products. If prices to the farmer were but 10 percent higher—and this would be substantially below their value 10 years ago—the farmer selling $3,000 worth of commodities would receive $300 more.

It does not take a lot of imagination to think up ways in which such families would put this additional income to use. It could mean a water system in the home, better medical care, needed farm tools, etc.

All of us recognize that wherever found, poor living conditions stunt the physical, mental, and spiritual growth of people. We have made little attempt to eliminate poverty in our rural areas, and have too long tolerated this condition.

It is time to end the bickering in Congress, time to conclude the debate among economists and college professors, time to stress unanimity between farm organizations.

Events of the last decade make it obvious that conditions will not right themselves until farmers force through badly needed reforms in farm legislation and take the lead in seeing to it that this Nation develops a national farm policy which will assure full prosperity to agriculture.

There Will Never Be Another Curley

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Boston Sunday Globe of November 16, 1958:

THERE WILL NEVER BE ANOTHER CURLEY

(By Richard D. Grant, former secretary of J. M. Curley)

I saw James M. Curley at close range. I've seen him riding the high clouds of happiness and I've seen him racked by grief.

I saw him angry, in those towering rages that sweep away perspective. And I've seen him so softly sympathetic in the presence of tragedy as to completely forfeit his composure.

Dealing with Curley, it is difficult to write subjectively—to separate the myriad human qualities from the bronze legend of the demigod.

When I was stranded with him for 3 hours on a tiny island on Eagle Lake, in the afternoon shadow of Mount Katahdin, I was sure he was the most charming and approachable man I had ever met.

At other times, I have thought he might be Brian Boru, or Cond of the Hundred Battles, or some other legendary Hibernian—a throwback of the age of giants.

In his prime, nobody ever looked twice at Curley to be sure of his identity.

As was said of Maurice Barrymore, the actor, if they didn't know who he was, they asked.

I heard of him for the first time 43 years ago, as I sat in athletic costume on the floor of rackety old Mechanics Building, waiting to race. Tall and faultless in formals, with the blue-black hair and high color of the fair-skinned Irish, Curley was impressive enough before he began to speak.

But that voice—ranging from deep organ quality to the screaming crescendo of a whipcrack—that could only be a gift direct from the gods.

As in the case of most controversial men, a mass of mythology has grown up about Curley—some of it invented by himself, some by detractors, but all, or nearly all, so apocryphal as to distort a true image of the man.

Actually, James M. Curley was an intensely human kind of fellow, one who loved a good time, who was fond of a joke, who was dedicated to his family—one who, in other settings, might have been a great actor, a world-famous promoter, perhaps a cardinal.

I remember something said by his Jesuit son, then little Franny, 11 years old, as the governor was dashing away from the dinner table to some official function, attired in cutaway and high silk hat.

"You may not realize it, father," said the deadpan youngster to the first citizen of the commonwealth, "but in that outfit you're wearing, you look just like W. C. Fields."

If I were asked to rate Curley as a politician, I would have to say he was the most

dynamic campaigner of an era that began without loud speakers, without quick transportation, and which ended with television, jet plane travel and audiotape commercials.

No one in our time ever brought to the field of campaigning the boundless energy with which Curley hurled himself into every fight that commanded his attention.

The Old Man must be chuckling in his grave over the self-assurance of those who take satisfaction from the fact that the overwhelming success of the Democratic Party was achieved this year without him.

In my opinion, present Republican weakness has come about because, for 50 years, the Republicans made Curley their only target—exhibit A in the chamber of political horrors.

What they forgot to notice was that the Democrats meanwhile were spawning a whole new generation of leaders, a new organization of voters, a new order of objectives in Massachusetts.

Jim Farley's memory for names and faces is legendary, but Curley's was no whit inferior.

Forty-three years ago, a red-headed kid named Arthur L. Palmer delivered milk to the Curleys in Mount Pleasant Avenue, Roxbury. It was a brief acquaintance.

Recently, Mr. Palmer, now 70 and completely gray, met Mr. Curley passing the Parker House, said "Hello, Governor," then moved to one side.

Curley turned around, his eyes flashing recognition, put his hand on Palmer's shoulder and replied, "Why hello, 'Red', how's the North Dorchester A.A.?"

There's a sequel to this.

The North Dorchester club was Clarence H. DeMar's first sports affiliation and "Red" Palmer rode the bicycle behind DeMar when he won his first Boston Marathon on April 19, 1911.

As a fellow reared in the newspaper tradition, to me, Governor Curley's most outstanding gift was his appreciation of news values, his wonderful sense of timing, and his flair for the dramatic. No Governor, before or since his time, has made more news.

I recall one press conference at which Curley told statehouse reporters he knew of nothing that might be of special interest to them.

Nevertheless, they hung around in casual conversation for half an hour.

Then, just at the breakup, the Governor observed quite casually that he had just notified Eugene C. Hultman, chairman of the metropolitan district commission and former Boston police commissioner, that he was removing Hultman from office.

The gallery was so stunned that, for a moment, nobody moved a whisker. Then they dashed back to their seats and the ensuing interview made headlines for weeks in every newspaper in the State.

Curley's sense of humor was extraordinary and broad-gaged, like everything else about him. Some people would have you believe he had an appreciation only of slapstick, but that was not so.

While Governor, he had for a legislative secretary a well-tanned, baldheaded lawyer who wore gold spectacles, usually pushed back on his forehead. His name was John H. Backus and he was forever trying, without much success, to direct the Governor's attention to bills enacted by the legislature.

One day, when the Governor's chamber was full of visitors, Backus made his usual move, with the usual result. "No, John, no—not now," said Curley with a regal wave of the hand that commanded Mr. Backus to shuffle out again behind a gently closed door. Curley turned to his company. "You know," said the Governor, "he's getting to look more like an old Spanish cardinal, every day."

I wonder how many remember the day reporters begged Mr. Curley for a story to fill what was apparently a news vacuum on the hill, and the boss came through with the smasher about the two $100 million luxury liners he was planning to get from Roosevelt.

Yes, indeed, these immense ocean greyhounds were to be built with Government help, would sail from the port of Boston and would carry 5,000 passengers each to Europe for $50 a head.

The boys all nudged each other—what a yarn.

Typical Curley promotion stuff.

Right now, a corporation has been formed and financed, headed by a New York hotelman, which seeks to do just that.

Build two huge, oceangoing ships with Government aid, carrying at least 5,000 passengers each at a rate just about as low as the tourist rate pegged by Curley 23 years ago.

Mr. Curley's long foresight was uncanny.

His critics scoffed at this ability to see beyond the present, they said Curley was just a big blowhard who was lucky enough to have some of his daffy schemes land right side up.

Frankly, I don't agree.

I've seen too many of his pipedreams realized, with credit for Curley's ideas going to people who were not fit to hold his coat.

If space wasn't so tight, I could expand this to book length.

Tell about Curley's distribution of silver dollars, for instance—not in the manner of largess, like the Duke of Burgundy to the peasants, as has been claimed, but as a morale builder for the ladies during the great depression.

With a pocket full of cartwheels, the Governor never was at a loss in meeting women voters.

Pressing a dollar into the hand of an admirer, he would say: "There are two things, dear lady, that every woman needs and now you have both—money and good looks."

One day on the way to lunch, we were walking down Beacon Street past the old Houghton and Dutton Building when an ancient female panhandler popped out and barred the way.

For sheer decrepitude and filth, her appearance would be hard to match.

Her age might have been anything from 75 to 100.

The Governor reached for his pocket, the one in which he kept the silver, and I found myself flinching from what was apparently about to happen.

"Oh, no," I groaned in nearly audible tones. "Not this one."

But I had underestimated Curley. He gave the old dame the dollar with the usual flourish and she followed us all the way to the Tremont Street corner shouting, "God bless you, Governor. God bless you and keep you. I'll pray for you every night for the rest of my life."

There'll be a lot of epitaphs suggested for this intensely human, rugged individual but, having in mind Mr. Curley's favorite author, the Bard of Avon, I can't think of a better one to signalize his passing than to quote Hamlet's familiar comment from the first act—his observation on the passing of his father:

"He was a man, take him for all in all,
"I shall not look upon his like again."

The Space Challenge

EXTENSION OF REMARKS
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. KING of Utah. Mr. Speaker, while I am deeply pleased to be a member of the Committee on Science and Astronautics, I am also greatly sobered by the gravity of this assignment. I believe that this committee, despite its newness, bears one of the heaviest responsibilities of our time.

Overtaking the Russians in space will be no easy task, but I am confident the United States has the capacity to accomplish it. We will not do it with the checkbook alone. We will not do it with anything short of a maximum effort in every relevant area of human activity.

The astronautical challenge has been widely described as the space race. This is an apt expression. We Americans must realize that what we are engaged in is, in every sense of the word, a race.

Speed and time are essential elements of every race. We must recognize their particular importance in this race.

A distinguished Philadelphia scientist, Dr. I. M. Levitt, said, in an Associated Press story which appeared in the Washington Star, that by 1980 men may be living in the plastic-domed villages on the moon. Imagine, if you will, how quickly 1980 will be upon us. In my memory I find it no more than a quick step back to the outbreak of World War II, which was almost 20 years ago. Within a similar span men could be living on the moon.

Dr. Levitt, who is the director of the Fels Planetarium at Franklin Institute, said, in fact, that his estimate of 1980 may be too conservative. With another breakthrough in our progress in nuclear energy, and with atomic fuels installed in space vehicles, men, he said, could put settlements on the moon even sooner.

This is indeed a sobering possibility.

It is even more sobering to ponder the possibility that the men who settle the moon might be Russians—perhaps only Russians. We do not need Dr. Levitt to tell us—as he has—that control of the moon by a hostile military power will give it an alarming logistic advantage.

Clearly, time has favored the Russians up to now. Experts agree they have a substantial lead in space. Exactly how wide the gap is, no one knows. But certainly the Russians, believing as they do about the importance of space leadership to their goal of world supremacy, will never willingly allow that gap to be closed, and their advantage lost.

In a race which runs just 20 years, and perhaps less, in its first important heat—in what actually may be the only important heat—a handicap of a year is plainly critical. A gap of 3 years could be insurmountable.

I see a parallel between the race in space and the contest on the seas which engaged the world in the 15th and 16th centuries, climaxed by the colonization of the Americas.

The exploits of Columbus and Magellan, which proved the earth round, opened great frontiers to exploration and development. Spain and England had the imagination to recognize the political, military and economic importance of these frontiers, and set out to conquer them. By their unremitting efforts to colonize and develop the New World, England and Spain became formidable sea powers, and fixed for them-

selves places of eminence in global affairs for several centuries.

The New World today is space.

Concern about whether the American people are taking this challenge seriously enough is not mine alone. I am certain it is shared by my congressional colleagues, as well as by many other American citizens. Unfortunately, there are, however, many who do not share it.

Alan T. Waterman, Director of the National Science Foundation, has voiced deep concern about American apathy toward the space race. In a United Press International story carried by the Washington Post, Mr. Waterman was quoted as saying:

As a Nation, we appear to forget that we live in a competitive world and shall continue to do so. It seems abundantly clear that we shall rapidly lose in competition unless we can show more determined and constructive efforts than we have during the past years.

Mr. Waterman deplored the post-sputnik response of the American public. He warned that other countries, and especially Russia, are showing a determination and a national spirit on the part of the people which seems to be relatively absent from the American scene.

We do not seem to understand—

He said in the article—

that it will be impossible to maintain our own prosperity and world peace unless we do and do promptly the things necessary to compete in a modern world.

He went on to say that American educators who have toured Russia have been alarmed at the clarity of purpose they find there. He said the Russians believe that by winning the race in space, and by emphasizing science and education, they will achieve leadership over the entire world, and without the cost of a destructive war.

As Mr. Waterman points out, the Soviet challenge really is more than a race in space. It is a contest in technology, whose fruitage is not only better space vehicles, but better bathtubs and better automobiles. This reflects, of course, a more basic contest in education.

Our answer to this challenge must be the effective use of those qualities and resources which have enabled Americans to successfully meet every other crisis in their history; namely, imagination, initiative, and ingenuity.

These qualities are inherent in, and cultivated by, our democratic way of life. They are the bread and butter of our free enterprise system.

The society which cultivates and nurtures these qualities in the greatest abundance is, in reality, the truly liberal society. I am confident our society has, and always will have, these qualities in greater abundance than is possible in any regimented Communist society.

And with them, Americans can win the space race.

We will win it, if we will but cease to grumble about the challenge, put aside our partisanship and our doubts, and apply our best brainwork and teamwork—along with the proper measures of elbow grease and midnight oil—to the task.

Business and Government Meet at the Cleveland Department of Commerce Field Office

---

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1959

Mrs. BOLTON. Mr. Speaker, in an article in the December issue of the Clevelander, monthly magazine of the Cleveland Chamber of Commerce, Arthur W. Zimmerman says:

If Ed Higbee has anything to say about it—and he does—the Cleveland field office of the U.S. Department of Commerce is one Government office where the taxpayer will get a dollar's worth of information and help for a tax dollar spent.

Col. Edwin C. Higbee has been manager of this hard-working office since 1957 and heads a staff of 12. As evidence of the work handled by this small group, Mr. Zimmerman points out that between 2,500 and 3,500 personal contacts are made with business people each month by telephone calls, letters and personal visits. In addition, Manager Higbee makes an average of three speeches each month and attends as many meetings of special groups as he possibly can. The office personnel, aside from their regular duties, run booths at trade shows, such as the recent Metal Show, and put on educational programs.

Believing my colleagues will be interested in reading Mr. Zimmerman's article, "Business and Government Meet at the Commerce Department Field Office," under unanimous consent, I include it with my remarks.

The article follows:

BUSINESS AND GOVERNMENT MEET AT THE COMMERCE DEPARTMENT FIELD OFFICE

(By Arthur W. Zimmerman, secretary, Cleveland Seaway Committee, the Cleveland Chamber of Commerce)

If Ed Higbee has anything to say about it—and he does—the Cleveland field office of the U.S. Department of Commerce is one Government office where the taxpayer will get a dollar's worth of information and help for a tax dollar spent.

"We can be of great assistance to business people of all kinds in supplying the information necessary to back up management decisions," says Mr. Higbee. "We want not only to help the local businessman select precisely the facts he is seeking from our vast storehouse of information, but we want also to act as his personal spokesman to the Federal bureaus, telling them in Washington where Government studies can be made more useful to private interests.

"This is a two-way street we're running. One of the major obstacles to better use of Commerce Department facilities, however, is that so often the private citizen simply doesn't realize what a large mass of aids is available to him."

Edwin C. Higbee became manager of the Cleveland field office of the U.S. Department of Commerce on March 25, 1957. He heads a 12-man office where the workload is divided approximately in half between domestic and foreign business.

Lendall E. Jones is chief of the domestic commerce division, assisted by John D. Kishler, business analyst, and Miss Helen Kostuk, secretary.

Charles B. Stebbins, heads the world trade division, with Miss Ann G. Semerer, business analyst, and Miss Helen Green, secretary, assisting.

Mrs. Zelda W. Milner carries the title of library and research division chief, but actually she is Girl Friday to anyone seeking a specific piece of information among the maze of statistics always on tap in the office.

Miss Margaret Farrel is head of publication sales for the office. As such, she administers one of the most valuable services offered by the field office. Here, for a matter of pennies, the businessman can buy the study which bears on his particular problem, take it back to his office, work with it, pencil it, cut it up, tear it apart, or file it—a great advantage over getting only a hurried look at it some place outside his office.

The staff of the local field office is rounded out by Miss Betty Lenahan, librarian, Miss Edith Mashman, secretary to Mr. Higbee, and Mrs. Ellen Hannon, secretary to Mrs. Milner.

One benchmark of the amount of work handled by this small group is the 2,500 to 3,500 personal contacts made each month. That includes only telephone calls, letters, and personal visits. In addition, Manager Higbee makes an average of three speeches every month and the office personnel runs booths at trade shows, such as the recent metal show, and educational programs.

Besides that, Mr. Higbee makes a definite effort to attend as many meetings of special groups as he can. "I catch a meeting practically every noon, sometimes two or three in a day. When you get to three meetings in a day, that can be pretty rugged," he admits.

It's all part of Mr. Higbee's personal conviction that the community should be alerted to the help awaiting it at the end of a local telephone call or a short visit. But it's not a one-man show.

In truth, no one person could know the details of everything the Commerce Department has to offer. Within this Federal department is the Business and Defense Services Administration, Office of Business Economics, Bureau of the Census (largest single factfinding agency in the world), Civil Aeronautics Administration, Coast and Geodetic Survey, Bureau of Foreign Commerce, Maritime Administration, and Federal Maritime Board, the Patent Office, Bureau of Public Roads, National Bureau of Standards, the Weather Bureau, and, just recently, the St. Lawrence Seaway Development Corporation.

All this makes the Commerce Department sound awesome and overpowering but it's not. The one irreplaceable advantage offered by the local field office is that, while they have an inside access to the marble halls of Washington, the field office personnel are here, on the local scene, knowing the importance of information to the consumer of that information.

Just two examples.

A producer of brick and common clay products was wiped out by fire. To collect damages from his insurance, he had to support his claim that he lost a certain amount of business during the time he was out of operation. Commerce Department indexes give the month-by-month production rate of these products for years. The claim could easily be verified.

Dr. U. T. Greene, assistant director of commercial development, Diamond Alkali Co., says: "* * * information, such as your field office has furnished us on many occasions, is so much a part of our regular stock in trade that we use it almost continuously in the market analysis part of our work. It is really part of the warp and woof of the fabric from which we assemble many of our studies and reports. Perhaps one report that was of outstanding help to us was the special bichromate report in the October 1955, Chemical and Rubber Industry Report. That article, issued at a time when we were assembling end use information on our own sales, was

especially helpful to us in setting up categories and giving us an overall check on U.S. sales of bichromates."

The man sitting on top of the world trade division in Cleveland, which threatens to mushroom in the next few years, is Charlie Stebbins. A graduate of Ohio State University with a major in foreign trade and one-time employee of the combination export managing firm of Curtis E. Wagner, Akron, Mr. Stebbins has been with the Commerce Department for 12 years, long enough to pick up a lot of know-how in foreign trade matters.

"We can be and are of help to the little company just considering entering world trade and to the large corporation with years of background in the field," says Mr. Stebbins. "One reason is that we are the local outlet for information being funneled back to the United States by the American Foreign Service. The American Foreign Service is a sort of on-the-spot overseas observer for domestic businessmen."

This on-the-spot reporting is demonstrated by the World Trade Directory reports, designed to furnish American firms with sales information on overseas companies. The obscure titles of the reports, plus the relatively cheap price of $1 per copy, are misleading. Information in the World Trade Directory reports is not more than a year old and obtained by trained American personnel in the country where the foreign firm operates. There are close to 500,000 such reports on individual overseas companies on file in Washington.

"We find information in these World Trade Directory reports to be very helpful," states C. D. Newcomer, export manager, Harshaw Chemical Co., "especially in that they disclose the relative size of the foreign firm, number of salesmen, number of branches, and number of technical employees, if any."

Trade Lists, available for $2 each, give names and addresses of all known importers and exporters in a given product classification for a particular country. Trade Contact Surveys, costing $10 per investigation, dig deeper for prospective overseas agents or distributors or licensee firms.

Besides these tailored reports, there is a growing practice of having American consular officials and commercial attachés from foreign countries visit the Cleveland field office to talk directly with businessmen. One such visit was made recently by A. Guy Hope, American consul at Istanbul, Turkey.

Among the industry delegations to meet with Mr. Hope was one from Thompson Products export division, Thompson Ramo Wooldridge Inc. Says Frank L. Williams, of Thompson Products, about the visit: "Our discussions with Mr. Hope were mainly concerned with the present and future import and dollar exchange situations, the size of the market, their sources for automotive, truck, and industrial engine spares, and other matters. Mr. Hope's firsthand information from an American businessman's point of view is, we feel, the next best thing to actually visiting the market ourselves."

Next such overseas visitor scheduled to come to Cleveland is J. L. Dougherty, consul and commercial officer at Sidney, Australia, who will be here at the local field office, January 21–22, 1959.

Often the Department of Commerce is the only source for certain types of information on world trade matters. More frequently, the local field office is simply the most convenient and efficient place to get it.

That's why Cleveland is among the top five offices in volume of World Trade Directory reports in the country.

That's why Manager Higbee of the Cleveland field office, says: "The development of the port of Cleveland and all international trade will have a major effect on the work of this office in the years immediately ahead."

Delawareans Support McDowell Resolution To Investigate High Cost of Living

EXTENSION OF REMARKS
OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1959

Mr. McDOWELL. Mr. Speaker, I have been pleased to receive numerous letters from my constituents in Delaware approving House Resolution 42 introduced by me on January 7, 1959. It is my sincere belief that it is the responsibility of the Congress, as well as the President and the executive department of our Government, to do something, and do it now, about the high cost of living and inflationary prices. It is not enough just to issue reports and to make glowing statements about the necessity to stop the threat of further inflation. It is the duty of the Congress to find out, to get the facts, and then to act intelligently to combat this evil threat to the economic well-being and security of the Nation. I submit as example of the correspondence I am receiving from the wonderful people of my State who support my position on this important question the following letters, also a statement appearing in the Wilmington Journal-Every Evening under date of Thursday, January 15, 1959:

STATEMENT APPEARING IN THE WILMINGTON, DEL., JOURNAL-EVERY EVENING, THURSDAY, JANUARY 15, 1959

Congressman HARRIS B. McDOWELL, JR., Democrat, of Delaware, on the first day of the new session of the 86th Congress introduced in the House of Representatives a resolution to investigate the reasons for the high cost of living. The proposed act, now known as House Resolution 42, titled "Creating a Select Committee on Consumer Interests," calls for the appointment by the Speaker, Mr. RAYBURN, of a seven member committee, one of whom shall be designated as chairman.

The committee is authorized and directed to conduct a study and investigation by means of research and investigation of all problems affecting consumer interests in the present national emergency and to obtain all facts possible in relation thereto which would not only be of public interest but which would aid the Congress in enacting remedial legislation, and to report to the House from time to time the results of such studies and investigations, together with its recommendations.

In carrying out its duties the committee shall give special attention to prices received by the producer and to prices charged the consumer for food, fuel, and clothing, and the costs and methods of producing, processing, and distributing these and other consumer goods and their component parts.

For the purpose of this resolution, the committee, or any subcommittee thereof, is authorized to sit and act during the present Congress at such times and places, whether or not the House is sitting, has recessed, or has adjourned; to employ upon a temporary basis such technical, clerical, and other assistants as it deems advisable; and, with the consent of the head of the department or agency concerned, to borrow from Government departments and agencies such special assistants, and to utilize the services, information, facilities, and personnel of all agencies in the executive branch of the Government; to hold such hearings; to require the attendance of such witnesses and the production of such books, papers, and documents; and to take such testimony, as it deems necessary. Subpenas may be issued under the signature of the chairman of the committee or any properly designated chairman of a subcommittee thereof, or any member designated by him, and may be served by any person designated by such chairman or member. The chairman of the committee or any member thereof may administer oaths to witnesses.

Congressman McDOWELL issued the following statement with regard to his resolution:

"House Resolution 42 is the answer to my campaign pledge to fight the high cost of living and inflation. I am going to do everything I possibly can as a Member of Congress to urge my colleagues to pass this proposed act in this session of Congress. There is much talk today of the danger of inflation. The President in his state of the Union message had this to say: 'We will not tolerate inflation in the years to come. But history makes clear the risks inherent in any failure to deal firmly with the basic causes of inflation. * * * It strikes hardest those millions of our citizens whose incomes do not quickly rise with the cost of living. When prices soar, the pensioner and the widow see their security undermined, the man of thrift sees his savings melt away; the white collar worker, the minister, and the teacher see their standards of living dragged down.'

"I agree with this statement by President Eisenhower, but by and large the public knows little or nothing about the causes of inflation and too many of them think the consequences are desirable. Even among some businessmen and professional people, there exists an alarming state of ignorance and apathy as to its consequences and yet a rather fatalistic acceptance that continuing inflation is inevitable. As I see it, the battle against inflation must be waged on the educational front. We shall win the battle only when the mass of our voters come to understand at least the fundamentals of the causes and consequences of inflation.

"Obviously a great need exists for ascertaining, analyzing and interpreting the facts bearing on inflation. Both the executive department and the Congress have a great responsibility to the Nation at large to present and analyze these facts for the general public. This is not going to be an easy task. Inflation is a mysterious phenomenon, both in its nature and its source. Experts violently disagree. We must try to isolate and focus attention on the fundamental causes.

"If we can all recognize even mild inflation for what it is—a symptom of failure—failure on our part to govern ourselves wisely, if we can all recognize that for the community as a whole there is no hedge against inflation, and, finally, if we can all recognize the price paid to avoid inflation is much less than the price exacted by further inflation, then, and only then, shall we have laid the groundwork for a successful anti-inflation campaign.

"It is my belief that House Resolution 42 is the best approach to a need for factfinding in order to share our experiences and to discuss the best ways and means for Congress to carry the fight forward against the high cost of living and inflation."

LETTERS INDICATING APPROVAL OF HOUSE RESOLUTION 42

WILMINGTON, DEL., *December 30, 1958.*

DEAR HARRIS: I want to take this opportunity to wish you a happy and successful session in the U.S. House of Representatives. I know you will live up to your campaign promises and I'll be rooting for you in your

all-out battle to stem the high cost of living. No doubt you are well aware that the cost of living is still soaring and being unchecked. Everyone seems to be concerned about it, but no one seems to be doing anything about it.

As a father who is trying earnestly to raise three young children, I find it quite difficult to make ends meet. The price of children's shoes and clothes is outrageous. Why should you have to pay the same price for a child's outfit as you would an adult's? To prove that this pricing business is dishonest just let me cite an example for you. When buying tires for an automobile you pay less for size 600 by 15 than you would for size 760 by 15—why? Because naturally the manufacturer uses less material and time to make same. It seems this theory does not apply to children's clothing. The legalized crooks claim it takes just as long to make children's shoes and clothes as it would for an adult's. To me this sounds like a plain lie. Also, Harris, I wish you would check into the price of drugs. A previous investigation down in Washington in reference to drugs discoverd that the drug companies were making 200-percent profit on their pills and medicines. It seems the drug lobby was successful in killing this investigation as according to the newspapers no action was taken.

Your efforts in stemming the tide of inflation will be noted and appreciated by the voters who supported you in the recent election. Upon closing may I wish you a happy and prosperous New Year, and when you find time, keep me posted on what is going down there in our Nation's Capital.

Best regards.

NICHOLAS (MICKEY) FIGUN.

WILMINGTON, DEL., *January 15, 1959.*

MY DEAR CONGRESSMAN MCDOWELL: From the news item in tonight's Journal Every-Evening, you are certainly making an auspicious start.

As one of many thousands of retired persons in Delaware, I know what inflation has done to my life insurance and savings and pension. You have attacked the most dangerous problem facing us today.

Instead of Democrats being the spenders, which creates a cheaper dollar, your action creates confidence in the American dollar here and abroad, and keeps this country first in world stability.

I wish you success in the continuance of your career.

Very truly yours,

WILLIAM J. MALONEY.

WILMINGTON, DEL., *January 17, 1959.*

DEAR MR. MCDOWELL: As a member of that group of your constituents whose incomes are fixed, we wish to express our appreciation of your efforts to combat the high cost of living and inflation through the introduction of House Resolution 42, and we pray for the success of your efforts.

While you are familiar with this situation in Delaware, we mention a few that seriously affect the lives of those of us in the fixed income groups.

Foods: Especially all meats.

Telephone and tax: A telephone almost a necessity to pensioners. Recently increased, with another further increase in prospect, further increasing the Federal tax we are paying, which for benefit of all should be repealed.

Hospitalization: Now almost prohibited for persons in our group.

Home upkeep: Repairs, etc.

Bus fares: All transportation.

Miscellaneous items: Hair cuts, shoe repairs, postage, papers, service charges, fuel, etc.

Sincerely yours,

E. E. ALEXANDER.

The Real Mikoyan

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. DEROUNIAN. Mr. Speaker, having listened to the television program on Sunday, January 18, when members of the press queried Mr. Mikoyan, I am in complete agreement with the views of Mr. David Lawrence and commend to you his editorial, which appeared in the news on January 20:

U.S. PEOPLE SEE REAL MIKOYAN—RED'S INTERVIEW CALLED DEMONSTRATION OF TACTICS AMERICAN OFFICIALS FACE

(By David Lawrence)

The American people were given on a television program Sunday a vivid demonstration of what the U.S. Government is up against in its relations with the Soviet Union.

Evasion, indifference to truth, arrogance, and brazen misrepresentation of facts came from the Soviets' Deputy Premier, Anastas Mikoyan, along with a very plain implication that, if the U.S. Government wants peace, it must surrender unconditionally to the Soviet Union on all issues now in dispute.

Never in all history has any high official of a foreign government visiting this country displayed such effrontery and defiance of the American Government and its policies.

Not a single question asked on world policy was answered forthrightly or with the slightest regard for what the past record shows. To the Soviet Deputy Premier, the brief and limited stay by a small detachment of American forces in Lebanon—where not a single native citizen was killed or injured by American troops, and where withdrawal came in 3 months—is the same thing as the continued occupation of Hungary by Soviet troops, who have killed nearly 20,000 Hungarians in the 2 years since the people rose up in an attempt to regain their liberty.

Again and again the panel members of the Meet the Press interview, which was televised over a nationwide network of the National Broadcasting Co., tried to get Mr. Mikoyan to answer whether any American high official would be allowed to go to the Soviet Union and speak as directly to the people of Soviet Russia in criticism of the Soviet Union as he has to the American people about the U.S. Government. The evasive reply was that the visitor would be given the best reception.

When the Soviet Deputy Premier was asked why, inside Russia, criticism of the men in the Kremlin is not permitted and there is such a rigid censorship maintained on all the newspapers and radio stations, he replied—without even a smile—that, of course, there is nothing for anybody to criticize, as the Soviet Government is working well. This is the stock answer of Communist officials.

Did Mr. Mikoyan really think his listeners in America were so gullible or so naive as to accept such an untrue statement? He would have been more logical if he had said frankly that, under the Communist system, the policy calls for censorship and that other countries may do it differently. He did try to explain away the censorship of Khrushchev's lengthy speech denouncing Stalin which was read to a Communist meeting 3 years ago but never published in the Soviet press. Mr. Mikoyan inadvertently conceded that the Government seemed to be afraid of the people, since, as he said, there were some enemies who might get argumentative material out of the speech and cause internal difficulty.

The American audience, indeed, learned far more about the troubles of President Eisenhower and Secretary of State John Foster Dulles in talking with Soviet officials from watching that television show than they will learn from the speeches of those luminaries on Capitol Hill who insist that all that's needed to deal with the Soviets are bold and imaginative ideas and policies.

The fact is that the dictators in the Kremlin are as cruel and inhumane, as indifferent to the wishes of human beings for freedom, as were Hitler and Stalin. Far from reassuring the American people that the Soviet Union really wants peace, there was a frightening aspect in Mr. Mikoyan's attitude. He seemed totally indifferent to the possibility that a world war could break out some day because of the difficulty of coming to any agreement with the inflexible Communist mind as some untoward incident arises or some adventure in bluffing strategy—like that now enveloping the status of Berlin—is undertaken by Moscow.

Mr. Mikoyan—the No. 2 man in the Kremlin—sits adamantly across the table, making no concessions but demanding counter proposals, which can be only of one kind—surrender—if the Soviet Government is to be appeased.

Under the circumstances, any suggestions of disengagement or negotiation or of reaching an agreement at a summit conference seem worthless. The only policy apparently that will succeeed in deterring war is one that keeps up American armament to full strength while refusing to be bluffed by Soviet maneuvers in Europe or Asia.

It's a game of watchful waiting. It means a stalemate that can last for years unless misguided persons here, weaken and cause the policy of the United States also to weaken. It is firmness alone that will win out. For, in the end, appeasement only brings on war.

Address of Samuel Rose, Chief Contact Officer, Veterans' Administration, Before Delegates of 31st National Convention of the Fleet Reserve Association

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Samuel Rose, chief contact officer of the Veterans' Administration before the delegates to the 31st national convention of the Fleet Reserve Association:

I am happy to be here today—my shipmates of the Fleet Reserve Association—to take part in this 31st national convention of your fine organization. I feel that we are old friends as well as shipmates. None has made this feeling stronger in my heart than your splendid national officers. I treasure their friendship.

These are some of the deeply felt personal reasons why each year I mark the Fleet Reserve Association's national convention on my calendar as a must. But there is another reason why I derive pride in coming here to greet you, and to assist you so far as VA benefits are concerned.

Yours is a very special organization. Your qualifications for membership are truly unique. Tom, Dick, and Harry may be nice people—but Tom, Dick, and Harry can't get into the Fleet Reserve Association unless they have completed 6 years of active service in the Navy or Marine Corps.

Another thing, there's no use knocking on the Fleet Reserve door for admission, unless you were that king among men when you were afloat on the salty sea—an enlisted man.

Does anyone think that's the whole story of how you are dedicated to Uncle Sam and to your shipmates and their dependents? No sir. Your key officials know their business. The record proves it. Schuyler Pyle, 15 years of active service; Russell Langdon, 27 years of active service; Charlie Lofgren, 21 years of active service; Charlie McCarthy, 30 years of active service. That's an impressive record.

Yes, yours is an exclusive organization, yours is a growing organization, yours is a willingness to fight for the best interests of your shipmates, their widows, their orphans, and their families. You have also fought for measures to keep America free, to keep America strong, to keep it growing. I think you can take a great measure of pride in the fact that you have never made membership in the Fleet Reserve Association a requirement before you extend a helping hand to a shipmate.

I want to pay personal tribute to your national secretary, Russell Langdon. "Lucky" Langdon we call him. I don't think that happy nickname has a thing to do with him. I think it means that whoever gets to know and to work with Russell Langdon is truly fortunate. I know it is so in my case.

It's the same story with Schuyler S. Pyle, your national financial secretary. We've known each other a long time. And the longer we know each other, the more we like each other. He radiates sunshine in your executive offices, and I've seen him on some cloudy days.

And let's not forget Charlie McCarthy, your editor of naval affairs. To come to any anchorage of the Fleet Reserve Association, and not see Charlie around—well, that would be almost like going to a World Series and not seeeing the Yankees.

And Charlie Lofgren. We might as well have a Navy without an ocean, as to come here for a Fleet Reserve convention and miss him. If a seagoing outfit like this can be said to have a cornerstone—Charlie is it.

And may I tell you this: Your zeal for the good of veterans everywhere is matched by the zeal of the Veterans' Administration for that all-important cause. I know, because I know the zeal that inspires our dynamic and hard-working Administrator, Mr. Sumner G. Whittier.

I wish Mr. Whittier could have been here in person. His warm and magnetic personality would have thrilled you. He has a big task. There are many calls on his time and energy. I hope the day may come soon when both of us—Mr. Whittier and myself—may be privileged to stand together on this platform to assure you that the VA is in business to serve veterans and their dependents to the best of its ability.

I said that Sumner G. Whittier is doing a marvelous job. Let me shoot a few machinegun facts at you, to show you I'm not using words carelessly.

VA's budget today—$5 billion. Number of employees, fellows just like me, trying to do our best to serve you—over 170,000. And the cost of operating the VA during the fiscal year 1958 was less than 4 cents of each tax dollar that the VA spent in that year.

The VA operates the biggest hospital and medical program in the Nation, and the largest ordinary life insurance business in the world. We administer a multi-billion-dollar compensation and pension program. We conduct a bigger home-loan mortgage operation than any private institution in the country. We operate the greatest education program ever undertaken with Federal funds. These programs have had a profound effect on the national welfare.

Think of what America is today as the result of VA-sponsored education—hundreds and thousands of desperately needed scientists, engineers, doctors, schoolteachers—making America mentally and morally strong, because the benefits the Congress has provided war veterans have proved to be a gilt-edged investment. The billions of dollars spent have resulted in social and economic advantages to the Nation that will return the cost many times over, both in this generation and in generations yet to come.

The Administrator's recent announcement of a liberalization of Korean GI bill regulations gives many thousands of Korea veterans, who were forced to interrupt their training for more than 12 consecutive months, the chance to complete their GI education.

And think of what VA hospitals and clinics mean to the veteran who needs medical help—prompt help, real help—to treat an ailment, suffered by many through no fault of their own, except patriotic desire to help our country.

During this very year of 1958 the Congress has passed, and the President has signed into law, many measures of benefit to veterans and their dependents. These laws have broadened direct benefits. They have increased compensation and pension rates. This year, in a warm action that symbolizes America's evergrowing unity of freedom, we have provided pensions for Confederate veterans and their widows. Further, the hundreds of veterans' laws have been codified into a single act.

This year Congress passed and President Eisenhower signed the law extending the loan guaranty program for World War II veterans to July 25, 1960.

I can report to you with pride that net claims paid on defaulted home loans actually amounted to only about 7 cents out of every $100 of the mortgages guaranteed. What's more, our veterans have already repaid in full more than 1 million loans having a face value of more than $8 billion. One more proof of the A-1 credit risk of veteran home-loan borrowers.

Our 171 VA hospitals, serving every area and section of the United States, now care for the highest number of veterans in history, nearly 111,000. We have an alltime high in the number of doctors, nurses, technicians and others, to restore our veterans to health, so far as human skill can help. And to seek divine guidance in our healing mission, we have many dedicated, hard-working chaplains, of all faiths, serving in our hospitals.

And so—as the days pass, and the years follow one another, our work at VA goes on. Soon, more than 685,000 Korean conflict veterans will be able to convert their previously nonconvertible term GI insurance to permanent plans. Over 5 million World War II and Korean conflict veterans who hold G.I. insurance, may now attach a new type of total disability income provision to their policies, in return for a small additional premium, provided the insured is in good health and under 60 years of age.

The past year has also witnessed liberalization of social security laws regarding certain veterans receiving disability payments. There has been an increase in VA disability compensation rates. VA benefit checks may now be forwarded under certain circumstances to your bank for deposit to your personal account. The term "widow" has been redefined for VA benefits. There have been increases in the pension rates for certain widows of wars before World War I. Also enacted was an increase in the Government allowance toward burial expenses for certain deceased veterans.

To every shipmate present, as well as to all who are not present, I want to assure you that the VA stands ready to extend every assistance to veterans and their dependents, and to do it in a cheerful, warmhearted, and sympathetic manner. Your shipmates in your executive offices in Washington, D.C., will tell you so.

We don't manufacture anything at VA. We're in business to serve. What's more, we are in business to serve human beings. And we are at all times aware that the human beings we serve are veterans—men and women who have displayed the highest type of citizenship in a free nation.

Whether you have a question or not, will you do me a favor? If you meet me anywhere, in this hotel or on the street, will you please say "Hello"? I know a great many of you, but even though I may not know your name I do hope you will stop me and say "Hi" whenever we may meet. I am proud of my shipmates of the Fleet Reserve Association.

May God bless all of you, my shipmates and my friends.

"Dear Mr. Mikoyan"—An Open Letter to the Deputy Premier by the Spring Valley (Minn.) Tribune

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. QUIE. Mr. Speaker, on January 15 there appeared in the Spring Valley (Minn.) Tribune an editorial which, I believe, admirably summarizes the feelings of millions of Americans to the visit here by the Deputy Premier of the Soviet Union, Anastas I. Mikoyan.

The editorial, which appears in the newspaper edited by Bob Lind and published by Walt Babineau, certainly reflects what should be the view of this Government as it agrees to discuss policy at any time with the Soviet Union—but which, nevertheless, keeps careful scrutiny on that Nation's actions due to a history of broken pledges and dishonored agreements.

The editorial reads as follows:

DEAR MR. MIKOYAN

Mr. ANASTAS I. MIKOYAN,
Deputy Premier of the U.S.S.R.,
Somewhere in the United States.

DEAR MR. MIKOYAN: While traveling around our country last week, you said we Americans don't trust you Russians enough.

Mr. Mikoyan, we don't trust you Russians at all.

We wish we could, of course. We Americans are generally a trusting crowd of optimists. We're usually ready to think well of the other fellow.

But you and all your comrades-in-atomic-arms have done everything possible to make us doubt every word you utter and every promise you make.

You have talked about free elections in East Germany; but they haven't taken place.

You've talked about stopping atomic bomb tests; then you tested some more bombs.

You told the people of Budapest you were pulling out; then you sent tanks back in to slaughter them.

You've violated promises, treaties, and law with flagrant disregard.

Yet, Mr. Mikoyan, you wonder why we don't trust you, Mr. Khrushchev, and the other Soviet leaders "enough."

Now you're spreading the Soviet cry for peace while you tour America.

If we had real peace, could you be trusted to keep it?

Mr. Khrushchev has expressed extreme displeasure over our bases which encircle your country. He doesn't approve of our placing missile bases, airfields for long-range aircraft, and large numbers of troops all around your homeland.

This is evidence of the deep lack of trust we have for you, Mr. Mikoyan.

A father will tell his 2-year-old son to keep his fingers out of the candy bowl—but, nevertheless, he keeps a wary eye on him.

We're keeping a wary eye on you, too.

Because, to date, you're just about as trustworthy as that 2-year-old boy.

Sincerely.

Right-To-Work Laws Hurt the GOP

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. VANIK. Mr. Speaker, during the elections of last autumn the reaction of the electorate to the so-called right-to-work laws was the most significant development.

As a matter of fact, the greatest Democratic victories occurred in those States in which right-to-work was an issue. The voters of these communities manifested their understanding of this complex issue in spite of confusing argument and unprecedented pressures.

The following article from the Democratic Digest of November–December 1958, entitled "Right-To-Work Laws Hurt the GOP," expertly analyzes the election result. Those who think in terms of a Federal right-to-work law should give the election results careful consideration:

RIGHT-TO-WORK LAWS HURT THE GOP

When Republican leaders picked right to work as a winning issue in 1958, they demonstrated anew how completely out of step they are with the 20th century. In all but one (Kansas) of the six States where the issue was on the ballot November 4, the voters overwhelmingly rejected the antiunion measure along with a healthy majority of the Republicans who spoke out in favor of it.

Before the election opponents of the so-called right-to-work bill admitted that the title was going to be difficult to overcome. Far from providing the right to a job, which the fraudulent phrase implies, the so-called right-to-work law denies both organized labor and management the right to negotiate a union shop and opens the door to the unfair practices of an earlier era that fostered hostile labor-management relations, sharp conflict, and sometimes violence.

Under the Taft-Hartley law, enacted by the Republican 80th Congress, the union shop is permitted; that is, contracts requiring union membership after employment are legal. But as a result of this same law, which the Republican Congress enacted, the door was opened to flagrant antiunionism by giving State laws precedence over the Federal law, thus permitting the States to ban the union shop by State statute.

Antilabor forces which backed the measure, recognized that what they could not accomplish in the U.S. Congress under the glare of national publicity, might well be achieved on a local level. These forces included the National Association of Manufacturers, the U.S. Chamber of Commerce, the American Farm Bureau Federation, Big Business Republican supporters along with GOP leaders.

IKE HEDGES

While politically astute Labor Secretary Mitchell termed the right-to-work law unwise, President Eisenhower hedged on the controversial issue in the 1958 campaign. "I have never urged any State to vote for the so-called right of work law," Mr. Eisenhower told his October 1 press conference, "for the simple reason that I believe it's the State's business, and I'm not going to get into it."

When a news reporter tried to question the President further, he turned the newsman away abruptly with a "thank you very much. I have answered it."

Vice President NIXON continually doubletalked his way around the delicate issue—especially in California where GOP Senator Knowland based his gubernatorial campaign on the State right-to-work law, while GOP Governor Knight, running for the Senate, opposed it. Mr. NIXON begged off, when asked for his stand, explaining that he did not want to influence California voters and then proceeded to try to influence them on two equally controversial issues on the California ballot.

Former President Truman, who vetoed the Taft-Hartley law in 1948, and was one of the most outspoken campaigners against right-to-work laws in this year's campaign, warned of their danger.

"To outlaw the union shop," Mr. Truman told a Cleveland, Ohio labor audience on October 3, "will undermine the responsibility and the standing of the great unions on whom the stability of our productive industrial life depends."

Further, he pointed out, "the union shop is good for the employer as well as the workers—and enlightened employers know this."

Recognizing that the title was designed to deceive, Mr. Truman said that "some people will tell you that they are against the union shop but they are for unions. That is like saying you are for motherhood but don't like children."

Mr. Truman's claim of support for his stand from enlightened employers was verified in more than one instance. For example, in Colorado, one of the States where the issue was on the ballot, leading representatives of industry opposed the right-to-work amendment with their plea to the voters that Colorado has experienced a minimum of strikes and labor strife over the past several years and management preferred to keep it that way. The measure went down to defeat—315,683 to 200,027.

THE COUNTRY AGREES

Democratic political leaders and candidates, respected labor leaders and rank-and-file union members around the country were in agreement. Religious and community leaders joined in speaking out in support of a healthy union movement and its contributions to a democratic society, including the National Council of Churches, the Methodist Church, leading Catholic clergymen and rabbis. The National Conference for Industrial Peace, with such distinguished members as Mrs. Franklin D. Roosevelt and Senator Herbert H. Lehman, mobilized public opinion through a nationwide educational campaign, hammering away at the fact that banning the union shop would open up a long period of labor unrest and social conflict which the Nation could ill afford.

National Chairman Paul M. Butler saw the real purpose of the right-to-work law as an effort "to bust unions—once and for all time, with the result that wages will suffer, working conditions will deteriorate. And in the long run we all will suffer, because the welfare of all of us in America is interdependent with the welfare of working men and women."

The national chairman warned that if Senator Knowland of California, campaigning on a right-to-work platform, were elected, the cause of organized labor in this country would be set back at least a generation. The stunning defeat of the amendment—2,903,309 to 1,934,911—and the overwhelming victory of Democratic Gov. Pat Brown, clearly indicated that California's citizens want no part of Republican Old Guard policies.

The story was repeated in Ohio, where Democratic candidates and organized labor were joined by all six bishops of the Catholic Church to help defeat the anti-union measure on the ballot—2,007,291 to 1,080,266. Unseated were Old Guard veterans Senator John Bricker and Gov. William O'Neill.

A similar drive in the State of Washington, where a right-to-work proposal was defeated 2 years ago, again was slapped down by a healthy margin—2,106,055 to 1,303,882.

In Idaho, where the right-to-work proposal was defeated 124,147 to 117,923, a Republican Governor was victorious, while in predominantly agricultural Kansas, the right-to-work measure won approval—369,511 to 280,325—and Democratic Gov. George Docking who opposed it was re-elected to his second term.

While there were both national and State issues contributing to the sweeping Democratic victory nationwide November 4, the defeat of the right-to-work measure in five of the six States where it was on the ballot points up the fact that the majority of the voters reject 19th century policies for 20th century problems.

Location of Federal Prison in Southern Illinois

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. GRAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news release:

GRAY OPTIMISTIC ABOUT CHANCES FOR $10 MILLION FEDERAL PRISON FOR AREA—FUNDS INCLUDED IN BUDGET

WASHINGTON, D.C.—Congressman KENNETH J. GRAY, Democrat, West Frankfort, said today that chances for locating the proposed $10 million Federal prison in southern Illinois look good.

GRAY said the new budget presented to Congress to operate the Department of Justice for the next fiscal year contains a $10 million request for funds with which to construct the new maximum security, escape proof, prison. He said he will go before Congress early next month to urge that southern Illinois be given the new prison.

According to GRAY, the site selection has narrowed down considerably and southern Illinois is one of the remaining favorable locations.

"I believe our area has more to offer than other sites still under consideration and I feel very optimistic about our chances," GRAY said.

"If we can get the prison for our area, it will mean hundreds of jobs during construction and several hundred permanent jobs in the operation," he said.

GRAY said the prison will be a model institution and a great asset to the area.

GRAY said he expects some definite word as to a location within the next 30 days.

The Responsibilities of Leadership

EXTENSION OF REMARKS
OF

HON. FRANK M. CLARK

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1959

Mr. CLARK. Mr. Speaker, the following message is one in a series of programs being prepared and presented by the Christian Amendment Movement. I commend it to the attention of Members of this body:

"THE RESPONSIBILITIES OF LEADERSHIP"

(By the Reverend R. J. G. McKnight, D.D., Ph. D.)

From our studies of the preamble to the Constitution four things are apparent:

1. It ignores God the Father as the source of all authority.

2. It ignores the Lord Jesus Christ as the ruler of nations.

3. It assumes for the people the powers and the functions that belong to God alone.

4. It retires the Bible from its rightful place in our national life as the only standard of civic morality.

We cannot excuse ourselves on the ground that the preamble simply says nothing about these matters. The trouble is that it says nothing about them at the place where it ought to state all of them definitely. The fatal thing is that it leaves them out.

A man who leaves God, Christ, and the Bible out of his life is not a Christian. He may be a gentleman. It may be possible to say many nice things about him. But whatever else he may or may not be, he is not a Christian. And a nation that leaves God, Christ, and the Bible out of its fundamental law is not a Christian nation, however much we may praise its legal excellencies.

Many years ago Japan sent out a delegation to various countries to study the different religions of each country. In their report they said that Christianity was the best religion but that there were no Christian nations. How did they arrive at this conclusion? Manifestly not by reading the individual statements relative to divine guidance in national affairs such as were made by such outstanding men as George Washington who said in his Farewell Address: "Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports."

The Japanese did not base their conclusions on the words of John Adams, Washington's first successor, who said in his inaugural address: "If a veneration for the religion of a people who profess and call themselves Christians, and a fixed resolution to consider a decent respect for Christianity among the best recommendations for the public service," I can accept this responsibility.

Noble utterances such as these can be found by the dozens in the speeches and writings of strong Christian men who have served in high places in our Government. These are but personal opinions of men whose vibrant Christian faith found expression in their lives and service. The Japanese did not consider these things as evidence that the Nation was founded on the Christian religion or pervaded by it. They rested their verdict on the written Constitution of the country, and in it they read: "But no religious test shall ever be required as a qualification to any office or public trust under the United States." So, notwithstanding the part Christianity had played in laying the foundations of our great Nation, our Constitution—the supreme law of the land—the legal instrument which is the standard by which all national political actions are to be determined, did not regard the Christian religion as worthy of mention.

The judgment of the Japanese was right when they said: "There are no Christian nations." They could find in our Constitution—the supreme law of our land—no acknowledgment of Christianity as a factor in our growth and development as a nation. If the Japanese had found in our Constitution the acknowledgment that God is the source of all authority, that Jesus Christ is the ruler of nations, and that the Bible is the infallible guidebook for men and nations—and if they had recommended to their people the doctrines of Christianity as indispensable factors in the growth of a nation, and if Japan as a nation had embodied these principles in their instruments of government—would there have been a Pearl Harbor attack?

No man liveth to himself, and in this world which is daily growing smaller, no nation liveth to itself. The United States has reached the position of leadership in the world. This high position involves great responsibilities. If there is ever to be a Christian world order, some nation must lead in the movement to establish it. To lead in the movement, some nation must take the first step by establishing a Christian government within its own borders.

Despite our failure to make Christian acknowledgments in our Constitution, the United States has a social order in which the Christian belief dominates. The majority of our people, in some form, profess the Christian religion. It is true, of course, that many who profess the Christian faith do not live up to the high ideals of Christianity. But, on the other hand, the majority of our people sing the sentiment of the song: "Faith of our fathers, living still, we will be true to thee till death."

Now, it is axiomatic that in the long run a nation will have the kind of government the majority of the people in that nation want. It may be a long, long run, but ultimately, if a majority in a nation wants a change in government, the change will come. They may have to break the shackles of a dictator. It may take a lake a long time. But in the end it will come. Not only so, but the character of the majority of the people will be reflected in the character of the government.

But someone may say, "What about minorities?" Well, there is this to be said about minorities who disagree with the Christian belief in the United States of America: In no other nation under the sun are the rights of minorities, whether religious or political, so legally protected and morally safeguarded as in this land of liberty we call the United States.

Why is it that the oppressed of every nation on earth yearn for the day when they can set foot on American soil? They know they will be minority groups, but they know also that here, regardless of race, color, or creed, they will have unlimited possibilities for advancement in every way. And they know their rights will be protected, their schooling will be provided, and they may live as freemen. This is what America has to offer to the oppressed. But why does America offer it? The answer is plain. It is because the predominant religion of America is Christian, and the religion that is dominant—Christianity—is the religion that fosters the spirit of brotherhood as no other religion can do.

Minority groups regard America as the safest haven because of the prevalence of the Christian religion.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Inaugural Address of Gov. Ralph Herseth, of South Dakota

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. McGOVERN. Mr. Speaker, under leave to extend my remarks, I include the excellent inaugural address of South Dakota's able new Governor, the Honorable Ralph Herseth:

INAUGURAL ADDRESS OF GOV. RALPH HERSETH, OF SOUTH DAKOTA, 36TH SESSION, SOUTH DAKOTA LEGISLATURE—CONSERVANCY DISTRICT LAW, STRICTER CURB ON MOTORISTS IS PROPOSED

President of the senate, speaker of the house and members of the 36th session of the South Dakota Legislature:

In keeping with a provision of the South Dakota Constitution it is now my privilege and duty to address this distinguished body. To share with you some of my thinking on the affairs of a great State and to make such recommendations as are deemed advisable.

In the tradition of election years our two political parties have again engaged in a contest for the voters' favors to determine in the true pattern of a democracy who the men and women should be to represent the people in government. That is now history of 1958. Much of value was attained in the old year. Some scars and some bruises were also acquired, not all of which have any connection with political struggles. As I give you my hearty wish for a wonderful and productive 1959; I also ask that you take with you from 1958 those memories which showed profit and contained a good moral. By the same token, in the name of progress and for a better tomorrow, we should leave behind that which has shown a loss or divided our efforts toward making South Dakota a better State in which to live.

During the weeks that have intervened since you choose me as your chief executive I have become increasingly aware of the responsibilities we face together. I am sure that as legislators you have experienced a similar reaction. Let me assure you that I am today a most humble and grateful person. Also, that my most earnest desire is to conduct myself in a manner which will command the esteem of all South Dakotans, not just those who may share my political views. I am aware, as you are, that we will make mistakes. May we discipline ourselves to the extent that such mistakes as are made will be completely honest. I am convinced that there has never been, nor will there ever be, a good substitute for constant vigilance in any business. This is most certainly true in the State's business where many people are involved. I ask you to alert yourselves to the need of assessing your own performance in this respect, as well as that of our fellow men.

This being our attitude, I am confident that with the divine assistance I shall earnestly seek, and with a genuine humbleness of spirit, a desire to adhere to the abiding principles of the Golden Rule, our State will move united toward the high destiny a merciful God has provided for us.

With these preliminary statements I shall discuss with you in a general manner some of the paramount problems facing us in this session. We have reached the point where we must, to the best of our ability, interpret tangibly what the majority of our voters spelled out in the past election. No one can dictate nor guarantee results. However, I am obligated as you are to accomplish some reforms and some new endeavors. In this respect conflicts of interest and thinking will be encountered. In the final analysis I do not anticipate a perfect score. I am most hopeful for a high average as a testimony to honest efforts and the wisdom of our legislative process.

GOVERNMENT REORGANIZATION

An exciting challenge confronts this 36th legislature and this new administration. We have a golden opportunity to increase the efficiency of the executive branch of the State government and at the same time achieve substantial savings for the taxpayer. The people of our State want their government operated in a businesslike manner and they have a right to expect that we will promptly and aggressively move toward real progress in that direction.

The challenge to all of us lies in the fact that for the past 35 years there has been talk of this problem, but for the most part very little has been done about it. Approximately 30 years after statehood and partly as the result of the experience and actions of other States, it was realized that the organization structure of the executive branch was defective. Thus, during 1921–22, consultants were engaged, at a cost of $25,000, to study the executive branch and to recommend a plan for improvement. Few of the many recommendations arising from that study were ever adopted. In 1925, however, two Departments, Finance and Agriculture, were established and several independent offices and boards were abolished.

During the intervening years, the volume and variety of functions have increased greatly and, largely by statute, there has been a piecemeal, uncoordinated enlargement of the State government. The new study of the executive branch authorized by the 1953 legislature revealed the extent to which our governmental structure has overgrown. The 90 State agencies, boards, and commissions of the 1921 study had by 1954 increased to 125. The 1900 State employees of 1921 had by 1958 increased to over 7,000. The 1921 general appropriation of about $6½ million had by 1957 increased to about $32½ million. Thus, if the 1921 legislature saw a need for reorganization, it is crystal clear that the need has by now become a necessity. The time has come when the consideration of measures designed to improve the efficiency of State government can no longer be delayed. While every reasonable effort must be made to maintain and improve the quality of essential governmental services, the State of South Dakota cannot move forward under the handicap of obsolete governmental structures, nor can the taxpayers be expected to continue indefinitely to provide increased financial support for duplicative activities and overlapping functions. As a result of the 1954 study, we have the benefit of the recommendations of the "little Hoover" committee drawn from the membership of the 1953 legislature. This committee was, of course, named after the National committee which pioneered this work in our Federal Government, a committee headed by former President Herbert Hoover, who accepted his post as a civic service at the request of President Harry Truman. Too, we have the benefit of the report and recommendations of the bipartisan efficiency and economy committee, whose membership came from the 1955 legislature. The entire reorganization program is, in my view, completely bipartisan and one which has only the objective of reducing the cost of operating our State government by increasing its efficiency. In order to provide improved public service and to promote efficiency in State government, I earnestly recommend that this legislature:

1. Establish a State department of commerce which would consolidate the existing functions of the insurance department, the banking department, the securities commission, the fire marshal, the aeronautics commission, and the corporate supervision function of the secretary of State. This in brief would bring the regulation of business agencies into one department. I think you would be interested to know that former Gov. M. Q. Sharpe made practically the same recommendation in his 1945 inaugural message. I now quote from that part of Governor Sharpe's message wherein he recommends consolidation of the department of banking, insurance, and securities: "This would be a propitious time, therefore, to unite these two departments into one single State department to be designated as the department of banking and insurance and headed by a single commissioner of banking, securities, and insurance. I have held conferences with officials of both departments and have found that this can be done with a considerable saving of expense and at the same time an increase of efficiency in both fields of regulation and inspection. The plan has been in effect for years in other States and, in my opinion, would be advantageous in South Dakota. It can be effected with one or two simple amendments to present laws and without interfering with operations of either department. The last session of the legislature authorized placing the securities commission in the insurance department and this was effected and is now operating with saving of expense and increased efficiency for the State. The three departments are closely related to one another in their operations and should now be united into one."

NO ACTION

Unfortunately, this excellent recommendation was not favorably acted upon by the 1945 legislature and has not since been resubmitted in any subsequent inaugural message.

2. A reorganization of the department of agriculture is in order. It must be strengthened to become a real force in aiding the welfare of agriculture, our No. 1 industry in South Dakota. The new department of agriculture should consolidate and centralize the many different boards, agencies, and commissions now dealing with various agricultural phases but without any real coordinating or executive direction from any source. I therefore recommend that you give full consideration to bringing into the department of agriculture the horticulture agency, the office of State veterinary, the South Dakota State Horticultural Society, the dairy industry commission, the State brand board, the State weed board, the State soil

conservation committee, the State weather control commission, the State livestock sanitary board, the seed certification board, and the State fair board. The incorporation of the administrative functions of the above agencies into one department and the merger of the several boards will simplify administrative direction, coordinate the work, and eliminate duplication of effort. It will reduce much of the current confusion in the minds of the farmers and ranchers served by these agencies and make for savings of administrative costs. A replacement of the abovementioned boards by a single board of agriculture upon which were represented leaders in all of the different phases of farm and ranch activities, would insure that the viewpoint of all interests affected would be fully and adequately considered.

3. I recommend that the duties of the State bond board, the South Dakota Rural Credit Board, the State surplus property committee, and the State travel commission be included within the department of finance and that these boards be abolished. This recommendation places before you one of the reforms suggested by the 1954 executive branch study authority by the 1953 legislature.

4. The need for executive branch reorganization is a continuing one. Thus our Federal Government and several of the State governments have already vested in the executive the authority to institute such further reorganization measures as may seem advisable, subject, however, to the right of the legislature to disapprove such administrative reforms. A statute of this nature recently passed in the State of Michigan has been hailed by students of State government as a model step in the right direction. I therefore recommend for your consideration a statute patterned after the Michigan law but tailor made to fit the special needs of our own State of South Dakota in the field of governmental reform.

FISCAL AFFAIRS

It is my firm belief that our people want State Government operated on a pay-as-you-go basis. However, we are now spending more than we are taking in. Last month's printed report of the State auditor covering the fiscal year ending June 30, 1958, reveals that the State's general fund balance of about $13 million, June 30, 1957, had dropped to less than $10 million, June 30, 1958. A study of figures and public records now available in the offices of the State treasurer, auditor and comptroller further indicates that the general fund balance at the end of the present biennium, June 30, 1958, will be $6 million or less.

While we view the long range future of our great State with confidence, we must also be on guard against the time when our tax revenues and other receipts may be temporarily decreased by a period of drought or business depression. If we continue spending beyond our income until all our reserves are gone, only to run unexpectedly into a period of general economic distress we could conceivably find our State in the unhealthy position of paying 6 percent interest on unpaid State warrants, unpaid because of a lack of money in the State treasury to pay them. In short, the time has now come when we must consider most seriously the question of whether the general fund of our State can in safety be permitted to go much below the expected $6 million mark of June 30, 1959.

It is obvious that we can operate under a balanced budget for the next 2 years only if the total appropriation for the coming biennium do not exceed receipts and revenues conservatively estimated for the same period. To put it another way, we have now come to the point where we cannot any longer spend the State's money unless we have already provided for the raising of revenues sufficient to meet such expenditure. No one is more anxious than I to see our institutions, departments and functions of State Government adequately and reasonably supported. This desire, however, can never be used as an excuse for retreating from the fundamental principle that any unit of Government can spend only such funds as it exacts from its citizens by way of taxes and that for every tax dollar spent we must insist upon a dollar's worth of services or goods.

TAXATION

Monumental problems face us in the general field of taxation. Property taxes have been carried to dangerously high levels, with recent sharp increases in many cases exceeding 50 percent, particularly on real estate. On the other hand, demands upon State and local governments for new services and for drastic increases in services traditionally rendered have sent governmental budgets to new highs in this inflationary period in which we now live. Surely the time has come to take a long, searching look at the whole structure of taxation in South Dakota. Our taxpayers are willing to pay for those States, local, and educational services they consider essential, but only if the tax law is one generally considered fair and equitable, properly assessed and economically administered. The complexity of the problem and the lack of a ready answer from any legislative source is pointed up by the report of the assessment, taxation, and finance committee of the legislative research council, drawn from the membership of the 1957 legislature, which report is dated October 1958. In point 1 of the summary of the report, the committee gives this summary of its study and I now quote from the report:

The committee concludes "that at this time it cannot present any satisfactory recommendation for a tax that would be either in lieu of or provide any relief for personal and real property taxation and recommends that the matter of property tax relief again be studied in the light of actions taken by and demands made on the 1959 legislature." Clearly, the time has come to take a new look at the whole field of taxation, both State and local, in South Dakota. This thorough, comprehensive, year-long study can best be made by a bipartisan citizens committee representing all walks of life, such group to receive the fullest cooperation of all sources of State government, but to be completely free to reach its own conclusions from its own independent study. I am sure that many of you know that this form of tax study by an independent citizens group has already been successfully conducted in the State of Minnesota. It is most interesting to note that although the citizens of this committee came from all types of business, agriculture, and industry that after thorough study the committee was able to unanimously recommend to the Minnesota Legislature a number of worthwhile and needed reforms. The same method has been successfully followed in at least one other Midwestern State.

Sometimes we of the executive and legislative branch can be too close to the problem. A citizens committee of leaders in the various fields, having no connection with the State government, can bring a new approach or a keen reevaluation of our present revenue-raising methods.

I, therefore, respectfully suggest that legislation to carry the foregoing recommendation into effect be enacted by this legislature and that such such legislation carry an emergency clause with the provision that the group begin its studies by April 1 and that the full report of the group be placed on file in the office of the Governor by January 1, 1960. At such time I will carefully study the report and if the report contains recommendations having the support of the great majority of the committee and recommendations which can be of immediate value to our State and its taxpaying citizens I will give full consideration to the question of immediately calling the legislature into special session for the purpose of enacting such recommendations into law. I do believe that out of a thorough tax study now we can bring forth in the future, when and if they are needed, taxation measures that will find true popular support because they are as fair and equitable as possible to all taxpayers.

Up to know I have not seen the proposed budget for the next biennium. I am therefore unable to make any statement concerning any of its items at this time. Our law provides the incoming Governor a period of 10 days after receipts of the budget message of the retiring Governor, within which to send a supplemental budget message to the legislature. In the short period thus allotted to me, and after the fullest consideration possible, if necessary, I will send to you my supplemental message on this vital part of State government.

EDUCATION

The people of South Dakota are justifiably proud of our State's educational achievements. The public school system and the institutions of higher education, together with the many excellent private educational institutions, have established an enviable record in training the youth of our State for positions of leadership in South Dakota, and in the Nation. But the needs and standards of education are constantly advancing and South Dakota must move forward with other States, or see its school system relegated to an inferior position.

The contribution of the real and personal property taxpayer in South Dakota for education on the local level is substantially greater than the national average. While I know that South Dakotans want better than average education for the children of this State, we must make renewed efforts to achieve all possible economics, consistent with sound educational practices. The presence of inefficiencies in the South Dakota public school system is suggested by the fact that we have a higher number of school districts, and a lower average number of pupils per district than many of the other States. The resulting high cost per pupil is perhaps responsible for the fact that even with property taxes at an extremely high level a number of South Dakota school districts are still operating in the red.

In order to maintain and improve the quality of educational services in South Dakota, to equalize the costs of education among the several categories of taxpayers, and to promote economy and efficiency in the operation of our school system, I earnestly suggest that this legislature consider:

1. Revision of the appropriate school laws to achieve a more workable plan of school district reorganization, always keeping in mind the traditions of local control and the right of appeal to the courts.

2. I recommend the adoption of a minimum foundation program which will establish formulas for the distribution of school aid, which will encourage adequate educational standards, efficiency in operations, and a more equitable distribution of public school costs. The quality of education and the efficiency with which educational services can be provided are not exclusively and uniquely determined by the size of the school. Area, transportation, distances and time, adequacy of the tax base, and the population density—as well as number of students enrolled, must be taken into account in the determination of the ideal size of school districts. However, there is rather clear and unmistakable evidence that costs per pupil are excessive in very small school units, particularly in the smaller high schools. The extent to which all of the people of the State should be required to subsidize the continued operation of such

high cost units through existing or increased State aid is a debatable question. But I respectfully suggest that the time has come when the chosen representatives of all the people should arrive at a clearcut policy decision on this vital matter. In considering the general matter of the minimum foundation plan, this legislature should undoubtedly be mindful that one of the objectives of such a plan is the relief of local property taxes and any such plan should contain safeguards to insure attainment of this goal.

No school system is any better that the quality of the teachers comprising its faculty. The exodus from South Dakota of well-qualified teachers is truly alarming. While most of our schools cannot establish salary schedules as attractive as those found in other States, we can provide other inducements for teachers to remain in South Dakota. Therefore, I recommend that this legislature give full consideration to adoption of a teacher retirement system. Such a system could be financed jointly by the school district, the participating teacher, and the State.

Defense Education Act
